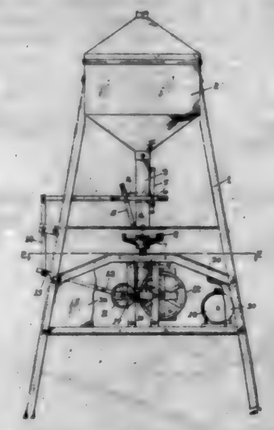
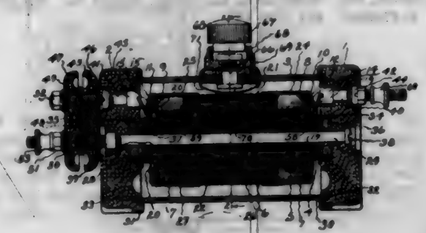
9. In a valve the combination with a frame having a relatively high temperature coefficient of expansion of a stopper of glass having a relatively low temperature coefficient of expansion.

1,533,794. PROCESS AND APPARATUS FOR COLLECTING RADIUM EMANATION. GIOACCHINO FAILLA, New York, N. Y. Filed Sept. 20, 1920. Serial No. 411,582. 7 Claims. (Cl. 167—9.)

1. In apparatus for collecting radium emanation, the combination with means for subjecting radium or one of its salts to a high vacuum, means for collecting the emanation evolved in this vacuum comprising a vacuum pump and a variable mercury level pump cooperating therewith, and means for compressing said emanation comprising a plurality of containers and means for compressing said emanation alternatively in either one of said containers while the other containers are closed off from the emanation supply.



1,533,795. RACE GAME. ANDREW B. FOANS, New York, N. Y. Filed July 10, 1923. Serial No. 650,574. 9 Claims. (Cl. 273—86.)

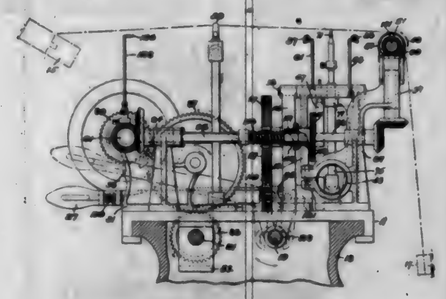


1. In a game the combination with a platform, of a carriage arranged thereon, a target carried by the carriage, and means carried by the carriage operated by the position of the target for propelling the carriage.

1,533,796. STOCK FEEDER. EDWARD H. GENUIT, Napoleon, Ohio. Filed Sept. 5, 1924. Serial No. 736,006. 10 Claims. (Cl. 161—10.)

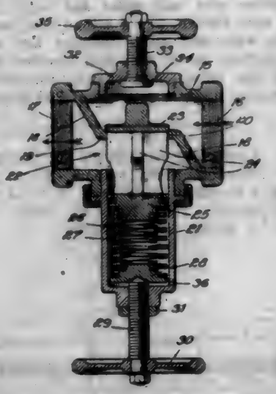
1. In a stock feeder, a source of current, an electric motor, a feed escapement operated by the motor, a distributing member actuated by the motor, a clock for completing the circuit of the motor and a controlling means for discontinuing the operation of the motor.

1,533,797. INDUCTION COIL. VICTOR GEMPP, New York, N. Y., and LESLIE FORREST CURTIS, Springfield, Mass., assignors to American Bosch Magneto Corporation, Springfield, Mass., a Corporation of New York. Filed June 4, 1921. Serial No. 474,995. 4 Claims. (Cl. 175—360.)



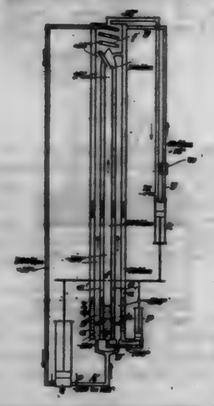
1. An induction coil having a core with primary and secondary windings mounted thereon, an encasing structure including a tube and a high tension binding post, a magnetic shell around said windings and electrically connected to the terminal of said secondary winding and said binding post.

1,533,798. SECONDARY CHARGE FOR COMPOUND DETONATORS. BENNETT GROTTA, Tamaqua, Pa., assignor to Atlas Powder Company, Wilmington, Del., a Corporation of Delaware. Filed Mar. 1, 1923. Serial No. 622,208. 2 Claims. (Cl. 52—3.)



1. A compound detonator consisting of a main charge and a priming charge and wherein the main charge consists of a mixture of equal parts of tetranitroaniline and potassium chlorate and wherein the priming charge consists of a mixture of fulminate of mercury and a heavy metal azide.

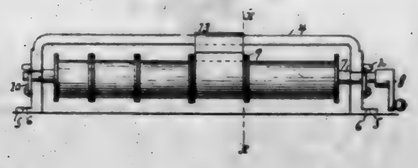
1,533,799. WARP-LEASING MACHINE. EDGAR F. HATHAWAY, Wellesley, Mass., assignor, by mesne assignments, to Barber-Colman Company, Rockford, Ill., a Corporation of Illinois (1922). Filed Jan. 18, 1919. Serial No. 270,892. Renewed July 21, 1923. 19 Claims. (Cl. 28—40.)



1. A leasing machine having, in combination, two spaced supports between which a sheet of warp threads extends, operating mechanism, and means for causing relative travelling movement between said warp supports and said mechanism, said mechanism comprising a thread-selector and spacer mounted on one of said supports, two leasing members located between said selector and the other support, a hook to engage a thread which has been spaced by said selector and spacer and draw said thread out of the plane of the warp, said hook operating between the leasing members, two hooked arms mounted to move past the ends of the leasing members respectively and longitudinally thereof, and means to oscillate said arms in opposite phase to take threads from said hook and place them in engagement with the leasing members.

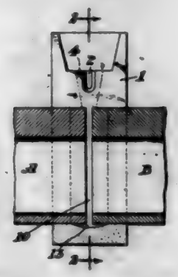
1,533,800. APPARATUS FOR CONTROLLING STEAM PRESSURE IN BOILERS. FRANK HENNEBOHLE, Chicago, Ill. Filed Feb. 11, 1921. Serial No. 444,253. 6 Claims. (Cl. 251—145.)

6. In a fluid pressure supply line, a valve having a valve seat therein between the inlet and the outlet of the valve, a valve constantly balanced on its outlet side and movable to close said seat by pressure of the fluid supply at the inlet, mechanical means tending to open the valve member with a force inversely proportional to the extent of opening of said valve member, whereby said valve member becomes balanced by said means acting against the fluid pressure at the valve inlet, whereby to regulate the passage of fluid thru said valve inversely as the fluid pressure varies.



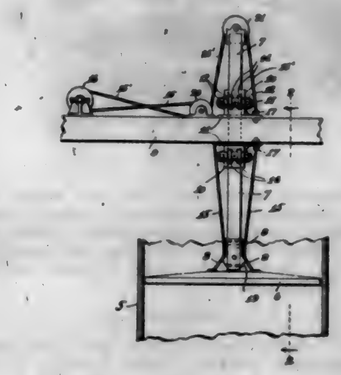
1,533,801. APPARATUS FOR PRODUCING LOW TEMPERATURES. PAUL HEILANDT, Sudende, near Berlin, Germany. Filed Jan. 3, 1921. Serial No. 434,852. 1 Claim. (Cl. 62—122.)

A refrigerating apparatus comprising, in combination, a pair of concentrically disposed annular members forming an inner chamber and an outer chamber in communication with each other near their lower ends, said cham-



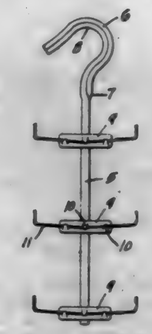
bers being spaced apart to provide an intermediate chamber therebetween and said inner chamber enclosing a space forming a cylindrical central chamber, an expansion machine disposed below said chambers, a tubular coil in communication with said central chamber at the upper end thereof and with said expansion machine, a pipe communicating with said expansion machine and with said intermediate chamber at the lower end thereof, a compressor in communication with the atmosphere and adapted to compress air to a pressure of 40 atmospheres, a water cooler, a pipe in communication with said compressor and passing through said water cooler, said pipe communicating with said outer and inner chambers at the upper ends thereof, and a second compressor in communication with said outer chamber and said central chamber at their lower ends and adapted to receive a fluid from the outer chamber and transfer it to the central chamber under a pressure of 200 atmospheres.

1,533,802. ADHESIVE PLASTER OR TAPE ROLLER. EDWARD JOHNSON, North Pelham, N. Y., assignor to Meinecke & Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 24, 1923. Serial No. 676,741. 1 Claim. (Cl. 242—60.)



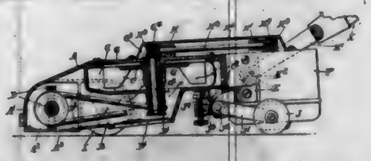
An adhesive plaster or tape roller comprising a frame having a convexed top bar with a pair of legs each provided with a slot, a shaft having a crank mounted thereon journaled in the slots to key a series of tape carrying bobbins for removal from one end of the shaft the tape being made to unwind over the bar, and a detent swingingly connected to the frame adjacent each slot coacting with the shaft to prevent accidental withdrawal thereof.

1,533,803. MOLD FOR WELDING RAILS AND THE LIKE. FRANK N. KEITHLEY, Burlingame, Calif., assignor to Metal & Thermit Corporation, Chrome, N. J., a Corporation of New Jersey. Filed Jan. 17, 1923. Serial No. 613,194. 2 Claims. (Cl. 22—204.)



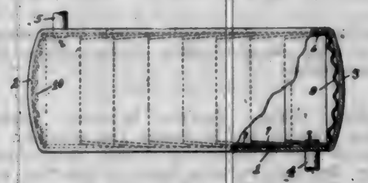
1. Means for welding rails and the like by means of superheated fluid metal, comprising a mold of refractory material having a joint defining cavity surrounding the rail ends, a basin in the top of the mold, and spaced pouring gates connecting the bottom of the basin with the top of said cavity to direct the enterng metal to both sides of the rails simultaneously.

1,533,804. COTTON STAMPER. JOHN O. MCCOY, Atlanta, Ga. Filed Dec. 15, 1923. Serial No. 680,857. 2 Claims. (Cl. 100—12.)



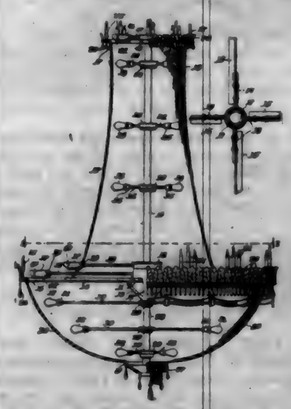
1. A cotton tramper, comprising a presser block, a stem for said block, a guide casting having rollers to engage said stem on all sides for positively guiding said stem in its reciprocating movements, a pulley mounted at each end of said stem, and oppositely movable cables engaging over said pulleys with a rolling contact for positively thrusting said stem in both directions.

1,533,805. ELECTROPLATING RACK. EDD C. OLIVER, Adrian, Mich., assignor to Parker Rust Proof Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 6, 1924. Serial No. 748,253. 5 Claims. (Cl. 204—5.)



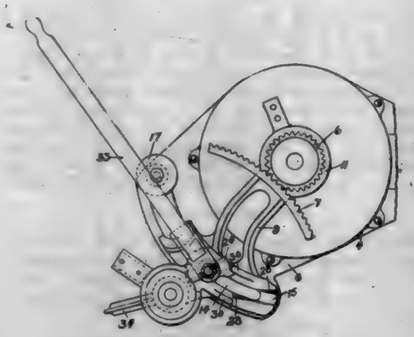
1. A rack for use in electro-plating consisting of a vertically disposed member having laterally extending cross-pieces thereon, and hangers removably secured to said cross-pieces.

1,533,806. VACUUM CLEANER. LESLIE M. PARKER, Evanston, Ill., assignor to The Hoover Company, a Corporation of Ohio. Filed Nov. 11, 1922. Serial No. 600,195. 6 Claims. (Cl. 230—11.)



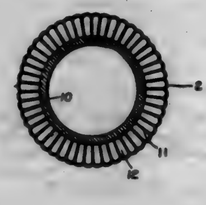
3. In a suction cleaner, a suction producing fan mounted to rotate about a substantially vertical axis, a casing for said fan, and an electric motor adapted to drive said fan, a separate casing for said motor, said fan and motor casings lying in the same general horizontal plane.

1,533,807. BOILER CONSTRUCTION. CHARLES V. PATERNO, New York, N. Y., assignors, by mesne assignments, to Elliott Company, Pittsburgh,, Pa., a Corporation of Pennsylvania. Filed Sept. 18, 1920. Serial No. 411,182. 3 Claims. (Cl. 210—9.)



1. A device of the class described, adapted for use with a tank, comprising a removable lining therefor adapted to react with the water passing through said tank to remove the corrosive constituents from said water, said lining being made up of a series of tapering rings nested partially one within the other.

1,533,808. LIGHTING FIXTURE. JOHN E. O. PRIDMORE, Chicago, Ill., and EARL C. MCKINNIE, Oak Park, Ill., assignors to Curtis Lighting, Incorporated, Chicago, Ill., a Corporation of Illinois. Filed May 6, 1922. Serial No. 558,887. 14 Claims. (Cl. 240—78.)

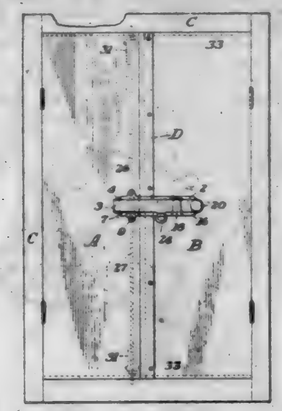


1. A lighting fixture of the class described, comprising a translucent body, means within the body for illuminating the latter by refracted light, means at the exterior of said body for illuminating the latter by reflected light, and a source of light associated with the body at a point remote from said internal and external illuminating means for maintaining by indirect illumination a light zone in proximity to the body.

1,533,809. TRACTOR-WHEEL SHIFT MECHANISM. SAMUEL W. RAYMOND, Adrian, Mich. Filed Mar. 23, 1923. Serial No. 627,058. 2 Claims. (Cl. 180—41.)

1. In a tractor, a tractor frame, a driving pinion, a member supported for pivotal movement about the axis of the driving pinion, a bull wheel connected to the member, a gear wheel for connecting the bull wheel with the driving pinion, the member having a slot, a pin extending through the slot and connected to the frame and a clamping cam located on the pin for clamping the member to the frame.

1,533,810. AIR-COOLED CYLINDER. CHESTER S. RICKER, Indianapolis, Ind. Filed Feb. 9, 1920. Serial No. 357,171. 2 Claims. (Cl. 257—261.)



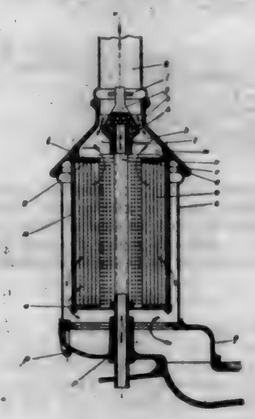
1. A cylinder for internal combustion engines having continuous longitudinal heat radiating fins, each fin having at its outer edge a flange extending to the next fin, such fins with their flanges forming a plurality of longitudinal air passages open at top and bottom for permitting air to be passed lengthwise of the cylinder past the fins within the casing formed by the fin-flanges.

1,533,811. DOOR FASTENER. WILLIAM A. SCHLEICHER, Cleveland, Ohio, assignor to The Eberhard Manufacturing Co., Cleveland, Ohio, a Corporation of Ohio. Filed Nov. 27, 1923. Serial No. 677,207. 6 Claims. (Cl. 292—5.)

1. A door fastener, comprising a latch lever adapted to be secured to a door for pivotal movement with respect thereto about an axis located adjacent one end of the lever, keeper means for releasably securing the

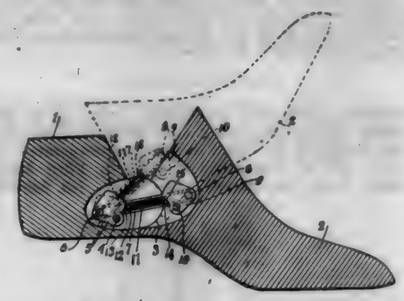
free end of said lever to a support, a handle mounted on the free end of said lever, a plate spring carried by said lever, said lever being of channel shape in cross section with the channel facing inwardly towards the door and said spring being positioned in said channel and

having a bowed intermediate portion for engagement with said support when said lever is held by said keeper means, and common means engaging said handle and one end of said spring for securing said handle and spring to said lever, substantially as described.



1,533,812. BOLT SNAP. WILLIAM A. SCHLEICHER, Cleveland, Ohio, assignor to The Eberhard Manufacturing Company, Cleveland, Ohio, a Corporation of Ohio. Filed Apr. 26, 1924. Serial No. 709,186. 2 Claims. (Cl. 59—85.)

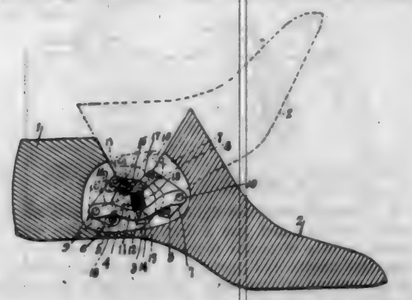
1. A snap comprising a body having an eye forming member integral at one end with the body, the free end of said member having a raised portion on its extreme end extending above the surface of the body of the member in all positions of the same and providing a striking knob for closing the eye, substantially as described.



1,533,813. APPARATUS FOR SEPARATING AND BINDING DUST OR OTHER IMPURITIES IN COMBUSTION AIR OF COMBUSTON ENGINES. KARL SCHROEDER, Dusseldorf, Germany, assignor to the Firm Heinrich Lanz, Mannheim, Germany. Filed Mar. 30, 1921. Serial No. 456,966. 3 Claims. (Cl. 183—5.)

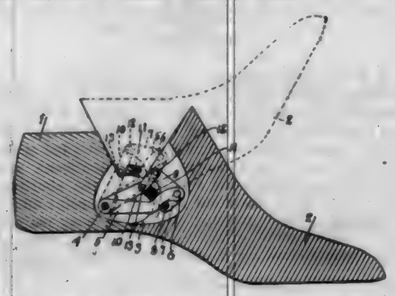
1. Apparatus of the character stated, comprising means for mixing oil vapors with atmospheric air, a separator consisting of a plurality of spaced, concentrically arranged, perforated, impact plates, and means for causing said mixture to progressively impinge against said plates to

cause binding of dust particles with oil particles, the latter being caused to adhere to the surfaces of said impact plates.



1,533,814. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Apr. 21, 1924, Serial No. 707,796. Divided and this application filed Nov. 24, 1924. Serial No. 751,765. 1 Claim. (Cl. 12—136.)

In a last of the divided type, the combination of a heel part and a toe part, a plate in the heel part pivotally attached thereto, a plate in the toe part pivotally attached to the toe part, a tube pivotally connecting said plates to each other, said tube extending from the heel part into the toe part of the last, and a spring within said tube and cooperating with said plates to maintain the last parts in extended position and in collapsed position under tension.



1,533,815. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Apr. 21, 1924, Serial No. 707,796. Divided and this application filed Nov. 24, 1924. Serial No. 751,766. 1 Claim. (Cl. 12—136.)

In a last of the divided type, the combination of a heel part and a toe part, a lever pivotally attached to the heel part, a second lever pivotally attached to the toe part, a link extending from the heel part to the toe part and pivotally attached at its extremities to said levers, toggle mechanism carried by the free ends of

said levers, and a spring interposed between said toggle mechanism and said link to maintain the last parts in extended position and in collapsed position under tension.

1,533,816. LAST. CLINTON M. SEARL, Portsmouth, Ohio, assignor to The Vulcan Last Company, Portsmouth, Ohio, a Corporation of Ohio. Original application filed Apr. 21, 1924, Serial No. 707,796. Divided and this application filed Nov. 24, 1924. Serial No. 751,767. 1 Claim. (Cl. 12—136.)

In a last of the divided type, the combination of a heel part and a toe part, a lever pivotally attached to said lever and extending into the heel part to which it is pivotally attached, toggle mechanism connecting the free end of said lever to the heel end of said link, and a spring interposed between said link and toggle mechanism to maintain the last parts in extended position and in collapsed position under tension.

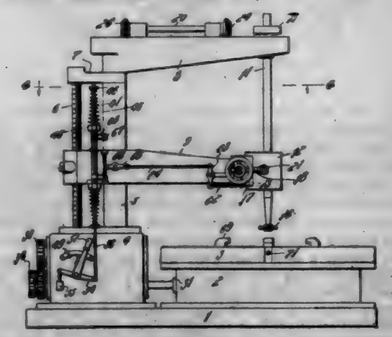
1,533,817. CEILING FOR CONCRETE FLOORS. CHARLES A. SMITH, Columbus, Ohio. Filed May 17, 1922. Serial No. 561,578. 3 Claims. (Cl. 72—70.)

1. A ceiling for a concrete beam floor including, in combination, a sheet metal floor and beam molding core formed with seats at the inner sides of its beam molding margins and a sheet of plaster lath secured between the inner sides of said margins to said seats.

1,533,818. MANUFACTURE OF ALLOYS. ROBERT C. STANLEY, New Brighton, N. J., assignor to The International Nickel Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 2, 1923. Serial No. 629,487. 12 Claims. (Cl. 75—17.)

1. In the manufacture of nickel and copper alloys, the steps consisting of roasting a nickel-copper matte, and then subjecting the product to a melting temperature in a furnace in the presence of sulphur-removing slag material.

1,533,819. MANUFACTURE OF PUDDLED IRON. ROLLIN C. STREBS, Youngstown, Ohio. Filed July 10, 1924. Serial No. 725,170. 5 Claims. (Cl. 75—27.)



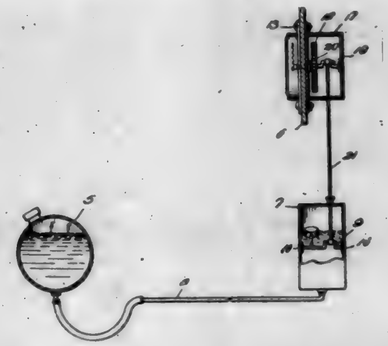
3. The process of manufacturing puddled or wrought iron, comprising removing the puddle ball from the puddling furnace prior to the completion of the reactions between the iron and slag and placing it in a separate heating furnace, and allowing said ball to remain in said separate furnace until the necessary reactions are completed, substantially as described.

1,533,820. CAMPER'S TENT. ROBERT R. WHITEHEAD, Chicago, Ill., assignor to Tentobed Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 2, 1924. Serial No. 741,141. 7 Claims. (Cl. 135—1.)

1. In a tent, a front having a door opening therein, a fly extending forwardly of the tent from a line above the top of the opening, a pair of doors adapted to jointly close the opening, means including fastening elements near the top of the doors for securing them in their said closure position, and means including fastening elements spaced downwardly from the tops of the doors for securing the doors to the fly in forwardly directed open positions.

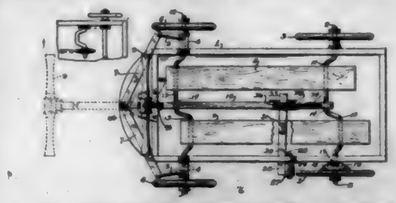
1,533,821. GRINDING MACHINE. WILLIAM S. AMBERSON, Waynesboro, Pa. Filed Jan. 22, 1924. Serial No. 687,827. 5 Claims. (Cl. 51—50.)

4. An apparatus of the class described comprising a turn-table, jaws adjustably mounted thereon for gripping the work-piece, an upright, an arm slidably mounted



thereon, a head adjustably mounted on the arm, a tool shaft passing through the head, a tool connected with the lower end of the shaft, a member rotatably connected with the upper end of the upright, a gear thereon keyed to the tool shaft so that the shaft can slide through the same, a shaft passing through the upright, means for driving the gear from said shaft, such means being carried by the member, a screw shaft connected with the arm for moving the same upon the upright, and means for rotating the screw shaft, the shaft in the upright and the turn-table.

1,533,822. ORNAMENTAL CHAIN. LOUIS J. ANSHEN, Providence, R. I. Filed Oct. 25, 1924. Serial No. 745,820. 2 Claims. (Cl. 59—79.)

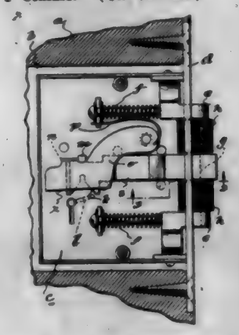


1. In a chain of the type set forth, a series of connected units, each unit comprising a wall, housings on the wall parallel with each other, transversely disposed posts supported in the housings near their ends, a connecting plate slidably engaging the wall, lugs upon one end of the plate within the housings, a loop on the plate between the housings loosely surrounding a post of an adjacent unit, and compression springs in the housings engaging the lugs.

1,533,823. GASOLINE GAUGE. HARRY BASHIAN, Chicago, Ill. Filed Jan. 24, 1924. Serial No. 688,234. 1 Claim. (Cl. 73—82.)

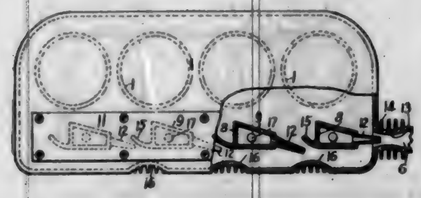
A device of the class described comprising a main gasoline tank, an auxiliary tank, a supply pipe leading from the former to the latter, a crank shaft mounted for rotation in said auxiliary tank, an arm carried by said crank shaft, a float connected to said arm, a casing mounted above said auxiliary tank, a second crank shaft, said second named shaft being mounted for operation in said casing, a dial associated with the casing, a pointer cooperative with the dial, a shaft upon which said pointer is mounted, a gear connected to the pointer operating shaft, a second gear connected to said second named crank shaft and in mesh with said first gear, and a rod connected at its opposite ends to said crank shafts said auxiliary tank and casing being provided with openings through which said rod extends.

1,533,824. FOOT-PROPELLED VEHICLE. WALTER ROGERS BENJAMIN, Granite City, Ill. Filed Apr. 28, 1923. Serial No. 634,033. 19 Claims. (Cl. 208—80.)



1. In a foot propelled child's vehicle, a pair of crank shafts, one of which has a driving connection with the vehicle, a pair of pedals journaled on the cranks of the respective shafts and operable to rotate the shafts, and means making it impossible for the shafts to rotate in opposite directions.

1,533,825. PLOW. WILLIAM JACKSON BURNETT, Thomasville, Ga. Filed Aug. 16, 1922. Serial No. 582,198. 1 Claim. (Cl. 97—198.)



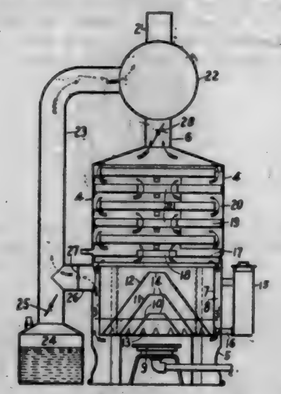
In a plow the combination with an elongated loop constituting a standard, of a backing plate, a longitudinally channeled slotted stem integral with the backing plate and straddling the standard, a point detachably secured to the backing plate and having its upper edge outstanding from the stem to constitute an abutment, a wing plate bearing against the slotted stem and abutting the edge of the point, the front faces of the point and plate being flush at their meeting edges, said wing plate being slotted, and means extending through the wing plate, stem and standard for holding them together adjustably.

1,533,826. DOORLOCK. SAMUEL D. BUTTERWORTH, Lansing, Mich. Filed May 28, 1923. Serial No. 641,831. 4 Claims. (Cl. 70—29.)

1. A door lock, having in combination, a casing, a roll striker slidably supported therein, means for yieldably forcing the same outwardly, a striker plate provided with a recess having inclined walls for the roll to ride upon, and a deadlocking bolt slidably supported within the casing intermediate the ends of the roll striker, the said bolt arranged to straddle the roll to also dog the same.

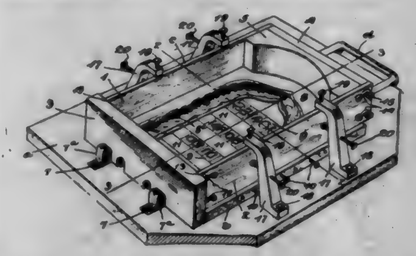
1,533,827. COOLING SYSTEM FOR INTERNAL-COMBUSTION ENGINES. WALTER S. CARR, Dayton, Ohio. Filed Sept. 11, 1922. Serial No. 587,320. 12 Claims. (Cl. 123—175.)

12. A cooling device for an internal combustion engine comprising a water jacket having a compartment arranged above the heads of the cylinders of said engine and provided with a passageway leading to a radiator and a plurality of housings arranged within said compartments, one behind the other, and each spaced from one of the side walls of said compartment to form a passageway between it and said wall, each housing having that side wall which is adjacent to said passageway extended rearwardly at an angle to said passageway, and the side wall of said compartment having inwardly extending portions arranged opposite the extensions to the side walls of the respective housings, each of said housings forming a steam generating chamber and having a nozzle arranged to discharge a jet of steam into one of said passageways.



1,533,828. DOOR-LATCHING MECHANISM. ANDREW CHRISTIANSON, Butler, Pa. Filed Nov. 28, 1923. Serial No. 677,547. 3 Claims. (Cl. 105—308.)

1. In car door latching mechanism, the combination of a rotary shaft carried by the car frame, a downwardly swinging door, a flexible connection secured at one of its ends to said shaft, a swinging latch member carried by said door, a yieldable connection between the other end of said flexible connection and said latch member, and a protuberance carried by said latch member in position to rest upon said shaft when the door is closed.



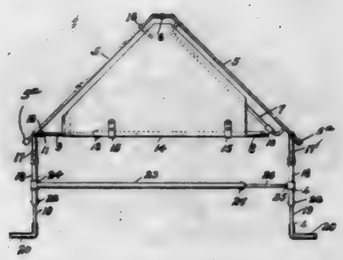
1,533,829. APPARATUS FOR GENERATING MEDICINAL FUMES AND APPLYING THE SAME TO THE BODY OF A PATIENT. JOHN F. CLASS, Dayton, Ohio. Filed Apr. 28, 1921. Serial No. 465,111. 7 Claims. (Cl. 167—3.)

3. In an apparatus of the character described, a generator comprising a casing having an air inlet near the bottom thereof and an outlet at the top thereof, a water receptacle arranged in the lower portion of said casing to provide an air passage between the same and the wall of said casing, a plurality of frusto-conical baffles of different sizes mounted in said water receptacle one above the other, the lower edge of each of said baffles resting upon the bottom of said receptacle and having notches therein and each of said baffles being open at its upper end, a heater for said water receptacle, a plurality of trays interposed between said water receptacle and said outlet, a conduit connected with said outlet, a valve to control said connection, and a device connected with said conduit for applying vapor to the human body.

7. In an apparatus of the character described, a generator comprising a casing having an air inlet near the bottom thereof and an outlet near the top thereof, a water receptacle arranged in the lower portion of said casing and having an air passage about the same, a plurality of frusto-conical baffles of different sizes mounted in said water receptacle one above the other, the lower edge of said baffles resting upon the bottom of said receptacle and having openings therein and each of said baffles having an opening in its upper end, and a heater for said water receptacle.

1,533,830. MEANS FOR MOLDING MONUMENTS AND THE LIKE FROM PLASTIC MATERIAL. JOSEPH E. COCHRAN, Chicago, Ill., assignor of one-half to Ellis T. Crawford, Charleston, W. Va. Filed Sept. 17, 1924. Serial No. 738,181. 9 Claims. (Cl. 25—123.)

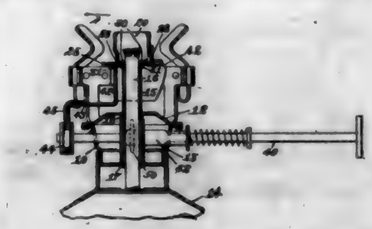
1. Means for molding monuments and the like from plastic material comprising a base-plate, a bottom plate having patterns thereon and adapted to rest upon the base-plate, side and end pieces, the former adapted to rest upon the bottom plate, and a lever hinged to the base-plate and extending beneath the bottom plate for rocking the mold to an upright position.



1,533,831. DOORCHECK. FREDERICK J. COLCHIN, Decatur, Ind. Filed Apr. 19, 1924. Serial No. 707,671. 1 Claim. (Cl. 292—289.)

In a door check, the combination with a body member, the same having a curved outer edge, supporting side plates carried by said body member and having the outer edges thereof curved and extending beyond the curved outer edge of the body member, the inner ends of said

plates being disposed outwardly to provide securing flanges, whereby the body member may be supported on a door, the inner face of the body member having an arcuate recess provided therein, a spring supported in said recess, a bracket having its inner end extending transversely through the center of the supporting plate adjacent the flanged ends thereof, the sides of said bracket extending adjacent the outer faces of said side plates and beyond the outer edges thereof, a roller supported on the outer end of said bracket and adapted to travel over the curved outer edge of the body member between the outer edges of said side plates, said roller adapted to engage with a floor when in an operative position, the inner end of the bracket having a crank portion formed therein for engagement with said spring, whereby the roller may be held in an operative or inoperative position.

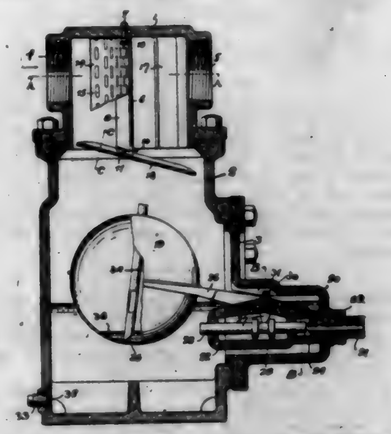


1,533,832. WINDOW SCAFFOLD. JOHN H. COOK, Salt Lake City, Utah. Filed Apr. 11, 1923. Serial No. 631,450. 9 Claims. (Cl. 304—26.)

1. A window scaffold comprising a guard rail composed of sections pivoted together on an upright axis, devices carried by the free portions of the guard rail sections for supporting engagement with the walls of an opening, means for holding the sections and devices spaced apart to maintain such supporting engagement, and a platform that is supported between and by the rail sections.

1,533,833. BURNER. EDWARD C. CORADO, Boston, Mass. Filed Nov. 10, 1923. Serial No. 673,037. 14 Claims. (Cl. 675—65.)

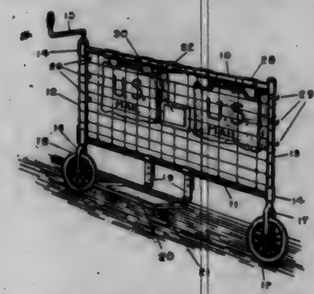
1. A burner having a wick tube and a dome co-operating therewith to form an enlargement thereof above the outlet end of said wick tube, said dome having a bottom and upright walls, the latter being provided with a main air inlet whose lower end is located above the said bottom to cause the wick to be projected out of the wick tube in order to co-operate with said main air inlet and thereby cause the sides of the wick above the wick tube to be exposed.



1,533,834. HENCOOP AND THE LIKE. WILLIAM CULLINANE, Bristol, England. Filed Nov. 10, 1924. Serial No. 748,966. 2 Claims. (Cl. 119—13.)

1. A coop comprising in combination a case member, a canopy member pivoted to said case member, means whereby the canopy member can be let down in front of the case to form a run, and a partition member hinged to move as a whole and adapted to divide the case member from the run.

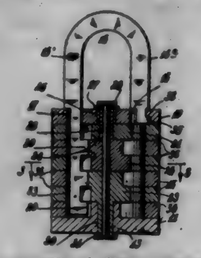
1,533,835. SEPARATOR AND TRAP. CLARENCE A. DAWLEY, Plainfield, N. J. Filed Nov. 1, 1923. Serial No. 672,105. 9 Claims. (Cl. 183—42.)



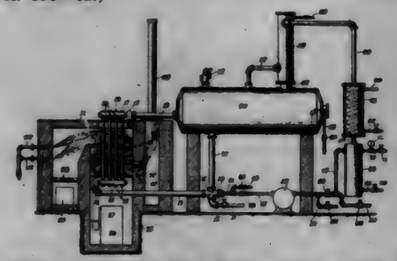
1. A combined separator and trap comprising a baffle chamber and a subjacent trap, baffles in the baffle chamber, and a drip plate to which the baffles discharge, said drip plate substantially corresponding in area to the baffle chamber and serving to confine the turbulent gas flow to the baffle chamber, said drip plate having a gradual downward inclination from the intake to the outlet end of the baffle chamber.

1,533,836. EGG CARRIER. FRED W. DOOR, Creston, Iowa. Filed June 4, 1924. Serial No. 717,798. 4 Claims. (Cl. 220—1.)

1. An egg carrier including a box-like container having an open carton receiving end, there being an aperture in the other end of the carrier for the reception of carton ejecting means, a carton retainer movably engaging the carrier adjacent the open end thereof, said retainer comprising a resilient member slidable within spaced apertures in the carrier, and means upon opposed portions of the retainer and cooperating with the walls of the apertures for holding the retainer in carton retaining position.



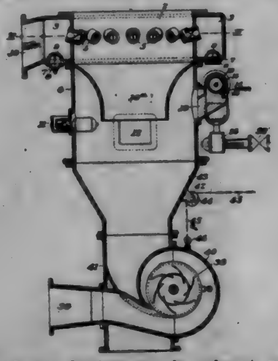
1,533,837. MAIL-DELIVERY VEHICLE. ELIZABETH J. DOUGLAS, Crete, Nebr. Filed Mar. 12, 1923. Serial No. 624,469. 3 Claims. (Cl. 280—55.)



1. In a mail delivery vehicle, a rectangular frame consisting of a top rail, a bottom rail, and a pair of end rails, a pair of supporting wheels positioned beneath said bottom rail, one at each end of the rectangular frame, the wheel at the forward end of the frame being pivoted to a steering post which extends above the level of the top rail and terminates in a steering handle, a hand grip on said top rail at its middle point, each of said end rails having pivoted thereto at its upper extremity a supporting leg, said supporting legs having limited swinging movement outwardly to support the vehicle in inclined position when at rest but swinging into parallel relation with the end rails when the vehicle is in motion, a pair of L-shaped arms secured to said bottom rail and projecting on the side opposite the supporting legs, a platform secured to the horizontal portions of said L-shaped arms, and a pair of supporting wheels underneath the said platform.

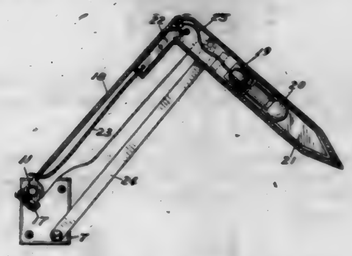
1,533,838. PADLOCK. WILLIAM DUGUAY, Lowell, Mass. Filed Apr. 16, 1923. Serial No. 632,248. 2 Claims. (Cl. 70—113.)

1. A padlock, a shackle, a body comprising a pair of end plates, rotary rings located between said end plates, and disks enclosed within the body adapted to engage and lock the shackle, said disks being formed with elements projecting through the said end plates for purposes of rotation, a part on said shackle adapted to be released from the body by lateral movement of the shackle, said rings normally holding the shackle against lateral movement, and being each formed with a notch adapted to be brought into registry with the shackle to free the latter said notches being of a depth insufficient to permit of disengagement of the shackle from the said disks by the said lateral movement of the shackle.



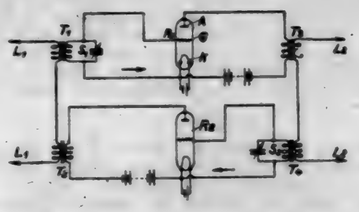
1,533,839. PROCESS AND APPARATUS FOR CRACKING HYDROCARBONS. RECTOR EGELAND, Chicago, Ill. Filed Oct. 17, 1921. Serial No. 508,286. 6 Claims. (Cl. 196—62.)

1. The process of cracking hydrocarbons consisting of circulating hydrocarbons, supplying a gas to said hydrocarbons during circulation, subjecting the hydrocarbons and gas to heat, passing the vaporized and unvaporized hydrocarbons resulting from the application of heat to said hydrocarbons and gas to a still and supplying additional gas and hydrocarbons through an ejector to the unvaporized hydrocarbons and again subjecting the unvaporized hydrocarbons, added gas and added hydrocarbons to heat.



1,533,840. CONDENSER. RAYMOND N. EHRHART, Edgewood, Pa., assignor to Elliott Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Oct. 28, 1918. Serial No. 259,946. 17 Claims. (Cl. 230—18.)

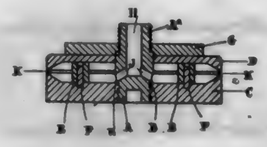
1. A condenser having an air exhaust passage, two separate air ejectors communicating with said passage, and a double seating valve arranged to close the com-



munication between the passage and either one of the air ejectors whereby either of said ejectors may be independently operated and the other completely cut off from said exhaust passage, said valve being constructed to also allow free communication between said passage and both of the ejectors, substantially as described.

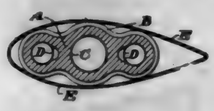
1,533,841. DIRECTION INDICATOR. CARL J. ERSON, Minneapolis, Minn., assignor of one-half to Nils J. Veline, Minneapolis, Minn. Filed Feb. 8, 1924. Serial No. 691,527. 7 Claims. (Cl. 116—54.)

1. A direction indicator consisting of a plate, a channel-shaped casing pivotally secured to said plate, a signal arm pivotally mounted in said casing so as to be substantially concealed therein when in idle position, and a link bar connected at one end to said plate and at the other end to said signal arm.



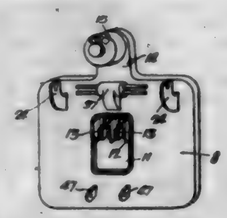
1,533,842. TELEPHONE AND TELEGRAPH SYSTEM WITH AMPLIFIERS. HEINRICH FASSBENDER, Charlottenburg, and ERICH HABANN, Berlin, Germany, assignors to Deutsche Telephonwerke G. m. b. H., Berlin, Germany. Filed May 3, 1921. Serial No. 466,525. 2 Claims. (Cl. 179—170.)

1. A high frequency communication line arrangement, comprising an incoming and an outgoing line, two branches in parallel connecting both said lines together, two amplifying thermionic tubes arranged one in each branch, the said tubes being so arranged that the grid of one tube and the anode of another tube are electrically joined to the same line, and tuning means whereby each of the said branches is tuned to another high frequency oscillation and so that communication can be effected in one direction only and this at the particular frequency to which the tube appertaining to this direction is tuned, said tuning also preventing howling.



1,533,843. ADJUSTABLE CENTRIFUGAL MACHINE FOR EMULSIFYING. ETHEL MARY FERNS, London, England, assignor to The Ferns Emulsifiers Ltd., London, England, a British Company. Filed Aug. 8, 1924. Serial No. 730,952. 14 Claims. (Cl. 99—12.)

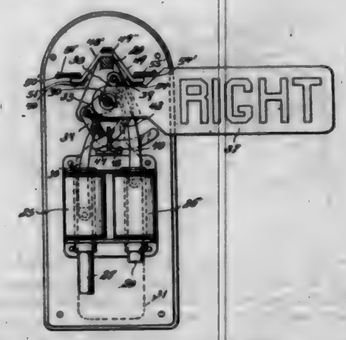
14. An emulsifying apparatus comprising in combination: a plurality of circular discs having their juxtaposed faces dished or scooped out to form sharp edged brims, interchangeable distance pieces arranged between said discs, means for clamping said discs together, and a rotatable central shaft common to said discs and



upon which said discs are fast, said shaft having a longitudinal bore and radial holes connecting said bore and the spaces between the juxtaposed faces of said discs.

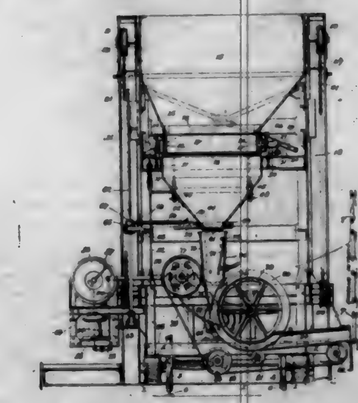
1,533,844. SHOCK ABSORBER SUITABLE FOR USE ON AIRCRAFT. HENRY PHILLIP FOLLAND and HENRY EDWARD PRESTON, Cheltenham, England, assignors to themselves and The Gloucestershire Aircraft Company, Limited, Cheltenham, England. Filed Nov. 20, 1924. Serial No. 751,159. 3 Claims. (Cl. 267—63.)

1. A shock absorber for use on aircraft comprising a plurality of tubes, alternating rubber pads and metal plates threaded on said tubes and a stream line casing enclosing the assemblage of parts and plates.



1,533,845. HEATER. JOHN S. FORBES, Overbrook, Pa. Filed May 3, 1923. Serial No. 636,402. 9 Claims. (Cl. 219—34.)

1. The combination in a heater of a supporting structure; a heat radiating plate hinged to and normally suspended from said structure and movable from a normal substantially vertical plane to a substantially horizontal plane; with means for maintaining said plate in the latter plane.



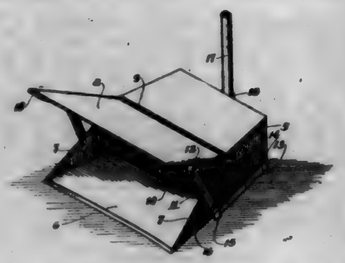
1,533,846. SIGNAL. PAUL JOSEPH FORSYTHE, Eldorado, Kans. Filed July 25, 1921. Serial No. 487,392. 4 Claims. (Cl. 177—339.)

1. A signal comprising a casing, a bracket mounted on one wall thereof, a rotatable shaft mounted between the bracket and the casing wall, a sleeve rotatably mounted on the shaft, semaphores carried by the shaft and sleeve respectively, links depending from the shaft and sleeve provided with notched edges, a keeper positioned beneath the shaft and provided with a central apertured web, a locking flange on either side thereof, the links depending from the shaft and sleeve operating

through the aperture of the web to slidingly engage their respective flanges, and means to move the semaphores into operative position.

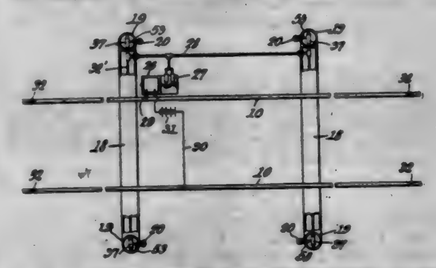
1,533,847. CHARGING APPARATUS. HOWARD C. FREEDENBURG, Baltimore, Md., assignor to The Bartlett Hayward Company, Baltimore, Md., a Corporation of Maryland. Filed May 31, 1923. Serial No. 642,556. 6 Claims. (Cl. 214—18.)

1. In an apparatus of the character specified, the combination of a supporting frame; an elevator structure carried thereby, said structure embodying a storage hopper, a weighing hopper, and a discharging mechanism; means under control of the operator for raising and lowering the elevator structure; and means likewise under control of the operator for controlling the discharge of material from the storage hopper to the weighing hopper and from the weighing hopper to the discharge mechanism.



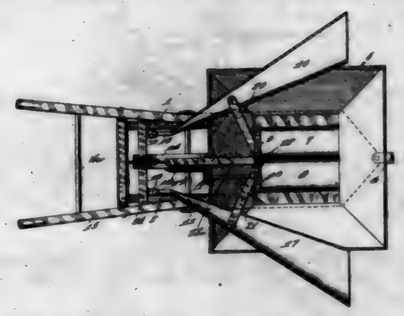
1,533,848. ROLLER SKATE. ADOLPH H. FEITS, Torrington, Conn., assignor to Union Hardware Company, Torrington, Conn., a Corporation of Connecticut. Filed Mar. 16, 1923. Serial No. 625,466. 5 Claims. (Cl. 208—179.)

1. In a roller skate, a frame plate, a truck carried thereby and comprising a yoke member having perforated ears, a roller carrier having perforated flanges to cooperate with said yoke, a pin adapted to extend through the perforations in the ears and flanges to secure said parts together, a plurality of longitudinally spaced shoulders on the pin, and means for pressing a portion



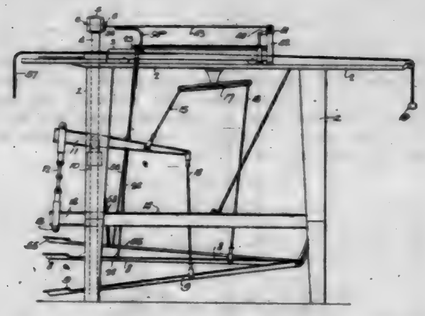
of the pin intermediate said shoulders against the edge of one of the perforations whereby the shoulders will prevent longitudinal movement of said pin in either direction.

1,533,849. DUSTPAN. HARRY GEHMAN, Philadelphia, Pa. Filed Mar. 20, 1924. Serial No. 700,594. 2 Claims. (Cl. 65—20.)



1. A dust pan comprising a receptacle having a flat imperforate bottom, and a mouth with a hinged lid, links pivotally connected to the opposite sides of the lid and depending therefrom, other links pivotally connected at their inner ends to the free ends of the first-mentioned links and pivoted at their rear ends to the rear end of the receptacle, all of said links being arranged on the outside of the receptacle and movable at the sides thereof, and a rigid handle connected to the receptacle, whereby when the pan is being carried by the handle the lid will close by gravity and will be kept closed by the links at each side, said links hanging downwardly below the bottom of the receptacle at an angle, and when the pan is set down on the floor, the links will engage the floor at the inner pivoted connections and cause the links to swing upwardly to open the lid.

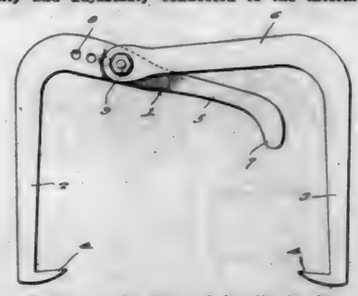
1,533,850. RAILWAY-CROSSING GUARD. EDGAR GIBSON, Big Timber, Mont. Filed Aug. 21, 1922. Serial No. 583,432. 3 Claims. (Cl. 246—261.)



1. In a crossing guard for railway tracks, a gate hingedly mounted beside the track; a chamber; a cylinder having a piston therein, said piston being connected to said gate; means controlled by the presence of a car upon the track for supplying fluid under pressure to said chamber; and means for controlling the passage of fluid pressure from said chamber to said cylinder.

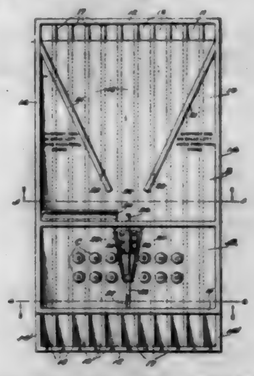
1,533,851. BOLL-WEEVIL DESTROYER. JAMES SULLIVAN GLOVER, Elbridge, Tenn. Filed July 23, 1923. Serial No. 653,251. 4 Claims. (Cl. 43—133.)

4. In an apparatus of the class described, a frame, a supporting wheel mounted to rotate thereon, a hopper mounted on said frame with crushing rolls in the bottom thereof, connections between said rolls and wheel whereby the turning of the latter will actuate the former, wings mounted over said hopper to direct insects into the hopper, links pivotally connected at one end with said wings and at the other end with each other, a bar pivotally connected with the connected end of the links, a lever connected with the bar and adapted to be shifted to move the wings toward and away from each other, and means for holding the wings in adjusted position.



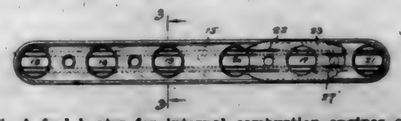
1,533,852. JACQUARD-CARD-PUNCHING MACHINE. KEMP S. GRAHAM, Philadelphia, Pa., assignor to The Orinoka Mills, Philadelphia, Pa., a Corporation of New York. Filed Mar. 15, 1923. Serial No. 625,373. 15 Claims. (Cl. 164—112.)

1. The combination with a supporting body having a recess, of a punch slidable in said recess, and a pair of elements independently movable into said recess in back of the punch and adapted in predetermined relative positions to fix the punch in the body.



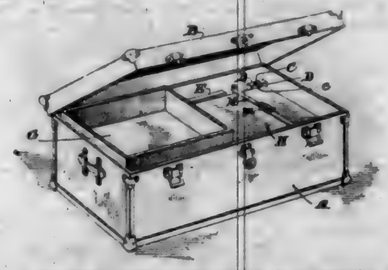
1,533,853. GRAPPLE. MELVILLE M. GRANT, Alliance, Ohio, assignor of one-half to L. Oscar Frantz, Alliance, Ohio. Filed July 25, 1924. Serial No. 728,150. 1 Claim. (Cl. 294—62.)

A grapple of the type specified comprising a pair of arms provided at the corresponding ends with hooks to engage the object to be grasped, the upper end of each arm being directed laterally to provide handles, one of said handles being disposed at an approximate right angle to the complemental portion, the other handle being disposed at an approximate acute angle to its complemental portion, the free end of the right angular handle being pivotally and adjustably connected to the intermediate



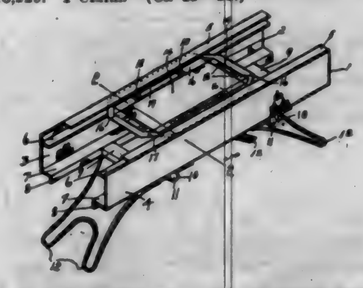
portion of the acutely disposed handle to dispose the hand gripping portion in divergent relation and on a plane below said right angular handle.

1,533,854. GAME APPARATUS. EUGENE D. GRAY, Harrison, Me. Filed May 12, 1924. Serial No. 712,692. 2 Claims. (Cl. 273—122.)



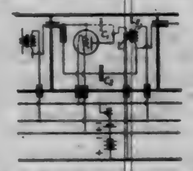
1. In game apparatus, a game board including a base wall, side and end walls, and a flat top upper wall forming a playing surface spaced from said base wall, said upper wall terminating at its ends spaced from said opposite end walls, respectively, and a series of longitudinally disposed dividing walls extending between said upper wall and base wall to form a series of passages having their upper sides open at opposite ends of the board to form a series of pockets across one end and a series of open receptacles across the opposite end of the playing surface, said base wall inclined downwardly from said series of pockets to said series of receptacles.

1,533,855. FUEL HEATER FOR INTERNAL-COMBUSTION ENGINES. HARRY EVERETT HARKIN, Ridgefield Park, N. J., assignor of one-half to Frederick George Krone, Ridgefield Park, N. J. Filed Dec. 1, 1920. Serial No. 427,610. 7 Claims. (Cl. 123—122.)



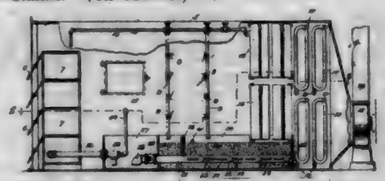
1. A fuel heater for internal combustion engines comprising a wire grid extending across the inlet and exhaust ports of an explosion engine, and serving to transmit the heat of the exhaust therethrough to an explosive mixture contacting with the grid at the inlet port.

1,533,856. TRAVELING TRUNK. WILLIAM HENRY HARRISON, Philadelphia, Pa. Filed Feb. 9, 1924. Serial No. 691,800. 5 Claims. (Cl. 190—19.)



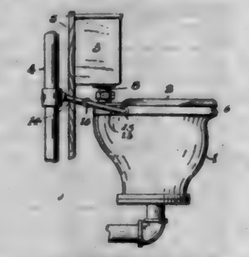
1. A traveling trunk having within it on opposite sides, open ended vertical guides which are shaped to receive and retain the ends of cross bars of garment hangers at the four corners of the trunk, the guides on one side cooperating with the guides on the opposite side to hold said cross bars in position.

1,533,857. AUTO SERVING SET. CHARLES E. HART, Kansas City, Mo. Filed Jan. 17, 1923. Serial No. 613,229. 1 Claim. (Cl. 45—31.)



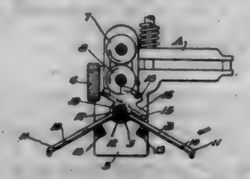
In an auto serving set, a pair of spaced apart side rails having longitudinal channels disposed in opposite relation, bearing boxes mounted on the lower sides of said rails in opposite relation, swinging members having their terminals journaled in said bearing boxes and adapted for supportingly engaging said rails, and a tray slidably mounted in the channels in said rails.

1,533,858. METHOD AND MEANS FOR NEUTRALIZING CAPACITY COUPLING IN AUDIONS. LOUIS A. HAZELTINE, Hoboken, N. J., assignor to Hazeltine Corporation, Jersey City, N. J., a Corporation of Delaware. Original application filed Dec. 28, 1920, Serial No. 433,729, Patent No. 1,489,228, dated Apr. 1, 1924. Divided and this application filed Dec. 28, 1923. Serial No. 683,249. 17 Claims. (Cl. 179—171.)



1. The method of neutralizing capacity coupling between the grid and plate circuits of an audion having a transformer in the plate circuit which consists in capacitively coupling the grid of said audion and a secondary of said transformer to cause equal capacity currents to flow to and from the grid whereby such current is prevented from flowing between the grid and the filament system.

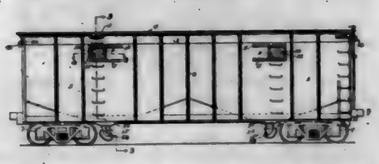
1,533,859. AIR-CONDITIONING SYSTEM. WILLIAM B. HOGUE, Charlotte, N. C., assignor to Parks-Cramer Company, Fitchburg, Mass., a Corporation of Massachusetts. Filed Dec. 18, 1923. Serial No. 681,439. 6 Claims. (Cl. 183—3.)



1. In an air conditioning plant, the combination of an air duct; means for propelling air therethrough; water sprayers in said duct; means for collecting water precipitated in said duct; a pump connected to draw water from said collecting means and feed it to said sprayers; a filter of the granular bed type associated with said collecting means and arranged to filter the collected water on its way to the pump; means for disconnecting said filter from said collecting means; auxiliary means for supplying water to said sprayers; means for producing a reverse flow of water through said filter bed to back-wash the same; and an over-flow positioned above the normal water level on said bed and serving to carry off the back-wash water and water precipitated from said spray heads during the back-washing operation.

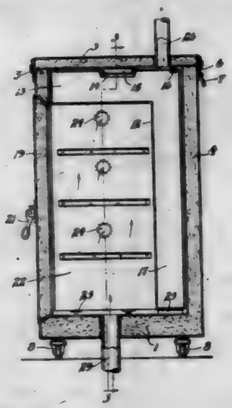
1,533,860. SANITARY RECEPTACLE. SMITH A. HOGE, Rices Landing, Pa. Filed Jan. 15, 1923. Serial No. 612,626. 6 Claims. (Cl. 4—72.)

1. The combination with a closet bowl formed with a hollow brim roll constituting a flushing water supply passage for the bowl, said roll having its bottom provided with water outlets, a water feed pipe leading to said passage, and an air discharge, means leading from said passage, of a plurality of vertically disposed hollow necks integral with and opening through the bottom of said passage and further terminating at their upper ends at a point in proximity to the top of said passage.



1,533,861. WRINGER. CHESTER C. HOWE, New Kensington, Pa., assignor, by mesne assignments, to The Brush Washing Machine Company, New Kensington, Pa., a Corporation of Pennsylvania. Filed Sept. 2, 1921. Serial No. 497,824. 3 Claims. (Cl. 68—32.)

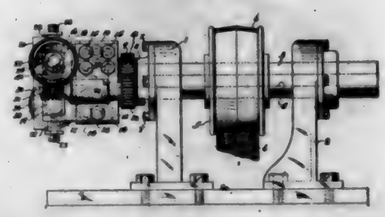
1. The combination with a ringer having a pair of rolls, of a reversible drain board disposed beneath the rolls, and means for automatically shifting the drain board



when the direction of the rolls is reversed, said means including a spring pressed wiper disposed in proximity to the end of the roll and frictionally engaging the end face thereof.

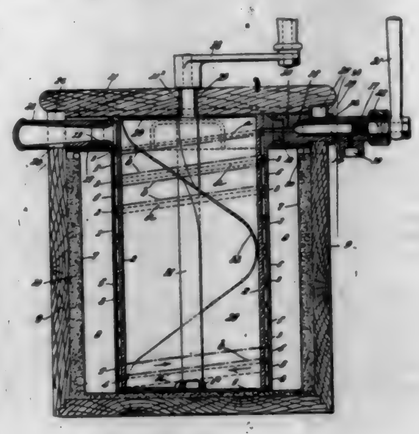
1,533,862. STEEL GRAIN CAR. JACOB A. HYLE, Girard, Ill., assignor, by direct and mesne assignments, to United Railway Equipment Company, St. Louis, Mo., a Corporation of Delaware. Filed May 29, 1924. Serial No. 716,686. 11 Claims. (Cl. 105—248.)

1. A steel grain car of the character described, comprising a central fixed partition forming two compartments, each compartment being formed with an ingress opening at each side, an ingress opening at its top, and two egress openings at the bottom thereof.



1,533,863. REFRIGERATOR. ANTON JOHNSON, Hunter, N. Dak., assignor to Dakota Cooler Corporation, Fairmount, Ind., a Corporation of North Dakota. Filed May 26, 1923. Serial No. 641,612. 6 Claims. (Cl. 45—71.)

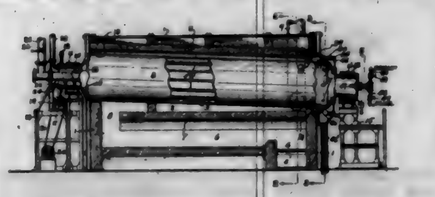
1. A refrigerator comprising a casing having top, bottom and vertical side walls, a door in one of said vertical walls, a removable tank having a top portion with a top wall spaced from the top wall of said casing, and portions extending downwardly along the vertical walls of said casing and spaced therefrom, the said tank being supported in spaced relation from the bottom wall at the back and both sides of said tank by means of spaced supports, and having a chamber formed by the inner portions of the side members and rear member of said tank and the lower portion of the overhanging part of said tank connecting the side members, the chamber thus formed being in alinement with said door.



1,533,864. ATTACHMENT FOR FLEXIBLE-TUBE-MAKING MACHINES. CHARLES J. JOHNSON, Bloomfield, N. J. Filed Oct. 26, 1923. Serial No. 671,056. 3 Claims. (Cl. 117—50.)

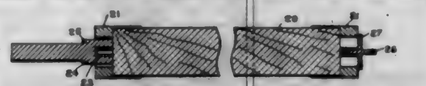
1. In a device of the kind described, a main shaft having an axial passage therethrough, bearing in which said main shaft is journaled, means for rotating said main shaft, a pair of opposed rotatable combined feed and squeeze rollers to engage an armored electric cable passing into and through said shaft passage, means for mounting said rollers in connection with said shaft adjacent to the receiving end of said shaft passage so that said rollers revolve with the shaft about the longitudinal

axis of the latter, a worm and worm gear transmission means for each roller, each transmission means having a spur gear for driving the same, and stationary gear member supported in connection with a bearing of said main shaft with which said spur gears mesh and about which they revolve as the main shaft rotates, and means for adjusting said rollers toward one another.



1,533,865. APPARATUS FOR REFRIGERATING AND FOR MANUFACTURING ICE. WILLIAM FFAULKES JONES, London, and ALAN MATHER PENNINGTON, Bury, England. Filed Oct. 29, 1923. Serial No. 671,519. 2 Claims. (Cl. 62—92.)

1. In a refrigerating and ice manufacturing apparatus of the kind herein referred to, a double-wall receptacle having in the space between the walls a helically directed duct returning on itself, said duct having a passage-way whose cross sectional area gradually increases in the direction of its length between the two ends thereof.

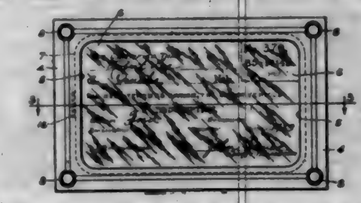


1,533,866. ROTARY KILN. ELLIS C. KENT, Brooklyn, N. Y., assignor to Robert Sayre Kent, Inc., a Corporation of New York. Filed July 24, 1923. Serial No. 653,435. 10 Claims. (Cl. 263—34.)

1. In a kiln, a substantially airtight rotary retort, means for heating said retort, means for introducing material to be treated into the forward receiving end of said retort, said retort having discharge means at its opposite end, means for automatically opening and closing said discharge means, a vent pipe communicating with the forward end of said retort, an adjustable

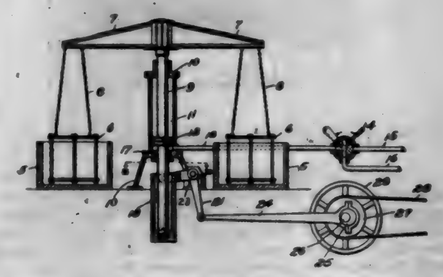
damper mechanism connected with said vent pipe, and means at the rear end of said retort for controlling the admission of air thereinto.

1,533,867. SPINDLE. CHARLES AUGUSTUS KENWORTHY, East Orange, N. J., assignor to The Beck Duplicator Company, a Corporation of New York. Filed May 11, 1923. Serial No. 638,412. 6 Claims. (Cl. 242—68.)



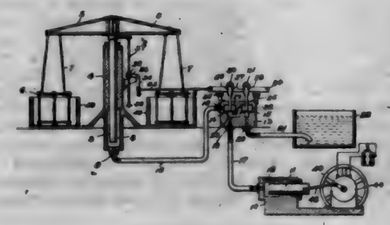
1. In a spindle, the combination with a shaft provided at each end with a member having an opening adapted to be engaged by a chuck; of a removable member adapted to engage with one of said first named members not so engaged by a chuck and provided with a pin adapted to engage with a bearing in the apparatus with which said spindle is adapted to be used.

1,533,868. SCOURING DEVICE. RUSSELL B. KINGMAN, Orange, N. J. Filed May 22, 1924. Serial No. 715,070. 3 Claims. (Cl. 15—208.)



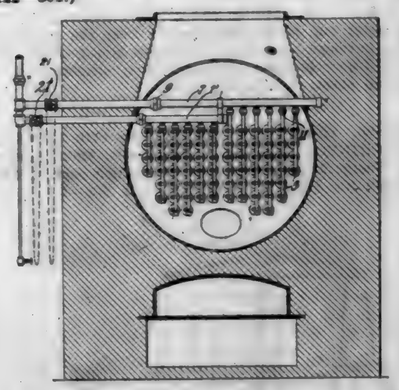
1. A scouring ball, comprising a knitted metallic fabric, a portion of said fabric being loosely balled together to provide a substantially spherical center core, and another portion of said fabric being folded around the said core and secured to form a continuous enveloping outer cover portion.

1,533,869. LICENSE HOLDER FOR MOTOR VEHICLES. AARON T. KLOPP, Omaha, Nebr. Filed Nov. 15, 1923. Serial No. 674,968. 1 Claim. (Cl. 40—16.)



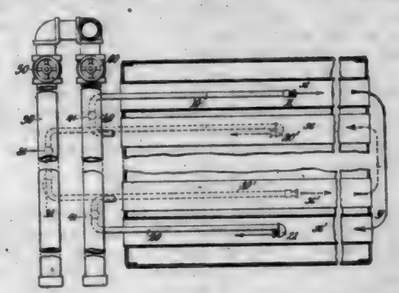
A license holder for motor vehicles, comprising an envelope of moisture-proof material having an open end-flap and having an opening at the front thereof, the edges of said opening being slightly spaced from the adjacent edges of the envelope whereby the remaining portions of the face of the envelope comprise a frame-like border about the opening, a sheet of transparent celluloid and a flat reinforcing member disposed within the envelope, said sheet and member each being substantially coextensive with the envelope, the celluloid sheet being sealed to the face of the envelope about the edges of the opening, and a staple securing together said sheet and reinforcing member near the closed end of the envelope, said staple forming a stop to limit entry of an insert between the reinforcing member and the celluloid sheet.

1,533,870. OPERATING MECHANISM FOR PICKLING MACHINES. LEIF LEE, Youngstown, Ohio, assignor to George Mesta, Pittsburgh, Pa. Filed Sept. 2, 1922. Serial No. 585,973. 3 Claims. (Cl. 266—7.)



1. In combination in a pickling machine, a vat for the pickling solution, a tray, a longitudinally reciprocable and rotatable plunger for supporting said tray, pressure actuated means for yieldingly supporting said plunger and for reciprocating the same to move said tray into or out of said vat and means independent of said pressure actuated means for imparting longitudinal pulsations to said plunger when said tray is in said vat including a nonrotatable reciprocable shoe adapted to receive the lower end of said plunger when said tray is in said vat, mechanical means for reciprocating said shoe and a nonrotatable yieldingly supported buffer plate located within said shoe and adapted to support said plunger and lock it against rotation while said shoe is reciprocating.

1,533,871. OPERATING MECHANISM FOR WEIGHT-SUPPORTING PLUNGERS. LEIF LEE, Youngstown, Ohio, assignor to George Mesta, Pittsburgh, Pa. Filed Sept. 2, 1922. Serial No. 585,974. 14 Claims. (Cl. 266—7.)



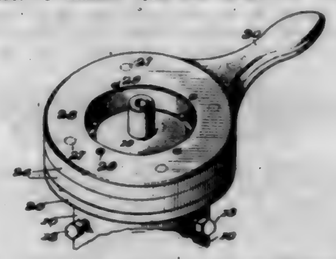
1. In combination with a weight supporting plunger of a machine, a pressure chamber into which said plunger projects, means for delivering actuating fluid to the chamber to support the plunger in different position with relation thereto, and means for delivering pulsations to said fluid within the chamber to reciprocate the plunger.

1,533,872. TUBE CLEANER. FREDERICK W. LINAKER and THEODORE M. BRUBACK, Dubois, Pa. Filed Mar. 10, 1920. Serial No. 364,614. 9 Claims. (Cl. 122—391.)

1. In a boiler, the combination with a fire tube system of a cleaner comprising an expanding jet nozzle inserted permanently within a tube and adapted under pressure to direct a jet of fluid at high velocity parallel with the axis of the tube and in the direction of the normal draft to induce an intensified gaseous flow through the tube, and means for admitting and conducting such fluid to the nozzle.

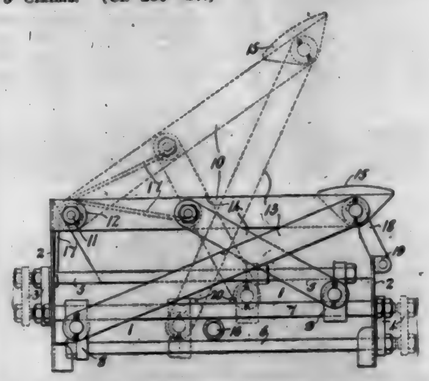
1,533,873. APPARATUS AND METHOD FOR CLEANING BOILER TUBES. FREDERICK W. LINAKER and THEODORE M. BRUBACK, Dubois, Pa. Filed Apr. 6, 1920. Serial No. 371,729. 17 Claims. (Cl. 122—391.)

1. A tube system having parallel tubes connected at their respective ends, and means for causing a normal draft through the tubes in one direction, said tubes divided into groups or series, with cleaning means comprising jet-projecting elements having accelerating nozzles located within the tubes, the series of such elements in the tubes of one group discharging in a direction opposed to such normal draft, and the series in the tubes of another group discharging in a direction coinciding with the normal draft, and controlling valves, whereby on blowing both series of elements a circulation is caused in one direction through one group of tubes and in the reverse direction through the other group of tubes.



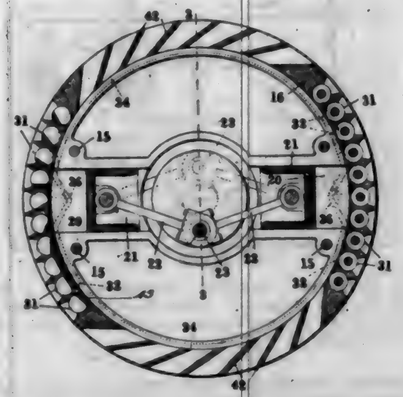
1,533,874. ELECTRIC-ARC WELDING AND PREHEATING HANDLE. HENRY W. LIVERMORE, East Orange, N. J., assignor to Electric Arc Cutting & Welding Company, New York, N. Y. Filed Dec. 30, 1921. Serial No. 525,984. 8 Claims. (Cl. 219—14.)

1. In a device of the class described, a one-piece longitudinal frame member adapted to carry cables substantially from end to end, clamps carried on one end of said member in insulated spaced relationship, holders adjustably carried by said clamps and supporting arc



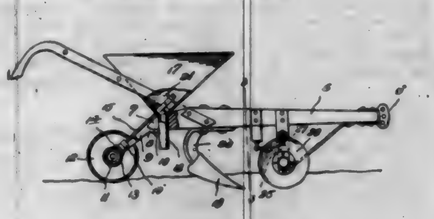
electrodes, fastening means on said clamps for receiving said electric current cables and means for striking an arc between said electrodes.

1,533,875. CASING-HEAD LATCH. CLYDE MCCLEARY, Webb City, Okla. Filed Sept. 17, 1924. Serial No. 738,237. 8 Claims. (Cl. 285—168.)



1. In combination with a control head, a tubular body mounted thereon and having a seat at its upper end, a cap coopernable with said seat, holding means engageable with and disengageable from said cap and including slidable holding pins mounted on the tubular body portion, and a rotatable operating member mounted on the tubular body portion and coacting with said pins for sliding the same inwardly and outwardly.

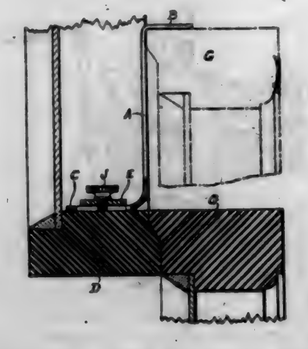
1,533,876. PUMP FOR INFLATING PNEUMATIC TIRES AND THE LIKE. DAVID MCERLANE, Glasgow, Scotland. Filed Aug. 29, 1922. Serial No. 585,007. 5 Claims. (Cl. 230—27.)



1. In a pump for inflating pneumatic tires and the like, a cylinder; piston rods protruding from both ends of said cylinder and provided with crossheads; rods connecting said crossheads with other crossheads adapted to slide on guide rods; and an arrangement of a lever and links for actuating the same, substantially as herein set forth.

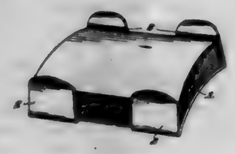
1,533,877. POWER-TRANSMITTING DEVICE. CYRUS T. MCCORMICK, Fredericktown, Mo. Filed May 17, 1923. Serial No. 639,519. 9 Claims. (Cl. 192—60.)

1. In a device of the class described, the combination with a driving member, of a driven member, a cylinder carried by one of said members, a piston connected to the other of said members, a plurality of valves also carried by said latter named member, and means for progressively actuating said valves to retard the flow of fluid from said cylinder, said means being arranged to begin the opening of each succeeding valve before the closing of the preceding valve is completed.



1,533,878. AGRICULTURAL IMPLEMENT. ISHAM E. MCGEE, Starr, S. C. Filed Dec. 26, 1923. Serial No. 682,731. 2 Claims. (Cl. 97—209.)

1. In an agricultural implement of the character described, a beam, vertical bifurcated members rigidly attached to and depending from opposite sides of the beam, vertical spindles carried by said bifurcated members, outwardly projecting stub axles having hub members upon the inner ends thereof rotatably and slidably mounted upon said spindles, yieldable means carried by said spindles for resisting sliding movement of the stub axle hubs upwardly on said spindles, means associated with the stub axles and with the plow beams for securing the stub axles in adjusted position at different angles relative to the longitudinal axis of the beam, and coulter discs journalled upon said stub axles.



1,533,879. WINDOW CATCH. PETER GEORGE RENDALL MACINNES, Glasgow, Scotland. Filed Sept. 20, 1923. Serial No. 663,812. 2 Claims. (Cl. 292—262.)

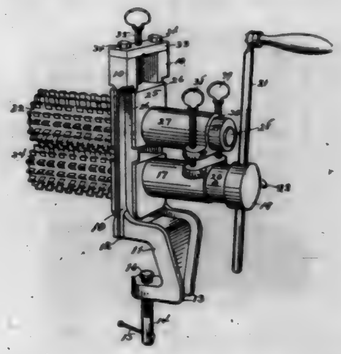
1. A window catch comprising an arm or bar having ends bent over at right angles in opposite directions, and a horizontally apertured socket piece on the lower sash-bar of the upper portion of the window to receive

one bent end of the bar, as and for the purposes described.

1,533,880. CARD HOLDER. MAX H. MALWITZ, Eau Claire, Wis. Filed May 23, 1924. Serial No. 715,822. 1 Claim. (Cl. 273—148.)

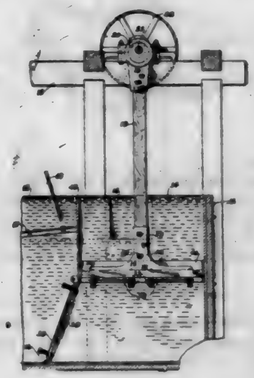
A playing card holder having an inwardly curved back with opposite constricting inwardly bent sides and finger spaces bent up from the edges of the curved back, the space between and parallel with said bent sides being open and unobstructed at both ends, substantially as set forth.

1,533,881. DOOR CONSTRUCTION. HUNTINGTON MALARKEY, Chicago, Ill. Filed Nov. 24, 1924. Serial No. 751,898. 4 Claims. (Cl. 20—35.)



3. In a door, stiles, rails having a wide groove therein, panels in the central portion of said grooves, and wedge members in said grooves and upon each side of said panels.

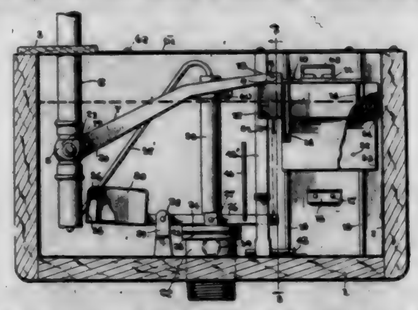
1,533,882. MACHINE FOR TENDERING BEEFSTEAK. SIMON P. MICKEY, Gering, Nebr. Filed Apr. 21, 1924. Serial No. 707,898. 8 Claims. (Cl. 17—26.)



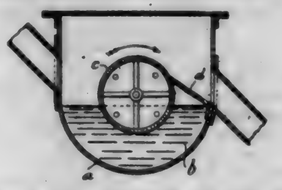
1. A machine for tendering beef steak, comprising a single frame member, means for securing said frame member to a support, shafts mounted substantially parallel

in and extending on opposite sides of said frame member, one of said shafts being adjustable relative to the

other, and toothed rollers removably and replaceably mounted on said shafts, said rollers being wholly at one side of said frame member.



1,533,883. VALVE PLUNGER. GEORGE LEROY MILLER, Shickshinny, Pa. Filed Feb. 20, 1924. Serial No. 694,101. 7 Claims. (Cl. 103—225.)



1. In a device of the character described, the combination of a rectangular chamber, a plunger having a head conforming to the sides of the chamber and reciprocable therein, channel shaped shoes embracing the sides of the plunger and slidably supported thereon, and springs seated between the bottoms of the channels and the sides of the plunger and urging said shoes into close contact with the sides of the chamber.

1,533,884. FLUSH TANK. CHARLES MONROE MINTON, Philomath, Oreg. Filed July 14, 1922. Serial No. 574,937. 3 Claims. (Cl. 4—67.)

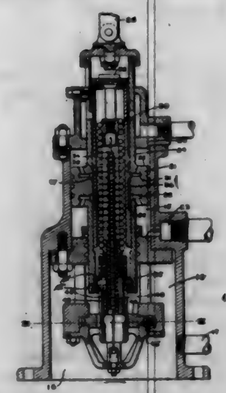
1. A tank of the character described comprising a container body adapted to hold a liquid and being provided with an inlet and with an outlet through the bottom thereof, a vertically movable float within the container and adapted to rest upon a liquid therein, means operated by the float for controlling the inlet, a closure for the outlet, a pivoted arm secured intermediately to said closure, a lever and link arrangement connected to said arm at one end thereof and having a portion extending exteriorly of the container body, whereby said closure can be lifted from closing position upon manual operation of the lever and link arrangement, and a float upon the end of the bar remote from that attached to the lever and link arrangement for returning the closure to closed position.

1,533,885. METHOD OF REMOVING A LIQUID FROM THE SURFACE OF MOLTEN METAL. JOHN STANLEY MORGAN, London, England. Filed June 1, 1922. Serial No. 565,105. 3 Claims. (Cl. 266—34.)

1. A method of completely and rapidly removing a liquid material from the surface of a molten metal, such as lead, so as to avoid or minimise the simultaneous removal of metal, which consists in revolving a body having a surface which is a figure of revolution, with part of the said surface immersed beneath the level of the liquid and removing the material from the surface of the said body at a part thereof which is not immersed.

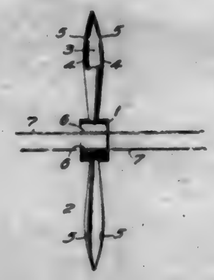
1,533,886. WATER TRAP AND TRAP CONNECTION. PHILIP MUELLER, ANTON C. SCHUERMANN, and CLARENCE W. LUCAS, Decatur, Ill., assignors to Adolph Mueller, trustee, Decatur, Ill. Filed Aug. 19, 1920. Serial No. 404,539. 4 Claims. (Cl. 285—122.)

1. A water trap comprising inlet and outlet pipe sections one of which has a bushing interlocked therewith by a flange at the end of the pipe and a projection in the wall of the pipe below said flange; means for nonrotatably securing said bushing to one of the pipe sections, the other of said sections having an integral flange formed in the wall thereof at a point removed from its end and disposed in opposed relation to said end-flange; and a coupling-nut rotatably engaged with said flanged section and detachably connected with said bushing.



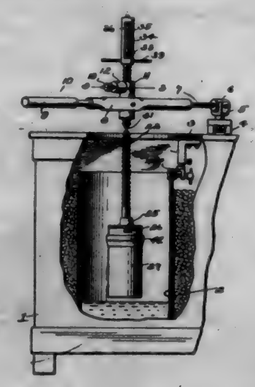
1,533,887. MAIL-BOX SUPPORT. CASPER M. MUGLER, Clay Center, Kans. Filed July 19, 1924. Serial No. 727,018. 3 Claims. (Cl. 232—40.)

1. A mail box support including upper and lower sections, the lower section being of tubular, expansible and contractible form and having an upper head including radially outstanding wings, the upper section having an upright body provided at its lower portion with outstanding wings to seat on the wings of the lower section and also having a depending extension of tubular form telescoping within the upper portions of the



lower section, said upper section having a horizontally outstanding box supporting arm, and having braces connecting its said body portion and its said outstanding arm, and a clamp around the upper portion of the lower section to clampingly engage the same with the inner telescoping extension of the upper section.

1,533,888. GOVERNING APPARATUS. JOHN S. MYERS, Philadelphia, Pa., assignor to Westinghouse Electric and Manufacturing Company, a Corporation of Pennsylvania. Filed Sept. 12, 1923. Serial No. 662,316. 11 Claims. (Cl. 264—14.)



1. In a fluid-pressure actuated governing apparatus, the combination of a controlling element having a single-acting operating piston portion actuated in one direction by intermittent admission of fluid under pressure thereagainst and a stem portion subjected at all times to fluid under pressure for moving the controlling element in the opposite direction, a valve for admitting and exhausting motive fluid to the operating piston portion, means for biasing the valve toward a fixed position relative to the controlling element, and further means for biasing the valve toward a stationary element.

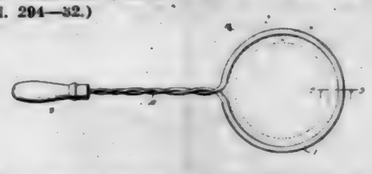
1,533,889. WHISTLING-PROPELLER TOY. FRANK H. NEWCOMB, Ashland, Mass. Filed July 8, 1924. Serial No. 724,838. 2 Claims. (Cl. 46—14.)

1. As an article of manufacture, a whistling propeller toy comprising a hub provided with radial blades oppositely pitched whereby the propeller, upon receiving revoluble movements first in one direction and then the other, expels the air first in one direction and then the other at right angles to the direction of rotation of the propeller, and an operating twisting cord on which the propeller toy is operatively mounted and whereby, upon exerting pressure in directions away from the propeller longitudinally of the cord and alternately relieving the pressure, revoluble movements are imparted to the propeller, the opposite walls of the propeller blades being arcuate and provided with axially aligned circular openings which act to draw in and expel the air during the rotation of the propeller for the purpose of creating a whistling noise.

1,533,890. BOX FILLER. OLLIE B. NEWMAN, Camp Chase, Ohio. Filed Sept. 17, 1924. Serial No. 738,258. 5 Claims. (Cl. 226—19.)

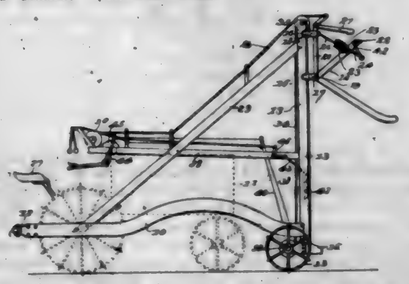
3. A device of the class described, comprising a frame, telescopically connected sections adapted to adjustably connect the frame to an ice cream containing cabinet, a hollow shaft adjustably connected with the frame and having a box holder detachably connected to its lower end, a rod slidable in the shaft and having a disk upon its lower end adapted to engage a box mounted in the holder, a casing mounted upon the upper end of the shaft, said casing having notches formed therein, a pin carried by the rod for selectively engaging the notches to hold the disk in adjusted positions to engage boxes of varying capacities mounted in the box holder.

1,533,891. SINK TRAY. CLAUDE J. OLES, Unadilla, N. Y. Filed Aug. 15, 1924. Serial No. 732,263. 1 Claim. (Cl. 4—189.)



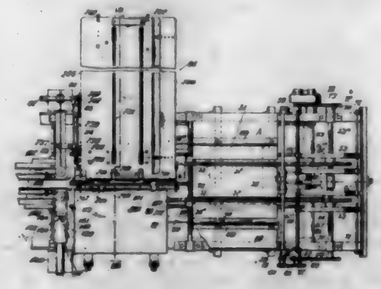
A sink tray comprising a pair of spaced, parallel, wooden sills, each sill having its upper face formed with sockets extending downwardly partway into the sill, and also having depending foot portions at the terminals thereof, and a plurality of spaced metallic cross bars connecting the sills, each cross bar having its terminals bent downwardly and pointed to be forced into said sockets, the latter being of less diameter than said pointed terminals for the purpose set forth, and each pointed terminal having longitudinal ridges to prevent turning in their respective sockets.

1,533,892. CASTING FREELY OXIDIZABLE METAL. HAROLD H. OSBORNE, Cleveland, Ohio, assignor to American Magnesium Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Mar. 6, 1922. Serial No. 541,569. 11 Claims. (Cl. 22—188.)



1. A sand mold having a binder containing glycerine.

1,533,893. PLATE LIFTER. JOSEPH PERRY, Jackman, Me. Filed Oct. 9, 1924. Serial No. 742,682. 2 Claims. (Cl. 294—32.)

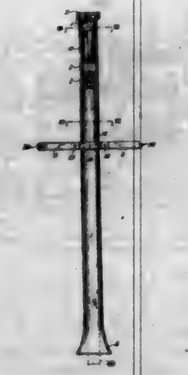


1. A kitchen implement of the character specified comprising a single stout wire doubled upon itself and having the part adjacent the fold or bight enlarged to provide a ring which is flattened, the end portions of the wire being brought together and intertwisted.

1,533,894. HAYSTACKER. HENRY A. PETERSON, Holdredge, Nebr. Filed July 13, 1921. Serial No. 484,361. 3 Claims. (Cl. 214—113.)

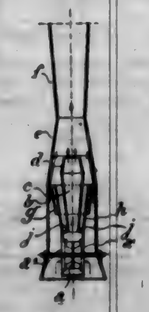
1. A hay stacker having a push frame provided with laterally spaced side beams to permit of the arrangement therebetween of a tractor, a push bar spanning the rear ends of said side beams and adapted for attachment at an intermediate point to a convenient portion of the tractor frame, an upright frame supported by the front end of the push frame, a fork mounted for vertical movement upon the upright frame, a ground wheel supporting the push frame at the forward end, fork actuating means operatively connected with the ground wheel, an overhead frame paralleling the push frame and terminating adjacent the tractor seat, and controlling means for the fork actuating means carried by said overhead frame.

1,533,895. BOOK OR PAMPHLET COVERING MACHINE. JOHN J. PLEGER, Chicago, Ill. Filed Feb. 4, 1922. Serial No. 534,101. 42 Claims. (Cl. 11—4.)



1. A machine of the character described, comprising endless cover-sheet conveying means provided with cover-sheet engaging portions, means disposed along the path of the cover-sheet whereby one side of the latter is scored, and means, disposed beyond said scoring means, along the path of the cover-sheet whereby the opposite side of the cover-sheet is provided with adhesive material intermediate of the outer scores.

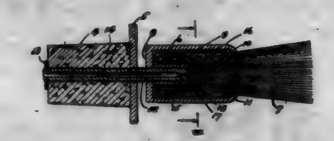
1,533,896. GAS RETARDING AND ADJUSTING DEVICE. FREDERICK W. POPE, Roxbury, Mass. Filed May 28, 1924. Serial No. 716,361. 8 Claims. (Cl. 137—112.)



1. A device for retarding and adjusting the flow of gas in boiler tubes comprising a tubular body portion, a tubular section projecting from the body portion, and removable means carried by the device to retard and adjust the flow of gas.

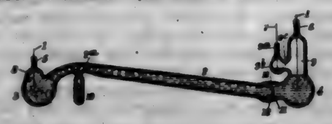
1,533,897. WELL DRIVER. JAMES W. POTTS, Gunnison, Miss. Filed Mar. 29, 1923. Serial No. 628,661. 5 Claims. (Cl. 61—73.)

1. In a well driver of the type described, a pipe section, handle bar carried thereby, a metallic insert at the upper striking end of the pipe section, and a wooden block embedded in the metallic insert.



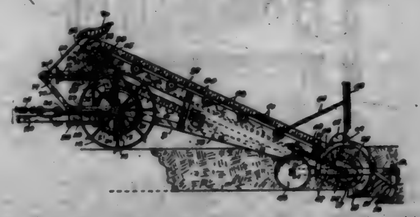
1,533,898. APPARATUS FOR OBTAINING ARTIFICIAL DRAFT. GEORGES JULES ARMAND LOUIS PRAT, Paris, France. Filed Aug. 30, 1923. Serial No. 660,257. 3 Claims. (Cl. 110—162.)

1. In apparatus for producing artificial draft in chimneys, the combination of a fan or ventilator having a discharge nozzle opening to the chimney, a housing around said nozzle and communicating at one end with the outlet of the fan and providing a passage between its other end and the chimney wall, means for opening or closing said passage whereby the apparatus may operate to produce either an induced or an aspirated draft, and means whereby the discharge of the fan may take place through the nozzle alone or through the nozzle and housing.



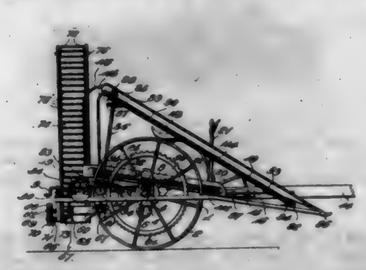
1,533,899. FOUNTAIN BRUSH. JACK E. PYETLE, San Francisco, Calif., assignor to Service Products Manufacturing Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 23, 1924. Serial No. 694,675. 2 Claims. (Cl. 15—138.)

1. A fountain brush comprising a reservoir handle with a stopper at one end with a threaded pipe extending therethrough and projecting therefrom, a bristle carrying tubular element surrounding and securing the bristles and having a threaded socket screwing over the



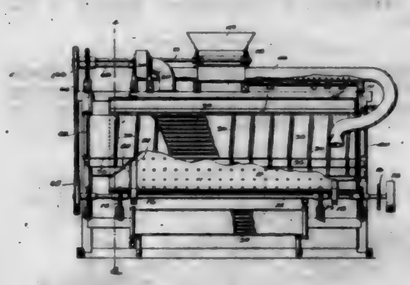
pipe, said socket having a stop adapted to abut and close the end of the pipe upon screwing the element, and a port from the socket to the bristles adjacent the stop.

1,533,900. MERCURY AND OTHER VAPOR ELECTRIC LAMP. FREDERICK REYNOLDS, Walkerville-on-Tyne, England, assignor of one-half to The Silica Syndicate Limited, Westminster, London, England, a Company of Great Britain. Filed Apr. 16, 1921. Serial No. 462,054. 3 Claims. (Cl. 176—42.)



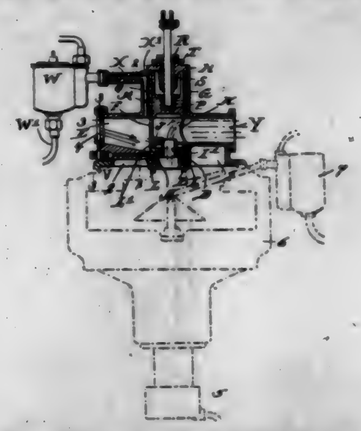
1. A vapor electric lamp of the atmospheric type, having a lighting tube, a chamber at only the lower end thereof for displaced vaporizable liquid, a chamber at the upper end of said tube and filled with said vaporizable liquid, said lighting tube being constricted to assist in the striking of an arc at the starting of the lamp, said constriction being of such extent and so located that the liquid at the negative end of the lamp remains in the constriction during the play of the arc, said constriction being of such cross section that at the negative end of the lamp the cross sectional area of the liquid upon which the arc plays is less than that upon which the arc plays at the positive end of the lamp, the relation between said areas being such that the temperatures of the opposed faces of the liquid electrodes upon which the arc plays at its opposite ends, are substantially equal, and condensation at the negative electrode is thus avoided.

1,533,901. DITCHER. ANDREAS G. RONNING and ADOLPH RONNING, Minneapolis, Minn. Filed Feb. 20, 1922. Serial No. 537,818. 18 Claims. (Cl. 37—102.)



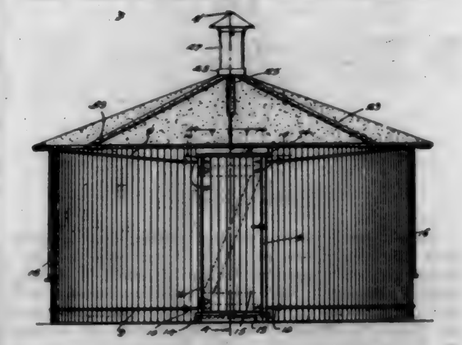
1. In an excavating machine, a forwardly inclined elevator boom, an endless carrier mounted upon shafts at opposite ends of the boom, a curved shovel arranged rearwardly of the lower end of the carrier and in normally uniform spaced relation therewith, said shovel being pivotally connected to the boom for swinging movement in a vertical plane, and means for mounting the lower shaft of the carrier with reference to the lower end of the carrier whereby the shaft will be yieldably movable away from the shovel to permit the space between the carrier and the shovel to enlarge under pressure.

1,533,902. ENSILAGE CUTTER. ANDREAN G. RONNING and ADOLPH RONNING, Minneapolis, Minn. Filed Mar. 13, 1924. Serial No. 699,125. 4 Claims. (Cl. 56—61.)



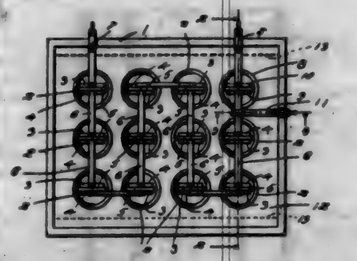
1. A harvesting machine having a stalk gathering and feeding mechanism, means for cutting the standing stalks from the field, a chute receiving from said cutting mechanism which is inclined upwardly and rearwardly and which is arranged to deliver to a second cutting mechanism, said stalk gathering and feeding mechanism being arranged to convey the cut stalks in an upright position from said first named cutting mechanism, means for directing the severed stalks so that they will fall from said gathering and feeding mechanism transversely of the direction of the movement of the machine, an ensilage cutting mechanism arranged to receive the stalks as they thus fall transversely of the movement of the machine and to cut the stalks into small particles as they are thus received, elevator mechanism arranged to receive from said ensilage cutting mechanism and to deliver the said cut particles of stalks from the machine, and power applying devices for operating the said several mechanisms of the said machine.

1,533,903. SEED-COTTON CONDITIONER. PARRISH H. RYLANDER, Austin, Tex., assignor to The Rylander Co., Austin, Tex. Filed Jan. 31, 1923. Serial No. 616,143. 11 Claims. (Cl. 34—5.)



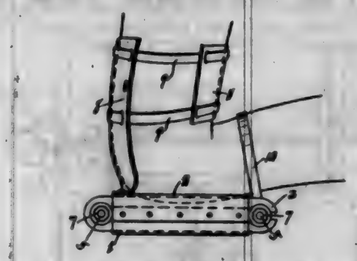
10. A cotton conditioner comprising a casing, a drum arranged therein, a feed hopper having a flue for supplying cotton to the drum, a plurality of stationary spaced coils arranged within the drum and being transversely inclined, the upper edges of the coils being arranged in spaced vertical planes, covers extending over the coils and constituting trays to support the cotton for sliding movement across the coils during which time the cotton is subjected to the action of heat from the coils, supplemental heating means for the cotton, a fan adapted for supplying heated air to the flue whereby to maintain the flue and the drum in a heated condition, covers for said coils being provided with means to advance cotton as it passes across the covers, and means to supply jets of steam to the cotton during its passage through the flues.

1,533,904. MIXING VALVE FOR GASES. THOMAS WILLFRED SAUNT, Leigh-on-Sea, England. Filed Aug. 4, 1924. Serial No. 730,019. 1 Claim. (Cl. 261—44.)



A casing comprising a conduit adapted for connection at one end to an engine intake and open at the other end to the atmosphere, an inlet for vaporized fuel extending into said conduit transversely of the bore thereof, a cylindrical sleeve extending across said conduit coaxially of said fuel inlet, said sleeve being formed with an opening in that side adjacent the end of the conduit which is adapted to be connected to the engine intake, and with an arcuate port in the opposite side extending part way around said sleeve, the upper edge of said port terminating substantially at the upper edge of said fuel inlet, and a plunger-type throttle valve operable within said sleeve.

1,533,905. BROODER HOUSE. HENRY M. STAUFFER, and CLAUDE R. STAUFFER, Leola, Pa. Filed Dec. 18, 1923. Serial No. 681,389. 2 Claims. (Cl. 20—2.)

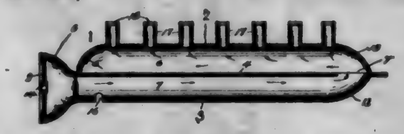


1. A brooder house comprising a sectional floor, a sectional enclosing wall embodying upper and lower cleats on the inner surface thereof, the lower cleats being disposed to overlap and rest upon the floor, and the upper cleats having their ends halved to provide lap joints, a flexible tie exteriorly encircling the enclosing wall and assisting materially in retaining the sections in place, a sectional roof including rafters which are let into notches in the top of the outer wall and which are notched in turn to receive said wall, said tie being disposed in the notches of the rafter and a collar having the roof sections grouped thereabout and receiving dowels projecting from the rafters, the enclosing wall being provided with a door and windows.

1,533,906. COMBINED STORAGE BATTERY AND RECTIFIER. WILLIAM THRESH, Cincinnati, Ohio. Filed Apr. 12, 1923. Serial No. 631,582. 2 Claims. (Cl. 136—29.)

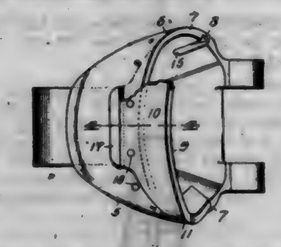
1. A storage battery including a plurality of cells electrically connected in series, a rectifier cell electrically connected to one end of said series, a terminal secured to said rectifier, another terminal secured to the end cell of the series farthest removed from the rectifier, and a third terminal adapted to be connected in circuit with the series of battery cells at different positions for charging and discharging the battery.

1,533,907. KNEE PROTECTOR. JOHN W. WHIPP, Fort Worth, Tex., assignor of one-half to M. H. Moore, Fort Worth, Tex. Filed July 26, 1924. Serial No. 728,481. 4 Claims. (Cl. 2—24.)



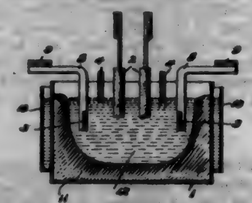
2. A knee protector comprising a base member and a knee supporting member, a frame for spacing said base and supporting members apart, said base and supporting members being formed of a single piece of flexible material and surrounding said frame, a brace and shield attached to said knee support, straps and buckles attached to said brace and shield for binding the same to the leg of the wearer, and a bearing member to prevent said straps from injuring the legs of the wearer.

1,533,908. TOY GUN. HENRY J. WOLTER, St. Cloud, Minn. Filed July 3, 1924. Serial No. 724,088. 1 Claim. (Cl. 124—14.)



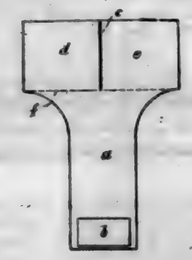
A gun comprising a stock provided with a longitudinally extending groove terminating at its rear end in a shoulder, a barrel provided at its front end with an arcuate notch and having its rear portion seated in said groove with its rear end in contact with said shoulder, a fastening element passing through the stock and engaging the barrel, said stock being provided with an opening and said barrel with a slot, and a trigger pivoted to the barrel within said slot and extending through said opening, said trigger being provided with a forwardly extending arm positioned in said slot and terminating at its front end in a lug extending through said slot above the barrel.

1,533,909. BURNER FOR GAS STOVES. ORA A. FERGUSON, Tulsa, Okla. Filed May 18, 1922, Serial No. 561,985. Renewed Mar. 5, 1925. 2 Claims. (Cl. 158—104.)



1. A gas burner, comprising a base trough section of semi-circular form in cross section and having a baffle integral therewith and in the plane of its upper edge and a gas inlet port, and a cover section also of semi-circular form in cross section and having its lower edge in the plane of said baffle and being provided with burner tips, said cover section being of the same length of said base section and forming therewith a burner of circular form in cross section, of which said baffle is diametric.

1,533,910. DREDGE BUCKET AND LIP THEREFOR. GEORGE R. HANKS, High Bridge, N. J., and GERRITT V. WOOD, Oakland, Calif., assignors to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed June 25, 1924. Serial No. 722,304. 10 Claims. (Cl. 37—191.)



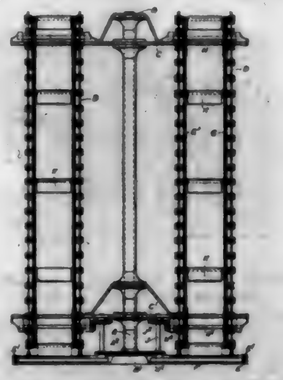
1. A dredge bucket having its hood formed with a lip seat, a lip adapted to said seat and having flanges inside and outside the hood, the inside flanges having a wedge connection with the hood.

1,533,911. ELECTROLYTIC PRODUCTION OF MAGNESIUM. WILLIAM G. HARVEY, Niagara Falls, N. Y., assignor to American Magnesium Corporation, Niagara Falls, N. Y., a Corporation of New York. Filed Sept. 6, 1921. Serial No. 498,892. 4 Claims. (Cl. 204—19.)

1. The method of electrodepositing magnesium from a molten fluorid bath utilizing a solid cathode, comprising maintaining the zone of bath in proximity to the cathode at a lower temperature than the zone of bath in proximity to the anode, whereby the cathode zone of bath is more viscous than the anode zone.

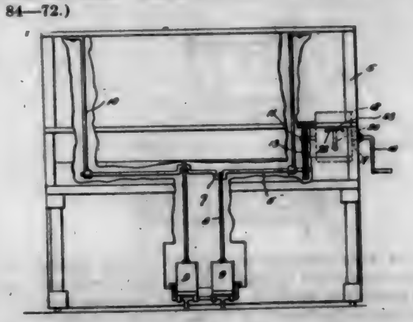
1,533,912. DEVICE TO LESSEN THE VELOCITY OF FALL OF SAMPLES THROWN OUT OF FLYING MACHINES. FRIEDRICH HESS, Munich, Germany. Filed June 9, 1924. Serial No. 718,995. 2 Claims. (Cl. 244—1.)

1. A device to retard the velocity of fall of articles thrown out of flying-machines, specified as consisting of a sheet of paper or similar material, to the lower end of which the article can be attached, while the upper end is formed into two screw-blades, by which a rotatory motion round a vertical axis is imparted as the device falls, and this rotation hindered by the resistance of the air to the rotating stem of the device.



1,533,913. BOBBIN. ROY D. HEYMANN, Hartford, Conn. Filed Mar. 24, 1924. Serial No. 701,892. 2 Claims. (Cl. 242—120.)

2. A hollow bobbin of fruato-conical form and of pulp, the body receiving in it a spider comprising a base that fits over the lower edge of the body and having a head and a hollow stem connecting the head and the base, the head having spurs which are pressed downwardly onto the body, said hollow stem being adapted to slidingly fit over a spindle.



1,533,914. AMUSEMENT DEVICE. CLARENCE D'OYLEY HUTCHINS, Windsor, England. Filed June 24, 1924. Serial No. 722,123. 3 Claims. (Cl. 272—7.)

1. In an amusement device of the class described, the combination of a vertical pivot, a tube rotatable about said pivot, a framing comprising radial arms extending from said tube, a cage carried by said arms elevating mechanism mounted in the cage at least one car permanently freely suspended from said elevating mechanism, means for rotating the framing about its pivot, and means for actuating the elevating mechanisms when the whole framing is rotated such that the raising and

lowering of the several cars is positively controlled by these mechanisms and takes place along substantially similar ascending and descending paths.

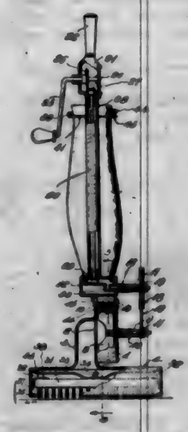
1,533,915. MOTOR ATTACHMENT FOR PLAYER PIANOS. JOHN EARL JACKSON, Detroit, Mich. Filed Oct. 13, 1923. Serial No. 668,330. 4 Claims. (Cl. 84—72.)

1. In a combination with a player piano embodying a case and operating pedals, a longitudinal crank shaft journalled within the case of the piano and having cranks, links operatively connecting the cranks of said shaft with said pedals, a spring motor within the case adjacent one end of the latter and operatively connected to said crank shaft, externally disposed means for rewinding said spring motor from a point at one end of the piano case, and means adjacent said rewinding means for rendering the motor operative or inoperative at will.

1,533,916. BONDING RAIL JOINT. IRA K. JOHNSON, West Caldwell, N. J. Filed May 23, 1924. Serial No. 715,328. 3 Claims. (Cl. 238—243.)

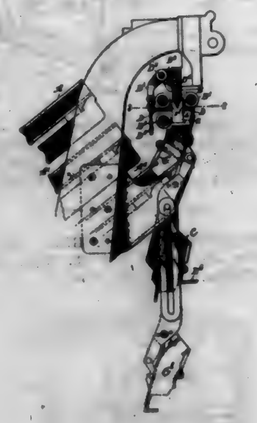
1. A rail joint comprising fish plates, oppositely disposed longitudinal sets of projecting teeth formed on said fish plates at the point of contact of the same with each rail whereby irrespective of the relative movement of the connected rail sections, said teeth set up a biting action to insure bonding of the rails and the establishment of electrical communication therebetween.

1,533,917. BLEACHING PROCESS AND MEANS. WILLIAM O. KAISER, Burlington, Iowa. Filed July 10, 1924. Serial No. 725,282. 10 Claims. (Cl. 8—2.)



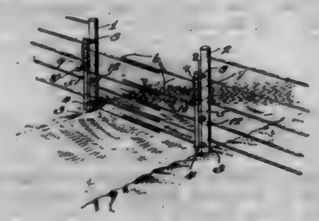
2. The process consisting in placing the object to be treated between sheets of material respectively impregnated with oxalic-acid and sodium bisulphite, and then applying to the sheets a liquid whereby said chemicals are caused to react.

1,533,918. WEEDER. MORGAN D. KAST, Pendleton, Oreg. Filed July 25, 1922. Serial No. 577,294. 7 Claims. (Cl. 97—144.1.)



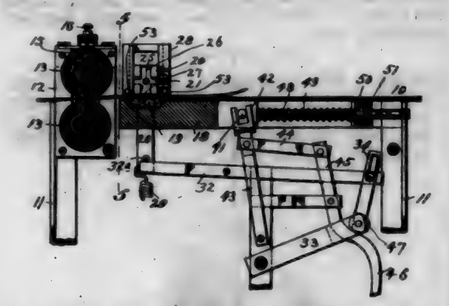
1. A weeder comprising a coupling frame, a pair of weeder frames pivotally connected to the coupling frame and supporting the same, rollers mounted within the weeder frames, cutting blades carried by the weeder frames, means for independently adjusting each of the rollers to regulate the depth of the blades, and means for independently dumping each weeder frame.

1,533,919. HAND-OPERATED VACUUM CLEANER. WALTER L. KEEFER, Chambersburg, Pa., assignor to Harry G. Wolf, Chambersburg, Pa. Filed Feb. 26, 1923. Serial No. 621,405. 3 Claims. (Cl. 15—17.)



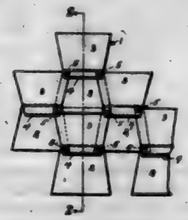
1. A hand-operated vacuum cleaner comprising a fan casing having an inlet nozzle at its front side, a suction fan in said casing having a horizontal shaft extending laterally through one side thereof, a gear casing pivoted to the rear side of said fan casing on a horizontal axis parallel to said shaft, a second horizontal shaft extending through one side of said gear casing and disposed parallel to and behind the fan shaft, wheels on both of said shafts and a belt trained around said wheels, said belt being yieldable to permit vertical swinging of said gear casing without interfering with driving of the fan shaft, an elongated handle at right angles to said shafts secured at its front end to said gear casing, a longitudinally extending manually operated shaft carried by said handle and extending into said gear casing, and gearing in said gear casing for driving the second named shaft from said longitudinal shaft.

1,533,920. TYPOGRAPHICAL DISTRIBUTING MACHINE. DAVID S. KENNEDY, Brooklyn, N. Y., assignor to Mergenthaler Linotype Company, a Corporation of New York. Filed Aug. 16, 1923. Serial No. 657,657. 16 Claims. (Cl. 199—38.)



1. A typographical distributing mechanism including, in combination, a distributor bar formed to release a matrix at one point, and cooperating means adapted to give support to said released matrix and drop it at a different point, said means being movable into or out of action, as required, according to the distributing point of the matrices undergoing distribution.

1,533,921. FLOODGATE. JOHN A. KENNEDY, Topeka, Kans. Filed June 7, 1924. Serial No. 718,536. 2 Claims. (Cl. 39—4.)



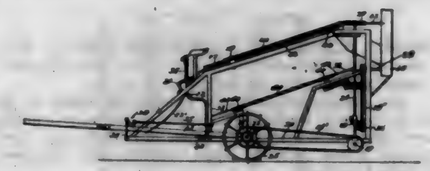
1. A flood gate comprising standards, one on each side of a stream, gate sections with vertical spindles rockably mounted on the standards and adapted to align with each other for the purpose of closing a gap in a fence ending on each side of the stream, projecting abutments on the standards for limiting the gate sections in alignment, and means on the spindles for tensioning the gate sections to hold them against the abutments.

1,533,922. PLANT-SHREDDING MACHINE. WILLIAM EDWIN KILLINGER, Oklahoma City, Okla. Filed Sept. 18, 1923, Serial No. 663,455. Renewed Feb. 20, 1925. 8 Claims. (Cl. 19—1.)

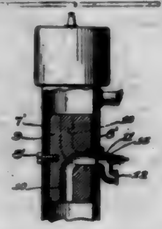
3. A plant shredding device comprising a slitting device a plant drawing means beyond the slitting device, and means to move the slitting device while in engagement with the plant towards the plant drawing means.

1,533,923. INTERLOCKING SHINGLE. RAYMOND A. KNOLL, Carrick, Pa. Filed July 13, 1923. Serial No. 651,322. 2 Claims. (Cl. 108—8.)

1. A shingle provided with a central double fold providing inner and outer elements extending in substantial parallelism with the body of the shingle and adapted for reception between them and the shingle body of the corner portions of adjacent shingles, the ends of the shingle being plain and unfolded to facilitate insertion thereof into the folds of adjacent shingles.



1,533,924. BUCKLE STRAP. HERMAN A. KREIDORN, Seguin, Tex. Filed May 27, 1924. Serial No. 716,203. 3 Claims. (Cl. 241—8.)



1. A strap comprising two side strips secured together with a lining interposed having ribs thereon running transversely to the strap.

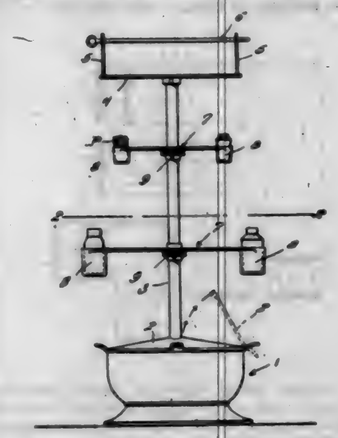
1,533,925. MAIZE HEADER. JOHN S. LANE, Rochester, Tex. Filed July 25, 1922. Serial No. 577,344. 8 Claims. (Cl. 56—59.)

1. A harvester for maize and similar products having a preliminary or stalk cutting mechanism for severing the stalks from the stubble at a uniform distance from the plane of the ground surface, means for engaging the grain heads to support the same with the attached stocks, means for conveying the heads rearwardly in this stalk supporting position and in a common plane, and a head cutter mechanism for severing the stalks at a uniform distance from the heads, the means for engaging and guiding the heads in a stalk supporting position consisting of a grille having longitudinally disposed rods forming spaces for the reception of the stems or stalks.

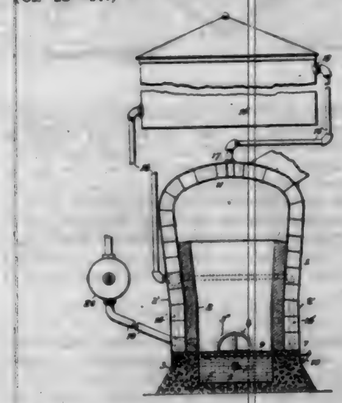
1,533,926. INTERNAL-COMBUSTION ENGINE. LUDVIG A. LARSON, Summit, S. Dak. Filed May 31, 1922. Serial No. 564,889. 1 Claim. (Cl. 123—61.)

In an internal combustion engine, a cylinder, a hollow piston mounted for reciprocation therein, a stationary valve core in said piston and provided with L shaped passageways opening out through its ends and through its side intermediate its ends, an intake manifold communicating with the side openings of said passageways, said piston provided with a slot engaging over said manifold.

1,533,927. MULTIPLE-SPAN BRIDGE. CARL G. EMIL LARSSON, Plainfield, N. J. Filed Feb. 7, 1923. Serial No. 617,547. 4 Claims. (Cl. 14—7.)



2. A bridge comprising a plurality of sections supported on piers, the length of the sections and the spacing of the piers being such that a cantilever portion of one section supports a simple span portion of an adjacent section which rests on a pier, the length of the cantilever portions each being substantially one sixth of the length of the section.



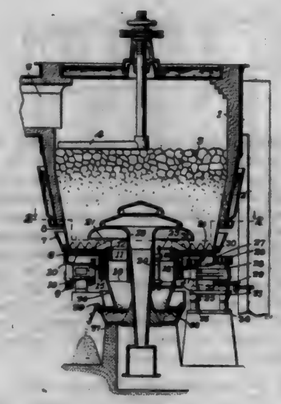
1,533,928. TABLE ARTICLE. GEORGE LECOPOULOS, Chicopee Falls, Mass. Filed June 16, 1924. Serial No. 720,268. 1 Claim. (Cl. 65—55.)

A table article supporting device of the class described comprising a bowl having a base to rest upon the table, said bowl having its top closed by a plurality of individual cover sections, a vertically disposed standard rising from the center of the bottom of the bowl, and extending above said cover section, a horizontal article supporting plate mounted upon the top of said standard, retaining arms carried by said plate and projecting upwardly therefrom, being provided at their upper ends

with apertures, a pin removably inserted through said apertures, and vertically spaced superposed spiders rotatably mounted upon the intermediate portion of the standard between the plates and bowl, the uppermost spider being comparatively small, all of the arms of the spiders being provided at their outer ends with cups.

1,533,929. GAS PRODUCER. JAMES HARRY LEMMON, Milltown, Ind., assignor to Louisville Cement Company, Louisville, Ky., a Corporation of Kentucky. Filed June 3, 1919. Serial No. 301,549. 2 Claims. (Cl. 48—67.)

1. A gas producer comprising a base having an upwardly extending wall, a fire wall extending upwardly from the wall of the base and spaced from the outer edge thereto to form a seat, a grate mounted in the base within the upwardly extending wall thereof, a water jacket surrounding the fire wall with its lower end resting upon the seat of the base wall, said water jacket extending above the upper end of the fire wall and over the top thereof, and means for circulating water through the water jacket.



1,533,930. VARIABLE INDUCTANCE. CLARENCE LINDSL, Maybee, Mich. Filed Mar. 24, 1923. Serial No. 627,414. 3 Claims. (Cl. 171—242.)

1. In a radio receiving apparatus, an inductance consisting of a cylindrical core having enameled wire wound thereon spirally, the outermost surfaces of the successive convolutions being freed from insulation, and a slide

contact consisting of a clip straddling the edge of the core and slidable transversely and circumferentially of said convolutions.

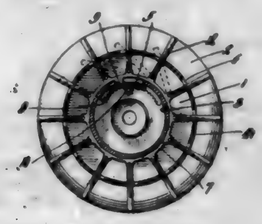
1,533,931. GAS PRODUCER. CHARLES W. LUMMIS, Worcester, Mass., assignor to Morgan Construction Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 15, 1920. Serial No. 365,990. 21 Claims. (Cl. 48—66.)

12. In a gas producer, a rotating ash support, a rotating blast distributor, and means responsive to relative rotation between said parts for procuring the movement of ashes inwardly on said support.

1,533,932. PROCESS FOR THE PREPARATION AND REACTIVATION OF METALLIC CATALYSTS USED IN THE HYDROGENATION OF OILS AND LIKE SUBSTANCES. ERNEST JOSEPH LUSH, London, England, assignor to Technical Research Works Limited, London, England. Filed Mar. 10, 1924. Serial No. 698,287. 4 Claims. (Cl. 23—236.)

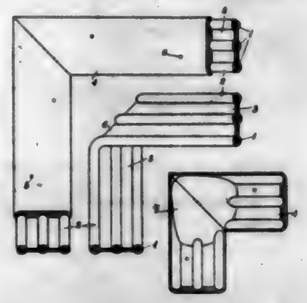
4. In the process of hydrogenation of oils and like substances wherein the material to be hydrogenated is passed through a vessel charged with an activated catalytic metallic mass subjecting said mass, when its activity is impaired through use and after removal of the residue of the hydrogennted product, to the action of a compound containing hypochlorite acid ions for the oxidation of the metallic surfaces which are afterwards washed and reduced in hydrogen for the purpose of reactivating same.

1,533,933. GEAR WHEEL. THEODORE AUGUSTUS LUEBKE, Pittsburg, Kans. Filed Apr. 8, 1924. Serial No. 705,100. 4 Claims. (Cl. 74—41.)



1. In a gear wheel, a felly having a plurality of spaced, transverse grooves, a removable tooth adapted to be arranged on the felly of the wheel, said tooth being provided with a rib on the base thereof adapted to fit in one of said grooves, a collar formed on the end of said rib, the side of said gear wheel being provided with a recess adapted to receive said collar, and fastening means adapted to engage the opposite end of said rib.

1,533,934. IMPLEMENT FOR USE IN HAND BRICKWORK. CARL THEODORE LUTS, Dresden-Gruna, Germany. Filed Sept. 11, 1922. Serial No. 587,543. 2 Claims. (Cl. 294—62.)

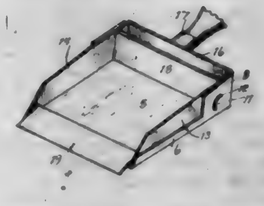


1. An implement for use in erecting brick work comprising a plurality of arms having claws on one end adapted for engagement with the end walls of a brick, a pivot secured across a pair of said arms and having connection with the inner end of another arm and said other arm extending from the pivot for engagement with the opposite end of a brick, said pivot being located near the claw ends of the pair of arms and the inner ends of said pair of arms extending beyond the pivot and above said other arm to form a handle for binding the claws against the opposite ends of a brick and for facilitating the releasing of one end of the implement after the brick is in place.

1,533,935. NONSKID WHEEL. ARCHY ANGUS MCISAAC, Inverness, Nova Scotia, Canada. Filed Apr. 1, 1924. Serial No. 703,511. 8 Claims. (Cl. 301—49.)

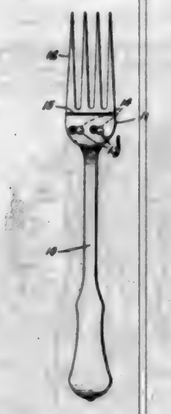
4. In combination, a wheel, an inner rim fixed to the wheel, an outer rim fixed to the wheel, said outer rim provided with a plurality of slots, said inner rim provided with a single slot, a ring rotatable about the inner rim and provided with a semicircular rack disposed within the inner rim extending through the slot thereof, a pinion, a shaft for rotation of said pinion, said pinion meshing with said rack, a plurality of rods pivoted to the ring and passing through the slots of the outer rim.

1,533,936. SURFACE WIRING FOR ELECTRICITY-DISTRIBUTING SYSTEMS. THOMAS H. MARTIN-HARVEY, Bickley, England. Filed Mar. 28, 1923. Serial No. 628,389. 3 Claims. (Cl. 247—1.)



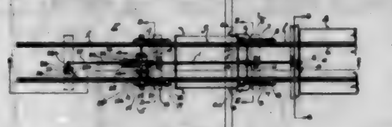
1. In a surface wiring system, a ribbed cable doubled over at corners, and a covering strip shaped conformably to the cable hollowed out at corners to accommodate the increased thickness formed by doubling the cable.

1,533,937. REFLECTING DEVICE FOR AUTOMOBILES. SÁNDOR MÓGOR, West Detroit, Mich. Filed Oct. 16, 1923. Serial No. 668,919. 4 Claims. (Cl. 88—67.)



1. A reflecting device for automobiles comprising a body bar, tubes carried by the body bar and formed in part by the same and spaced apart lengthwise of the body bar, a mirror frame carried by the body bar at one side thereof and arranged between the inner opposed ends of the said tubes, mirrors carried by said frame and arranged between the inner opposed ends of the tubes and disposed at obtuse angles to each other, and a canopy carried by the body bar and overhanging the mirror frame and mirrors and the inner ends of the said tubes.

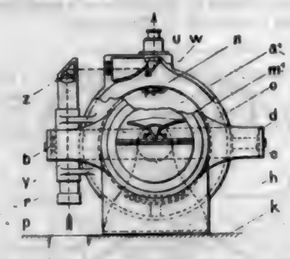
1,533,938. DUSTPAN. LINDLEY W. MOORE, San Francisco, Calif. Filed May 24, 1924. Serial No. 715,682. 2 Claims. (Cl. 65—20.)



1. In a dust pan, a base having upturned sides, extensions formed on said sides, a U-shaped frame adapted to be pivotally secured to said extensions of said sides, the forward extremities of said U-shaped frame being connected by an inclined portion, and means for latching said base to said inclined portion.

1,533,939. SANITARY FORK. GEORGE NICOT and CONSTANCE GRENOUILLOU, West Palm Beach, Fla. Filed Mar. 14, 1924. Serial No. 699,244. 1 Claim. (Cl. 30—5.)

A fork including separable sections, one section constituting a handle slightly curved at one end, headed studs projecting from said end, the other section including a body portion and a plurality of tines projecting from one edge thereof, said body portion being offset with relation to said tines and curved to correspond to the curvature of said end of the handle, said body portion having key hole slots arranged transversely of the body and adapted to receive the headed studs whereby said sections are detachably connected together, and a shoulder arranged between the body portion and said tines and adapted to engage the adjacent end of the handle when the parts are associated, thereby affording the fork strength and rigidity.

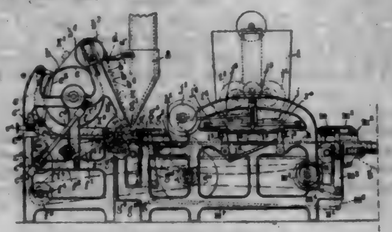


1,533,940. FEEDER AND SCALES. JAMES A. NOLAN, Bowerston, Ohio. Filed Oct. 3, 1924. Serial No. 741,436. 17 Claims. (Cl. 214—85.)

1. In car handling means, in combination with a dump provided with car receiving means, and an approach track leading to the dump, inner stops mounted on the approach track, outer trip holding stops mounted on the track beyond said inner stops, means for closing the inner stops as the dump moves into dumping position and opening said inner stops as the dump returns to loading position, means for opening the outer trip holding stops as the inner stops are closed, and means for closing said outer stops independently of the inner stops and after a car has passed between the outer trip holding stops toward the inner stops.

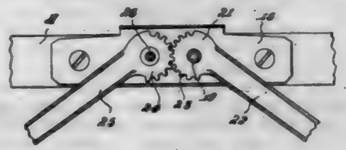
1,533,941. GYROSCOPIC APPARATUS HAVING A MEANS FOR INDICATING THE INCLINED POSITION OF AN AIRSHIP OR THE LIKE. WOLFGANG OTTO, Neumuhlen, near Kiel, Germany, assignor to Nederlandsche Technische Handel Maatschappij "Giro," 's Gravenhage, Netherlands. Filed Oct. 25, 1924. Serial No. 745,756. 8 Claims. (Cl. 33—1.)

1. An apparatus of the type described comprising a gyroscope, a casing therefor having a reference line thereon, a liquid container for said casing, a support, a Cardan mounting connecting said container to said support, an eye-piece and an object lens mounted on said container, a prism system interposed between the eye-piece and the object lens, the eye-piece and prism system being arranged so that both the reference line on the gyroscope casing and any objects vertically below the support are visible through the eye-piece.



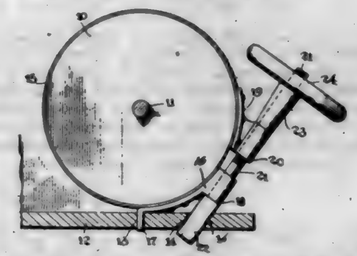
1,533,942. REENFORCED METAL SUPPORTING STICK. JOHN E. PARRISH, Richmond, Va. Filed Apr. 29, 1924. Serial No. 709,843. 3 Claims. (Cl. 131—21.)

1. A reenforced metal supporting stick, comprising an integral piece of metal substantially U-shaped in cross section, the same being corrugated longitudinally and transversely, a central longitudinal ridge pressed therein, a plurality of alternately disposed lateral extending arms at the opposite sides of said central ridge and inwardly extending notches provided with serrated edges formed between adjacent arms.



1,533,943. MECHANISM FOR FEEDING AND CONVEYING OPEN RECEPTACLES SUCH AS TINS. WILLIAM EDWARD PRESCOTT, Harlesden, London, and JOHN EDWARD POINTON, Peterborough, England, assignors to Joseph Baker, Sons and Perkins Limited, London, England, a Corporation of Great Britain. Filed Sept. 27, 1920. Serial No. 413,225. 5 Claims. (Cl. 198—29.)

1. In mechanism for feeding and conveying open receptacles, the combination of a hopper to receive the receptacles, a conveyor movable in said hopper, devices on said conveyor adapted to engage and carry along said receptacle, a revolving drum, around part of the periphery of which the receptacles are conveyed by the conveyor, and by which the conveyor is moved to a position

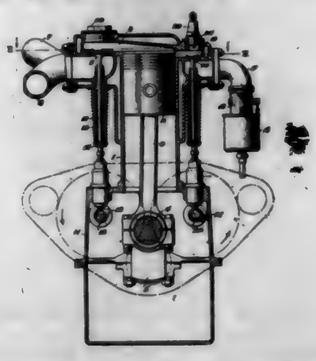


to discharge the receptacles with their open ends directed upwardly, and means adjacent the upper part of the hopper for causing receptacles to present their open ends to the carrying devices on the conveyor around the drum, or return said receptacles to the hopper.

1,533,944. WINDOW OR WINDSHIELD CLEANER. JOSEPH S. PROWENSE, Kansas City, Mo., assignor of one-half to Isadore Agron, Kansas City, Mo. Filed Apr. 11, 1924. Serial No. 705,880. 1 Claim. (Cl. 15—251.)

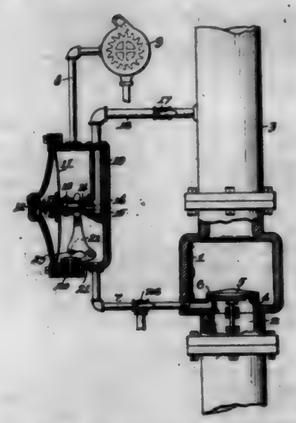
In a device of the character described, attaching brackets adapted for engagement upon a window frame, a shaft journaled through the brackets and through the frame and equipped with a crank handle, a pair of toggle arms located at opposite sides of the glass, two opposite ones of said arms being secured upon said shaft and having a segmental gear connection with the adjacent arms, a second pair of arms pivotally connected with the outer ends of said first named arms and arranged in converging relation with their adjacent ends geared together, and squeegee strips carried by the ends of said last named arms.

1,533,945. BRAKE-BAND CONTROL. CHARLES R. RECKART, Brady, W. Va. Filed Feb. 23, 1924. Serial No. 694,658. 2 Claims. (Cl. 188—77.)



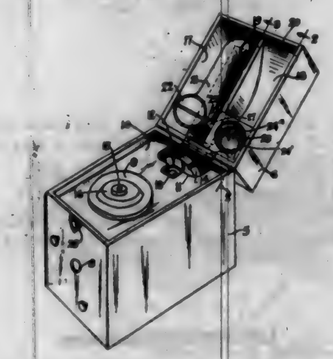
1. In a device of the class described, a support having a guide opening of other form than round and a socket, a flexible brake band adapted to encompass a brake drum, a stop lug extending from said band for engaging in said socket, apertured lugs extending respectively from said band at the ends thereof, a bolt engaging through said apertured lugs with a portion threaded and a portion of other form than round to engage the guide opening of the support and held from rotation thereby, and a nut element engaging the threaded portion of the bolt.

1,533,946. PISTON RING. CHARLES BENJAMIN REDRUP, Leeds, England, assignor to Percy Reginald Greenwood, London, England, and Frank Mitchell, London, England. Filed Apr. 14, 1924. Serial No. 706,571. 2 Claims. (Cl. 74—109.)



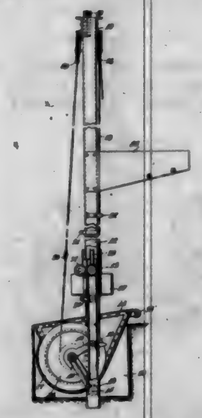
1. A piston ring comprising in combination an outer ring, a gapped inner concentric ring the ends of which are spaced from each other, spring means arranged in the gap of substantially the same thickness of the inner ring and forming a continuation of the curvature thereof and aligning with the inner periphery thereof, and laterally disposed retention means on the outer ring and located within the gap for preventing displacement of the spring means.

1,533,947. CONSTANT-COMPRESSION INTERNAL-COMBUSTION ENGINE. ANDREW L. RIKER, Fairfield, Conn. Filed Apr. 8, 1921. Serial No. 459,807. 3 Claims. (Cl. 123—75.)



1. An internal-combustion engine, comprising a cylinder affording a compression-end and provided with a valve-controlled exhaust-outlet, a piston reciprocable within said cylinder, a separate ignition-pocket provided with suitable ignition-means and having a valve-controlled inlet for admitting fuel-mixture, a valve-controlled cold-air inlet leading into one side of said compression-end, and a restricted port leading from said pocket into said compression-end at the side diametrically opposite to said cold-air inlet.

1,533,948. ALARM-CONTROLLING DEVICE FOR SPRINKLER SYSTEMS AND THE LIKE. GEORGE I. ROCKWOOD, Worcester, Mass. Filed Mar. 4, 1922. Serial No. 541,229. 4 Claims. (Cl. 169—23.)

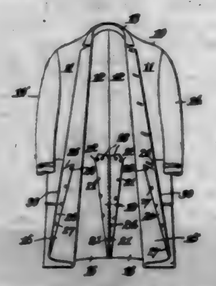


1. In a system of the class described, the combination with a supply pipe, a distributing pipe, a check valve for admitting water from said supply pipe to said distributing pipe, a valve seat for said valve, said seat having an opening therein, and means communicating with said opening and adapted to deliver water to an alarm or signal device to operate the same, of a valve adapted to be controlled by the water discharged through said communicating means for admitting water to the alarm or signal device directly from the distributing pipe.

1,533,949. PORTABLE PHONOGRAPH. SOLOMON SACHS, New York, N. Y. Filed Feb. 26, 1924. Serial No. 695,277. 4 Claims. (Cl. 274—2.)

2. A portable phonograph having a cover therefor, a partition forming two compartments in said cover, a tone board in one of said compartments constituting with said compartment an amplifying chamber, a tone arm support on said amplifying chamber, means for releasably securing the tone arm in the other compartment, the tone arm having means at one end thereof for engaging said support when the phonograph is being used, said means engaging said securing means in the other compartment when the phonograph is not being used so that the tone arm may be stored therein and the cover closed.

1,533,950. MIXING PROCESS AND APPARATUS THEREFOR. VICTOR H. SCHLICH, Southofen, Germany, assignor to Otto S. Schlich, New York, N. Y. Filed Aug. 18, 1921. Serial No. 493,409. 14 Claims. (Cl. 83—73.)



1. A process for preparing a cementitious mixture which includes the placing of suitable ingredients into a receptacle, simultaneously elevating said receptacle and stirring the contents automatically at an intermittently increasing speed.

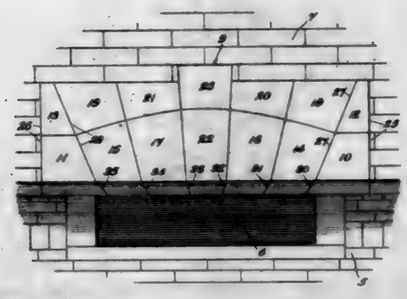
1,533,951. HOSE SUPPORTER. BERNARD P. BERGER, San Francisco, Calif. Filed Oct. 19, 1922. Serial No. 595,588. 5 Claims. (Cl. 241—6.)

1. A hose supporter comprising a rubber suction cup, a leg encircling band attached to the outside of the cup at opposite points within its marginal edge whereby the cup may be held against the leg for suctional functioning thereagainst, and a hose engaging strap suspended from the outer closed side of the cup.

1,533,952. CONVERTIBLE GARMENT. EDWARD M. SHAPRAN, Brooklyn, N. Y. Filed Apr. 7, 1923. Serial No. 630,626. 1 Claim. (Cl. 2—86.)

In a new article of manufacture, a coat having front parts and back sections, elongated substantially V-shaped pieces attached to the front parts along their lower portions and being vertically attached along one of its long edges to the vertical marginal edges of the parts, elongated substantially V-shaped pieces attached to each of said back sections along their lower portions and being vertically attached along one of its long edges to the vertical marginal edges of the sections, fastening means carried by the free edges of the pieces on the back sections, fastening means carried by the free edge of each of the pieces on the front parts and coacting with the fastening means on the back sections for the obtainment of a skirt or trouser leg portions for the article.

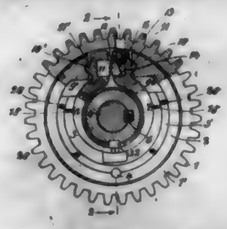
1,533,953. ANIMAL-RESTRAINING DEVICE. GURNEY L. SMOOT, Angus, Minn. Filed Sept. 6, 1924. Serial No. 736,331. 3 Claims. (Cl. 119—127.)



1. An animal restraining device comprising a rigid guard plate of a substantially U-shape in cross section arranged to partially encircle the leg of the animal at

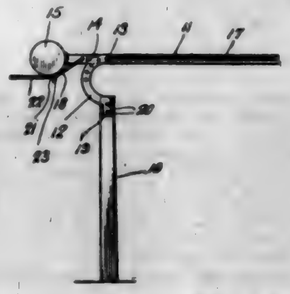
the joint thereof, straps arranged to extend across the open side of the guard plate above and below the joint, means adjustably connecting the straps to one side of

the guard, and means carried by the other side of the guard for forcibly and synchronously bringing the straps into binding contact with the leg of the animal.



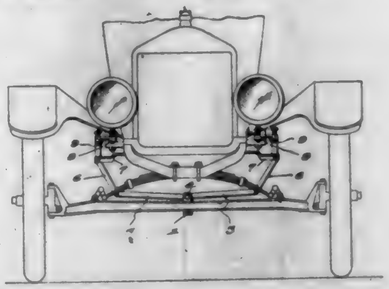
1,533,954. PORT RELIEF ARCH. HUGH H. SKILES, Fairmont, W. Va. Filed May 8, 1923. Serial No. 637,509. 6 Claims. (Cl. 49—54.)

6. In a glass furnace, a side wall provided with a port opening adjacent its upper edge; an arched crown supported by said wall; and a combined port and relief arch in said crown bridging said opening, one surface of which constitutes the upper wall of said port, said arch comprising a plurality of blocks tapered in two directions, whereby they will resist both lateral and vertical pressures.



1,533,955. FRICTION CLUTCH. FRITZ TANDEL, Chemnitz, Germany, assignor to the Firm C. G. Haubold, A. G., Chemnitz, Saxony, Germany, a Corporation of Germany. Filed Aug. 20, 1923. Serial No. 658,368. 2 Claims. (Cl. 192—77.)

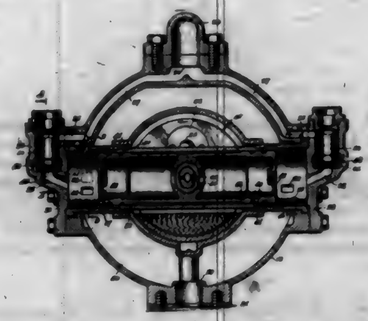
1. In a clutch, two rotatable members, a friction member adapted for frictional engagement with one of said members and rotatable with the other of said members, a pair of rockers adapted to force said friction member into frictional engagement, one of said rockers having a recess near one end thereof, a shoe mounted in said recess to move in the plane of said rockers bearing on the other rocker and formed with an inclined face



opposite its bearing face, a member in said recess having an inclined face engaging the inclined face of said shoe, and means for adjusting said member.

1,533,956. MAIL BOX. CURTIS THORNTON, Versailles, Ind. Filed Apr. 5, 1924. Serial No. 704,474. 2 Claims. (Cl. 232—40.)

1. In combination, a post including a stationary section, curved arms rising above said section, a movable section mounted on said arms for both pivotal and sliding movements, a mail box carried by one end of the movable section, teeth formed on said curved arms and a yoke carried by the movable section and adapted to engage said teeth to normally support said section in parallelism with the fixed section.

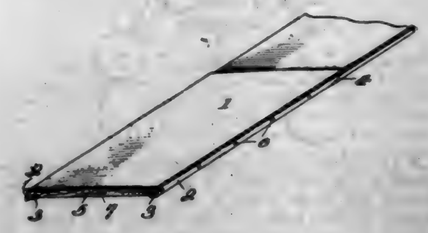


1,533,957. MOVABLE HEADLIGHT. WILLIAM C. TOOMEY, Harrisburg, Pa. Filed June 16, 1923. Serial No. 645,903. 1 Claim. (Cl. 240—62.)

In a motor vehicle, a horizontal supporting bar for each lamp thereof, each bar having a depending part at one end for engaging the hole formally occupied by the lamp standard, a substantially T-shaped bracket fastened to each side of the vehicle frame adjacent the front thereof, a lever pivoted intermediate its ends to each bracket,

a link connecting the forward end of each lever with the forward end of each lamp supporting bar, a clamp carried by the cross bar of the steering mechanism of the vehicle, an arm connecting the rear end of each lever with said clamp and springs at the pivotal points of the members.

1,533,958. AIR COMPRESSOR. CHARLES M. TURSKY, New York, N. Y. Filed Apr. 23, 1924. Serial No. 708,515. 4 Claims. (Cl. 230—34.)

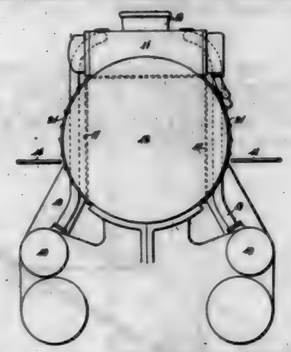


1. An air compressor, comprising end cylinders, a cylindrical valve turnable relatively to said cylinders, a piston in said valve, actuating means to give reciprocating movement to the piston in said valve and to give turning movement jointly to the piston and valve, and means to alternatively admit air to said valve and to permit escape of the air at both ends of the valve with the reciprocation of the piston.

1,533,959. ELECTRIC SOLDERING DEVICE. EMIL WAGNER, Loveland, Colo. Filed Oct. 31, 1922. Serial No. 598,224. 4 Claims. (Cl. 218—26.)

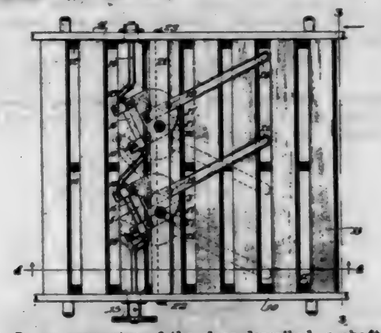
1. An electric soldering iron comprising a tubular shank, a handle at one end thereof, a soldering point removably secured to the opposite end of the handle and provided with a socket, an electric heating element within said socket and engaging the soldering point, means for yieldingly holding the element in engaged position, means whereby current may be conducted to said element to heat the soldering point, a switch for controlling the supply of current and means included in the current conducting means for resisting the travel of heat from the heating element to the handle.

1,533,960. FORM FOR CONCRETE CONSTRUCTION. HEWITT WELLS, Washington, D. C., assignor to Washington Steel Form Company, Washington, D. C., a Corporation of the District of Columbia. Filed July 18, 1923. Serial No. 652,232. 4 Claims. (Cl. 25—131.5.)



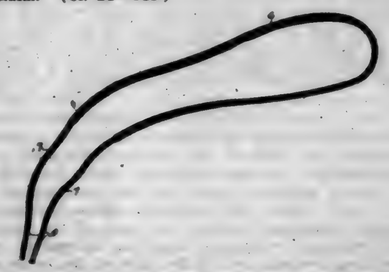
1. A form for concrete construction comprising a metal plate having its sides bent downwardly and then inwardly, a portion of each side being cut away near one end to permit overlapping with the next adjacent form, and a series of transversely arranged braces fitted between said downwardly extending sides and means for permanently fastening the braces in position.

1,533,961. LEVEL AND PLUMB. ROBERT ZIEGLER, Chicago, Ill. Filed Dec. 27, 1921. Serial No. 525,000. 1 Claim. (Cl. 33—215.)



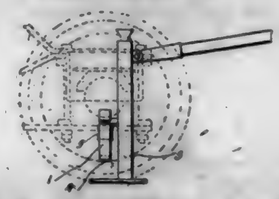
A tool of the class described comprising a stock having a recess therein and a window in its upper edge communicating with the recess, side plates connected with the stock and arranged at the ends of the recess, each plate having an upwardly extending narrow part, a shaft having its ends carried by said narrow parts, a hollow circular member rotatably supported by said shaft, said member having curved slots in the lower part of its ends a weight arranged in said member, bolts passing through the slots and engaging the weight for adjustably connecting the weight to the member, transparent members connected with the stock and closing the ends of the recess, indicating marks on the circumference of the circular member and adapted to appear through the window, indicating marks on the ends of the circular member adapted to appear through the transparent members, ring members held in the ends of the recess and having graduations thereon for cooperating with the marks on the ends of the member.

1,533,962. LOCOMOTIVE CONSTRUCTION. AUGUSTINE R. AYERS, Cleveland, Ohio. Filed Apr. 7, 1924. Serial No. 704,866. 7 Claims. (Cl. 105—37.)



3. In a steam locomotive construction including steam chests, a feed water heater, a smoke box and pipes connecting said steam chests to said heater, veritcally extending recesses formed in the sides of said smoke box adaptde to receive said pipes, and covers for closing the open sides of said recesses.

1,533,963. DISTRIBUTOR ATTACHMENT TO THRASHING MACHINES. AUGUST BERGGREN, Eagle Bend, Minn. Filed Dec. 11, 1924. Serial No. 755,818. 6 Claims. (Cl. 130—22.)



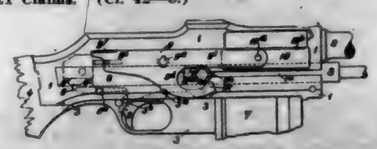
4. In an apparatus of the class described, a shaft having a crank directed obliquely to the longitudinal axis thereof, a bar rotative relative to said crank, a stationary support, a rod movable at one end through said support and movably coupled at the other end to said bar, and a spring between said bar and support.

1,533,964. SHOE LACE. MEYER BERMAN, New York, N. Y. Filed Nov. 2, 1923. Serial No. 672,430. 1 Claim. (Cl. 24—148.)

A shoe lace comprising an intermediate elastic portion and non-elastic extremities, the length of the intermediate elastic portion being sufficient to coact only with the lace engaging elements of the shoe, and the non-elastic ends extending beyond the lace engaging elements to afford a non-elastic tying portion.

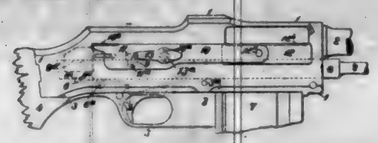
1,533,965. JOURNAL-BOX LIFT. BERT BRANNEN, Keyser, W. Va. Filed Sept. 15, 1923. Serial No. 662,907. 2 Claims. (Cl. 254—33.)

1. A journal box lift consisting of a rigid elongated lifting bar, said lifting bar being operable as a lever of the second class and adjacent one end having substantially transversely disposed knife-edge fulcrum means engageable with the inner surface of a car wheel flange to anchor the lifting bar against displacement, said lifting bar extending outwardly beyond an engaged journal box and upwardly with respect to its fulcrum end to facilitate lifting.



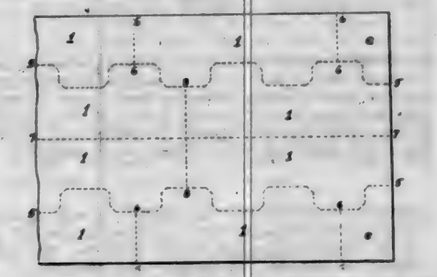
1,533,966. AUTOMATIC RIFLE. JOHN M. BROWNING, Ogden, Utah. Filed Dec. 6, 1922. Serial No. 605,229. 14 Claims. (Cl. 42—3.)

1. In an automatic firearm, the combination of a frame having a magazine-receiving seat therein, a cartridge magazine insertable in said seat and having a spring-actuated follower, a latch for releasably locking said magazine in said frame, an action-slide mounted for longitudinal reciprocatory movement in said frame, and means movable into the path of said action-slide by said follower after said magazine has become empty, said means having an operative connection with said latch and being movable, when engaged by said action-slide on the counter-recoil of the same after the firing of the last cartridge taken from said magazine, for operating said latch to release the magazine.



9. In an automatic firearm, the combination of a frame having a magazine-receiving seat, a cartridge magazine normally positioned in said seat, means for releasably locking said magazine in said seat, and means comprising an action-slide and a stop therefor for automatically moving said locking means to release said magazine after the same has become empty, and means operative after such release for automatically ejecting said magazine.

1,533,967. AUTOMATIC RIFLE. JOHN M. BROWNING, Ogden, Utah. Filed Dec. 29, 1922. Serial No. 609,675. 21 Claims. (Cl. 42—3.)

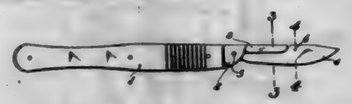


1. In an automatic firearm, the combination of a frame having an ejection-opening, a firing member, means for closing said opening, and means positively actuated in the closing of said opening to lock said firing member against firing movement.

1,533,968. AUTOMATIC RIFLE. JOHN M. BROWNING, Ogden, Utah. Filed Jan. 6, 1923. Serial No. 611,041. 12 Claims. (Cl. 42—3.)

1. In an automatic firearm, the combination of a frame having an ejection-opening, a firing member, and means for covering said ejection-opening and simultaneously locking said member against firing movement, said means comprising an element mounted for movement on the outside of said frame and having a projection extending into said frame for co-operation with said firing member to positively lock the same against firing movement while the ejection-opening is covered.

1,533,969. STRIP SHINGLE. LEON BUSHA, Minneapolis, Minn. Filed Feb. 11, 1924. Serial No. 692,157. 2 Claims. (Cl. 108—8.)

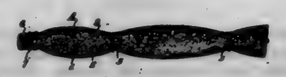


1. A strip shingle comprising a body portion and each shingle having a plurality of separated butts projecting from one edge thereof, the butts being connected with the body portion at the base by inclined lines, said butts also having vertical side edges, the ends of the butts being correspondingly shaped with adjacent separating spaces and the distance from the point where the outer inclined line of one butt joins the body portion to the end of the shingle being equal to the distance from the point where the outer inclined line of the other butt joins the body portion to the end of the shingle strip.

1,533,970. COVERING FOR TIRES. MILTON D. CAMPBELL and HORACE C. HEISEY, Cincinnati, Ohio, assignors to The Perkins-Campbell Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Mar. 15, 1923. Serial No. 625,254. 1 Claim. (Cl. 154—54.)

A tire cover comprising a linear piece of flexible material adapted to fit the cross sectional periphery of the tire casing, and to be wrapped lengthwise about the periphery of the tire, said cover having a clip shaped to engage over the casing, and secured at, at least, one end of the cover said end of the cover adapted to overlap the other end of the cover, for the purpose described, said clip being formed with tips which are curved outwardly from the body of the clip to engage the tire rim edge, with said tips so formed that when withdrawn from the edge of the rim, the ends thereof will not bite into the tire casing.

1,533,971. SURGICAL KNIFE. LUIGI CASTRACANE, New York, N. Y. Filed Aug. 13, 1924. Serial No. 731,828. 3 Claims. (Cl. 30—9.)

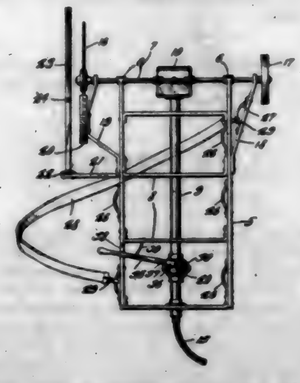


1. A surgical knife comprising a handle provided with a U-shaped end section merging into a socket section, said end section having one of its sides formed with an extension provided with a turned over reduced portion acting as a pin, and means extending through said socket section acting as a stop, and a flexible blade formed with a notch at one end and an aperture intermediate its length, said aperture being adapted to accommodate said pin and said notch being adapted to accommodate said stop when the blade is fitted into said socket section and U-shaped section.

1,533,972. CIRCUIT-BREAKING TERMINAL. GEORGE H. CLARK, Brooklyn, N. Y. Filed Feb. 15, 1924. Serial No. 693,045. 1 Claim. (Cl. 200—158.)

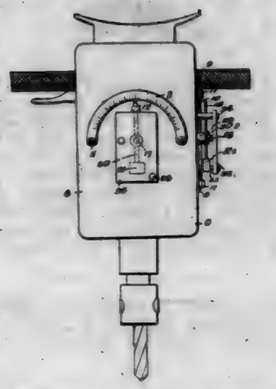
A circuit breaker comprising a body having a longitudinal throughbore, internally threaded bushing elements in said bore at the ends and spaced at their opposed ends, screws at the outer ends of the bushing elements and in threaded engagement therewith, said screws adapted to constitute binding posts for connecting up the circuit breaker, said body having a transverse longitudinal bore and a screw in said transverse bore adapted by turning movements to bridge the said bushing elements or to break the circuit between said elements.

1,533,973. QUILTED WATERPROOF PAD. SAMUEL COHEN and SAMUEL KILBERG, Brooklyn, N. Y. Filed Apr. 23, 1924. Serial No. 708,519. 1 Claim. (Cl. 5—91.)



A bordered quilted water-proof pad which comprises a pair of spaced layers of fabric with a layer of padding therebetween, said three layers being quilted together, and a layer of rubber in the form of a coating upon and suitably incorporated with the outer face of one side of said quilted material, and over and covering the quilting thereof, whereby the pad at the coated side is waterproof throughout including the quilting stitches.

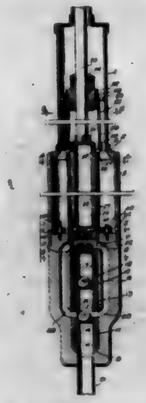
1,533,974. PORTABLE SAW. VERNON DAVIS, Franklinville, N. Y. Filed June 4, 1924. Serial No. 717,848. 3 Claims. (Cl. 30—11.)



1. In a portable saw, a frame, means for supporting the same from the person, a shaft journaled in the frame, a bar carried thereby, a tubular casing extending longitudinally of the frame, a drive shaft arranged therein,

and adapted to be connected with a source of power, clutch elements arranged within the tubular casing, one of which being fixed to the shaft and the other being slidable thereon, a lever pivoted to the tubular casing

and having operative connection with the slidable clutch element, and means for locking the lever in a position to retain the movable clutch element in inoperative position.



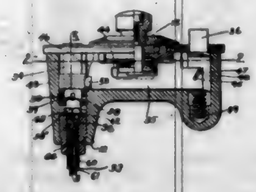
1,533,975. GAUGE OR LEVELING DEVICE FOR ELECTRIC OR OTHER DRILLS. CHARLES ALBERT DENE, Lambertville, N. J. Filed June 16, 1923. Serial No. 645,826. 2 Claims. (Cl. 33—207.)

1. A level indicator, comprising a weighted arm, a pointer means for pivotally mounting said weighted arm and pointer, and means for rigidly connecting said pointer to said arm, said means comprising a pin carried by the pointer adapted to be received in one of a plurality of openings formed in the weighted arm, and means for maintaining said pin in its opening.

1,533,976. OIL PUMP. ORIAN F. DEVOLLD, Bartlesville, Okla. Filed Apr. 24, 1923. Serial No. 634,360. 2 Claims. (Cl. 103—155.)

1. In an oil pump, an outer casing, a working barrel arranged in said casing, a piston mounted in said working barrel, a member secured to the lower end of said casing, said member being provided with a central passage reduced in size adjacent its lower end forming an inclined shoulder, a valve cage resting on said shoulder, a valve seat mounted on the top of said cage, a ball valve adapted to engage said seat, a second cage secured to said first cage and surrounding the said ball valve, a valve seat mounted on top of said second cage, an upper ball valve adapted to engage said seat, a cage secured to the upper end of said second cage and surrounding said upper ball valve, and a member secured

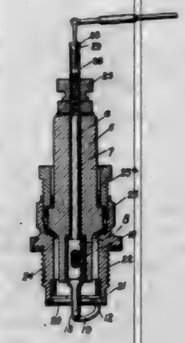
to the upper end of said last mentioned cage and closing the upper end of said central passage, said pump being provided with a passage extending from a point between said valve seats to said working barrel and being further provided with a second passage extending from a point above said upper ball valve to said outer casing.



1,533,977. CARD-OILING MACHINE. SIDNEY MILTON DUNCAN, Chattanooga, Tenn., assignor of one-half to E. G. Alley, Chattanooga, Tenn. Filed Dec. 19, 1923. Serial No. 681,644. 15 Claims. (Cl. 19—153.)

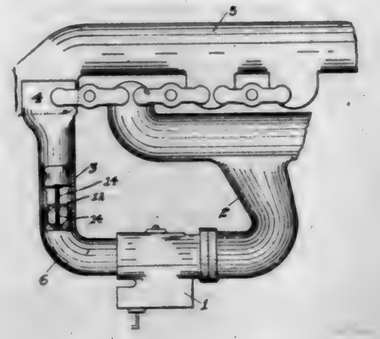
9. Means for oiling the aprons of a carding machine comprising a stationarily mounted shaft detachably associated with the frame of the card, standards engaged upon and slidable with respect to said shaft, rollers rotatable and slidable upon the shaft and engaging the upper deck of card aprons, means for feeding oil to said rollers, means for moving the rollers transversely of the aprons, said means being driven by movement of the aprons, auxiliary supports connected with said standard, rollers journally associated with said auxiliary supports and engaging the lower deck of card aprons, and means for supplying oil to said second named rollers, said second named oil feeding means consisting of a perforated pipe located adjacent the second named rollers, a conducting plate disposed below said pipe and leading to the periphery of the roller, a reservoir for oil, a flexible hose leading from said reservoir, and connected with the oil feeding pipe, and guide means for the hose.

1,533,978. LOCK-CONTROLLED CUT-OFF. FREDERICK C. ECKELMAN, New York, N. Y. Filed July 23, 1923. Serial No. 653,334. 4 Claims. (Cl. 251—6.)



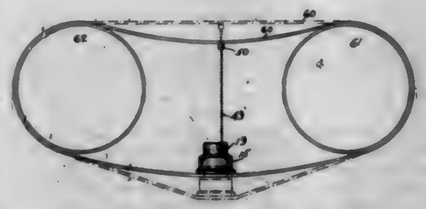
1. A lock cut-off for connection in a conduit to establish and disestablish the passage therethrough comprising locking means, cut-off means whose operation is governed by the operation of said locking means, and

cut-off operating means operable by virtue of the operation of said locking means, said cut-off operating means including a push button, a spring pressed latch laterally projecting from said push button, slotted means included in said locking means for receiving the latch to prevent movement of the push button, a second push button, a



pin thereon and being movable in the slot to reciprocate said slotted means into or out of engagement with said latch, a spring actuated rack, teeth on a portion of said cut-off means which mesh with the teeth of said rack and encased in guided connection between said push button and said rack.

1,533,979. SPARK PLUG. FRANK MICHAEL EULER, Irvington, N. J. Filed June 6, 1919, Serial No. 302,095. Renewed Aug. 13, 1923. 2 Claims. (Cl. 123—169.)

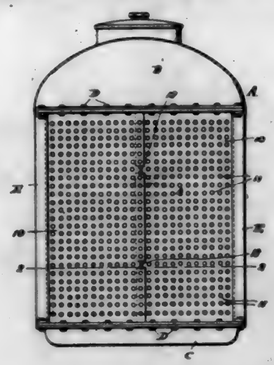


1. In a spark plug, a tubular shell, a central tube in said shell, insulating means spacing said central tube from the shell and terminating short of both the inner end of the shell and the inner end of the central tube, an annular space thus being produced between the inner end portions of the tubular shell and the central tube, said central tube being enlarged adjacent to its inner end, said enlargement terminating short of the inner end of the central tube and having a lateral opening, the outer end of the enlarged portion of the central tube defining a valve seat within the central tube, a valve movable within said enlargement, a spring within said enlargement urging said valve against said valve seat, and a screw threaded in the inner end portion of said central tube for adjusting the pressure on said spring and for closing said central tube inwardly of the lateral opening of said enlargement.

1,533,980. AIR-REGULATING ATTACHMENT FOR CARBURETORS. WRAY FALWELL, Fitchburg, Mass., assignor to Emerson W. Baker, Fitchburg, Mass. Filed Nov. 5, 1923. Serial No. 672,966. 2 Claims. (Cl. 251—144.)

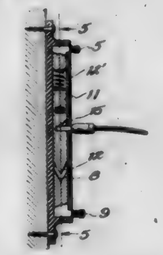
1. As a new article of manufacture, an air-regulating attachment for a carburetor, comprising a double-acting yielding check member offering the same resistance to air in either direction insertible either end foremost in a vertical leg of the hot-air supply tube leading to said carburetor.

1,533,981. BELT-LENGTH CALCULATOR. GUSTAV RICHARD FICKERT, Hoboken, N. J. Filed Sept. 29, 1921. Serial No. 504,017. 9 Claims. (Cl. 33—140.)



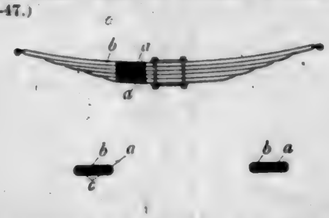
1. A belt length calculator, comprising a measuring member, a sectional casing constructed so that one section may be rotated relative to the other, said casing serving to carry the measuring member, cooperating scales carried by the sections of the casing, means for rotating one section of the casing relative to the other, and means for throwing the measuring member into engagement with said means for rotating one section of the casing relative to the other, to operate the sections by the withdrawal of the measuring member.

1,533,982. RADIATOR PROTECTOR. ALONZO A. FIRKINS, Rolfe, Iowa. Filed June 7, 1924. Serial No. 718,600. 1 Claim. (Cl. 180—68.)



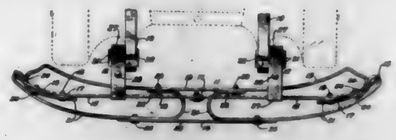
A radiator protector comprising a pair of apertured metal sheets disposable against the front of a radiator

with their outer edges engaged behind the radiator shell or frame and with their inner edges overlapping, and



outstruck tongues on said overlapping edges engaging each other for preventing relative sliding movement of the sheets.

1,533,983. SAFETY DEVICE. JOHN HENRI FLAMM, Baltimore, Md. Filed Nov. 7, 1923. Serial No. 673,366. 1 Claim. (Cl. 200—2.)



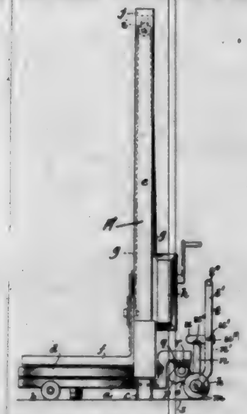
A switch comprising a stationary contact, a movable contact having a recess therein adapted to cooperate with said stationary contact, a second switch having a plurality of stationary contacts, a bar carrying a plurality of movable contacts adapted to cooperate with said stationary contacts, said bar being carried by but insulated from the movable contact of the first switch, a plug adapted to be connected to a translating device and adapted to engage said recess and operate said movable contact.

1,533,984. LAMINATED SPRING. HERBERT FROOD, Sovereign Mills, Chapel-en-le-Frith, England. Filed June 2, 1924. Serial No. 717,420. 4 Claims. (Cl. 267—47.)

1. In laminated or leaf springs, a covering for each leaf formed of non-metallic materials, and metallic reinforcing material within said covering.

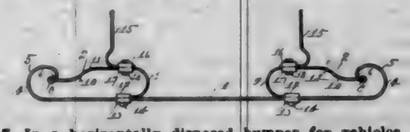
1,533,985. BUMPER FOR MOTOR VEHICLES. ERNEST GALASSI, Brooklyn, N. Y. Filed Aug. 9, 1924. Serial No. 731,170. 6 Claims. (Cl. 293—55.)

1. A bumper including a relatively rigid section comprising a pair of vertically spaced members and a yieldable section disposed forward of said rigid section and supported thereby, means for limiting the inward movement of said yieldable section, said means embodying spaced vertical members connecting said vertically spaced members and attaching means carried by said relatively rigid section.



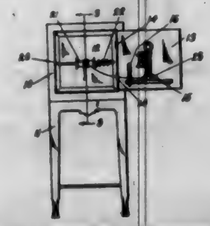
1,533,986. PERFORATING ATTACHMENT FOR PRINTING PRESSES. JEFFERSON FRANKLIN GENTRY, Cookeville, Tenn., assignor of one-sixth to Norman Massa and one-sixth to Arther M. Johnson, both of Cookeville, Tenn. Filed Mar. 29, 1924. Serial No. 702,898. 3 Claims. (Cl. 164—98.)

1. A perforating attachment for the purpose set forth comprising a stationary bed piece provided with a channel for the discharge of cuttings formed during the perforating operation, said channel permanently open at one end, said bed piece further provided with a plurality of openings communicating with said channel, a spring controlled carrier pivotally connected to one end of said bed piece and provided with a plurality of openings intermediate its ends and adapted to register with the openings in the bed piece, and a resiliently supported perforating device connected with said carrier, shiftably mounted therein and provided with a plurality of perforating elements operating through the registering openings of the carrier and bed piece, an attaching block connected to the lower end of the bed piece and a resilient clamp connected to the upper end of the bed piece, said clamp and block providing means for detachably connecting the bed piece to a platen.



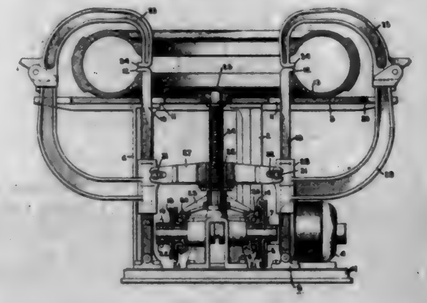
1,533,987. PORTABLE ELEVATOR. HENRY SHELDEN GERMOND, Jr., Bayonne, N. J. Filed Jan. 26, 1922. Serial No. 531,966. 4 Claims. (Cl. 280—46.)

1. An apparatus of the character described, including a truck-support therefor; and mechanism for alternately changing the latter from a readily-movable truck-support to a fixed, stationary truck-support; said mechanism including an operating pull-handle for drawing the apparatus from point to point along the floor, the pull-handle being mounted free to be moved out of loading-obstructing position; and means carried by the pull-handle for



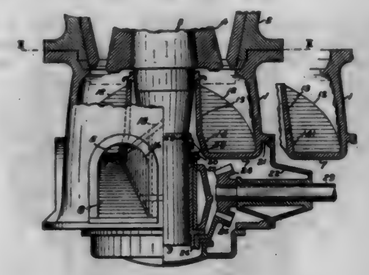
interlocking the pull-handle at will with other parts of said mechanism for the actuation of the same by the pull-handle to effect both the changes.

1,533,988. BUMPER FOR VEHICLES. ARTHUR M. GODWIN, Grand Rapids, Mich., assignor to Wolverine Bumper & Specialty Company, Grand Rapids, Mich., a Corporation of Michigan. Filed June 19, 1924. Serial No. 720,938. 8 Claims. (Cl. 293—55.)



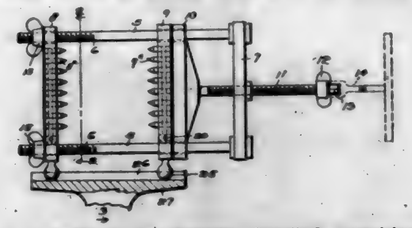
7. In a horizontally disposed bumper for vehicles extending transversely thereof; a spring impact element having an involuted end portion extending toward the vehicle; a second spring element connected adjacent its outer end to the impact element's said end portion; mounting means for the bumper connected to said second element remote from the point of its said connection to the impact element.

1,533,989. TELEPHONE CABINET. WILLIAM J. HAEHN, Jamestown, N. Y. Filed Mar. 24, 1923. Serial No. 627,331. 3 Claims. (Cl. 179—146.)



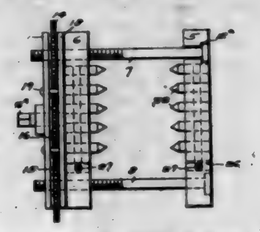
1. A cabinet for a telephone instrument provided with a flexible cord, said cabinet having a side opening door, a shelf on the inner face of said door on which the instrument rests when not in use and from which it is removed when in use and means acting upon the telephone cord and tending whenever the instrument is upon said shelf to close said door.

1,533,990. TIRE-OPENING MACHINE. WILLIAM C. HOUGH, Cuyahoga Falls, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Aug. 4, 1920. Serial No. 401,181. 1 Claim. (Cl. 154—9.)



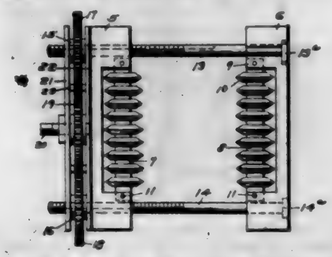
A machine for opening tire casings, having in combination, a table to support the tire casing, a set of arms arranged in a circle and extending through the table, means on the ends of said arm to engage one bead of the tire casing, sleeves slidably mounted on the said arms. A spider located within the arms the spokes of the spider being pivotally connected at their outer ends to the said sleeves. A screw threaded shaft extending through the hub of the spider, a gear upon the lower end of the said shaft, a horizontal shaft beneath gears freely mounted upon the drive shaft and adapted to mesh with said first named gear, manually operated means for connecting and disconnecting each of the said beveled gears with the drive shaft to elevate and lower the said spider, a second set of arms extending from the sleeve and encircling the table, and means on the ends of said last named arms to engage the other bead of the tire casing.

1,533,991. CRUSHER. ARTHUR J. JORGENSEN, Milwaukee, Wis., assignor to Allis-Chalmers Manufacturing Company, Milwaukee, Wis., a Corporation of Delaware. Filed Feb. 19, 1921. Serial No. 446,209. 9 Claims. (Cl. 83—10.)



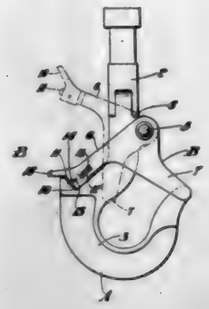
1. A crusher comprising a substantially cylindrical shell, means permitting reduction in the height of said shell including a pair of adjacent discharge openings and a diaphragm comprising a pipe-like portion through which the crusher shaft is adapted to pass and a pair of discharge chutes co-operating with said discharge openings, and means for further permitting reduction in the height of said shell including the provision of a conoidal base for said pipe-like portion.

1,533,992. AUTOMOBILE SPRING SPREADER. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr., assignor to Central Trading Company, Dover, Del. Filed Feb. 26, 1924. Serial No. 695,209. 7 Claims. (Cl. 81—3.)



1. A device of the character described comprising a pair of rods, a plate supported thereon, a second plate slidable thereon, a transverse element connecting said rods, a manually operable screw working in said element, a follower movable along said rods under the influence of said screw and a plurality of wedges floatingly mounted in each of said plates.

1,533,993. SPRING SPREADER. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr., assignor to Central Trading Company, Dover, Del. Filed Mar. 17, 1924. Serial No. 699,756. 8 Claims. (Cl. 81—3.)



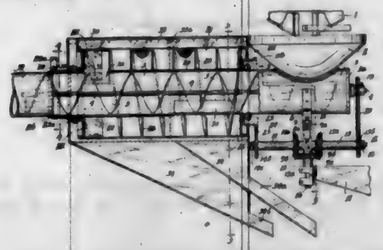
2. A device of the character described comprising a pair of wedge carrying blocks, threaded bolts held against turning with relation to one of said blocks, gear wheels having threaded parts engaged with said bolts and acting against the other of said blocks, a pinion engaged with both of said gear wheels and means carried by said pinion for the reception of an operating tool.

1,533,994. SPRING SPREADER. GOTTLIEB L. E. KLINGBEIL, Omaha, Nebr., assignor to Central Trading Company, Dover, Del. Filed May 23, 1924. Serial No. 715,444. 10 Claims. (Cl. 81—3.)

6. A device of the character described comprising a supporting block, notched out at its opposite ends, a bar seated in said notched out portions and held in position therein by set screws and a plurality of wedges strung upon said bar, said bar and wedges being provided with interengaging means for holding the wedges against turning.

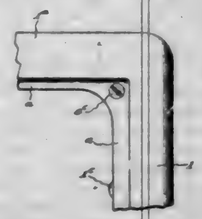
1,533,995. HOOK. PAUL LANG, Cleveland, Ohio, assignor to The American Steel and Wire Company of New Jersey, a Corporation of New Jersey. Filed Jan. 5, 1924. Serial No. 684,570. 2 Claims. (Cl. 24—241.)

1. The combination with a hoisting hook comprising a shank portion and a curved or hook shaped head portion, of a substantially V-shaped closure member pivotally connected at its apex to said shank for closing the space between the point or nose of said head and said shank, one of the arms of said V-shaped member operating as a closing arm and being adapted to close the space between said shank and the nose of said head, and the other of said arms being adapted to function as an operating arm or lever, said head being provided at its rear side with a suitable notch adapted to be be engaged by the end of said operating arm or lever when said closure arm is bridged across the space between said shank and the nose of said head, a yieldable spring pressed latch mounted in said operating arm and projecting through the end thereof and adapted to enter a suitable recess in the wall of said notch, and a projection adjacent the end of said operating arm adapted to form a hand hold to facilitate operation of said closure member.



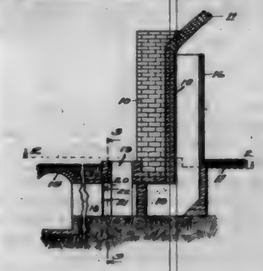
1,533,996. ARM BAND AND THE LIKE. EMIL A. OLSON, Plainville, Conn., assignor to The Humason Manufacturing Company, Forestville, Conn., a Corporation. Filed Aug. 4, 1921. Serial No. 489,872. 2 Claims. (Cl. 241—5.)

1. In a device of the character described, a coiled wire band having its ends extending in opposite directions, and a plate having an integral bridge receiving and clamping said ends against said plate.



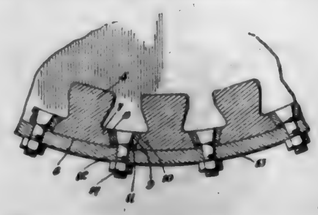
1,533,997. GRAIN-CLEANING ATTACHMENT FOR THRASHING MACHINES. HUGH B. STINSON, Glenwood, Minn., assignor of one-half to Elvan M. Voorhees, Peoria, Ill. Filed May 31, 1924. Serial No. 716,920. 11 Claims. (Cl. 130—16.)

1. The combination with the grain discharge conduit of a thrashing machine and the grain moving means therein, said conduit having an opening in its lower side adjacent its inner end and an opening in its upper side outwardly of said first mentioned opening, a screen beneath said conduit, means for progressing grain falling



through said first mentioned opening along said screen, and means for raising grain so moved along said screen and dropping it into said last mentioned opening.

1,533,998. STOVE STRUCTURE. THOMAS E. TAYLOR, Mansfield, Ohio, assignor to The Tappan Stove Company, Mansfield, Ohio, a Corporation of Ohio. Filed May 26, 1924. Serial No. 715,859. 12 Claims. (Cl. 126—39.)

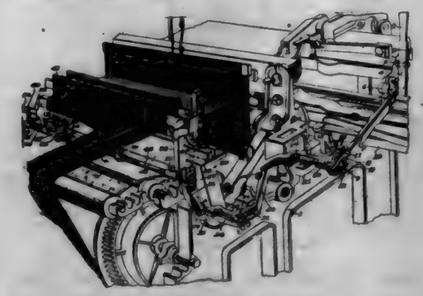


1. In a stove structure, the combination with a front frame and an oven structure extending therefrom, frame and oven connecting clamp members at the rear of said front frame, and concealed externally operable means for securing and adjusting said clamp members.

1,533,999. WASTE-HEAT COOLING SYSTEM FOR PERIODIC CLAY-BURNING KILNS. ROYAL L. ASH, Bucyrus, Ohio, assignor of one-half to Hans C. Pfund, Des Moines, Iowa. Filed Nov. 18, 1922. Serial No. 601,850. 5 Claims. (Cl. 25—132.)

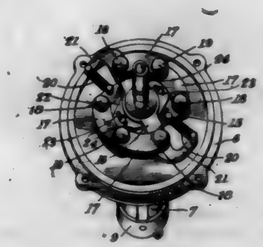
1. A waste heat cooling system comprising the combination of a kiln and a waste heat tunnel, with a flue arranged on the interior of the kiln, adjacent to the wall thereof, having its upper end open at the top of the kiln, a passage leading from the bottom of the flue to said tunnel, said passage having a port outside said kiln, a movable closure member in said passage between the port and the tunnel, and a false wall in the passage between the port and the flue.

1,534,000. BALL-MILL LINING. RAYMOND H. BAKER, New York, N. Y., assignor to Taylor-Wharton Iron and Steel Company, High Bridge, N. J., a Corporation of New Jersey. Filed Jan. 31, 1923. Serial No. 616,076. 2 Claims. (Cl. 83—9.)



1. In combination with the shell of a grinding mill, separable lining elements of substantial keystone shape in cross section, the extended bases of which are arranged in contact with the shell, with the narrower portions of substantial depth and thickness, and means cooperating with the edges of adjacent bases for securing said linings in place, said means having wedging engagement with such bases and presenting substantial continuations of such bases when the parts are assembled.

1,534,001. STITCH AND NEEDLE GUARD. MARY E. BLACKMAN, Cheney, Wash. Filed Feb. 7, 1923. Serial No. 617,559. 2 Claims. (Cl. 66—17.)



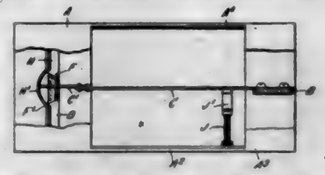
1. In a crochet needle, comprising a shank having a flat portion formed at one end, a spring loop formed integral with the extreme end of the flat portion and having the free end of the loop in engagement with the flat portion to prevent disengagement of the hook from a stitch positioned in an eye formed by the loop.

1,534,002. WARP STOP MECHANISM FOR LOOMS. CARL D. BROWN, Hopedale, Mass., assignor to Draper Corporation, Hopedale, Mass., a Corporation of Maine. Filed Nov. 10, 1924. Serial No. 748,855. 17 Claims. (Cl. 139—351.)

1. In a warp stop mechanism for looms, the combination of a series of drop wires normally supported by the warp threads during weaving, a detector having a detecting movement and adapted to be arrested in that movement by a drop wire, and means rendered effective by the arrest of the detector movement to impart to the detector another movement to indicate the location of the warp fault.

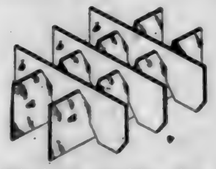
1,534,003. IGNITER GOVERNOR. HAROLD POTTER DONLE and JAMES HENRY BARTHOLOMEW, Meriden, Conn., assignors to The Connecticut Telephone & Electric Company, Incorporated, Meriden, Conn., a Corporation of Connecticut. Filed Oct. 17, 1923. Serial No. 669,093. 11 Claims. (Cl. 264—18.)

8. In a device of the character described, a main driven shaft, a drive plate secured thereon, a cam shaft, a governor plate secured thereon, centrifugal governor mechanism connecting said two plates whereby, upon rotation of said shafts, said governor mechanism will be thrown outwardly and said shafts slightly rotated relatively to each other, and a spring connecting said plates for resisting relative rotation between said shafts, said spring being in such position when the shafts are at rest that the points of connection of said spring to said plates and the axis of said shafts lie in a substantially straight line, and when the shafts are relatively rotated a line through the points of connection of said spring to said plates will pass a substantial distance to one side of the axis of said shafts, and adjustable means for limiting the turning movement of the governor plate.



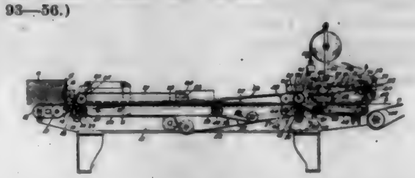
1,534,004. SECURING BRAKE-BEAM SUPPORT TO TRUCKS. WILLIAM E. FOWLER, Jr., Mount Lebanon, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,561. 14 Claims. (Cl. 188—218.)

5. The combination of a truck element provided with an opening, a supporting rail having spaced points of bearing on one side of the said element and provided with a loop or U-shaped portion intermediate said points of bearing and projecting through the opening in said element, and a pin passing through the portion of the projecting element from the opening and bearing on the truck element.



1,534,005. METHOD OF AND MEANS FOR AUTOMATIC CONTROL OF THE TEMPERATURE IN THE WATER JACKETS OF INTERNAL-COMBUSTION ENGINES. CYRIL FRANK PIZZEY, Woolwich, London, England. Filed Apr. 9, 1921. Serial No. 460,060. 5 Claims. (Cl. 123—178.)

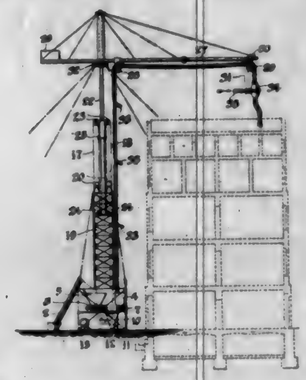
3. A device for automatically controlling the temperature of water in the jacket of an internal combustion engine, comprising a casing fitted within the jacket outlet pipe, a bi-metal strip mounted in the casing, pins attached to the strip, an spindle mounted in bearings in the casing, said spindle having a curved slot longitudinally or axially arranged for a portion of the length of the slot to receive the pin, and a throttle valve



carried by the spindle, said valve having a dished portion at its center to enable the end of the bi-metal strip to surround the spindle.

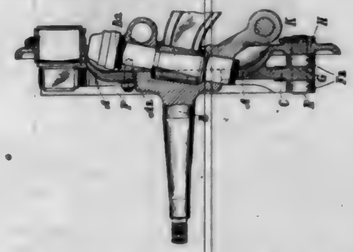
1,534,006. BOX PARTITIONING AND METHOD OF MAKING THE SAME. LEON E. LA BOMBARD and MELVIN H. SIDEBOTHAM, Chelsea, Mass., assignors to Specialty Automatic Machine Company, Chelsea, Mass., a Corporation of Massachusetts. Filed July 2, 1921. Serial No. 482,033. 2 Claims. (Cl. 217—32.)

1. Box partitioning comprising two sets of strips crossing each other, each of said strips having notches formed in one edge only and a slit made without the removal of material communicating with the apex of each notch, the slits of each set frictionally engaging uncut portions of the other set, the said notches having such depth that prior to complete assembly the strips of the upper set may be temporarily supported in substantially vertical positions by the sides of the notches of the lower set.



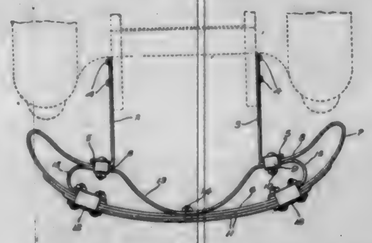
1,534,007. MACHINE FOR MAKING TAPED CARTONS. HAROLD S. LABOMBARDE, Nashua, N. H. Filed Sept. 20, 1923. Serial No. 663,881. 16 Claims. (Cl. 93—56.)

1. A machine of the character described, comprising means for folding blanks and bringing the edges thereof into substantial abutting relationship, means for adhesively securing a piece of tape throughout its length to the adjoining edges of each folded blank, and means for causing the blanks to travel during the folding and tape-securing operations, said machine having means for ensuring a predetermined location of each piece of tape on a folded blank longitudinally thereof.



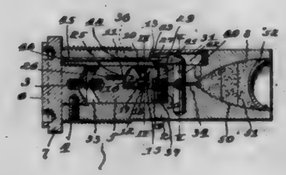
1,534,008. METHOD AND MACHINE FOR MIXING, CONVEYING, AND DISTRIBUTING CONCRETE, MORTAR, AND THE LIKE. ERNST BONGARDT, Mainz-on-the-Rhine, Germany. Filed Apr. 14, 1924. Serial No. 706,574. 5 Claims. (Cl. 83—73.)

1. A method of conveying hydraulic cement mixtures through pipes, which comprises intimately mixing concrete constituents with less than sufficient water to hydrate the mixture to produce a dustless, relatively dry mixture, forwarding the mixture by compressed air while maintaining the mass in rotation, enlarging the cross-section of the mass being forwarded, and finally



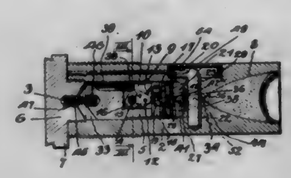
supplying the final quantity of water at the point of enlarged cross-section and contracting the so moistened mixture.

1,534,009. BRAKE FOR MOTOR VEHICLES. FREDERICK TASKER BURGESS, London, England, assignor of one-half to Bentley Motors Limited, London, England, a British Company. Filed Jan. 24, 1924. Serial No. 688,274. 4 Claims. (Cl. 188—78.)



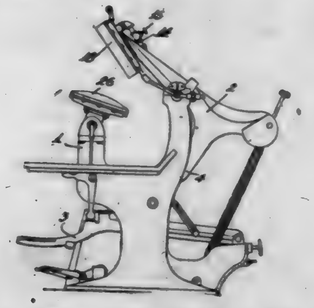
1. In a brake, the combination of an anchor plate, a web on said plate, a fulcrum on both sides of said web, and a shoe engaging both of said fulcra, substantially as set forth.

1,534,010. AUTOMOBILE BUMPER. ISRAEL FEINER, Brooklyn, N. Y. Filed June 7, 1924. Serial No. 718,620. 3 Claims. (Cl. 293—55.)



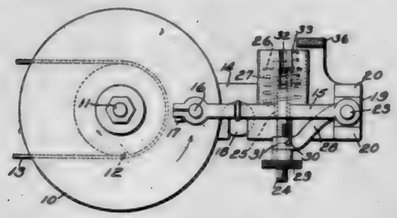
1. A bumper including supports capable of being secured to a vehicle, a body including a base strip having its ends bent with respect to the main portion of the strip, a brace having an intermediate portion and its ends secured to said body, and portions contiguous to said intermediate portion disposed adjacent the ends of said strip, and devices on the ends of the supports, each device comprising a single clamp for securing the support, one end of the strip and said brace together.

1,534,011. PERCUSSION FUSE. CHARLES P. WATSON, York, Pa. Filed Sept. 22, 1921. Serial No. 502,385. 36 Claims. (Cl. 102—39.)



14. In a fuse, the combination of a hammer block, an oscillating pin supported transversely in the hammer block and carrying a firing point and also an eccentric weight, the latter adapted to be acted upon by centrifugal force due to the rotation of the fuse to move the firing point into armed position, a spring coiled about the oscillating pin and having one end connected with the hammer block, and a tension regulating device with which the other end of the spring is connected, supported by the oscillating pin and adjustable relative thereto whereby the tension of the spring may be varied, the spring being arranged to exert its force to hold the oscillating pin with the firing point in safety position.

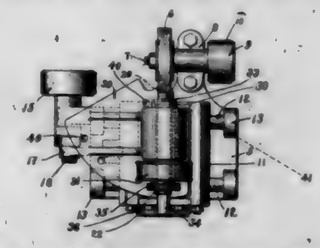
1,534,012. PERCUSSION FUSE. CHARLES P. WATSON, York, Pa. Filed Aug. 27, 1923. Serial No. 659,623. 43 Claims. (Cl. 102—39.)



17. In a high explosive detonating fuse, a fuse body in which are formed chambers, one to receive the booster charge and the other to receive the primer and detonator, these chambers being separated by a partition wall through which is a channel of communication, an automatically operating barrier in the said channel arranged to intercept the same when the fuse is unarmed, a plug for the primer having screw-thread engagement with the fuse body, mechanism for firing the primer, and a plug carrying a detonator and delay powder trains, the carrier plug being adapted to freely move to its position against the partition wall separating the chambers of the fuse, and being held in place by the primer plug when the latter is screwed into position, the detonator and delay powder trains occupying, respectively, cavities in the carrier plug, and the powder trains being arranged to be simultaneously ignited by the flash from the primer and to simultaneously burn out and deliver their flames in a common locality to ignite the detonator.

1,534,013. PRESSER FORM. HERMAN EHRLICH, Chicago, Ill. Filed May 22, 1922. Serial No. 562,748. 2 Claims. (Cl. 68—9.)

2. In a clothes pressing machine, a buck, a presser form having radially extending and broken grids attached thereto with said grids contacting the surface of said buck, said presser form having a raised portion and adjacent depressed portion, a second raised portion of different design from the first raised portion which terminates in a sloping portion.



1,534,014. GRADING MACHINE. CHARLES E. GILLETT, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Oct. 22, 1919. Serial No. 332,518. 6 Claims. (Cl. 265—18.)

1. The method of grading an abrasive wheel comprising the steps of rotating the wheel at a fixed rate, causing a tool to bear against the wheel under a definite pressure and move along an extended path thereon and measuring a force which varies with and is produced by the friction between the wheel and the tool during such movement.

1,534,015. GRADING MACHINE. KASPER O. SWENSON, Worcester, Mass., assignor to Norton Company, Worcester, Mass., a Corporation of Massachusetts. Filed Mar. 18, 1920. Serial No. 367,005. 8 Claims. (Cl. 73—51.)

1. That improvement in the method of grading abrasive articles which includes the steps of relatively moving a tool and the article to produce an abrading action, forcing the tool into the article for a definite period and at a constant rate faster than that at which the article

can wear away the tool and comparing the amount of material removed from the article with similar tests on other abrasive articles of known cutting ability.

1,534,016. SOUND-PRODUCING DEVICE. JOHN P. NORTHEY, Toronto, Ontario, Canada. Filed June 5, 1922, Serial No. 566,099. Renewed Sept. 12, 1924. 11 Claims. (Cl. 116—147.)

6. A pneumatic sound producing device comprising a cylinder with sound producing orifices in its wall and an annular enlargement at one end provided with air ports; a cover for the cylinder; a hollow piston open at one end, having sound producing orifices adapted to co-operate with the sound producing orifices of the cylinder and provided with an enlargement remote from the open end, fitting the annular enlargement of the cylinder and ports in said enlargement co-operating with the cylinder ports to control the admission and exhaust of the air which effects the reciprocation of the piston, the piston adjacent its open end being slightly reduced in diameter and the cylinder correspondingly reduced in diameter and the parts proportioned so that when the piston and cylinder are being assembled the end of the piston enters the part of the cylinder of least diameter at or about the same time that the enlargement of the piston enters the annular enlargement of the cylinder; and a diaphragm, in said piston close to the innermost sound-producing orifices.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 333—No. 3. TUESDAY, APRIL 21, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Mar. 31, 1925.*

John M. Flottman, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by John M. Flottman, 160 Eddy Street, San Francisco, Calif., and applications for patents filed by Frank H. Burns, 57 Elm Street, Hoosick Falls, N. Y.; Joseph H. Cole, Penacook, Merrimack County, N. H.; Ralph A. Krause, 4936 North 12th Street, Philadelphia, Pa.; Thomas Rhodus, 835 Junior Terrace, Chicago, Ill.; Joseph A. Rostron, 18 Palmer Street, Cambridge, Mass., and William Charles Ude, 250 Thomas Street, West Haven, Conn., and a notice of such declaration sent by registered mail to said John M. Flottman at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Flottman, his assigns or legal representation of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 6, 1925.*

Stanley Clague, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Fred A. Smith, 1426 West Third Street, Cleveland, Ohio, for registration of a trade-mark and trade-mark registered December 20, 1910, No. 80,410, to Stanley Clague, First National Bank Building, Chicago, Ill., and a notice of such declaration sent by registered mail to said Stanley Clague at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Stanley Clague, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 9, 1925.*

Mark Miller and Charles D. Miller, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Stockport Milling Co., Stockport, Ohio, and Butler County Milling Company, Poplar Bluff, Mo., for registrations of trade-marks and trade-mark registered November 20, 1894, No. 25,545, to Mark Miller and Charles D. Miller, Vassar, Mich., and a notice of such declaration sent by registered mail to said Mark Miller and Charles D. Miller at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Mark Miller and Charles D. Miller, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 9, 1925.*

The American Radio Sales and Service Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Multiple Electric Products Company, Inc., 61 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered July 11, 1922, No. 156,611, to The American Radio Sales and Service Company, of Mansfield, Ohio, and a notice of such declaration sent by registered mail to The American Radio Sales and Service Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless The American Radio Sales and Service Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Apr. 6, 1925.*

F. De Martino, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Frank J. Conjurske, 12 Cedar Street, Sturgeon Bay, Wis., to effect the cancellation of the trade-mark registration of F. De Martino, of 1027 Bridge Street, Altoona, Pa., No. 106,649, dated October 26, 1915, and the notice of such proceeding sent by registered mail to the said F. De Martino at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said F. De Martino, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

Condition of Applications Under Examination at Close of Business April 10, 1925.

(Total number of applications awaiting action, excluding Trade-Mark Division, 47,280; Trade-Mark Division, 2,262. Oldest new case, Oct. 11, 1924; oldest amended, Sept. 24, 1924. The dates given are 1924 except where † indicates 1925.)

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

BERNET, CRAFT & KAUFFMAN MILLING CO. v. PUSSY WILLOW COMPANY, INC.

No. 1,881. Decided December 1, 1924.

1. TRADE-MARKS—OPPOSITION—USE OF OPPOSER'S CORPORATE NAME.

The registration of opposer's corporate name by the appellant company is prohibited by section 5 of the Trade-Mark Act of 1905.

Decision of Assistant Commissioner Fenning.

2. SAME—SAME—SAME—MOTION TO DISMISS BASED ON DISSIMILARITY IN GOODS.

Where the opposition was based not on similarity of goods, but on the allegation that applicant's mark consisted of the name of opposer, the registration of which is prohibited by statute, a motion to dismiss on the ground that applicant's goods were different from those sold by opposer was denied.

APPEAL from Patent Office. Affirmed.

Mr. Paul Bakewell and *Mr. H. A. Coombs* for Bernet, Craft & Kauffman Milling Co.

Mr. Hans V. Briesen for Pussy Willow Company, Inc.

PER CURIAM:

[1] This appeal is from the decision of the Commissioner of Patents in a trade-mark opposition, refusing registration to appellant company of a trade-mark for self-rising wheat flour. The mark consists of the words "Pussy Willow" accompanied by some sprays of pussy willow. The opposition is based entirely upon the use of opposer's corporate name, the registration of which is prohibited by section 5 of the Trade-Mark Act of 1905.

The decision of the Commissioner is affirmed on the authority of *The Asbestone Co.* v. *The Philip Carey Mfg. Co.*, 41 App. D. C. 507; 200 O. G. 857; 1914 C. D. 146.

The decision of Assistant Commissioner Fenning, rendered November 5, 1923, is as follows:

This is an appeal from the action of the Examiner of Interferences sustaining an opposition to the registration of a trade-mark for self-rising wheat flour consisting of "Pussy Willow" accompanied by some sprays of pussy willow.

[2] Applicant moved to dismiss on the ground that its goods were different from those sold by opposer; but since the opposition was based not on similarity of goods, but on the allegation that applicant's mark consisted of the name of opposer, the registration of which is prohibited by section 5 of the Trade-Mark Act, the motion to dismiss was denied.

Applicant refused on the record to answer, and judgment pro confesso was entered sustaining the opposition. Applicant has filed here an elaborate interesting brief which in effect says that the present case is on all fours with *The Asbestone Co.* v. *The Philip Carey Manufacturing Co.*, 200 O. G. 857; 1914 C. D. 146; 41 App. D. C. 507; but that the decision of the court of appeals in that case was based upon a misinterpretation of the trade-mark statute. However that may be, this Office is dutifully obedient in following the decisions of the court of appeals. In view of the case cited it is clear that applicant's mark can not be registered in view of the opposition filed by Pussy Willow Company.

The decision of the Examiner of Interferences is affirmed.

Court of Appeals of the District of Columbia.

IN RE THE DOLLY VARDEN CHOCOLATE COMPANY.

No. 1,851. Decided December 1, 1924.

TRADE-MARKS—OFFICE OF—NONREGISTRABLE SIGNS OR FORMS OF WORDS.

A trade-mark may consist in any symbol or in any form of words; but as its office is to point out distinctively the origin or ownership of the articles to which it is affixed it follows that no sign or form of words can be appropriated as a valid trade-mark which, from the nature of the fact conveyed by its primary meaning, others may employ with equal right for the same purpose.

APPEAL from Patent Office. Affirmed.

Mr. W. F. Murray for The Dolly Varden Chocolate Co.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, ROBB and VAN ORSDEL, Associate Justices.

VAN ORSDEL, *J.*:

This appeal is from the decision of the Commissioner of Patents denying registration of the words "When Words Fail—Send" as a trade-mark for candy. The label accompanying the application bears the inscription "When Words Fail Send Dolly Varden Chocolates."

Registration was refused on the ground that the words do not constitute a technical trade-mark, since such a mark does not indicate origin or ownership of the article to which it is attached. Nor can it be appropriated by one person to the exclusion of another. In *Elgin National Watch Co.* v. *Illinois Watch Case Co.*, 94 O. G. 755; 1901 C. D. 273; 179 U. S. 665, 673, the court defined a trade-mark as—

a distinctive mark of authenticity, through which the products of particular manufacturers or the vendible commodities of particular merchants may be distinguished from those of others. It may consist in any symbol or in any form of words, but as its office is to point out distinctively the origin or ownership of the articles to which it is affixed, it follows that no sign or form of words can be appropriated as a valid trade-mark, which from the nature of the fact conveyed by its primary meaning, others may employ with equal truth, and with equal right, for the same purpose.

The mark here sought to be registered falls far short of "a distinctive mark of authenticity". It not only fails to meet the requirements of the above definition, but it falls within the ruling of the Patent Office in refusing registration in the following cases. "Not Right—Write—Will Make Right" as a trade-mark for sawmill, shingle mill, etc., *Ex parte Sumner Iron Works*, 147 O. G. 237; 1909 C. D. 171. "Good Candy—Nothing Else" as a trade-mark for candy. *Ex parte Chocolate Products Co.*, 142 MS. dec. 335. "Rim Wind" and "Rim Set" as trade-marks for clocks. *Ex parte Keyless Auto Clock Co.*, 309 O. G. 223; 1923 C. D. 25. This line of decision is sustained in *Smith* v. *Krouse*, 160 Fed. 270, where the words "Merrie Christmas" were held not to constitute a valid technical trade-mark for ribbon. In *Ault & Wiborg* v. *Cheshire*, 191 Fed. 741, the court held that complainant, in unfair competition, was not entitled to the exclusive use of the words "No-Wash-Up" as applied to a printing roller.

The decision of the Commissioner of Patents is affirmed.

U. S. Circuit Court of Appeals—Second Circuit.

BALL & ROLLER BEARING CO. *v.* F. C. SANFORD MFG. CO.

Decided February 18, 1924.

[297 Fed. Rep. 163.]

1. REISSUE—LACHES.
When used in respect of applications for reissue, laches means delay without excuse.

2. SAME—NARROWED CLAIMS—INTERVENING RIGHTS.
The doctrine of intervening rights is of doubtful application in litigation over a narrowed reissue, and where the disclosure was complete in the original specification and the reissued claims embodied the very language of an original claim which defined the essentials of the invention in language perhaps technically loose, but very plain, and defendant had warning from the reissue patentee before he had practiced the invention or spent a dollar, *Held* that the reissue was valid and the claim of intervening rights was denied.

3. INVENTION—UNRELIABLE MACHINE MADE SUCCESSFUL—NEW PRINCIPLE.
Where "centerless grinding," by which is meant grinding a roll, pin, or other cylindrical object without first centering the roll, was not unknown, but was unreliable, and H. attained success by applying and utilising a new principle of operation, *Held* that this involved invention.

4. ANTICIPATION—INADEQUATE REFERENCES.
A machine which was successful because of the application of a new principle of operation, *Held* not anticipated by a machine which lacked the essential feature of the invention or by one which was designed for a different purpose and could not produce the article produced by the successful machine.

5. DEDICATION TO THE PUBLIC—MATTER NOT CLAIMED IN PATENT.
Where after the grant of H.'s patent he presented an original application and obtained a patent for subject matter disclosed in the earlier patent, and no question of reissue, renewal, or amendment was involved, *Held* that the disclosure in his earlier patent, unaccompanied by any claim, constituted a dedication to the public of all other devices, combinations, and improvements apparent from the specification of that earlier patent, but not claimed.

6. INVENTION—MECHANICAL SKILL—WEAR STRIP.
Where the dominant feature of a patent is a wear strip consisting of a piece of material rectangular in cross section which can be turned four times and each side worn out in turn, *Held* that this is a device which would occur to any ordinary mechanic.

APPEAL from the District Court of the United States for the District of Connecticut.

Suit in equity by the Ball & Roller Bearing Company against the F. C. Sanford Manufacturing Company. Decree for defendant (280 Fed. 415) was affirmed on rehearing (291 Fed. 442), and plaintiff appeals. Reversed and remanded, with directions.

STATEMENT OF THE CASE.

Suit is for the infringement of three patents, all issued to L. R. Heim, viz, Reissue No. 15,085, for a "roll-grinding machine" (the original patent was 1,210,937, for which application was filed March 6, 1915, and patent granted January 2, 1917; application for reissue was filed September 8, 1920); No. 1,264,930, also for a "roll-grinding machine"; and No. 1,210,936, for a "feeding device for roll-grinding machines." The court below held that claims 1, 2, 4, 6–10, 12, 13, 15, 18, 19, 20, and 21 of reissued patent 15,085 were invalid in view of the prior art; also that claims 1 to 4 of 1,264,930 were invalid, and claims 2 to 6 of 1,210,936 were not infringed.

The "rolls" which are to be ground in the patentee's machine are commercially speaking roller bearings; i. e., usually small bodies of hard metal, commonly cylindrical in shape, and intended to afford a support as nearly frictionless as possible for revolving axes. As put by the trial court, the patents relate to means "by which roller bearings are manufactured in large quantities, rapidly, accurately and at a minimum cost, and all of these characteristics are to-day vitally essential to a successful manufacture."

The specification of the reissue asserts that the essentials of the patentee's roll-grinding machine are:

A grinding wheel having a relatively high surface speed, a carrier for the rolls to be operated upon, and a wheel moving in the opposite direction having a relatively low surface speed, the action of which is to cause constant and uniform rotation of the rolls while being operated upon at a much lower surface speed than the grinding wheel. This wheel I term the regulating wheel, for the reason that it regulates the speed at which the rolls rotate while being operated upon.

The specification further explains that, when the patentee speaks of his wheels moving "in opposite directions," he means that they so rotate as to their active portions—i. e., the parts actually at any given instant engaged in either grinding or regulating; and it is further stated that by the phrase "a machine of the character described" is meant a machine adapted "automatically to grind the surfaces of a succession of short rolls."

Of the numerous claims in suit, and disposed of as above noted, the twelfth is selected by plaintiff as typical of the invention in its most general aspect. It reads as follows:

A machine of the character described, comprising a grinding wheel adapted to be rotated at a relatively high speed, a regulating wheel adapted to be rotated in the opposite direction at a relatively low speed, a carrier for rolls between said wheels, means adapted to permit adjustment of said carrier toward and from the surface of one of said wheels, means adapted to permit adjustment of one of said wheels toward and from the other, whereby the distance between their operative surfaces is varied, means adapted to vary the angular relation of said carrier and of the path of the operative surface of said regulating wheel, and thereby vary the rate of feed of rolls upon said carrier, means adapted to guide a succession of rolls into a position on said carrier between said means, and means adapted to receive said rolls as they pass out of the grip of said wheels, and guide them away from the wheels, the acting parts of said wheels being substantially parallel.

The fourth claim of No. 1,264,930 relates to the mounting of the grinding and regulating wheels, to the end that there may be a relative yielding of the wheels when an object to be ground is introduced between them, united with means for limiting the amount of said movement or yield. It reads as follows:

A machine for grinding cylindrical or like blanks comprising a peripheral grinding wheel rotating at a relatively fast speed, a peripheral regulating wheel adjacent said grinding wheel, and rotating at a relatively low speed in the opposite direction, said wheels being relatively yieldingly mounted, spring-controlled means for forcing said wheels toward each other, a blank support, and means for limiting the movement of said wheels toward each other.

The application for this patent was filed July 13, 1917, patent issued on May 7, 1918. The application is an original; i. e., it is neither divisional nor renewed. No. 1,210,936—i. e., the feeding device patent—is based on an application filed contemporaneously with that now represented by reissue 15,085. The object is "to provide a simple, inexpensive, and durable feeding device especially adapted for use in connection with the type" or roll-grinding machines now represented by the above mentioned reissue. The sixth claim is thought fully to define the invention, and is as follows:

A roll-feeding device for grinding machines comprising a body, a carrier, and a removable wearing strip in the carrier having a plurality of wearing surfaces.

A discussion of the prior art and of the facts in the case will be found in the opinion. The appeal was taken by plaintiff.

Mr. Livingston Gifford, *Mr. Robert S. Blair*, and *Mr. William T. Knieszner* for the appellant.

Mr. William W. Dodge for the appellee.

Before HOUGH, MANTON, and MAYER, Circuit Judges.

HOUGH, *Cir. J.* (after stating the facts as above):

The suit being on three patents, it will be more convenient to consider them separately, first taking up Reissue 15,085.

[1] This is attacked, first, as to validity, and, second, by asserting intervening rights, as was successfully done in *Autopiano Co.* v. *American* (C. C. A.) 222 Fed. 276; 217 O. G. 1065. With the court below we are satisfied that this is a narrowed reissue, and that the patentee was not guilty of laches. When used in respect of applications for reissue, laches means delay without excuse; but enumerating valid excuses is merely dealing with facts—not creating precedents at law. It is enough therefore to point out that the facts at bar are quite within those in *Specialty Co.* v. *Ashcroft* (C. C. A.) 213 Fed. 35; *Maitland* v. *Goetz*, 86 Fed. 124; 29 C. C. A. 607; 85 O. G. 776, and *Vandenburgh* v. *Concrete*, 258 Fed. 143; 169 C. C. A. 138; 236 O. G. 743, very far within the Autopiano case, supra, and *Belber* v. *Seward* (C. C. A.) 279 Fed. 82; 304 O. G. 831, and do not at all resemble those in *Carpenter* v. *Searls*, 60 Fed. 82, 8 C. C. A. 476, and *Thomson-Houston* v. *Western Electric*, 158 Fed. 813; 86 C. C. A. 73.

[2] As for intervening rights, it is difficult to see how that doctrine can find place in litigation over a narrowed reissue, but in this case the disclosure was complete in the original specification, the reissued claims in suit embody the very language of the original seventeenth claim, that claim defined the essentials of Heim's invention in language perhaps technically loose, but very plain to a plain man, and defendant's president had personal warning from Heim before he had ground a roll, and, in so far as this record shows, before he had spent a dollar. We hold the reissue valid, and deny the claim of intervening rights.

The art to which this patent generically belongs is that of producing bodies having a circular transverse cross section, by grinding away irregularities and excrescences of raw material, and such material for this art is usually a cylindrical metal rod (however short) as drawn or forged. Specifically the machines of both parties, and of the patent in suit have to do with short and small hardened-steel objects, technically called "rolls"; something for which the demand has of late years greatly increased because of the friction developed by the increasingly rapid rotation of many kinds of wheels in common use—e. g., those of cycles or motors of many varieties.

These rolls have long been made by "centering" the work in a lathe, or mounting it on a chuck. This is applying to the production of small articles used in enormous quantities for machines comparatively inexpensive (e. g., motor cycles), the same slow and costly method used in making a shaft (e. g., for a steam propeller). To escape from this slow cost has been a recognized desideratum.

In reaching this goal, "centerless grinding" was not unknown before Heim, and that department of art was described, if not defined, by one of defendant's witnesses, thus: The machine is—

known as a centerless grinder, by which is meant that it will grind a roll, pin, or other cylindrical object without first centering the roll, or making it necessary to have the rolls revolve upon their centers, or supported from their centers.

To remove superfluous material from a round piece of metal, by pressing it against a revolving abrasive wheel, was and is obviously cheap and rapid, provided the object to be ground could be given a steady revolution, and machines with such a wheel, and a "work rest," or appliance that presented the object to be ground to the wheel, so that the wheel itself both ground it and caused it to rotate, were devised and used. For an illustration, see Grant, 1,106,803. These machines, though sometimes doing good work, were unreliable. The object to be ground, by a wheel doing several hundred if not thousand R. P. M., was apt to be shot out like a bullet, as numerous witnesses state. The machines of the patent and of defendant operate, as do all machines, in obedience to a mechanical or physical law, regarding which this court must rely on the testifying experts, who in this instance are happily not at variance.

We are thus informed that, if two juxtaposed disks are revolved, whether in lateral or peripheral juxtaposition, each possessing an abrasive surface, and the disks be so shaped and positioned relatively to each other that, when both are revolved, there be furnished parallel operative faces, separated by a space of which the width is the diameter to which a roll is to be ground, then, if one disk be revolved at a rate relatively much higher

than the other, and the parallel operative faces of the disks be traveling in opposite directions, when the roll to be ground is introduced between them, it follows that, if the predetermined (and controllable) path of travel between the operative faces is not radial, but across the radial lines of the slower moving disk, that disk will simultaneously cause the roll to revolve and advance across its own operative face, while the parallel face of the more rapidly moving one will grind the surface of the roll, which is thus presented to it by a comparatively slow, but regular, movement of rotation; and, finally, when the roll, having by the propulsive force of the slower wheel completed its travel across the operative parallel faces of both, comes to the end of the parallelism, the wider space produced by the beveling of the disks permits the now perfected cylinder or roll to drop by gravity only into the receptacle provided.

[3] Of course any machine, operating under this physical law, requires adjustments and appliances, regulating, e. g., the direction of revolution of the two disks when at work, and permitting some "give" between disks, as the roll is naturally slightly larger on entrance than on exit; but the principle is as stated, and the question in this case is whether anybody before Heim devised a method of utilizing this principle. Much less than being the first to utilize the principle would justify a patent, but on this record we state the query in its broadest form.

We pass infringement briefly, as it was disposed of below. There is nothing in the patent confining invention to ring wheels, or those peripherally juxtaposed; the principle applies to both, and there is no difference at all between producing nonradial travel of the roll by directing its path between wheels parallel in vertical planes, and tilting the slower or regulating wheel to produce the same result, when the juxtaposition is peripheral. Defendant has been vindicated below, not on noninfringement, not by a finding of anticipation, but by holding that in the light of the prior art, there was no invention in applying and utilizing the principle above stated. To this we are quite unable to consent.

The voluminous record at bar is the best (or worst) example recently presented to us of useless and misleading references to earlier patents and publications. It seems necessary to apply to patent litigation from time to time the maxim that one can not make omelettes of bad eggs—no matter how many are used. One good reference is better than 50 poor ones, and the 50 do not make the one any better. We decline to consider, as of any assistance, all references to single-wheel machines, because they do not and can not embody the principle stated. They can not do this, because it is a vital part thereof that there shall be a *regulating* disk or wheel; the work rest or other appliance which brought the roll into operative touch with the grinder did not even suggest that idea.

The case stands, as it did in the Patent Office, as an inquiry whether in the light of Lowman (British 12,190 of 1905) and French et al. (1,111,254) Heim showed invention as distinguished from mechanical skill. Lowman wished to clean and polish corks. Through a tube he fed between a sponge or brush disk slowly revolving in one direction and a wheel with a sandpaper face rapidly revolving in the other—the corks to be cleaned. The sandpaper wheel alone fed them along; the slow disk had no regulating power whatever, owing to construction. There was not, and could not be, any constant uniform rotation along a predetermined path, which is the feature of essential value in Heim's and defendant's machines.

[4] French in 1911 (when he filed application) undoubtedly had the idea of abrasive wheels beveled and oppositely rotating. But he expected both his wheels to grind, and both do. His purpose was not to grind rolls, but to remove from long rods "the relatively thin surface or skin of more or less uncertain density or homogeneity" left on rods or bars after rolling or drawing. His wheels had to oppositely rotate at differing speeds, because, if they did not, no action would follow and he arranged his wheels relatively to each other, not to do what these parties are doing, but to enable him to get grinding or polishing action on a rod which was fed through in guides, not propelled by a regulating wheel. The whole machine was designed diverso intuitu from that of Heim, and it was demonstrated by experiment at trial that it could not be made to produce rolls. That there was no anticipation by all this is, we think, admitted. *Topliff* v. *Topliff*, 145 U. S. 161; 12 Sup. Ct. 825; 36 L. Ed. 658; 59 O. G. 1257. The question remains whether it was no more than the work of a skilled mechanic to advance from the "grinding and polishing machine" of French et al. to the "roll-grinding machine" of Heim.

The question would be more difficult, if the principle of operation characterizing Heim and the defendant were even dimly present in French; but his inventive concept did not contain any thought either of producing their result or obtaining his result by and through a regulating wheel. The practical business comment on this invention is conclusive. The French machine was used and known, but it moved no one to try it for rolls; we see no reason why it should do so; and rolls continued to be made by the centering method, or on single-wheel machines, until Heim appeared.

The decree below is reversed as to this patent, and the claims in suit held valid and infringed.

[5] We now take up No. 1,264,930. This patent was applied for on July 13, 1917. It is admitted that the subject matter of the second and sixth claims (the only ones in suit) was disclosed in the specification filed March 6, 1915, for the original of Reissue 15,035. That original (1,210,937) was dated January 2, 1917, and no claim was made covering the subject matter of these claims in suit.

As matter of law we are of opinion that the disclosure unaccompanied by any claim in Heim's earlier patent constituted a dedication to the public of all other devices, combinations, and improvements

apparent from the specification of that earlier patent but not claimed. *Jewell Co.* v. *Jackson*, 140 Fed. 340; 72 C. C. A. 304. Cf. *Loraine, Etc., Co.* v. *General Electric*, 202 Fed. 215; 120 C. C. A. 615. Further, we incline to think as matter of fact that plaintiff had used the substance of this improvement in public for more than two years prior to filing application for this patent. We express no opinion as to whether the substance of the claims under consideration could have been inserted in the Reissue 15,035. The point at bar must be decided as it stands, viz: It presents an original application, and no question of reissue, renewal or amendment. As to this patent, the result below is affirmed.

The last patent in suit is No. 1,210,936. Plaintiff asserts that "the dominant feature of this patent is the wear strip," and infringement is said to exist because the defendant also uses a wear strip. Examination shows that the wear strip of plaintiff is a piece of material rectangular in cross section, whereas that of defendant is circular. When one side of defendant's strip is worn by the passage of the rolls, its life is prolonged by turning it over. In the model furnished, the plaintiff's strip can be turned four times, and each side worn out in turn. Defendant's circular wear strip can be rotated, so as to present any convenient unworn fragment of the circumference for use.

[6] We have carefully considered the scanty evidence on this subject, and are unable to avoid the conclusion that, given the theory of operation utilized by both parties at bar, the use of either a rectangular or circular wear strip is a device which would occur to any ordinary mechanic. We regard the machine as an invention of great ingenuity and almost primary importance, but in these wear-strips we can perceive no invention at all. As to this patent the result reached below is also affirmed.

The appellant, having been victorious in the major portion of this appeal, is allowed one-half costs in this court; the costs below are left to the discretion of the district court.

Decree reversed, and cause remanded, with directions to enter a new decree in conformity with this opinion.

PATENT SUITS.

[Notices under sec. 4921, R. S., as amended Feb. 18, 1922.]

841,844, J. Bernet, Key-operated locking switch, appeal filed Jan. 26, 1925, C. C. A. (7th Cir.), Doc. 3539, *W. R. Coe* v. *Olum Mfg. Co. et al.*

Re. 13,758. (See 882,517.)

ADJUDICATED PATENTS.

(C. C. A. Ohio.) The Stranahan patent, No. 1,180,799, for spark plug, claims 1, 3, and 6 *Held* valid and infringed. *S. S. Kresge Co.* v. *Champion Spark Plug Co.*, 3 F. (2d) 415.

(D. C. Ohio.) The Emery and Bray patent, No. 1,193,884, for portable grinder for truing up cylinders, claim 5 *Held* void, as merely functional, and claim 6 *Held* valid, but not infringed. *Auto Hone Co.* v. *Hall Cylinder Hone Co.*, 3 F (2d) 479.

(C. C. A. W. Va.) The Bowman patent, No. 1,304,534, for improving cable splice, *Held* invalid. *American Mine Door Co.* v. *Newberry*, 3 F. (2d) 435.

ADVERSE DECISIONS IN INTERFERENCE.

In interferences involving the indicated claims of the following patents final decisions have been rendered that the respective patentees were not the first inventors with respect to the claims listed:

Pat. 1,401,590, L. Del Turco, Divider for cementitious floors, decided February 18, 1925, claims 1 and 2.

Pat. 1,457,406, C. W. Stancliffe, Depth and specific-gravity measuring apparatus, decided April 3, 1925, claims 2 to 6, inclusive.

Pat. 1,515,007, A. S. Behrman, Base-exchange materials and process of making same, decided April 3, 1925, claims 11 to 15, inclusive.

TRADE-MARKS CANCELED.

54,988. Disinfectant, germicide, deodorizer, and insecticide. Wellsville Chemical Co., Wellsville, N. Y. Registered August 7, 1906. Canceled February 24, 1925.

103,415. Preparation in cream form to relieve constipation. Botanical Manufacturing Co., Wilmington, Del., and Philadelphia, Pa. Registered April 6, 1915. Canceled February 24, 1925.

152,198. Bacon, smoked belly, fresh pork sausage, Frankfurter-style sausages, Bologna sausages, and minced meat. Indianapolis Abattoir Company, Indianapolis, Ind. Registered February 21, 1922. Canceled February 24, 1925.

175,524. Silk, cotton, and wool piece goods and combinations thereof. Arthur Beir & Co. Inc., New York, N. Y. Registered November 6, 1923. Canceled March 7, 1925.

185,546. Antirheumatic analgesic, and antipyretic medicines. The Bayer Company, Inc., New York, N. Y. Registered June 17, 1924. Canceled February 24, 1925.

189,115. Wide elastic fabric suitable for making corsets, etc. Lawrence & Co., Poughkeepsie, N. Y. Registered September 9, 1924. Canceled February 24, 1925.

190,484. Base for ointments. P. Beiersdorf & Co., Inc., New York, N. Y. Registered October 14, 1924. Canceled March 7, 1925.

Disclaimer.

1,495,647.—*Stanley D. Robinson*, Hamilton, Ontario, Canada. COMBINATION PILOT LIGHT AND ILLUMINATING LIGHT FOR ELECTRIC RANGES. Patent dated May 27, 1924. Disclaimer filed April 2, 1925.

Hereby enters this disclaimer to the entire claim as set out in the said specification and claims.

Changes in Classification.

Order No. 2,902, March 30, 1925, provides:

In *class 273, Amusement Devices, Games* (Division 22), change the title of subclass 30, Tennis, Ping-pong, to read

Tennis
30 Table,

and in the definition thereof cancel the words "ping-pong or", and change the title of subclass 76, Bats, mallets, racquettes, cues, pins, slings, and Billies, Tennis, Ping-pong, to read

Bats, mallets, racquettes, cues, pins, slings, and billies
Tennis
76 Table,

and in the definition thereof cancel the words "or ping-pong."

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 21, 1925.

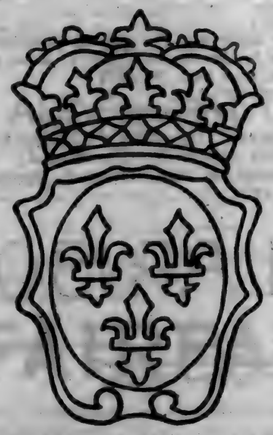
[VOL. 333. No. 3.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 139,485. (CLASS 20. MEASURING AND SCIENTIFIC APPLIANCES.) TIMELY FILMS, INC., New York, N. Y. Filed Nov. 10, 1920.



Particular description of goods.—Text Motion-Picture Films for Use by Motion-Picture Exhibitors.
Claims use since about April, 1920.

Ser. No. 174,995. (CLASS 23. CUTLERY, MACHINERY, AND TOOLS, AND PARTS THEREOF.) BENZ & CIE RHEINISCHE AUTOMOBIL- U. MOTOREN-FABRIK AKTIENGESELLSCHAFT, Mannheim, Germany. Filed Jan. 24, 1923.

Particular description of goods.—Motors—Namely, Internal-Combustion and Explosion Engines, Heat Engines, Gas Producers for All Kinds of Fuel for Use with Internal-Combustion and Explosion Engines; Parts and Accessories for Automobiles—Namely, Gas Producers, Exhaust Silencers, Lubricating Apparatus for Oil and Grease, Air Pumps, Ball Bearings, Pliers, Oil and Water Circulation Pumps, Jacks, Files.
Claims use since September, 1909.

Ser. No. 175,915. (CLASS 37. PAPER AND STATIONERY.) CAMILLE H. BOULIN, doing business as Canson & Montgolfier, New York, N. Y. Filed Feb. 12, 1923.

Trade-mark consists of a crown above a shield having fleur-de-lis in the field.
Particular description of goods.—Handmade Paper.
Claims use since Apr. 18, 1784.

Ser. No. 180,116. (CLASS 44. DENTAL, MEDICAL, AND SURGICAL APPLIANCES.) FORT HOWARD PAPER COMPANY, Green Bay, Wis. Filed May 3, 1923.

SANAP

Particular description of goods.—Sanitary Napkins.
Claims use since May 1, 1922.

Ser. No. 181,861. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) GEORGE T. PARR, St. Paul, Minn. Filed June 11, 1923.

Par-Pie

Particular description of goods.—Edible Ice-Cream Containers and Ice-Cream Confections Contained in Edible Containers.
Claims use since June 1, 1923.

Ser. No. 184,085. (CLASS 5. ADHESIVES.) DAVID BAIRD MACDONALD, Leicester, England. Filed Aug. 4, 1923.

KRUX

Particular description of goods.—Compositions for Use as Adhesives for Leather and Parts of Boots and Shoes.
Claims use since Sept. 10, 1912.

Ser. No. 186,144. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) THE LIVERPOOL BORAX CO. LTD., Liverpool, England. Filed Sept. 24, 1923.

CLARISOL

Particular description of goods.—Detergents in the Form of a Borate Washing Powder.
Claims use since Nov. 10, 1915.

Ser. No. 188,451. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) TELOMETER MANUFACTURING COMPANY, INC., Binghamton, N. Y. Filed Nov. 16, 1923.

TELOMETER

No claim is made to the word "Telometer" apart from the mark shown in the drawing.
Particular description of goods.—Signals for Indicating Extremes of Temperature in Motor-Vehicle Radiators, Gasoline and Oil Level and Liquid Level in Batteries of Motor Vehicles.
Claims use since May 20, 1922.

Ser. No. 188,934. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) SAFETY ELECTRIC PRODUCTS CO., Los Angeles, Calif. Filed Nov. 26, 1923.

SAFETY

The descriptive word "Safety" is disclaimed apart from the mark as shown in the drawing. The shaded lines in the drawing indicate a blue color.
Particular description of goods.—Electrical Goods for Use with Electrical Apparatus—Namely, Externally-Operated Electrical Switches, Switchboards, Panel Boards, Box Hangers, Cut-Out Cabinets, Pumping-Plant Panels, Exit Boxes, Sectional Wiring Trough, Motor-Lead Boxes, Reducing Washers, Tape.
Claims use since Oct. 1, 1923.

Ser. No. 189,285. (CLASS 15. OILS AND GREASES.) VULCAN OIL REFINING COMPANY, Coraopolis, Pa. Filed Dec. 5, 1923.

The drawing is lined to indicate the colors blue and orange.
Particular description of goods.—Gasoline, Kerosene, and Lubricating Oils and Greases.
Claims use since March, 1922.

Ser. No. 189,526. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) SAYLES FINISHING PLANTS, INC., Saylesville, R. I. Filed Dec. 11, 1923.

FINISHED AT SAYLES BLEACHERIES SAYLESVILLE R.I.

No claim is made to the exclusive use of the words "Finished at Saylesville, R. I." apart from the mark as shown in the drawing.
Particular description of goods.—Cotton Piece Goods.
Claims use for over five years.

Ser. No. 190,091. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) JOSEPH A. CURTS, Detroit, Mich. Filed Dec. 26, 1923.

Love Bites
"EVERY BITE A DELIGHT"

No claim is made to the words "Every Bite a Delight" except in connection with the mark as shown on the drawing.
Particular description of goods.—Chocolate Candy Bars Filled with Peanuts.
Claims use since December, 1919.

Ser. No. 191,250. (CLASS 28. JEWELRY AND PRECIOUS-METAL WARE.) ART WIRE AND STAMPING COMPANY, Arlington, N. J. Filed Jan. 25, 1924.

STA-LOCKT

Particular description of goods.—Gold-Plated and Gold-Filled Cuff Buttons.
Claims use since early in 1916.

Ser. No. 191,340. (CLASS 38. PRINTS AND PUBLICATIONS.) THE POLLOCK-DAVIS COMPANY, Cleveland, Ohio. Filed Jan. 26, 1924.

BUY-A-FORD

Particular description of goods.—A Monthly Publication.
Claims use since September, 1921.

Ser. No. 191,569. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE M. PROPP CO., New York, N. Y. Filed Jan. 31, 1924.

PROPP GLO-LITE

No claim is made to the exclusive use of the mark "Glo-Lite" apart from the mark shown on the drawing.
Particular description of goods.—Miniature-Electric-Light Clusters.
Claims use since about Jan. 1, 1924.

Ser. No. 191,570. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE M. PROPP CO., New York, N. Y. Filed Jan. 31, 1924.

ADA-S-OKET

Particular description of goods.—Electric Sockets.
Claims use since about Jan. 1, 1924.

Ser. No. 192,122. (CLASS 27. HOROLOGICAL INSTRUMENTS.) HOFFMAN BROS., INC., New York, N. Y. Filed Feb. 11, 1924.

FAIRFAX

Particular description of goods.—Watches, Watch Movements, Watchcases, Clocks, and Parts Thereof.
Claims use since Feb. 1, 1924.

Ser. No. 192,168. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE AUTOMATIC ELECTRICAL DEVICES COMPANY, Cincinnati, Ohio. Filed Feb. 12, 1924.

STAR
BATTERY CHARGER

No claim is made to the exclusive use of the words "Battery Charger" apart from the other features of the mark.
Particular description of goods.—Electrical Rectifiers.
Claims use since Jan. 2, 1924.

Ser. No. 192,486. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) KENWORTHY GRAIN & MILLING CO., Tacoma, Wash. Filed Feb. 18, 1924.

Ken-Ko

Particular description of goods.—Cereals—Namely, Corn Meal, Rolled Oats, Poultry Feeds, Dairy Feed, Mill Feed, and Hard-Wheat Flour.
Claims use since Jan. 16, 1924.

Ser. No. 193,028. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) BURNDEPT LIMITED, London, England. Filed Feb. 29, 1924.

ETHOPHONE

Particular description of goods.—Wireless Apparatus—Namely, Complete Radio Receiving Sets, Vacuum Tubes, Vacuum-Tube Units, and Amplifiers.
Claims use since 1921.

Ser. No. 193,469. (CLASS 38. PRINTS AND PUBLICATIONS.) WALTER RAY MAXWELL, doing business as International Publishing Company, Chicago, Ill. Filed Mar. 8, 1924.

International ReferenceWork with Loose Leaf Revision Service

Applicant disclaims the right to the exclusive use of the words "Reference Work with Loose Leaf Revision Service" except in connection with the mark as shown.
Particular description of goods.—Encyclopedia with Loose-Leaf Revision Service.
Claims use since Mar. 17, 1923.

Ser. No. 193,838. (CLASS 27. HOROLOGICAL INSTRUMENTS.) THE KEYSTONE WATCH CASE COMPANY, Philadelphia, Pa. Filed Mar. 15, 1924.

KEYSTONE
Standard

No claim is made to the word "Standard" apart from the mark as shown in the drawing.
Particular description of goods.—Watches, Watch-cases, Watch Movements, and Parts Thereof.
Claims use since Jan. 29, 1924.

Ser. No. 194,602. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE GREAT ATLANTIC & PACIFIC TEA COMPANY, Jersey City, N. J. Filed Mar. 28, 1924.

MELLO-WHEAT

No claim is made to the word "Wheat" apart from the mark as shown on the drawing.
Particular description of goods.—Cereal Breakfast Foods.
Claims use since Mar. 6, 1913.

Ser. No. 195,575. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALFRED E. F. WEIDNER, doing business as Fabrik medizinischer und kosmetischer Präparate Dr. Alfred E. F. Weidner, Berlin, Germany. Filed Apr. 15, 1924.

Hortiflor

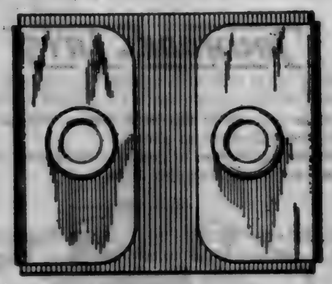
Particular description of goods.—Albuminates, Albumoses, and Dissolutions of said Substances to be Employed for Hygienic Purposes, Especially as Cosmetics and Trichogenous Means, Disinfectants, Dentifrices, and Collutoria.
Claims use since May 18, 1920.

Ser. No. 195,608. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EDMUND WEIDNER, Berlin, Germany. Filed Apr. 15, 1924.

Silvikrin

Particular description of goods.—Albuminates, Albumoses, and Dissolutions of said Substances to be Employed for Hygienic Purposes, Especially as Cosmetics and Trichogenous Means, Disinfectants, Dentifrices, and Collutoria.
Claims use since May 10, 1922.

Ser. No. 196,338. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) GENERAL ELECTRIC COMPANY, Schenectady, N. Y. Filed Apr. 30, 1924.



The trade-mark consists of the orange and blue border with white lines thereon shown in the drawing, wherein the color lines represent the colors orange and blue and the solid black lines represent white.
Particular description of goods.—Electrical Switches, Electrical Fuses, Electrical Insulating Compounds, Electrical Connecters, Electrical Circuit Boxes and Fittings, Electrical Wiring Conduits, Electrical Cut-Outs, Electrical Receptacles, Electrical Insulating Tape, Wire for Electrical Purposes, Electrical Sockets, Transformers, Storage-Battery Chargers, Christmas-Tree-Lighting Outfits, Armature Coils, Lightning Arresters, Telephone Plugs, Electric Soldering Irons, Electric Fans, Carbon Electrodes, Overhead Relay Bases, Electric Gluepots, Carbon Heater Lamps, Electrical Dashpots, Magnetic Interlocks, Rheostats, Electrical Compensators, Electrical Controller Segments, Electrical Relays, and Electric Motors.
Claims use since July, 1910.

Ser. No. 197,120. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) ALLEN-BRADLEY COMPANY, Milwaukee, Wis. Filed May 16, 1924.

Bradleyswitch

Particular description of goods.—Electrical Switches.
Claims use since Nov. 15, 1923.

Ser. No. 197,195. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES). DUBILIER CONDENSER & RADIO CORPORATION, New York, N. Y. Filed May 17, 1924.

The trade-mark consists of the color red arbitrarily placed on the face of the insulating material of radio condensers, no matter what the form of condenser; no claim made to the representation of the condenser. The lines of drawing indicate the color red.
Particular description of goods.—Electrical Condensers.
Claims use since on or about Jan. 15, 1924.

Ser. No. 197,556. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE PETER FOX SONS CO., Chicago, Ill. Filed May 24, 1924.

U-WANTHE BEST

Particular description of goods.—Dressed Poultry and Eggs.
Claims use since 1916.

Ser. No. 198,442. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE ANSTED & BURK CO., Springfield, Ohio. Filed June 12, 1924.

Exclusive use of the representation of the sack is disclaimed. The mark consists of a stripe forming a panel open at the upper end and printed on the front and back of the containers in which the flour is shipped and is orange colored.
Particular description of goods.—Wheat Flour.
Claims use since Mar. 6, 1924.

Ser. No. 198,067. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) KENNETH B. NOBLE, doing business as Noble Manufacturing Company, Hartford, Conn. Filed June 16, 1924.

"TRUMODEL TOYS"

No claim is made to the word "Toys" except in connection with the mark as shown.

Particular description of goods.—Mechanical Toys.

Claims use since Mar. 14, 1924.

Ser. No. 200,078. (CLASS 37. PAPER AND STATIONERY.) ALBANY PERFORATED WRAPPING PAPER COMPANY, Albany, N. Y. Filed July 16, 1924.

Applicant hereby disclaims any demand herein for protection upon the mere words "Finest Satin Tissue," "2500 Sheets 5 x 5¾," and "Albany, N. Y., U. S. A." apart from the mark shown.

Particular description of goods.—Toilet Paper.

Claims use since June 11, 1924.

Ser. No. 200,079. (CLASS 37. PAPER AND STATIONERY.) ALBANY PERFORATED WRAPPING PAPER COMPANY, Albany, N. Y. Filed July 16, 1924.

Applicant hereby disclaims any demand herein for protection upon the words "Pure White Toilet" and "Albany, N. Y." apart from the mark shown.

Particular description of goods.—Toilet Paper.

Claims use since June 13, 1924.

Ser. No. 200,081. (CLASS 37. PAPER AND STATIONERY.) ALBANY PERFORATED WRAPPING PAPER COMPANY, Albany, N. Y. Filed July 16, 1924.

Applicant hereby disclaims any demand herein for protection upon the mere words "1000 4½ x 5 Sheets" and "Albany, N. Y." apart from the mark shown.

Particular description of goods.—Toilet Paper.

Claims use since June 6, 1924.

Ser. No. 200,082. (CLASS 37. PAPER AND STATIONERY.) ALBANY PERFORATED WRAPPING PAPER COMPANY, Albany, N. Y. Filed July 16, 1924.

Applicant hereby disclaims any demand herein for protection upon the mere words "Toilet Paper" and "Albany, N. Y." apart from the mark shown.

Particular description of goods.—Toilet Paper.

Claims use since June 9, 1924.

Ser. No. 201,039. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DAVID J. MCCOMB, Santa Fe, N. Mex. Filed Aug. 6, 1924.

The descriptive words "Incomparable Fruits" appearing on the drawing are disclaimed apart from the other features of the mark.

Particular description of goods.—Fresh Deciduous and Small Fruit.

Claims use since June, 1922.

Ser. No. 201,117. (CLASS 36. MUSICAL INSTRUMENTS AND SUPPLIES.) THE UDELL WORKS, Indianapolis, Ind. Filed Aug. 7, 1924.

Empire

Particular description of goods.—Talking Machines.

Claims use since June, 1914.

Ser. No. 201,665. (CLASS 2. RECEPTACLES.) KALIX CUP COMPANY, Boston, Mass. Filed Aug. 20, 1924.

KALIX

Particular description of goods.—Paper Drinking Cups and Dispensers Therefor.

Claims use since Aug. 1, 1924.

Ser. No. 201,690. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) THE AUTOTYPE COMPANY LIMITED, London, England. Filed Aug. 21, 1924.

AUTOTYPE

The trade-mark consists of a coined or fancy word "Autotype" combined with a pictorial representation of a rising sun.

Particular description of goods.—Sensitized Photographic Paper.

Claims use since Feb. 1, 1922.

Ser. No. 202,065. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) IMPERIAL AUTO PRODUCTS COMPANY, Los Angeles, Calif. Filed Aug. 30, 1924.

IMPERIAL

Particular description of goods.—Prepared Dusting Cloths.

Claims use since May 22, 1924.

Ser. No. 202,091. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) CHARLES G. HALL, New York, N. Y. Filed Sept. 24, 1924.

FLEX-O-DYNE

Particular description of goods.—Radio Receiving Apparatus—Namely, Assembled Sets and Loud Speakers.

Claims use since Mar. 1, 1923.

Ser. No. 203,006. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) RADIOTYPE CORPORATION, Brooklyn, N. Y. Filed Sept. 24, 1924.

SilverVoice

Particular description of goods.—Radio Loud Speakers.

Claims use since Sept. 2, 1924.

Ser. No. 203,088. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) NEWTON, CHAMBERS & CO. LIMITED, near Sheffield, England. Filed Sept. 26, 1924.

Applicant disclaims any attempt to cover in this registration the words "Used the World Around" except in the precise relation and association in which they appear in the specimens and drawing. In the drawing the vertical lining indicates the color red, the diagonal lining indicates the color green.

Particular description of goods.—Perfumed Soap, Liquid Soaps, Medicated Soaps, Soft Soap, Soft and Hard Disinfectant Soaps.

Claims use since Nov. 1, 1922.

Ser. No. 203,100. (CLASS 46. FOODS AND INGREDIENT OF FOODS.) TOPEKA FLOUR MILLS COMPANY, Topeka, Kans. Filed Sept. 24, 1924.

Particular description of goods.—Wheat Flour.

Claims use since Mar. 25, 1924.

Ser. No. 203,215. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) OMER G. WHELAN, Richmond, Ind. Filed Sept. 29, 1924.

Particular description of goods.—White Corn Meal, Yellow Corn Meal, Graham Flour, Whole-Wheat Flour, Buckwheat Flour, Egg Mash, Growing Mash, Chick Feed, and Scratch Feed.

Claims use since July 1, 1924.

Ser. No. 203,312. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) GUST ECONOMY, Yankton, S. Dak. Filed Oct. 2, 1924.

Particular description of goods.—Shoe Dressing.

Claims use since July 1, 1924.

Ser. No. 203,481. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MOFFETT GROCER CO., Flint, Mich. Filed Oct. 6, 1924.

DINNER TIME

Particular description of goods.—Canned Fish, Food-Flavoring Extracts; Condiments—Namely, Mustard, Pepper, Paprika; Relish Comprising Sweet and Sour Pickles, Onions, Tomatoes, and Ginger, Alimentary Pastes, Canned Vegetables, Canned Fruits, Tea, Coffee, Evaporated Milk, Peanut Butter, Apple Butter, Spices, Cocoa, Salad Dressing, Vinegar, Preserved Fruits, Mincemeat, Pickles, Tapioca, Catchup, Honey, Chili Sauce, Dried Fruits, and Cereals—Namely, Rice and Barley.
Claims use since 1905.

Claims use since about 1921.

Ser. No. 206,004. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) ROBERT I. STEEN CO., Los Angeles, Calif. Filed Dec. 1, 1924.

RISCO

Particular description of goods.—Food-Flavoring Extracts, Spices, Nut Meats in Their Natural State, Mincemeat, Pie Fillings, Pie Thickener, Meringue Powder, Cocoa Powder, Bakers' Jelly, Molasses, Powdered Egg, and Salt-Rising Yeast.
Claims use since July 26, 1922.

Ser. No. 206,122. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) NATIONAL AIRPHONE CORPORATION, New York, N. Y. Filed Dec. 2, 1924.

TU-RA-FLEX

Particular description of goods.—Radio Receiving Sets.
Claims use since Sept. 10, 1924.

Ser. No. 206,190. (CLASS 16. PAINTS AND PAINTERS' MATERIALS.) RINALD BROTHERS PAINT WORKS, INC., Philadelphia, Pa. Filed Dec. 3, 1924.

Particular description of goods.—Varnishes, Dry Paints, Paste Paints, Ready-Mixed Paints, and Colors and Dyes Used in Connection Therewith.
Claims use since Nov. 25, 1924.

Ser. No. 206,315. (CLASS 38. PRINTS AND PUBLICATIONS.) HERBERT W. LAMB, doing business as Home Industries, Adrian, Mich. Filed Dec. 5, 1924.

HOME

Particular description of goods.—Books and Lesson Sheets Used in Connection with Correspondence Courses in Applied Arts, Decalcomania, Transfers, and Printed Greeting Cards.
Claims use since Oct. 25, 1924.

Ser. No. 206,330. (CLASS 38. PRINTS AND PUBLICATIONS.) SELL BROTHERS, Delaware, Ohio. Filed Dec. 5, 1924.

Applicants specifically disclaim the descriptive words "Quality" and "Service" apart from the mark shown.
Particular description of goods.—Photoprints and Enlargements.
Claims use since Sept. 1, 1911.

Ser. No. 206,350. (CLASS 39. CLOTHING.) JEOSEF GROPPER, doing business as J. Gropper Weavenit, New York, N. Y. Filed Dec. 6, 1924.

Particular description of goods.—Neckties.
Claims use since Sept. 17, 1924.

Ser. No. 206,375. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE REID-SEELEY COMPANY, INC., New York, N. Y. Filed Dec. 6, 1924.

Particular description of goods.—Chemical Stain Remover and Cleaner and Nap Raiser for Fabrics.
Claims use since Sept. 15, 1924.

Ser. No. 206,400. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) CONVEX SIGN CO., Chicago, Ill. Filed Dec. 8, 1924.

No claim is made to the representation of the target and the word "Game" apart from the mark as shown. The drawing is lined for red.
Particular description of goods.—Toy Pistol and Target.
Claims use since July 1, 1920.

Ser. No. 206,631. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) LEON A. OLMSTED, doing business as Vim Chain Stores, Chicago, Ill. Filed Dec. 12, 1924.

Particular description of goods.—Electric Tapes, Electric-Light Pull-Cord Beads, Electric Dry Cells, Electric Doorbells, Electric Junction Boxes, Electric Christmas-Tree Bulbs, Electric Dry-Cell Bulbs, Electric Flash-Light Bulbs, Electric Auto Bulbs, Electric Socket Bushings, Electric Tail and Dash Bulbs, Electric Buzzers, Electric Testing Clips, Electric Candlesticks, Electric Porcelain Cleats, Electric Wire Connecters, Electric-Light Clusters, Electric Plug Clusters, Electric Battery Connecters, Electric Extension Cords, Electric-Cord Adjusters, Electric-Current Taps, Electric Plug Cut-Outs, Electric Cut-Outs, Electric Dynamo Motors, Electric Dynamos, Electric Fans, Electric Dimming Rheostats, Electric Flash Lights, Electric-Lamp Guards, Electric-Wire Knobs, Electric Flatirons, Electric Soldering Irons, Electric Curling Irons, Electric Portable Lamps, Electric Motors, Electric Nipples and Plates, Electric Wall Switches, Electric Flatiron Plugs, Electric Attachment Plugs, Electric

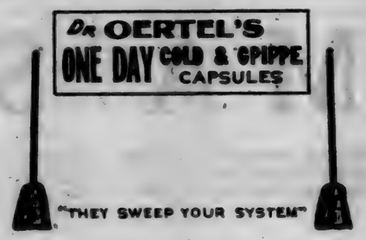
Swivel Attachment Plugs, Electric Plug Caps, Electric Plug Fuses, Electric Plug Receptacles, Electric Push Buttons, Electric-Light Wire Rosettes, Electric Christmas-Tree-Light Socket Holders, Electric-Light Sockets, Electric-Light Wall Sockets, Electric-Light Molding Sockets, Electric-Light Keyless Brass-Shell Sockets, Electric-Light Base Sockets, Electric-Light Key Sockets, Electric-Light Key Wall Sockets, Electric-Light Pull-Chain Sockets, Electric-Light Pull-Chain Wall Sockets, Electric Continuous-Ring-Bell Door Springs, Electric-Wire Staples, Electric-Wire Insulated Staples, Electric Switches, Electric Snap Switches, Electric Double-Pole Switches, Electric Pendant Switches, Electric Flush Switches, Electric Telegraph Keys, Electric Telegraph Outfits, Electric Telegraph Sounders, Electric-Bell-Ringing Transformers, Electric-Wire Porcelain Tubes, Electric Toasters, Electric-Bell Wires, Electric-Bell Duplex Wires, Electric-Lamp Cords, Electric Heater Cords, Electric Christmas-Tree-Light Outfits, Electric Tail Lights, Electric Spark-Plug Wires, Electric Rubber-Cap Plugs, Electric Knee Push Buttons, Electric Floor Push Buttons, Electric Lamp and Plug Sockets, Electric-Tail-Lamp Sockets, Electric-Tail-Light Converter Sockets, Electric Auto Switches, Electric Push-Button Switches, Electric Turn-Button Switches, Electric Spark-Plug Timers, Electric Auto Lighting Wires, Electric Spark-Plug Cables, Interdepartment Telephone Sets, Electric Room Heaters, and Electric Spark Coils.
Claims use since Dec. 15, 1922.

Ser. No. 206,716. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) BLATCHFORD CALF MEAL COMPANY, Waukegan, Ill. Filed Dec. 15, 1924.

Applicant disclaims the words "Essential Minerals for Cattle" and the words "Rights the Ration" apart from the other features of the mark.
Particular description of goods.—Feed for Cattle—Namely, Dairy Meal and Essential Minerals for Cattle, Each of Which Comprises a Compounded Ground Feed Having, Among Other Things, Various Minerals Which are Essential or Desirable Ingredients for Cattle Feed.
Claims use since Sept. 1, 1924.

Ser. No. 206,798. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE NEUMAN & SCHWIERS CO., INC., New York, N. Y. Filed Dec. 16, 1924.

YANKEE RELISH



No claim is made to the word "Relish" apart from the mark shown in the drawing.
Particular description of goods.—Vegetable Relishes.
Claims use since on or about Oct. 4, 1916.

Ser. No. 206,801. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) ED. POHL, Reval, Esthonia. Filed Dec. 16, 1924.

The words "Impregnated, Safeties, Brand, Made in Estonia" are disclaimed apart from the mark shown in the drawing.
Particular description of goods.—Safety Matches.
Claims use since Oct. 15, 1924.

Ser. No. 206,856. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CARL H. OERTEL, Baltimore, Md. Filed Dec. 17, 1924.

No claim is made to the words "Cold & Grippe Capsules" apart from the mark shown.
Particular description of goods.—Medicines for Colds, Grippe, and Influenza.
Claims use since September, 1921.

Ser. No. 206,860. (CLASS 21. ELECTRICAL APPARATUS, MACHINES, AND SUPPLIES.) THE RADIO PARLOR, New York, N. Y. Filed Dec. 17, 1924.

Mayolian

Particular description of goods.—Radio Receiving Sets and Parts Thereof.
Claims use since Aug. 8, 1924.

Ser. No. 206,882. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) DES MOINES WHOLESALE GROCER CO., Des Moines, Iowa. Filed Dec. 18, 1924.

Particular description of goods.—Apple Butter, Canned Fish, Canned Fruits, Olive Oil, Evaporated Canned Milk, Canned Vegetables, Preserved Fruits, Coffee, Prepared Mustards, Mincemeat, Canned Pork and Beans, Peanut Butter, Olives, Pickles, Catchup, Chili Sauce, Salad Dressing, Table Sirup, and Vinegar.
Claims use since July 14, 1923.

Claims use since January, 1916.

Ser. No. 210,698. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE AMERICAN BOOSTER COMPANY, Detroit, Mich. Filed Mar. 9, 1925.

BOOSTER

Particular description of goods.—Hair Tonic.
Claims use since 1919.

Ser. No. 210,734. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ARDEN P. KESSLER, doing business as The All Specialties Drug Company, Dayton, Ohio. Filed Mar. 9, 1925.

L. & T.

Particular description of goods.—Medicine for Constipation, Headache, and Nervous Conditions and All Troubles Arising from Colon Infection.
Claims use since Feb. 23, 1925.

Ser. No. 210,760. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) EMIL SIEBEL, doing business as Emil Siebel Company, St. Louis, Mo. Filed Mar. 9, 1925.

SIE-TABS

Particular description of goods.—Medicinal Preparation for the Relief of Billousness and Constipation.
Claims use since Nov. 1, 1924.

Ser. No. 210,780. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) AMERICAN KLORO PRODUCTS CO., Oakland, Calif. Filed Mar. 10, 1925.

KLORO

Particular description of goods.—Bleaching Fluid.
Claims use since Dec. 28, 1924.

Ser. No. 210,785. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) COTY, INC., Wilmington, Del., and New York, N. Y. Filed Mar. 10, 1925.

LA JACEE

Particular description of goods.—Perfumes, Toilet Waters, Face Powder, Talcum Powder, Eau de Cologne, Lotion for the Skin and Hair, Brilliantine, Bath Salts, Rouges, Lip Sticks, Powder Compacts.
Claims use since Jan. 5, 1925.

Ser. No. 210,788. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FLORIAN INC., Des Moines, Iowa. Filed Mar. 10, 1925. Trade-mark consists of a silhouette.

Particular description of goods.—Face Powder, Tooth Paste, and Face Lotion.
Claims use since Nov. 12, 1923.

Ser. No. 210,796. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH LESQUENDIEU, Paris, France. Filed Mar. 10, 1925.

ECLADOR

Particular description of goods.—Nail Polishes.
Claims use since Sept. 21, 1912.

Ser. No. 210,797. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH LESQUENDIEU, Paris, France. Filed Mar. 10, 1925.

Faryoli

Particular description of goods.—Rouges.
Claims use since Feb. 21, 1922.

Ser. No. 210,798. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH LESQUENDIEU, Paris, France. Filed Mar. 10, 1925.

FLOZOR

Particular description of goods.—Hair Coloring.
Claims use since Jan. 22, 1920.

Ser. No. 210,799. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOSEPH LESQUENDIEU, Paris, France. Filed Mar. 10, 1925.

FLO

Particular description of goods.—Perfume, Toilet Water, Face Powder, Talcum Powder, Face Creams, Lotion for the Skin and Hair, Brilliantine, Rouges, and Dentifrices.
Claims use since July 2, 1923.

Ser. No. 210,826. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) CAPITAL DRUG COMPANY, Sacramento, Calif. Filed Mar. 11, 1925.

Particular description of goods.—Mineral Bath Crystals.
Claims use since May 1, 1924.

Ser. No. 210,832. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) DENTA-GLO LABORATORY, Temple, Tex. Filed Mar. 11, 1925.

DENTA-GLO

Particular description of goods.—Liquid Tooth-Cleaning Preparation for Cleansing the Teeth and Removing Tartar, Stains, and Discolorations.
Claims use since Oct. 1, 1924.

Ser. No. 210,855. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) PEDE-KUMFO CO., Fort Wayne, Ind. Filed Mar. 11, 1925.

Pede Kumfo

Particular description of goods.—Preparation for Deodorizing Shoes.
Claims use since December, 1924.

Ser. No. 210,898. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) FERGGER-FOX DRUG COMPANY, Omaha, Nebr. Filed Mar. 12, 1925.

AKSARBEN

Particular description of goods.—Medicine Used in Cases of Rheumatism, Neuralgia, Sciatica, Paralysis, Lumbago, Lame Back, Stiff Joints, Pleurisy, Sore Throat, La Grippe, Asthma, Bronchitis, Lung Fever or Pneumonia, Sprains, Sore Feet, Swellings; Pains in Back, Stomach, Lungs, or Between Shoulders; and for Medicine Used in Cases of Stomach, Liver, Kidney, and Bladder Trouble, for the Relief of Indigestion, Constipation, Biliousness, Backache, Rheumatism Caused by a Diseased or Weakened Condition of the Organs of Digestion and Elimination.
Claims use since Jan. 1, 1920.

Ser. No. 210,903. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) HEINE & CO., New York, N. Y. Filed Mar. 12, 1925.

Jasminette

Particular description of goods.—Essential Oils Suitable for Perfumery Purposes.
Claims use since Aug. 11, 1910.

Ser. No. 210,916. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) MILLER PHARMACY CO., doing business as Polyclinic Medicine Co., Cincinnati, Ohio. Filed Mar. 12, 1925.

PHYLLIS

Particular description of goods.—Preparation for Hair Dressing and Grower, Shampoo, Dandruff, and Itching Scalp.
Claims use since about 1912.

Ser. No. 210,936. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE J. R. WATKINS COMPANY, Winona, Minn. Filed Mar. 12, 1925.

SYR

Particular description of goods.—Brown Skin Face Powder, Complexion Powder, Deodorant Powder, Talcum Powder; Tooth Powder, Fly Powder, Cold Cream, Face Cream, Face Packs, Vanishing Cream, Cosmetic Lotion, Rouge, Lip Stick, Perfume, Toilet Water, Scalp Tonic, Shampoo Jelly, Coconut-Oil Shampoo, Hair Tonic, Hair Oils, Mouth Wash, Tooth Paste, Nail Polish, Eyebrow Pencil, Aspirin, Kidney and Bladder Pills, Cascara-Senna Tablets, Cathartic Liver Pills, Baking Powder, After-Dinner Tablets, Corn Salve, Digestive Tablets, Diuretic Tablets, Headache Tablets, Herb Tablets, Little Liver Pills, Rheumatic and Gout Pills, Stick Salve, Toothache Wax, Worm Tablets, Household Disinfectant, Fly Oil, Poultry Tonic, Hair Tonic, Hair Oils, and Sachet.

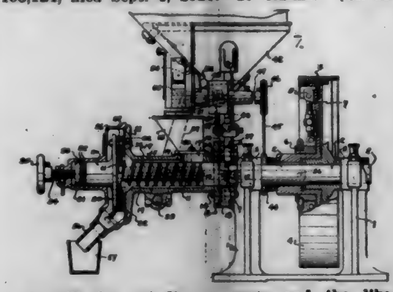
REISSUES

APRIL 21, 1925.

16,044. CLOTHES DRIER. LEWIS G. CAMPBELL, Cincinnati, Ohio, assignor to The Puritan Cabinet Dryer Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Feb. 21, 1925. Serial No. 10,988. Original No. 1,521,274, dated Dec. 30, 1924, Serial No. 708,279, filed Apr. 22, 1924. 8 Claims. (Cl. 34—19.)



5. In a clothes drier, a casing with a burner to heat the same on the inside, extending the width of the casing, and a cover plate mounted above the burner to divide the chamber into a heating and a drying compartment, the cover plate extending from end wall to end wall of the casing, with free openings along the sides of the cover plate at front and rear of the cover plate for the passage of heat from the heating to the drying compartment, and a baffle plate below the cover plate and fitted to same to form a dead-air space above the burner.

16,045. BRAKE MECHANISM. ANGELO ROBERT CLAS and RAYMOND W. RANDALL, Toledo, Ohio, assignors to The Toledo Automotive Products Company, Toledo, Ohio, a Corporation of Ohio. Filed July 5, 1924. Serial No. 724,495. Original No. 1,493,472, dated May 13, 1924, Serial No. 461,627, filed Apr. 15, 1921. 5 Claims. (Cl. 188—249.)

3. In a brake of the class described, a split brake, a lining unit for the band comprising a split pliant strip for fitting into the member and a fibrous lining fixed to the strip and terminating short of its ends, the projecting ends of the strip being longitudinally slotted, and bolts projecting through the slots in the respective ends of the lining strip to adjustably connect the strip and member, one of said member and strip having notches therein along its side edges and the other having spurs for loosely projecting into the notches and adapted to permit disengagement of the member and lining unit by movement of the unit relative to the member.

16,046. NUT MILL. RICHARD A. GREENE, Brooklyn, N. Y., assignor to Jabez Burns & Sons, a Corporation of New York. Filed Oct. 11, 1923. Serial No. 668,020. Original No. 1,394,082, dated Oct. 18, 1921, Serial No. 408,124, filed Sept. 4, 1920. 19 Claims. (Cl. 83—8.)

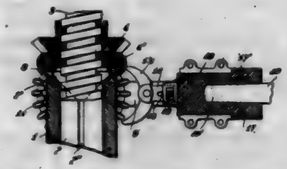
1. A mill for grinding peanuts and the like into smooth paste comprising a frame carrying a hopper for nuts, a feed screw casing having internal longitudinal grooves with an opening to receive the nuts to be ground, a slow pitch feed screw in said casing cooperating with said longitudinal grooves to feed the nuts forward under pressure, an annular flat grinder carried at the end of the feed screw, a stationary annular disk grinder cooperating therewith, means for resisting the thrust of the grinders, the end of the feed casing, the feed screw and the grinders being formed to provide a progressively narrowing passage to the flat faces of the grinders to maintain the nuts under increasing pressure between the feed screw and the periphery of the grinders, and the flat faces of the grinders having non-radial grooves therein, whereby pressure is maintained on the nuts by the feed to and through the grinders without overheating and without excessive thrust.

16,047. SURFACING SPONGE RUBBER. THOMAS W. MILLER, Ashland, Ohio, assignor to The Faultless Rubber Company, Ashland, Ohio, a Corporation of Ohio. Filed Oct. 14, 1924. Serial No. 743,688. Original No. 1,501,009, dated July 8, 1924, Serial No. 608,752, filed Dec. 23, 1922. 25 Claims. (Cl. 154—2.)

8. An article of manufacture having a rubber surface portion surmounted by a coating of rubber vulcanized integral and substantially coelastic with said portion and having fibrous material vulcanized in said coating with at least part of said fibrous material extending exteriorly of said coating to form a covering for said coating, and with at least part of said fibrous material extending and vulcanized to said portion.

16,048. PRODUCTION OF SHOW CARDS, ADVERTISEMENTS, SIGNS, DECORATIONS, OR THE LIKE BY STENCILING. HERBERT HAMILTON SCOTT and GEORGE MCINTOSH SCOTT, London, England. Filed Mar. 12, 1925. Serial No. 15,122. Original No. 1,516,065, dated Nov. 18, 1924, Serial No. 627,982, filed Mar. 26, 1923. 3 Claims. (Cl. 41—26.)

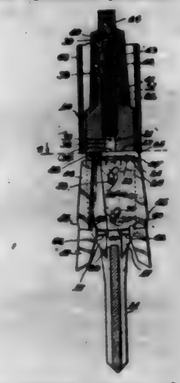
1. Method of producing designs upon a vitreous surface which comprises taking a pasty vitrefiable enamel composition containing finely ground vitrefiable enamel and an oily carrier and capable of being applied to a surface in subdivided form by being pressed through a fine mesh and of retaining a subdivided form upon said surface until heated, placing a fine mesh stencil onto the vitreous surface and forcing said composition



through the mesh portion of the stencil onto the vitreous surface, whereby the composition will be applied to the design portion of the surface in subdivided form, and finally heating the article to an enamel-fusing temperature.

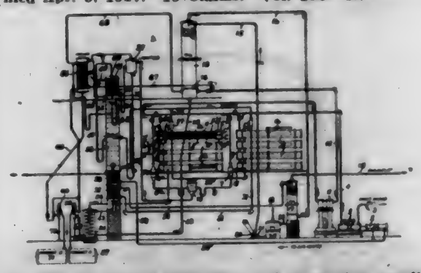
16,049. ALCOHOL TESTER. JACOB WERSHOW, New Haven, Conn. Filed Feb. 24, 1925. Serial No. 11,380. Original No. 1,481,277, dated Jan. 22, 1924, Serial No. 628,157, filed Mar. 27, 1923. 8 Claims. (Cl. 23—253.)

1. An alcohol tester, comprising a wick-container, a cap closing the same, and a plug carrying a coil housed within said cap.



16,050. JACK. MAURICE F. BERNSON, Canadian, Tex., assignor, by mesne assignments, to Walker Manufacturing Company, Racine, Wis., a Corporation of Wisconsin. Filed Dec. 17, 1924. Serial No. 756,626. Original No. 1,486,723, dated Mar. 11, 1924, Serial No. 484,111, filed July 12, 1921. 27 Claims. (Cl. 254—102.)

1. A jack of the class described comprising a standard having a bore therein and vertical grooves in the walls of the bore, the ends of the bore being of larger diameter than the major portion thereof with sloping shoulders connecting the enlargements with the walls of the grooves, a nut rotatably connected with the top of the standard, a screw threaded member located in the bore of the standard and passing through the nut, a projection at the lower end of the member for engaging the grooves to prevent rotary movement of the member until the projection reaches the enlargements, ratchet means for rotating the nut, a second screw threaded member located in the first member and having screw threads thereon, the first member being interiorly screw threaded to receive the second member and a supporting head on the upper end of the second member.



16,051. REAMER. JACOB S. BROWN, Los Angeles, Calif., assignor of one-half to Walter F. Eichenhofer, Los Angeles, Calif. Filed Aug. 11, 1923. Serial No. 656,906. Original No. 1,390,876, dated Sept. 13, 1921, Serial No. 335,739, filed Nov. 4, 1919. 10 Claims. (Cl. 255—75.)

1. A drill designed to be passed through a well casing including a stock, having an integrally formed bit at the lower end thereof and having a transverse opening above the bit, reamers having upper rounded corners and having lapping flanges which are received in said opening, means between the flanges and the stock for permitting a limited longitudinal and lateral movement of the reamers through the opening, spring means for influencing the reamers to an outward and angular position with respect to the stock, interengaging means between the respective reamers when in such position, elements on the reamers contacting with the stock when the reamers are in such position, spring influenced laterally movable latching means for engaging said spring influenced means for locking the latter when the reamers are in such operative position, and said latching

means and the rounded corners of the reamers being arranged for contact with the lower end of the casing when the stock is moved upwardly toward the casing whereby to release the latching means and to exert a downward pressure upon the rounded corners of the reamers to move the latter against the influence of the spring means to bring the interengaging means therebetween out of such engagement and the contacting elements out of contact with the stock and to again seat the reamers in the opening in the stock.

16,052. PROCESS OF AND APPARATUS FOR EXTRACTING, LIQUEFYING, AND SEPARATING LIQUEFIABLE CONSTITUENTS OF GASES. EMIL SCHILL, Woodmere, N. Y., and FRANZ WOIDICH (known as Francis Sales Woidich), Sapulpa, Okla., assignors to Continental Gas Compressing Corporation, New York, N. Y., a Corporation of New York. Filed May 28, 1924. Serial No. 716,513. Original No. 1,415,058, dated May 9, 1922, Serial No. 160,642, filed Apr. 9, 1917. 19 Claims. (Cl. 196—8.)

14. The process of extracting and recovering gasoline vapors from hydrocarbon gases whose liquefiable content consists in substantial part of normally liquid hydrocarbons, which consists in making a rough separation between certain lighter and heavier constituents thereof, which constituents include substantially all of said normally liquid hydrocarbons, independently introducing said lighter and heavier constituents into a rectification column at appropriate points therein and rectifying them to separate fixed gases therefrom and produce liquid gasoline.

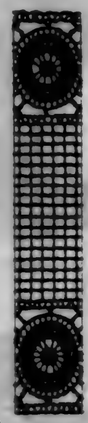
DESIGNS

APRIL 21, 1925.

67,065. LACE. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Broadway, Nottingham, England, assignors to Birkin and Company, Broadway, Nottingham, England. Filed Dec. 24, 1924. Serial No. 11,785. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

67,066. LACE. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Broadway, Nottingham, England, assignors to Birkin and Company, Broadway, Nottingham, England. Filed Dec. 24, 1924. Serial No. 11,786. Term of patent 3½ years.



The ornamental design for lace substantially as shown.

67,067. LACE. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Broadway, Nottingham, England, assignors to Birkin and Company, Broadway, Nottingham, England. Filed Dec. 24, 1924. Serial No. 11,787. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

67,068. LACE. CHARLES WILFRED BIRKIN and EDWIN THOMAS SANDS, Broadway, Nottingham, England, assignors to Birkin and Company, Broadway, Nottingham, England. Filed Dec. 24, 1924. Serial No. 11,788. Term of patent 3½ years.

The ornamental design for lace substantially as shown.

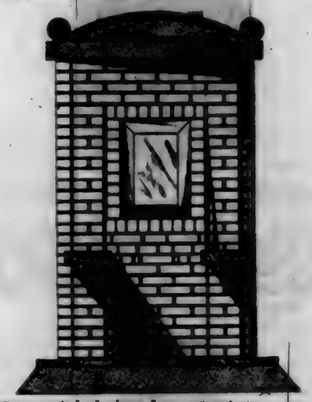
67,069. CHANDELIER. JOHN A. BOEHRINGER, Springfield, N. Y., assignor to Herman A. Safion, New York, N. Y. Filed Feb. 19, 1925. Serial No. 12,422. Term of patent 3½ years.

The ornamental design for a chandelier, as shown.

67,070. ASH TRAY. GOODMAN BURSETOWN, Houston, Tex. Filed Dec. 20, 1923. Serial No. 8,105. Term of patent 3½ years.

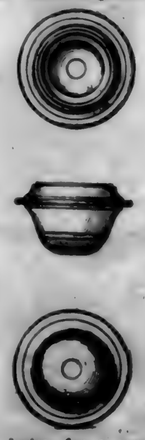
The ornamental design for an ash tray as shown.

67,071. WATCH CHARM. CHARLES W. CAMFIELD, Newkirk, Okla. Filed June 19, 1922. Serial No. 2,729. Term of patent 7 years.



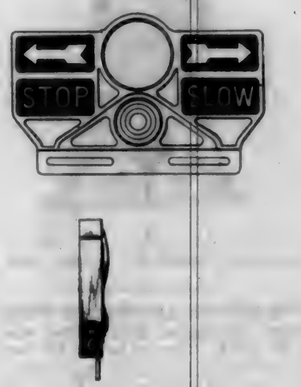
The ornamental design for a watch charm as shown.

67,072. WATCHCASE. ARTHUR P. CONANT, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Nov. 21, 1924. Serial No. 11,432. Term of patent 14 years.



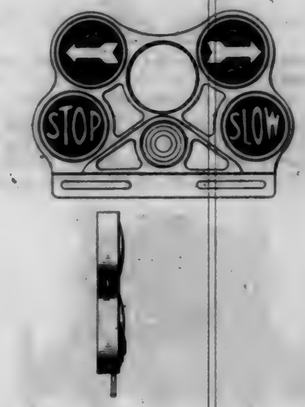
The ornamental design for a watchcase, substantially as shown.

67,073. TOMBSTONE. MINTON I. DA LEE, Oklahoma City, Okla. Filed Feb. 9, 1925. Serial No. 12,316. Term of patent 14 years.



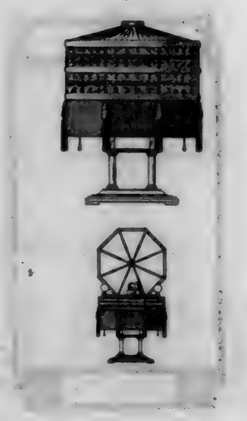
The ornamental design for a tombstone, as shown.

67,074. CANDLE CUP FOR LIGHTING FIXTURES. JOHN DE LEO, New York, N. Y. Filed July 28, 1924. Serial No. 10,269. Term of patent 7 years.



The ornamental design for a candle cup for lighting fixtures as shown.

67,075. AUTOMOBILE SIGNAL LAMP. HENRY G. DIBELKA, Chicago, Ill., assignor to Miller & Pardee, Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug 18, 1923. Serial No. 7,029. Term of patent 3½ years.



The ornamental design for an automobile signal lamp, substantially as shown.

67,076. AUTOMOBILE SIGNAL LAMP. HENRY G. DIBELKA, Chicago, Ill., assignor to Miller & Pardee, Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 18, 1923. Serial No. 7,030. Term of patent 3½ years.

The ornamental design for an automobile signal lamp, substantially as shown.

67,077. COMBINED LAMP AND SOUND-REPRODUCING DEVICE. WALTER ERNI and ARTHUR E. LANGE, Jr., Milwaukee, Wis. Filed June 8, 1922. Serial No. 2,571. Term of patent 3½ years.

The ornamental design for a combined lamp and sound-reproducing device, as shown.

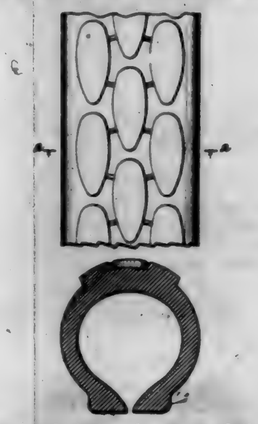
67,078. LIQUID-DISPENSING APPARATUS. ALEXIUS P. FLECKENSTEIN, Ionia, Mich., assignor to Fleckenstein Visible Gasometer Co. of Michigan, Grand Rapids, Mich., a Corporation of Michigan. Filed June 5, 1924. Serial No. 9,804. Term of patent 14 years.

The ornamental design for a liquid dispensing apparatus as shown.

67,079. DISPLAY CARD. CHARLES GREEN, Brooklyn, N. Y., assignor to Charles Green Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 19, 1924. Serial No. 11,750. Term of patent 7 years.

The design for a display card substantially as shown.

67,080. FINGER RING. SAMUEL GROSSMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners, trading as Klebanoff and Grossman, New York, N. Y. Filed Jan. 10, 1925. Serial No. 12,000. Term of patent 3½ years.



The ornamental design for a finger ring as shown.

67,081. FINGER RING. SAMUEL GROSSMAN, New York, N. Y., assignor to David Klebanoff and Samuel Grossman, Copartners, trading as Klebanoff and Grossman, New York, N. Y. Filed Jan. 10, 1925. Serial No. 12,001. Term of patent 3½ years.

The ornamental design for a finger ring as shown.

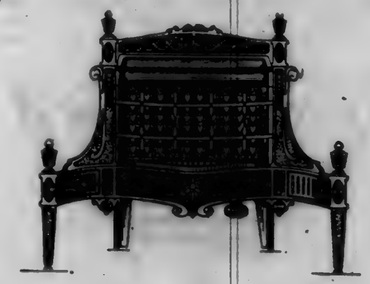
67,082. TREAD FOR AUTOMOBILE TIRES. ARTHUR H. GRUBER, Ludington, Mich. Filed Apr. 14, 1922. Serial No. 1,741. Term of patent 3½ years.

The ornamental design for a tread for automobile tires, as shown.

67,083. BADGE. GERTRUDE C. HART, Chicago, Ill., assignor to Protestant Women's National Civic Federation, Chicago, Ill., a Corporation of Illinois. Filed Oct. 23, 1924. Serial No. 11,155. Term of patent 14 years.

The ornamental design for a badge as shown.

67,084. STATUETTE. MERLE JOHNSON, New York, N. Y., assignor to Frank Walton, New York, N. Y. Filed Dec. 27, 1922. Serial No. 4,729. Term of patent 3½ years.



The ornamental design for a statuette as shown.

67,085. TEXTILE FABRIC. FRANK M. KAUFMAN, Philadelphia, Pa. Filed Nov. 26, 1924. Serial No. 11,493. Term of patent 3½ years.

The ornamental design for a textile fabric, as shown.

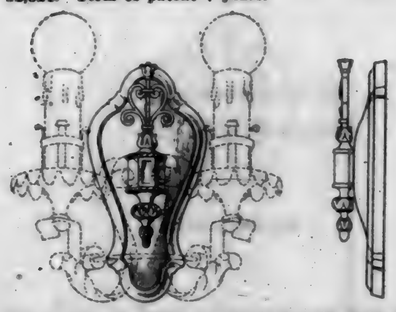
67,086. GAS HEATER. JOHN R. KELLER, Glenshaw, Pa., assignor to The Ohio Foundry & Manufacturing Co., Steubenville, Ohio, a Corporation of Ohio. Filed Jan. 10, 1925. Serial No. 11,993. Term of patent 14 years.

The ornamental design for a gas heater, as shown.

67,087. BADGE OR SIMILAR ARTICLE. GEORGE W. KITE, Atlantic City, N. J. Filed Oct. 18, 1924. Serial No. 11,120. Term of patent 14 years.

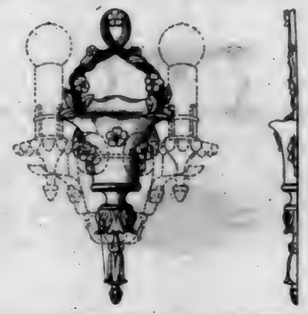
The ornamental design for a badge, or similar article, as shown.

67,088. BODY FOR LIGHTING FIXTURES. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 10,663. Term of patent 3½ years.



The ornamental design for a body for lighting fixtures, as shown.

67,089. CEILING LIGHT. MAX KLEIN, New York, N. Y., assignor to Shapiro & Aronson, Inc., New York, N. Y., a Corporation of New York. Filed Sept. 2, 1924. Serial No. 10,666. Term of patent 3½ years.



The ornamental design for a ceiling light, as shown.

67,090. BACKPLATE FOR LIGHTING FIXTURES. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to Lion Electric Manufacturing Co., Inc., a Corporation of New York. Filed Feb. 28, 1925. Serial No. 12,524. Term of patent 7 years.

The ornamental design for a back plate for lighting fixtures, substantially as shown.

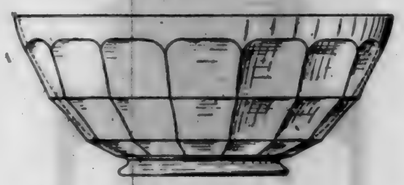
67,091. BACKPLATE FOR LIGHTING FIXTURES. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to Lion Electric Manufacturing Co., Inc., a Corporation of New York. Filed Feb. 28, 1925. Serial No. 12,525. Term of patent 7 years.

The ornamental design for a backplate for lighting fixtures, substantially as shown.

67,092. BACKPLATE FOR LIGHTING FIXTURES. ARTHUR R. KRAUSE, Woodhaven, N. Y., assignor to Lion Electric Manufacturing Co., Inc., a Corporation of New York. Filed Feb. 28, 1925. Serial No. 12,526. Term of patent 7 years.

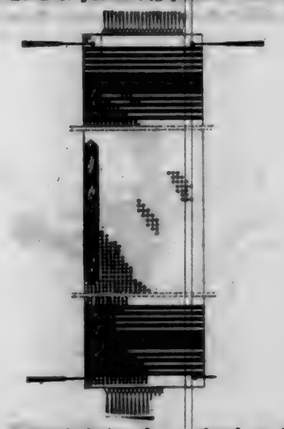
The ornamental design for a backplate for lighting fixtures, substantially as shown.

67,093. IMAGE. FRANCIS J. MCCLISH, St. Louis, Mo. Filed Feb. 5, 1925. Serial No. 12,270. Term of patent 3½ years.



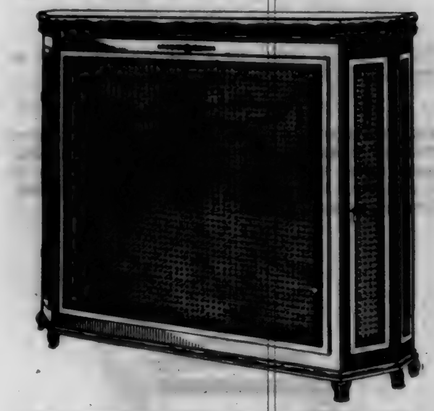
The ornamental design for an image, as shown.

67,094. BASE FOR LAMPS, ETC. MORRIS J. MURPHY, Chicago, Ill. Filed Feb. 27, 1925. Serial No. 12,500. Term of patent 3½ years.



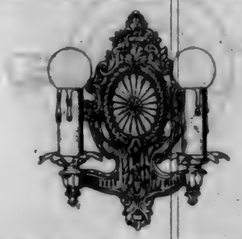
The ornamental design for a base for lamps, etc., as shown.

67,095. GLASS DISH OR SIMILAR ARTICLE OF MANUFACTURE. CHARLES W. OLDHAM, Bellaire, Ohio, assignor to Imperial Glass Company, Bellaire, Ohio, a Corporation of West Virginia. Filed Nov. 27, 1922. Serial No. 6,425. Term of patent 7 years.



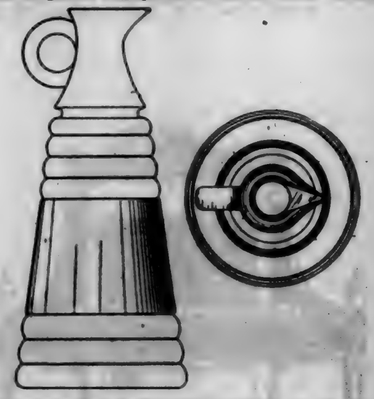
The ornamental design for a glass dish or similar article of manufacture, as shown.

67,096. SHAWL OR THE LIKE. DANIEL PASTON, Brooklyn, N. Y. Filed Feb. 3, 1925. Serial No. 12,247. Term of patent 3½ years.



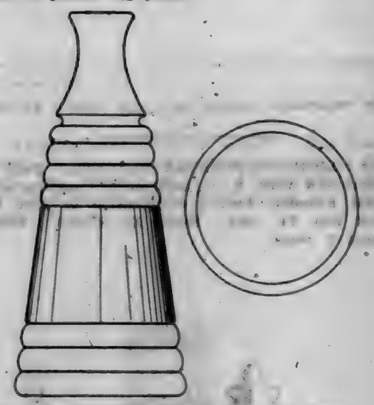
The ornamental design for a shawl or the like, as shown and described.

67,097. RADIATOR COVER. CHESTER M. PORTSCH, Chicago, Ill. Filed Feb. 14, 1925. Serial No. 12,385. Term of patent 14 years.



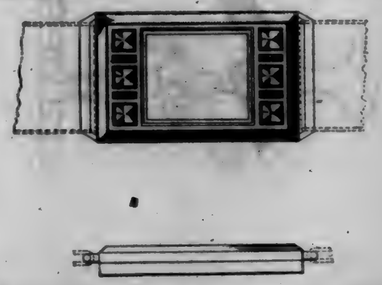
The ornamental design for a radiator cover, substantially as shown.

67,098. LIGHTING-FIXTURE BRACKET OR AN ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed Feb. 25, 1925. Serial No. 12,480. Term of patent 3½ years.



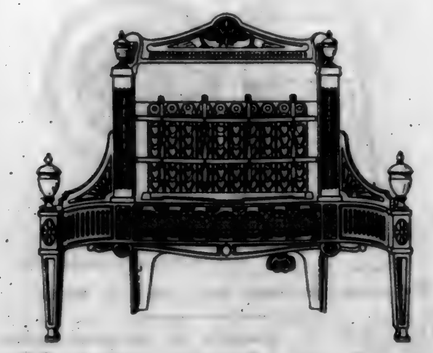
The ornamental design for a lighting fixture bracket, or an article of similar nature as shown.

67,099. CRUET. FREDERICK W. SCHWENCK, Cincinnati, Ohio. Filed Nov. 20, 1924. Serial No. 11,496. Term of patent 3½ years.



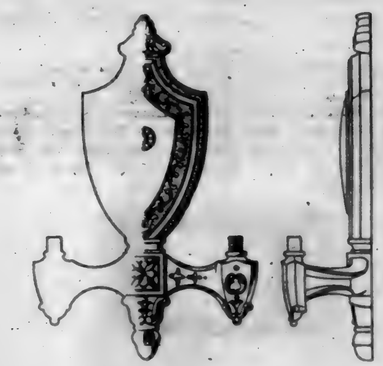
The ornamental design for a cruet, as shown.

67,100. BOTTLE. FREDERICK W. SCHWENCK, Cincinnati, Ohio. Filed Nov. 20, 1924. Serial No. 11,497. Term of patent 3½ years.



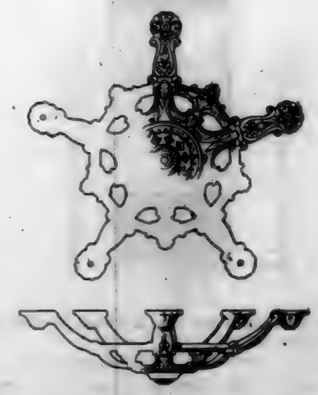
The ornamental design for a bottle, as shown.

67,101. WRIST-WATCH CASE. HARRY W. SCHWEITMAN, Cincinnati, Ohio, assignor to The Gruen Watch Company, Cincinnati, Ohio, a Corporation of Ohio. Filed May 26, 1924. Serial No. 9,707. Term of patent 3½ years.



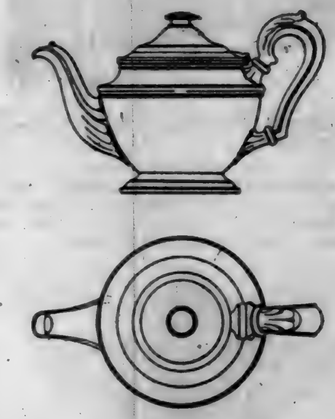
The ornamental design for a wrist watch case, as shown.

67,102. GAS HEATER. ALEXANDER B. SHARP, Steubenville, Ohio. Filed Nov. 18, 1924. Serial No. 11,399. Term of patent 14 years.



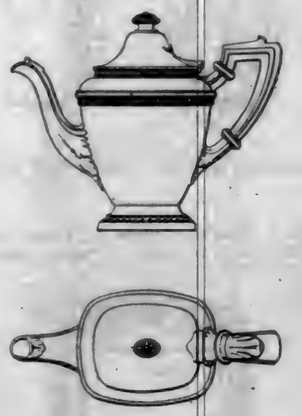
The ornamental design for a gas heater, as shown.

67,103. LIGHTING-FIXTURE BRACKET. PAUL SIPTROTT, New York, N. Y., assignor to Consolidated Art Metal Foundry, Inc., a Corporation of New York. Filed Feb. 24, 1925. Serial No. 12,469. Term of patent 7 years.



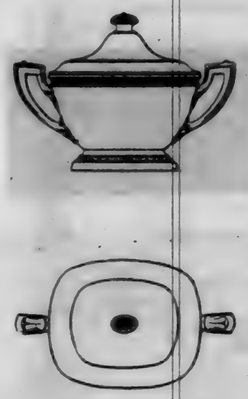
The ornamental design for a lighting-fixture bracket as shown and described.

67,104. LIGHTING-FIXTURE PART. PAUL SIPTROTT, New York, N. Y., assignor to Consolidated Art Metal Foundry, Inc., a Corporation of New York. Filed Feb. 24, 1925. Serial No. 12,470. Term of patent 7 years.



The ornamental design for a lighting-fixture part as shown and described.

67,105. TEAPOT OR SIMILAR ARTICLE. FREDERICK WILLIAM STARK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Nov. 6, 1924. Serial No. 11,303. Term of patent 14 years.



The ornamental design for a teapot or similar article as shown.

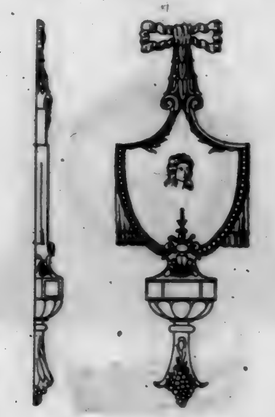
67,106. TEAPOT OR SIMILAR ARTICLE. FREDERICK WILLIAM STARK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Nov. 6, 1924. Serial No. 11,304. Term of patent 14 years.

The ornamental design for a teapot or similar article as shown.

67,107. DISH OR SIMILAR ARTICLE. FREDERICK WILLIAM STARK, Meriden, Conn., assignor to International Silver Co., Meriden, Conn., a Corporation of New Jersey. Filed Nov. 6, 1924. Serial No. 11,306. Term of patent 14 years.

The ornamental design for a dish or similar article as shown.

67,108. CANDLE HOLDER OR A SIMILAR ARTICLE. REGINALD C. STEEPLE, Spokane, Wash., assignor to Hubert J. Braun, Chicago, Ill. Filed Nov. 15, 1924. Serial No. 11,386. Term of patent 7 years.

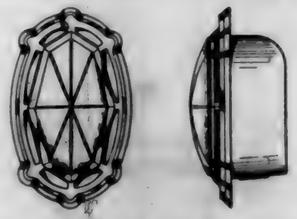


The ornamental design for a candle holder or a similar article, as shown.

67,109. LIGHTING-FIXTURE BRACKET. MAX STERN, Brooklyn, N. Y., assignor to Biltmore Lighting Fixture Co., Inc., Brooklyn, N. Y., a Corporation of New York. Filed Jan. 29, 1925. Serial No. 12,181. Term of patent 7 years.

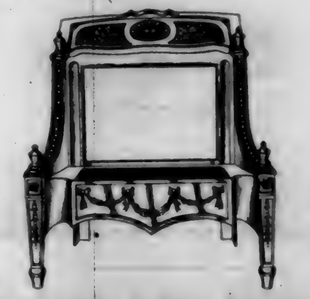
The ornamental design for a lighting fixture bracket, as shown.

67,110. BRACKET BACK FOR LIGHTING FIXTURES. LESTER R. WELLMAN, Chicago, Ill. Filed Nov. 28, 1924. Serial No. 11,525. Term of patent 3½ years.



The ornamental design for a bracket back for lighting fixtures, as shown.

67,111. DOME LIGHT. HERBERT WILSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 8,445. Term of patent 7 years.



The ornamental design for a dome light, substantially as shown.

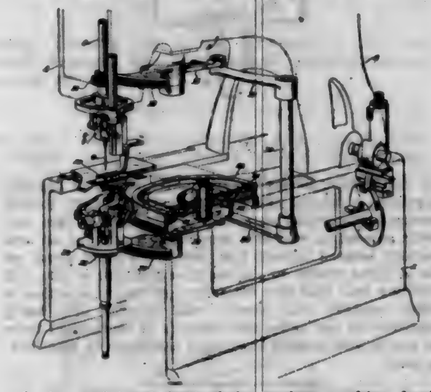
67,112. CORNER LIGHT. HERBERT WILSON, Toledo, Ohio, assignor to The Dura Company, Toledo, Ohio, a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 8,446. Term of patent 7 years.

The ornamental design for a corner light, substantially as shown.

67,113. GAS HEATER. AARON H. WOLFF, New York, N. Y. Filed July 26, 1923. Serial No. 6,867. Term of patent 7 years.

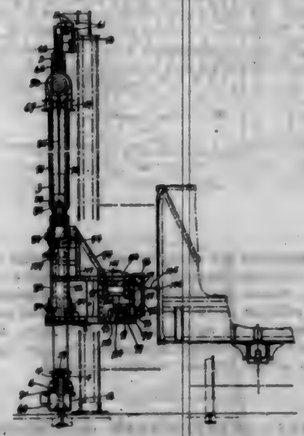
The ornamental design for a gas heater as shown.

67,114. TEXTILE FABRIC. FREDERICK ZIMMERER, Middletown, Conn., assignor to The Russell Manufacturing Company, Middletown, Conn., a Corporation of Connecticut. Filed Sept. 2, 1924. Serial No. 10,633. Term of patent 14 years.



The ornamental design for a textile fabric as shown and described.

PATENTS

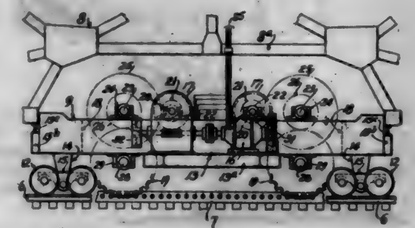


GRANTED APRIL 21, 1925.

1,534,017. MACHINE FOR SEWING ROUND-EYE BUTTONHOLES. EDWARD B. ALLEN, Newtown, Conn., assignor to The Singer Manufacturing Company, Elizabeth, N. J., a Corporation of New Jersey. Filed Jan. 9, 1924. Serial No. 685,101. 3 Claims. (Cl. 112—71.)

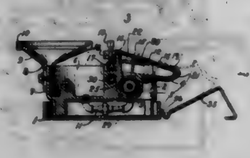
1. An eyelet-end buttonhole sewing machine having stitch-forming mechanism and a work-holder with means for relatively rotating the stitch-forming mechanism and work-holder in sewing around the eye-end of a buttonhole and for reversely relatively rotating the stitch-forming mechanism and work-holder in sewing the side stitches immediately adjacent the eye-stitches.

1,534,018. TRAVELING RIVETING PLATFORM. JOSEPH H. AMES, New York, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Mar. 31, 1922. Serial No. 548,375. 21 Claims. (Cl. 78—19.)



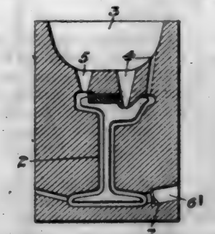
1. In a device of the class described, an independently operated work platform, a movable plate carried by said platform for holding-up rivets while being headed and operating means for moving said plate to and from holding-up position.

1,534,019. DYEING ACETYL CELLULOSE OR FABRICS CONTAINING THE SAME AND NEW PRODUCTS FOR USE THEREIN. JAMES BADDILEY, ARNOLD SHEPHERDSON, HERBERT SWANN, JAMES HILL, and LESLIE GORDON LAWRIE, Manchester, England, assignors to British Dyestuffs Corporation Limited, Manchester, England. Filed Oct. 9, 1924. Serial No. 742,703. 4 Claims. (Cl. 8—5.)



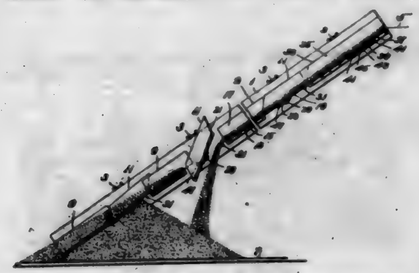
3. The manufacture of new products for dyeing acetyl silk by intimately mixing substantially insoluble colouring matters having affinity for acetyl silk with a naphthalene formaldehyde sulphuric acid condensation product.

1,534,020. TRACTOR BRIDGE CRANE. HIRAM E. BALDWIN, Cleveland, Ohio, assignor to The Brown Hoisting Machinery Company, Cleveland, Ohio, an Incorporated Company. Filed Nov. 8, 1924. Serial No. 748,664. 8 Claims. (Cl. 105—29.)



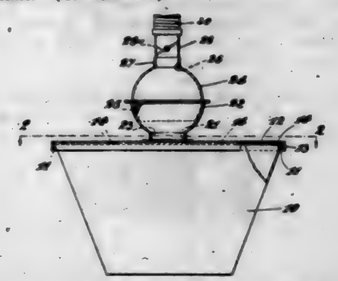
1. In combination, a bridge-crane having supporting legs mounted on wheeled trucks; parallel track rails forming runways for said trucks; racks along said runways between said rails; bull-pinion tractors, movably mounted on said rails centrally of the leg-members, in operative relation to said racks; sills, connecting said leg members above the tractors, and stop-members severally extending from the sills to the front and rear of said tractors when in their stated positions on the rails.

1,534,021. SHOE HEATER. WILLIAM H. BAYNARD, Quincy, Mass., assignor to Harry H. Beckwith, Brookline, Mass. Filed Dec. 12, 1921. Serial No. 521,758. 14 Claims. (Cl. 12—1.)



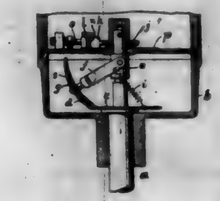
1. In a shoe heater, a trough, a heating element extending longitudinally in said trough, a shallow basin extending along one side of said trough in position to receive water boiled over from said trough, and a support for a shoe part positioned above said basin.

1,534,022. MEANS FOR PLUGGING AUXILLARY GATES OF MOLDS. EDWARD F. BROTRUP, Jersey City, N. J., assignor to Metal & Thermit Corporation, Chrome, N. J., a Corporation of New Jersey. Filed Aug. 15, 1923. Serial No. 657,528. 8 Claims. (Cl. 22—116.)



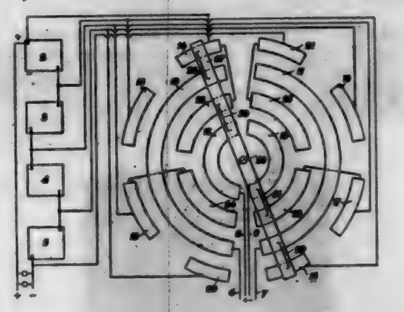
1. Means for sealing gates of welding molds comprising a metal cup adapted to be inserted and fitted bodily within the gate.

1,534,023. COAL CHUTE. HAROLD E. BETTON, Lynn, Mass. Filed Apr. 17, 1924. Serial No. 707,806. 10 Claims. (Cl. 193—14.)



1. Apparatus for piling material, comprising an inclined chute having fixed and tiltable floor sections in alternating relation, said tiltable sections being adapted for conducting material from fixed section to fixed section, and said tiltable sections being free to be tilted automatically to discharge positions by rising of the piled material in the chute onto the lower portions of the tiltable sections.

1,534,024. PROCESS FOR FUME CONTROL. VERN K. BOYNTON, New York, N. Y., assignor to Perry & Webster, Inc., New York, N. Y., a Corporation of New York. Filed May 27, 1921. Serial No. 473,073. 6 Claims. (Cl. 134—26.)

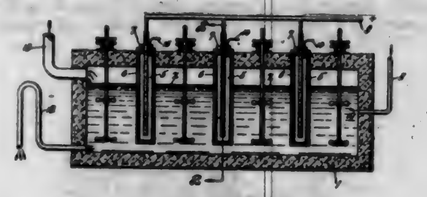


1. A process for controlling fumes within a covered kettle which comprises admitting air into the upper portion of the kettle, inducing a draft to the upper portion of the kettle and controlling the amount of draft whereby the amount of air drawn into the kettle will be controlled.

1,534,025. TIMER GOVERNOR. WILLIAM C. BRINTON, Jr., Kennett Square, Pa., assignor to Philbrin Corporation, Kennett Square, Pa., a Corporation of Delaware. Filed June 17, 1921. Serial No. 478,456. 4 Claims. (Cl. 200—32.)

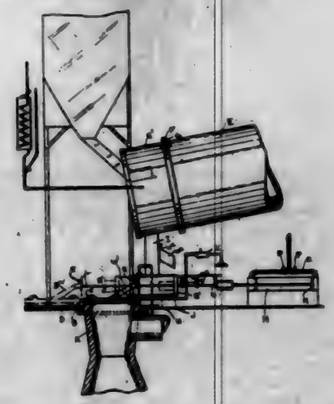
2. An ignition device for internal combustion engines, comprising a driving shaft, a breaker cam shaft, loosely connected therewith, an arm provided with a cam slot fixedly secured to said first mentioned shaft, and an arm pivotally secured to said last mentioned shaft about an axis at right angles to the shaft, a free end of the arm extending into said slot whereby a driving connection is formed between said shafts, said pivoted arm being adapted to fly out under the influence of centrifugal force and rotate said breaker cam shaft relatively to said driving shaft.

1,534,026. CHARGING SECONDARY BATTERIES. EDWARD LANCASTER BURNS, Westminster, London, England. Filed Feb. 10, 1923. Serial No. 618,429. 7 Claims. (Cl. 171—314.)



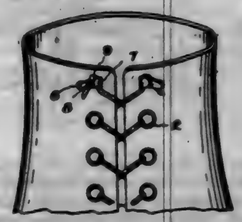
1. In apparatus for charging secondary cells in which a dynamo electric machine is employed, cells arranged in groups, means for combining or for separating the groups in relation to the power developed and means for charging each of the said groups in succession, the duration of said charge being determined by the number of revolutions of the dynamo electric machine.

1,534,027. MANUFACTURE OF CHLOROFORM. HORACE G. BYERS, Montclair, N. J., and WALLACE B. VAN ARSDEL, Berlin, N. H. Filed Oct. 20, 1921. Serial No. 511,435. 5 Claims. (Cl. 204—6.)



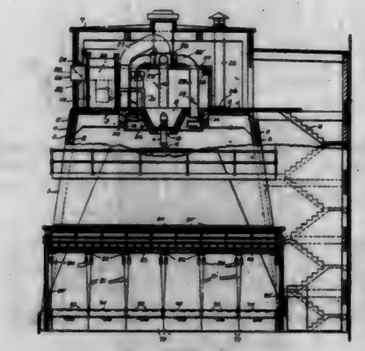
1. The herein described process of making chloroform, which comprises electrolytically decomposing an acid

and liberating nascent hydrogen in the presence of a solution of carbon tetrachloride in a solvent thereof,



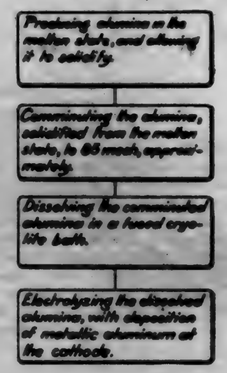
thereby reducing the carbon tetrachloride with the nascent hydrogen thus liberated, and separating and recovering the chloroform.

1,534,028. CHARGING DEVICE FOR BLAST FURNACES. JOSHUA K. CLUTTS, Detroit, Mich. Filed Sept. 25, 1922. Serial No. 590,496. 7 Claims. (Cl. 214—2.)



1. In a charging device, the combination with a blast furnace, of a closure therefor, a container for a quantity of ore, means for weighing said container and its contents, and a common means for shifting said closure to open position and for delivering the contents of said container into the blast furnace.

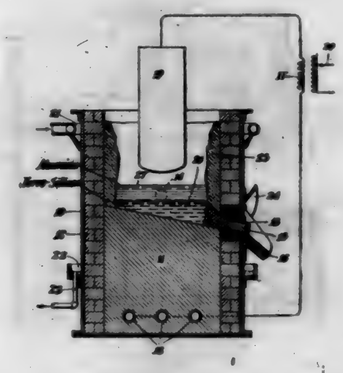
1,534,029. FASTENER FOR SHOE LACES AND THE LIKE. ARTHUR LEWIS COCHRANE, Toronto, Ontario, Canada. Filed Feb. 6, 1923. Serial No. 617,222. 5 Claims. (Cl. 24—117.)



1. In a fastener for shoe laces and the like, the combination of a wedging member in which a lace may be inserted and wedged therein; and a retaining member integral with the wedging member, a shoulder being formed on the edge of the retaining member adjacent the wedging member and under which the lace may be engaged.

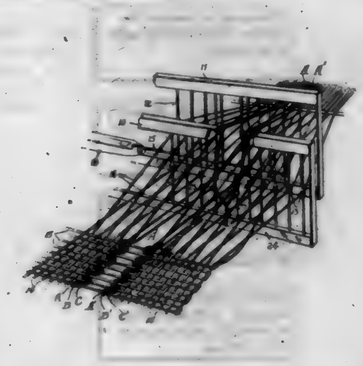
1,534,030. DRYING APPARATUS. JOSEPH G. COFFIN, Hempstead, N. Y., assignor to The General Rubber Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 30, 1923. Serial No. 635,585. 36 Claims. (Cl. 18—2.)

1. In an apparatus for drying latex and similar material, a drying chamber, means for supplying comminuted latex and a drying medium thereto, and means movable through the chamber for obtaining an integrated deposit of the dried latex.



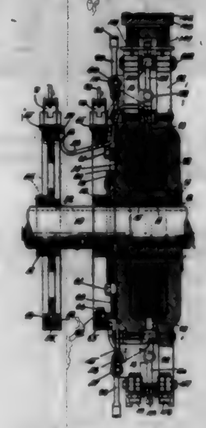
1,534,031. ELECTROLYTIC PRODUCTION OF ALUMINUM. FRANCIS C. FRARY, Oakmont, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 10, 1924. Serial No. 705,459. 5 Claims. (Cl. 204—20.)

1. In a process of producing metallic aluminum by electrolytic reduction of alumina in a fused bath containing sodium and aluminum fluorids, the steps comprising finely dividing alumina, solidified from the molten



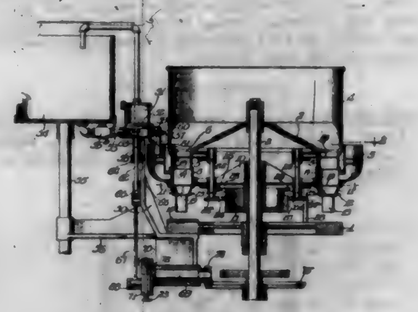
state, into particles of a size enabling the same to remain in suspension in the fused bath until dissolved therein, supplying the finely divided alumina to the bath for solution therein, and electrolyzing the same.

1,534,082. TESTING MOLTEN ALUMINA. LEO WILLIAM GABRIEL, Badin, N. C., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 29, 1924. Serial No. 689,202. 4 Claims. (Cl. 204—64.)



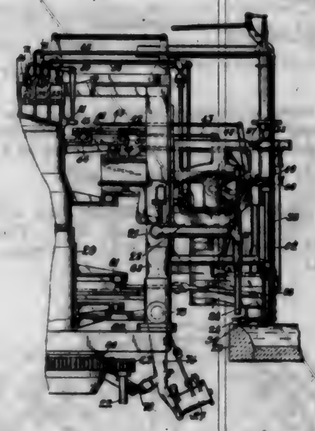
1. A method of testing a molten nonmetallic alumina-bearing product, comprising withdrawing a readily freezable sample thereof spread over a relatively large surface and permitting the same to solidify in the air, whereby characteristic color is produced on the surface exposed to the air.

1,534,033. ATTACHMENT FOR LOOMS. MAURICE A. GOLDMAN, Milford, N. H., assignor to Milford Textile Corporation, Milford, N. H., a Corporation of New York. Filed Nov. 13, 1924. Serial No. 749,690. 4 Claims. (Cl. 139—53.)



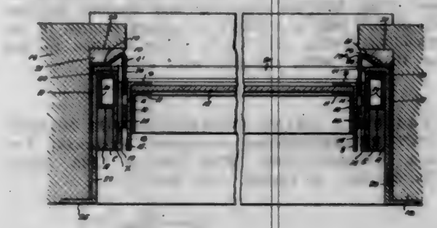
3. A center selvage attachment, comprising a flexible lene guiding member consisting of a linked chain having its upper portion separated into two portions to receive the lene threads of adjacent selvages, substantially as described.

1,534,084. APPARATUS FOR ELECTRICALLY WELDING WIRE FABRIC. WILLIAM S. SOUTHWICK, Clinton, Mass., assignor, by mesne assignments, to Wickwire Spencer Steel Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 10, 1921. Serial No. 521,370. 21 Claims. (Cl. 219—4.)



1. In an electric welding machine, a rotating transformer, a series of welding jaws connected to each branch of the secondary circuit of said transformer, and complemental welding jaws for each of said sets of welding jaws.

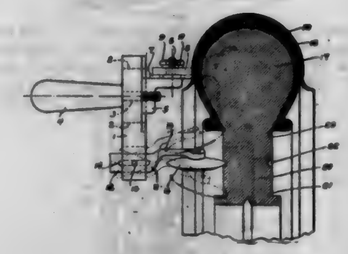
1,534,035. LIQUID MEASURING AND FILLING MACHINE. CLARENCE E. STEERE, Milwaukee, Wis., assignor, by direct and mesne assignments, of one-half to Sprague Canning Machinery Company, Chicago, Ill., a Corporation of Illinois, and one-half to Ayars Machine Company, Salem, N. J., a Corporation of New Jersey. Filed Jan. 17, 1918. Serial No. 212,246. 8 Claims. (Cl. 226—97.)



1. A filling machine, including a series of moving measuring chambers, means for supporting and moving cans thereunder, means for supplying bulk material to the measuring chambers for discharge into cans thereunder, a series of troughs movable with the measuring chambers, and means for supplying liquid to said troughs said troughs being in communication with said chambers and delivering liquid thereto.

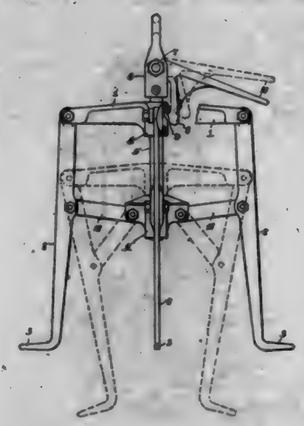
1,534,036. GLASS-FORMING MACHINE. THOMAS STRUTHERS, Washington, Pa., and LEONARD D. SOUDERS, Toledo, Ohio, assignors to The Owens Bottle Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 29, 1922. Serial No. 591,246. 11 Claims. (Cl. 49—5.)

9. In a glass forming machine, the combination of a mold, means to charge the mold by suction, a rock shaft, a cutter carried thereby, means to rock said shaft and thereby swing the cutter across the end of the mold to sever the glass, means to open the mold after the glass is severed, and a burner carried by said rock shaft and moved thereby into operative relation to the glass after the mold is opened.



1,534,037. METAL WINDOW CASING. LEROY B. TAYLOR, Cleveland, Ohio. Filed July 31, 1922. Serial No. 578,600. 3 Claims. (Cl. 189—36.)

1. The combination with pivoted sashes, of a window frame comprising side bars of channel section, each bar having a flange 17 adjacent the wall and a flange 20 adjacent the sash, a finishing member 23 extending from the inside of the wall and lapping the flange 17, and a channel strip 24 set between the sashes and the member 23, the sashes being pivoted to said strip.

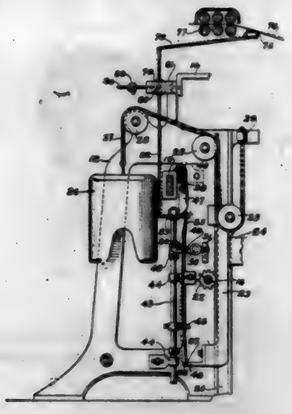


1,534,038. TIRE-BUILDING TOOL. WILLIAM THOMPSON, Detroit, Mich., assignor to Morgan & Wright, a Corporation of Michigan. Filed June 8, 1921. Serial No. 475,923. 8 Claims. (Cl. 154—8.)

6. A unitary hand tool for trimming a tire mounted on a rotatable carrier, having a knife, a gage adjacent the knife for regulating the depth of cut, and means fixedly spaced laterally of the knife for guiding it during the cutting operation in a path concentric to the carrier, said last named means including spaced rollers whose

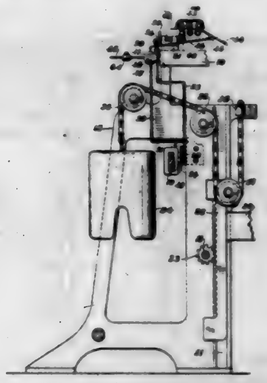
independent axes are convergent toward the axis of the carrier and on opposite sides of a line connecting the knife and the axis of the carrier.

1,534,039. WIRE-BLOCK-STRIPPING MECHANISM. PHILIP V. TIPPET, Cuyahoga Falls, Ohio, assignor to The Vaughn Machinery Company, Cuyahoga Falls, Ohio, a Corporation of Ohio. Filed June 29, 1923. Serial No. 648,449. 3 Claims. (Cl. 294—97.)



1. In a stripping device, the combination of a spider, a plurality of levers pivotally suspended from said spider at circumferentially spaced points and formed with outwardly directed fingers adapted to engage with a bundle of wire on a suitable support, a member vertically reciprocably mounted in said spider and operatively connected with said levers to swing the same in or out as desired, said member being provided with external attaching means, and means adapted to lock said member and spider together.

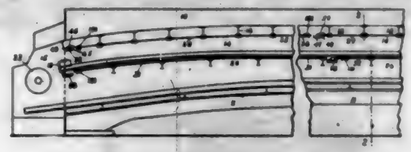
1,534,040. TENSION FEELER. SOLOMON GILBERT TOUCHSTONE, Columbia, S. C. Filed Sept. 27, 1923, Serial No. 665,079. Renewed Oct. 25, 1924. 10 Claims. (Cl. 118—3.)



1. In a machine of the class described, the combination of a shipper rod, an arm movable to shift the

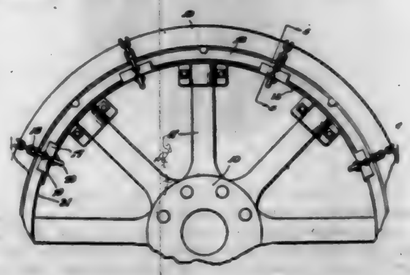
same, a latch normally holding said arm against movement, means normally in contact with the silver, and

operable by abnormal tension thereof to release said latch.



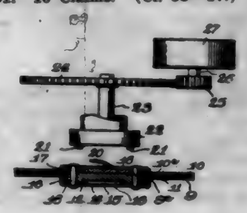
1,534,041. TENSION FEELER. SOLOMON GILBERT TOUCHSTONE, Columbia, S. C. Filed May 2, 1924. Serial No. 710,605. 9 Claims. (Cl. 118—3.)

1. In a machine of the class described, the combination of a shipper rod, an arm movable to shift the same, a latch normally holding said arm against movement, a continuously driven reciprocating trip finger, means for guiding said trip finger so that it normally moves clear of the latch, and means operable by the silver when subjected to abnormal tension to swing said trip finger into a position so that its reciprocation will cause it to contact with and release said latch.



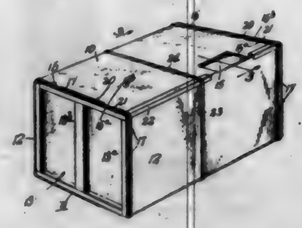
1,534,042. ELECTRICALLY-HEATED TRAVELING OVENS. ROBERT GEORGE TUGENDHAT, Saginaw, Mich., assignor to Baker-Perkins Company, Incorporated, White Plains, N. Y. Filed Aug. 1, 1924. Serial No. 729,535. 8 Claims. (Cl. 219—35.)

1. In a traveling oven, the combination with a baking chamber provided with corresponding openings at both ends, of moving platforms carrying the articles to be baked therethrough, and of two sets of electric heaters, one placed above the said platforms, and the other one beneath the same, one of the said sets consisting of a



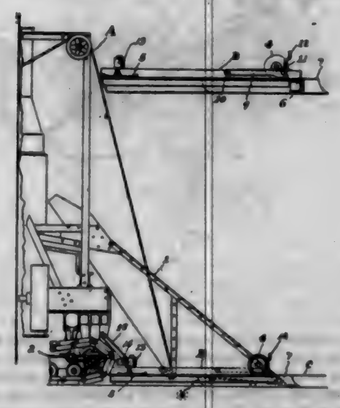
suitable number of sections arranged lengthwise in the said chamber, each section thereof being separately controllable, and the other set being controlled as a whole.

1,534,043. ANTISKIDDING DEVICE FOR AUTOMOBILES. AMOS A. TYSON, Albany, N. Y. Filed Apr. 23, 1924. Serial No. 708,475. 3 Claims. (Cl. 152—14.)



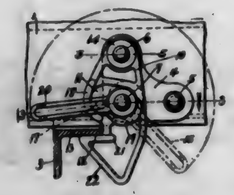
3. An anti-skidding device for vehicle wheels comprising a plurality of arcuate sections fitting the inner periphery of the felly, each section being divided along a medial line in the plane of the wheel, half sockets on said sections along said medial line, ears on said half sockets, bolts engaging in said ears and adapted to tighten the sockets around the spokes; spaced lugs along the outer edges of said sections overhanging the sides of the felly, an eyelet on said sections adjacent each of said lugs, and chains detachably secured in corresponding eyelets, said chains being adapted to fold over the tire while engaging with said lug.

1,534,044. CRANK CONNECTION FOR MOTION-PICTURE MACHINES. ALEXANDER FERDINAND VICTOR, Davenport, Iowa. Filed Dec. 10, 1923. Serial No. 679,801. 10 Claims. (Cl. 88—17.)



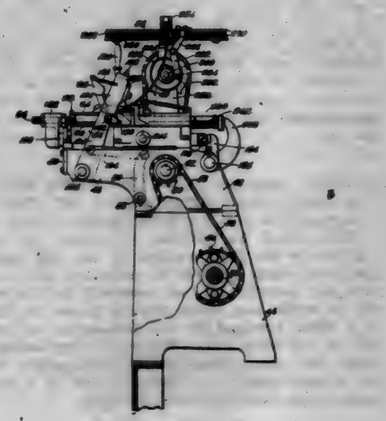
1. In a motion picture camera a suitable box having a hinged door, a disk-like clutch member journaled in an aperture in said door, a second clutch member mounted within said box and having elements projecting laterally therefrom, and spring fingers upon the first-mentioned clutch member coacting with the elements upon the second-mentioned clutch member when the door is closed, whereby retarded movement of the first clutch member will permit the lateral elements of said second clutch member to move past said spring fingers and effect a gradual slowing down of said second clutch member and the mechanism associated therewith.

1,534,045. BOX. HARRISON B. WALTER, Chicago, Ill., assignor to Chicago Mill and Lumber Company, Chicago, Ill., a Corporation of Illinois. Filed Nov. 18, 1922. Serial No. 601,820. 2 Claims. (Cl. 217—12.)



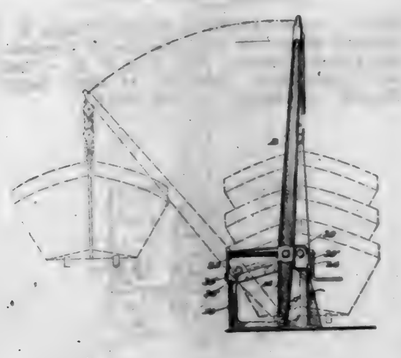
1. A box, comprising a blank creased to define sides, bottom and top section, end cleats attached to said blank and constructed to form end frames when the blank is folded into tubular form, and end blanks adapted to be attached to said end frame, said end blanks being provided with intermediate posts to extend between opposed end cleats, metal bands attached to the ends of the bottom wall section, to the ends of each of the side wall sections and to the ends of a narrow part only of the top wall section adjacent to the side wall section to which said top wall section is connected, said bands having free end parts which are adapted to be brought into overlapping relation above the top section of the box after the box is packed and to be drawn together,—with a space below the overlapped band ends for the insertion of a tool for drawing said band ends together and attaching and sealing them.

1,534,046. SUBGRADE PLANER. GEORGE E. WEBB, Milwaukee, Wis., assignor to Koehring Company, Milwaukee, Wis., a Corporation. Filed Jan. 6, 1922. Serial No. 527,423. 13 Claims. (Cl. 94—45.)



1. In combination, a portable road building machine, a movably mounted subgrade finisher extending over the subgrade and disconnected from the road building machine, and a pusher element carried by the road building machine and adapted to engage the finisher at a point in the length thereof to above the finisher forward as the road building machine is advanced.

1,534,047. DOOR-LATCHING MEANS. VICTOR R. WILLOUGHBY, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 31, 1922. Serial No. 596,096. 10 Claims. (Cl. 105—308.)



1. In a car, a door, a pivotally mounted latch for said door having a slot spaced from said pivot, a locking cam for said latch and a support for said cam engaging in the slot in said latch.

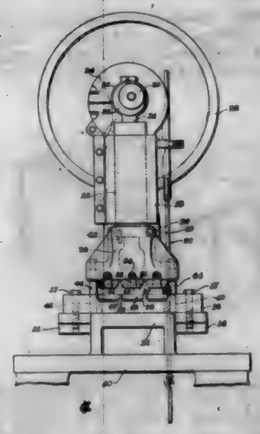
1,534,048. HEEL-LIFT ALINING, PRESSING, AND NAILING MACHINE. ERASTUS E. WINKLEY, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Mar. 20, 1919, Serial No. 283,693. Divided and this application filed Sept. 15, 1920. Serial No. 410,444. 40 Claims. (Cl. 1—33.)

1. A heel machine having, in combination, a form for receiving a heel of loosely assembled lifts, means for actuating the form in two stages to first preliminarily aline the component lifts and then to cause the form to occupy its final alining and clamping position, and means for subsequently forcing the heel in the direction of its height into the form and to subject it to pressure.

1,534,049. LIFEBOAT DAVIT. SIM EMIL ALLBIN, Seattle, Wash., assignor to Mayer Life Boat Co. Inc., Seattle, Wash. Filed Dec. 31, 1921. Serial No. 526,146. 4 Claims. (Cl. 9—22.)

1. In a device of the character described, a boom having its one end provided with a pair of elongated prongs, a support, a pivotal connection between said support and the free ends of said prongs adapted to permit vertical swinging movement of said boom, a stub shaft rotatably supported between said prongs adjacent the inner ends thereof, a worm shaft, said stub shaft carrying a nut, the stub shaft having a threaded passage to receive the worm shaft and being flattened on opposite sides at right angles to the axis of the worm shaft and having cylindrical ends of a larger cross section than the central portion thereof whereby said stub shaft may be placed in position from either side of the boom.

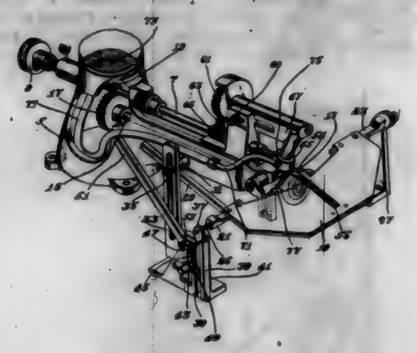
1,534,050. MANUFACTURE OF PRESERVED FRUITS. PAUL BARRIELLÉ, Apt, France. Filed Apr. 19, 1923. Serial No. 633,281. 2 Claims. (Cl. 99—11.)



2. A process for the manufacture of preserved fruits by diffusion consisting in passing a highly concentrated solution of sugar successively through fruit contained in a plurality of vats, restoring the solution of weak concentration passing from the last vat to its initial high concentration and heating and returning it to the first vat.

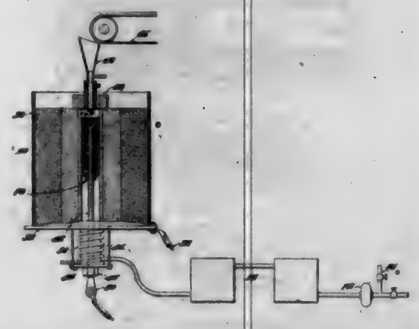
1,534,051. PROCESS FOR THE DIRECT REDUCTION OF ORES, AND PARTICULARLY OF IRON ORES. LUCIEN PAUL BARBET, Paris, France. Filed Feb. 21, 1923. Serial No. 620,505. 1 Claim. (Cl. 75—75.)

A process for the reduction of ores and particularly iron ores, which consists in subjecting the ore, mixed with the quantity of coal necessary for its reduction and to which are added suitable fluxes, to the action of a flame obtained by the combustion of pulverized coal in the necessary quantity of superheated air, in order that the combustion produces carbon monoxide and a small quantity of carbonic acid in a proportion smaller than that of carbon monoxide.



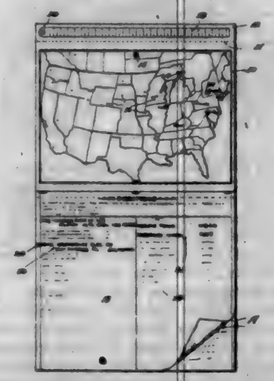
1,534,052. SOLE-MOLDING PRESS. FRANK E. BECKMAN, Haverhill, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Mar. 16, 1920. Serial No. 366,265. 8 Claims. (Cl. 12—32.)

1. A molding machine for breaking down the margin at the toe end only of soles having, in combination, a female mould having a wall shaped to receive the toe end of the sole and accurately fit it, a male mould opposite the female mould at the grain side of the sole, said moulds having co-operating oblique margin molding



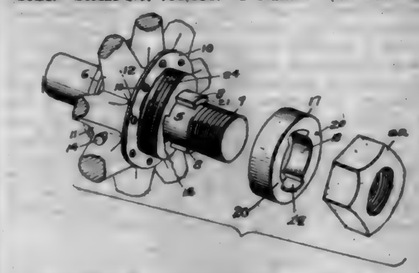
walls, and means for causing relative approach of said moulds to shape said margin of the sole by pressure between said oblique walls to facilitate the entrance of the needle in the sewing operation.

1,534,053. OVERFLOW-TRIMMING MACHINE. JAMES A. BROGAN, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Oct. 12, 1921. Serial No. 507,195. 20 Claims. (Cl. 164—68.)



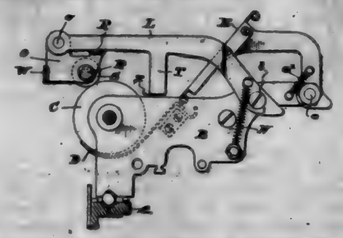
1. A machine for trimming a fin from a molded rubber article having, in combination, a rotary cutter, a co-operating shear member, a thin-edged guard having its work-engaging portion extending in front of the cutter whereby a face of the article may be held against the guard and the article so fed as to cause the fin to be severed substantially flush with said face, and means whereby the guard may be adjusted toward and from the cutter.

1,534,054. PROCESS FOR SYNTHETIC MANUFACTURE OF CYANIDE. GALEN H. CLEVENGER, Brookline, Mass., assignor to United States Smelting, Refining & Mining Company, Portland, Me., a Corporation of Maine. Filed Sept. 6, 1921. Serial No. 498,731. 14 Claims. (Cl. 204—64.)



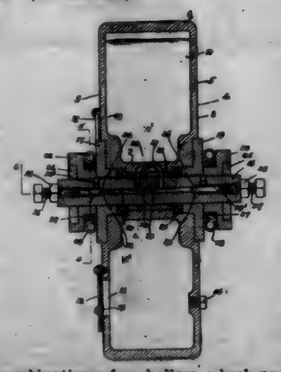
1. The process of synthetically producing cyanide, which consists in passing a stream of intermingled nitrogenous gas and vaporized metallic compound through a mass or zone of incandescent carbonaceous material, which extends completely across the path of flow of the gas, maintaining a temperature throughout the zone which precludes the existence of carbon dioxide therein and in the reaction gases issuing therefrom, supplying fresh carbonaceous material to replace the carbon consumed and continuously removing the products of the reaction.

1,534,055. RADIOCHART. JAMES P. COUGHLIN, Kansas City, Mo. Filed Apr. 13, 1923. Serial No. 631,828. 1 Claim. (Cl. 35—6.)



As a new article of manufacture, a radio chart including an oblong card bearing the representation of a map at its upper portion and provided immediately beneath the map with sheet bearing indicia pertaining to the map, the upper margin of the card immediately above the map being apertured near one end at one corner of the card and calibrated transversely of the card to represent a ruler having its union with the map weakened by a transverse score line whereby the ruler may be readily severed from the map and pivotally mounted thereon by a fastening device extending through said aperture and map for use in determining distances on the map.

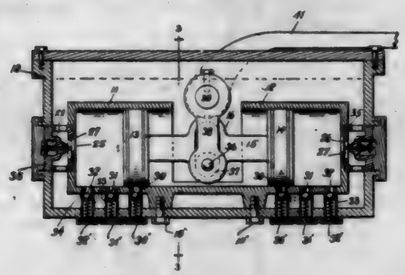
1,534,056. SPINDLE AND WHEEL CONSTRUCTION. VINCENT DE BELLIS, New York, N. Y. Filed Aug. 18, 1924. Serial No. 731,850. 4 Claims. (Cl. 301—112.)



4. The combination with a spindle, of a hub rotatable thereon, means for holding the hub in the normal inner position so that it is free to rotate, and means to lock the hub to the spindle against rotation when the hub moves outwardly upon the spindle beyond the normal rotating position.

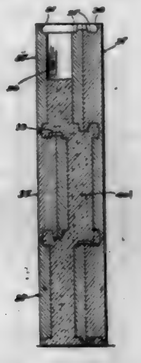
1,534,057. TYPEWRITING MACHINE. GUSTAVE O. DEGENER, Hartford, Conn., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed July 14, 1924. Serial No. 726,019. 6 Claims. (Cl. 197—127.)

1. In a typewriting machine, the combination of a platen carriage, a movable frame mounted therein to move rearwardly from operative position, and a roll carrying ball connected to said frame above the plane of the rolls and movable to a position in front of the platen.



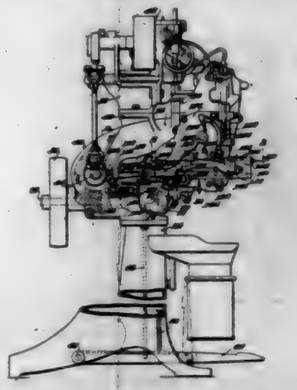
1,534,058. PLOW GAUGE WHEEL. GUY DENBIGH and ROY WALKER, Vulcan, Alberta, Canada. Filed Feb. 3, 1921, Serial No. 442,164. Renewed Oct. 15, 1924. 3 Claims. (Cl. 64—28.)

1. The combination of a hollow wheel provided with an axial opening surrounded by a tubular wall constituting the hub of the wheel and internally formed to



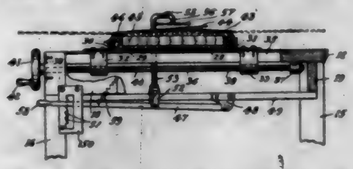
provide a shoulder adjacent each end of the hub, an axle journalled in the hub, gland plates having bearing on the axle at the ends of the hub, and packing material interposed between said plates and the aforementioned shoulders, said axle being provided with a longitudinal duct and a plurality of radial ducts interconnected by the said longitudinal duct, certain of said radial ducts being positioned intermediate the shoulders of the hub and adapted to register with openings formed in the latter during rotation of the wheel to permit oil to pass from the interior of the wheel to the said longitudinal duct, the remaining radial ducts of the axle being positioned to conduct oil to the bearing surfaces of the gland plates and needle valves mounted in the ends of the said longitudinal duct to control communication therebetween and the last-mentioned radial ducts.

1,534,059. FLUID-PRESSURE-CONTROLLING DEVICE. PAUL A. DENNETT, Saco, Me. Filed Feb. 11, 1924. Serial No. 692,126. 4 Claims. (Cl. 188—88.)



1. In a device of the class described, a casing, a plurality of cylinders therein, pistons in the cylinders, means rigidly connecting the pistons, valves admitting fluid from the casing to the cylinders, a plurality of valves for discharging fluid from each cylinder to the casing, and springs for these valves, the springs for the valves of each cylinder being of different strength.

1,534,060. WALL CONSTRUCTION AND BUILDING BLOCK FOR THE SAME. CARL J. DEXTER, West Lafayette, Ind. Filed Apr. 25, 1923. Serial No. 634,568. 6 Claims. (Cl. 72—29.)

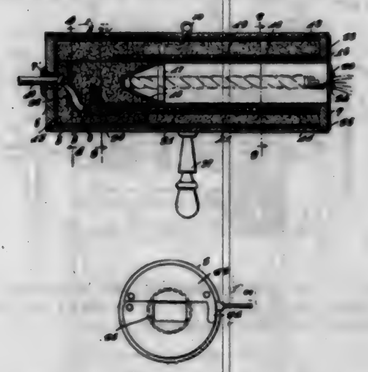


1. A building block comprising complemental sections having their adjacent surfaces correspondingly undulated, their exterior surfaces plain and flat, and their top and bottom surfaces provided with lengthwise running grooves of trapezoidal cross section.

1,534,061. MACHINE FOR OPERATING ON SHOE BOTTOMS. EDWARD ERICKSON, Beverly, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 1, 1919. Serial No. 335,030. 61 Claims. (Cl. 12—67.)

1. A welt-butting machine having, in combination, means for supporting a welted unsoled shoe, a cutter for butting the end of the welt, a cutter carrier, means for actuating the carrier and cutter longitudinally of the shoe, and means disposed in sliding engagement with the upper surface of the cutter and supported by and movable with the cutter carrier for removing material adhering thereto.

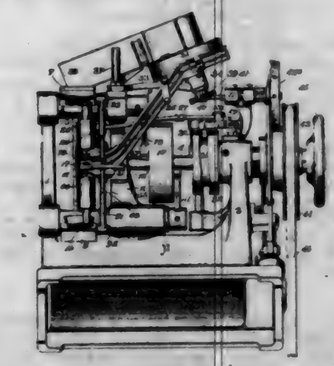
1,534,062. MACHINE FOR FILLING CUSHIONS. JOHN A. FLOOD, Minneapolis, Minn., assignor to Northwestern Reed and Rattan Company, Minneapolis, Minn. Filed Mar. 23, 1921. Serial No. 454,618. 6 Claims. (Cl. 225—44.)



1. A stuffing machine comprising a cushion receptacle, said receptacle being positioned in fixed relation to the machine, hinged closure members connected to said receptacle, a horizontal arm adapted to swing over and above said cushion receptacle, a plate connected to said arm and adapted to engage said closure members and means for drawing said arm and plate downward to compress the stuffing within said receptacle.

6. A cushion stuffing machine including a padding receptacle open at its top adapted to receive the padding therethrough, a pair of hinged closure members adapted to close said open top, a pivoted arm adapted to swing away from and over said hinged closure members, a plate on said arm adapted to engage said closure members, a lever for forcing said arm against said closure members and means for locking said lever in the compressing position of said plate.

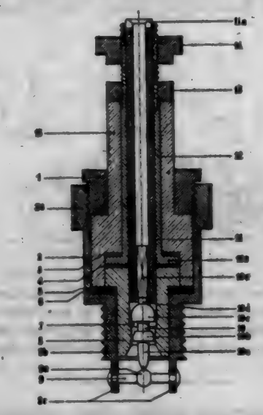
1,534,063. HAIR CURLER. DANIEL T. FRIDENA and WILLIAM B. JUDD, Brockwayville, Pa. Filed June 6, 1924. Serial No. 718,335. 2 Claims. (Cl. 132—36.)



1. In a device of the character described, a body portion, a tubular member in the body portion, a heating element surrounding the tubular member, a supporting member having an inclined wall, an iron adapted to

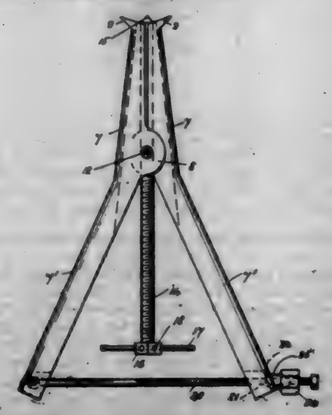
be positioned in the tubular member, said iron adapted to engage the inclined wall of the supporting member when being positioned in the tubular member to cause

the iron to be supported centrally of the tubular member and in spaced relation with the walls thereof, and means for closing the ends of the tubular member.



1,534,064. DUPLEX FASTENER-SETTING MACHINE. GEORGE W. JACQUES, Stratford, Conn., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 14, 1921. Serial No. 444,746. 14 Claims. (Cl. 218—15.2.)

3. In a machine having fastener-setting mechanism, mechanism for feeding the work step by step, and an operating shaft, a combination comprising fastener-supplying mechanism operable by said shaft, means for clamping the work between feeding steps, and means operable by an element of said fastener-supplying mechanism to prevent said clamping means from exercising its clamping action during the work-feeding periods.

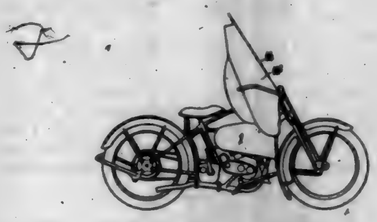


1,534,065. SPARKING PLUG. LUDOMIR KORCZYNSKI, Cracow, Poland. Filed July 18, 1922. Serial No. 575,790. 3 Claims. (Cl. 123—169.)

1. Electric sparking plug comprising a metal shell, an electrode fixed in the lower end of said shell, an outer metal tube axially disposed in said shell and insulated against it, an inner metal tube within and in contact with said outer metal tube and an axially movable electrode intermediate the lower end of said inner tube and said fixed electrode, a short non-cylindrical shaft on said movable electrode extending into the lower end of said inner tube, a valve body on said

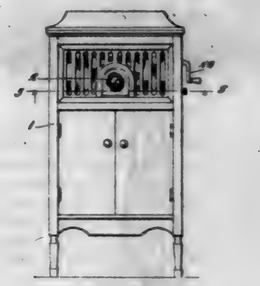
movable electrode adjoining said shaft and adapted to close the lower end of said inner tube and an insulating sleeve surrounding said movable electrode.

1,534,066. EXTRACTING TOOL. RILEY E. LARKEY, Enid, Okla. Filed Jan. 9, 1924. Serial No. 685,231. 3 Claims. (Cl. 29—88.2.)



1. An extracting tool, comprising two arms having overlapping pivoted lugs at their middle portions, each arm having a handle portion arranged at an angle to its main portion and having a jaw at the free end of its main portion, a nut pivoted to and between the said lugs, and an extracting screw working in the nut and projecting between the main portions of the arms.

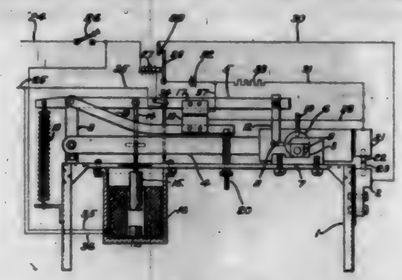
1,534,067. ENGINE-COOLING MEANS AND WEATHER PROTECTION FOR USE IN CONNECTION WITH MOTOR ROAD VEHICLES. HENRY ERNEST LLOYD OWEN, Winkfield, near Windsor, England. Filed Nov. 4, 1922. Serial No. 599,156. 12 Claims. (Cl. 206—150.)



1. Weather protection means for motor cycles and the like comprising a flexible apron-like cover adapted to extend in front of the rider to afford protection for the upper part of the body, a frame adapted to sup-

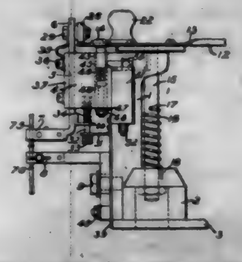
port said cover comprising a pair of members (such as 8), a cross bar (such as 9) uniting the members towards their upper ends, an adjustable post pivotally attached to the cross bar, a clamping device upon a fixed tubular member of the frame of the cycle to which the lower ends

of the pair of members are pivotally secured and a clamping clip to which the post is pivotally attached, the arrangement being such that the cover may be adjusted towards and away from th seat and fixed in any adjusted position.



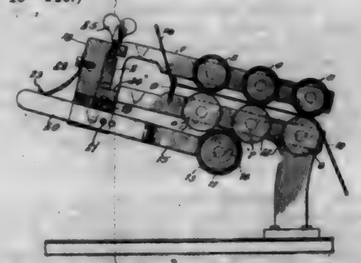
1,534,068. ATTACHMENT FOR PHONOGRAPHS. DUNCAN MCINTYRE, Gloversville, N. Y. Filed Apr. 30, 1924. Serial No. 710,122. 2 Claims. (Cl. 58—14.)

1. In combination with a phonograph having a chimes playing record thereon to be played thereby, of means for permitting the actuation of the phonograph motor to cause the playing of the chimes at determined intervals and for determined periods of time, comprising, in combination, a time piece actuated by a spring influenced train of gears including a notched striker wheel, a dog carrying striker arm to engage the notches of the wheel to normally hold the same from turning, and the means for swinging the striker wire to release the dog when the hands of the time piece are brought opposite hour indicating figures on the dial thereof, and in which said striker arm is extended and formed with an outer dog, a wheel carrying shaft engaged by the outer dog, a pinion on the shaft, a hollow shaft carrying a pinion in mesh with the first mentioned pinion, a gear loose on the shaft, clutch means operable through the shaft for locking the gear thereto, a wheel in mesh with the gear, and a worm on the shaft of the turnable table which is actuated by the phonograph motor, meshing with said wheel.



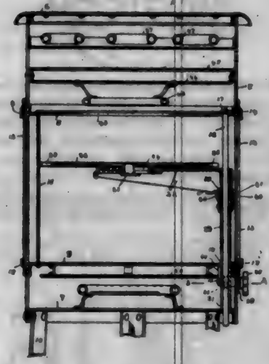
1,534,069. PERCUSSIVE WELDING MACHINE. ALLIS M. MACFARLAND, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed Apr. 11, 1922. Serial No. 551,529. 23 Claims. (Cl. 219—4.)

1. In an electric welding machine, a plurality of chucks connected to a source of electrical energy and adapted to secure a pair of electrodes to be welded, means for making contact between said electrodes to complete the welding circuit, means for breaking said



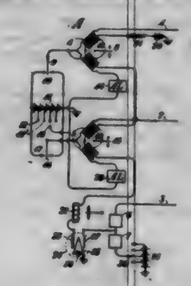
contact to establish a minor arc and subsequently establishing a major arc to fuse the electrodes and means for effecting percussive engagement thereof.

1,534,070. PERCUSSIVE WELDING MACHINE. ALLIS M. MACFARLAND, Wilkinsburg, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 6, 1923. Serial No. 649,887. 17 Claims. (Cl. 219—4.)



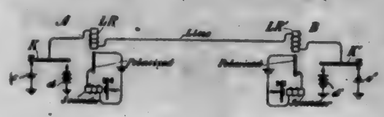
1. A welding machine comprising a frame, a stationary and a movable electrode holder mounted thereon, a roller mounted on said movable holder, a circular cam rotatably mounted in said frame and adapted to engage said roller, actuating means on said cam and independent actuating means on said movable holder and means for synchronizing the movements of said cam and holder.

1,534,071. ROLLER MECHANISM FOR SPINNING MACHINE. REGINALD A. MORSE, Providence, R. I. Filed Feb. 27, 1923. Serial No. 621,648. 8 Claims. (Cl. 19—140.)



3. Means for keeping a longitudinally-grooved drawing roll clean, comprising a member having a surface held against the surface of the drawing roll, the contacting surfaces being caused to travel at substantially the same speed, the surface of the cleaning member being covered with projecting resilient filaments of sufficient length and stiffness to enter the grooves of the drawing roll to the bottoms thereof.

1,534,072. OVEN FOR COOKING STOVES. JOHN MURSCH, Utica, N. Y. Filed June 26, 1924. Serial No. 722,601. 6 Claims. (Cl. 126—338.)

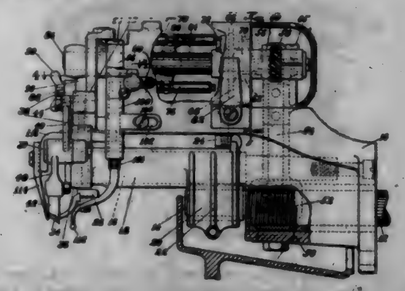


1. In a stove the combination of a chamber forming an oven having a door at its front side, a bracket swingingly mounted in the oven adjacent one side of the door and adapted to swing theretowards and a shelf revolubly mounted on the free end of said bracket and means operative from without the oven for vertically moving said bracket.

1,534,073. MEANS FOR NEUTRALIZING FOREIGN INTERFERENCE. HARRY NYQUIST, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 19, 1922. Serial No. 562,146. 12 Claims. (Cl. 178—69.)

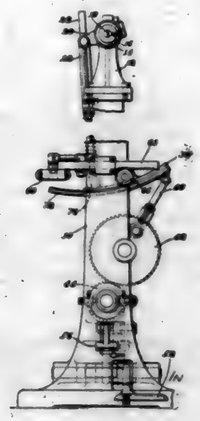
1. In a system comprising a grounded signaling circuit having a multiwinding receiving relay connected therewith, the said circuit being connected with one of the windings, a pilot circuit substantially coextensive with said signaling circuit, both of said circuits being subjected to substantially the same differences of earth potential, a vacuum tube having its grid connected with the pilot circuit and having its plate circuit connected with another of the said windings, of the receiving relay and having a source of direct current connected therewith, the method of substantially neutralizing differences of ground potential in the signaling circuit which consists in impressing upon the grid of the vacuum tube the earth potential set up in the pilot circuit and in opposing in the receiving relay the variations of the plate current against the variations set up in the signaling circuit by the same difference of earth potential.

1,534,074. TELEGRAPHY. RALSTMOND D. PARKER, Brooklyn, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 20, 1920. Serial No. 382,852. 8 Claims. (Cl. 178—2.)



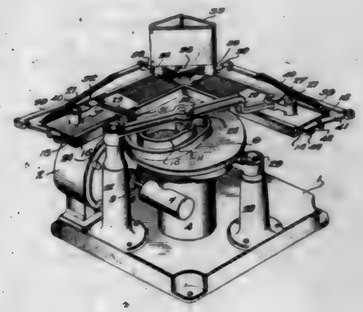
1. In a telegraph system, a line, a plurality of relays associated with the opposite ends thereof and responsive to reversals of current therein, transmitting devices associated with said relays, a source of current associated with each device, said sources being arranged to be in aiding relation in a predetermined like position of said devices, and another unequal source of current of opposite polarity associated with each device and arranged to be in opposition to the first mentioned source at the distant end in other predetermined relative position of said keys.

1,534,075. AUXILIARY HANDLE FOR HOES, RAKES, SHOVELS, ETC. WASHINGTON B. PARRISH, Kenbridge, Va. Filed July 27, 1923. Serial No. 654,203. 5 Claims. (Cl. 97—71.1.)



1. An attachment for implement handles comprising an auxiliary handle, an attaching bracket, and means for securing the bracket and the auxiliary handle upon the implement handle, the auxiliary handle being pivotally movable upon the bracket and including a grip member disposed at an angle to the axis of pivotal movement.

1,534,076. JOINTING MACHINE. FREDERICK H. PERRY, Beverly, Mass., assignor, by mesne assignments, to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 8, 1916, Serial No. 130,175. Renewed Jan. 2, 1923. 46 Claims. (Cl. 12—85.)

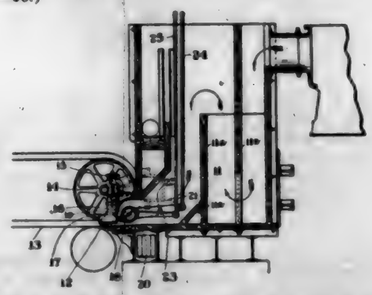


1. In a machine of the class described, the combination with means for trimming the edge of a shoe sole of continuously operating means for detaching the trimmed material from the sole, constructed and arranged to be controlled by the movement of the shoe in the machine.

1,534,077. MACHINE FOR SMOOTHING SHOE LININGS. ARTHUR F. PYM, Lynn, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 25, 1921. Serial No. 517,534. 21 Claims. (Cl. 12—51.)

1. In a machine for smoothing the linings of relasted shoes, in combination, a member constructed and arranged to be inserted between a last and a shoe completely relasted thereon, and a mounting for said member constructed and arranged to enable the member to be operated to smooth out the lining of a shoe and to permit a shoe to be held in both hands when presented in position to be operated upon by said member.

1,534,078. VEGETABLE-SLICING MACHINE. MEYER F. RUFFNER, New York, N. Y., assignor, by mesne assignments, to Potato Waffles, Inc., Dover, Del., a Corporation of Delaware. Filed July 11, 1924. Serial No. 725,391. 9 Claims. (Cl. 146—78.)



1. In a device of the character described, a hopper, a pair of cutting elements arranged at right angles to each other and adapted to be reciprocated alternately beneath said hopper, a main shaft, a disk mounted on said shaft, said disk being provided with a pair of cam tracks, and pivoted levers connected to said cutting elements and engaging said cam tracks.

1,534,079. ELECTRIC STEAM GENERATOR. ANDREW N. RUSSELL, BERNARD A. MALKIN, and WILLIAM P. MUIR, Lachine, Quebec, Canada. Filed May 2, 1922. Serial No. 558,028. 12 Claims. (Cl. 219—40.)

1. In an electric steam generator, the combination with a tank for more than one phase, of tubular electrodes and tubular neutral plates, disposed concentric with the electrodes whereby uniform separation and current flow is made possible between each electrode and its corresponding neutral plate.

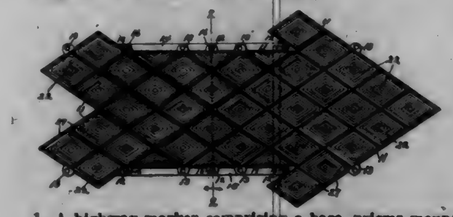
1,534,080. FLOW BOX FOR PAPER MACHINES. ANDREW N. RUSSELL, Lachine, Quebec, Canada. Filed June 30, 1923. Serial No. 648,766. 5 Claims. (Cl. 92—46.)

1. In a flow box for paper making machines, means for diverting the flow of the pulp into two streams, means for rotatably adjusting the diverting means, means for imparting vertical movement to the diverting means, means to bring the streams together, and adjustable means to control the flow of the mixture to a travelling wire.

1,534,081. BALL LOOP. JOSEPH SANDUSKY, New York, N. Y. Filed Dec. 30, 1922. Serial No. 609,901. 2 Claims. (Cl. 240—85.)

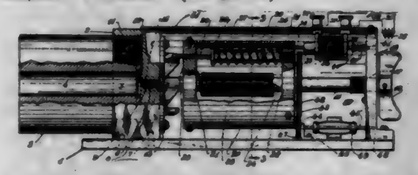
1. An electric light fixture comprising a support and an electric lamp provided with screw threaded openings, a coupling for connecting the lamp to the support comprising two short tubular members, a ball at one end of one of the said members engaging a socket at one end of the other member, the connection between the said ball and socket being freely movable and loosely fitting, screw threads at the outer ends of said members, adjacent to the said ball and socket, the said threads adapted to engage the said openings, the part of the coupling secured to the lamp adapted at all times when in operative position to normally assume a vertical position, a cut-away portion on the ball and an eccentric portion on the socket, the said portions cooperating to prevent substantial rotation of the ball and socket about the longitudinal axis of the joint but permitting free swinging movement.

1,534,082. DEVICE FOR PROTECTING CAR-AXLE JOURNALS. WILLIAM H. SANFORD, Buffalo, N. Y. Filed Nov. 11, 1922. Serial No. 600,457. 3 Claims. (Cl. 137—91.)



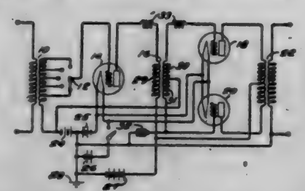
1. A device for protecting axle journals comprising a tube composed of water proofed sections molded to the journal shape, hinges connecting said sections and means adapted to secure the sections on the journal.

1,534,083. APPARATUS FOR RELINING MOTOR-VEHICLE BRAKE BANDS. ROBERT SARDESON, Minneapolis, Minn. Original application filed Nov. 25, 1921, Serial No. 517,728, which has matured into Patent No. 1,452,475, dated Apr. 17, 1923. Divided and this application filed Aug. 24, 1922. Serial No. 584,138. 5 Claims. (Cl. 218—19.)



1. An apparatus for relining motor vehicle brake-bands of predetermined widths comprising a substantially annular anvil, the anvil being of greater width than the widest brake-band to be relined whereby a portion of the anvil may project beyond the brake-band when the anvil is in operative position, said projecting anvil portion being provided with an aperture, and means adapted to be inserted in said aperture to facilitate handling of the anvil.

1,534,084. HIGHWAY MARKER. CARL L. SCHOUBOE, Des Moines, Iowa. Filed Mar. 8, 1923. Serial No. 623,695. 6 Claims. (Cl. 40—125.)



1. A highway marker comprising a base, prisms mounted thereon, angle bars fixed to said base and a bracket fixed to said angle bars and formed with an aperture and with notches radiating therefrom whereby said bracket is adapted to be mounted variously on a support.

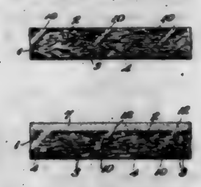
1,534,085. DETONATING DEVICE. MAX SCHWARZER, Brooklyn, N. Y. Filed Apr. 2, 1923. Serial No. 629,520. 7 Claims. (Cl. 89—1.)

1. A detonating device comprising a stationary cartridge receiver, a combination rotary and sliding hammer and means for automatically controlling the latter.

1,534,086. TRANSFORMER CIRCUITS. EDWARD O. SCRIVEN, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Aug. 8, 1922. Serial No. 580,532. 7 Claims. (Cl. 179—171.)

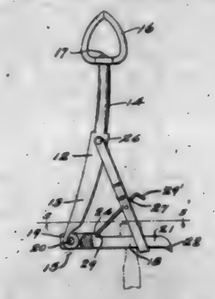
1. A transformer comprising a winding having its outer layer connected to ground, a second winding superimposed on said first winding and having its outer layer connected to ground, a third winding superimposed on said second winding and having its inner layer connected to ground, and a condenser connected between ground and the outer layer of said third winding.

4. In combination, a transformer having two secondary windings, two vacuum tubes having cathodes connected together and to the adjacent terminals of said windings, and having control electrodes connected to the non-adjacent terminals of said windings, one of said control electrodes being connected to said cathodes through a path comprising a natural capacity in said transformer, and a path comprising a condenser connecting the other of said control electrodes to said cathodes.



1,534,087. PORTABLE FOOD CONTAINER. WILLIAM H. SELLEW and HELEN W. SELLEW, Ann Arbor, Mich., assignors of one-half to Alfred T. Hopkins, Detroit, Mich. Filed Apr. 1, 1920. Serial No. 370,372. 2 Claims. (Cl. 219—35.)

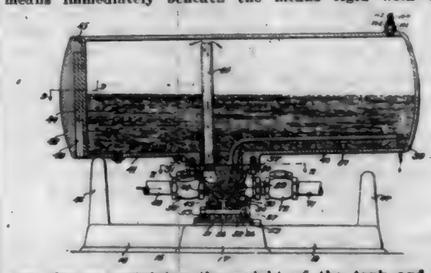
1. The combination with a plurality of receptacles containing hot cooked food, of a portable container for the transportation of said receptacles, comprising an



outer casing having a removable cover and heating insulation for said casing, and cover means for holding said receptacles within said container so as to form a surrounding air space, an electric heating unit arranged at the base of said container, a second unit arranged at a higher point within said container and provided with a flexible connection permitting of the removal thereof during loading and unloading, and electric connections by which said units may be drawn into circuit while the container is closed for heating the cooked food preliminary to serving.

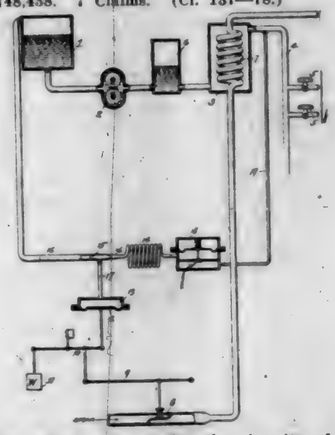
1,534,088. WOOD-FIBER BOARD. JOHN K. SHAW, Minneapolis, Minn., assignor to B. G. Dahlberg, St. Paul, Minn. Filed May 23, 1918. Serial No. 236,161. 11 Claims. (Cl. 72—124.)

1. As a new article of manufacture a porous body of paper board material, containing coarse, fine and intermediate sized fibers disposed in layers, said body having a specific gravity of less than four tenths, and provided with a plurality of holes having ragged surfaces adapted to receive and anchor a plastic substance, substantially as described.



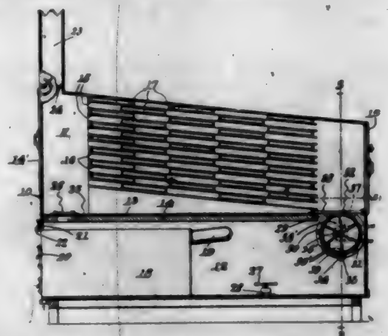
1,534,089. PUMP-ROD ELEVATOR. ROSE M. SHEARER, La Pryor, Tex., assignor of one-half to Hermon I. Bowen, La Pryor, Tex. Filed Oct. 2, 1924. Serial No. 741,159. 5 Claims. (Cl. 294—91.)

1. A device of the character described comprising a main supporting beam, a jaw member pivotally connected to the said beam, a bracket pivoted to the beam member and adapted to retain the jaw member in a horizontal position, and means for automatically releasing the said jaw member.



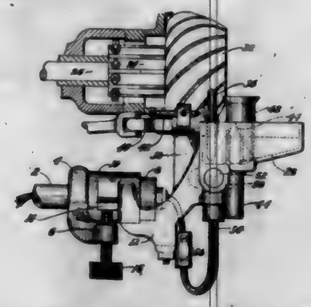
1,534,090. DEVICE FOR TRAPPING AND DELIVERING CONDENSATES. HOWARD G. SHORTT, Norristown, Pa., assignor to Frederick C. Farnsworth, Norristown, Pa. Filed Apr. 9, 1921. Serial No. 460,124. 22 Claims. (Cl. 137—103.)

1. A device of the character stated including a trap tank, two rigidly supported pivotal bearings for said tank spaced apart and respectively provided with oppositely directed tubular bearing portions, and centrally arranged means rigid with the tank intermediate of said spaced bearings and receiving the oppositely directed tubular bearing portions thereof, and further bearing means immediately beneath the means rigid with the



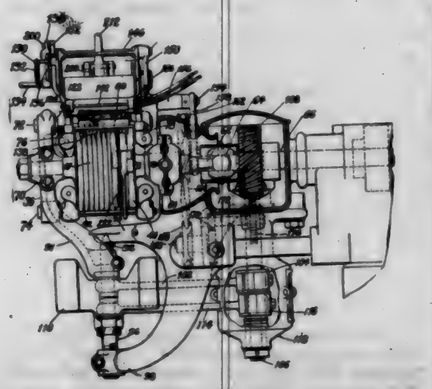
tank for so sustaining the weight of the tank and its contents that the friction due to the weight thereof is reduced at said pivotal bearings.

1,534,091. VISCOSITY REGULATOR. CHARLES H. SMOOT, Maplewood, N. J. Filed Nov. 7, 1924. Serial No. 748,438. 7 Claims. (Cl. 137—78.)



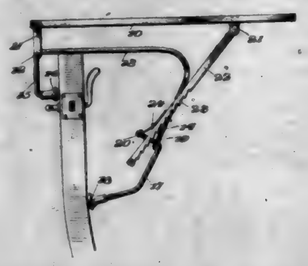
1. The method of regulating the viscosity of a fluid, which consists in heating the fluid, passing the fluid through a device responsive to variations in viscosity, and controlling the amount of heat supplied to the fluid in accordance with such changes in viscosity.

1,534,092. FRUIT-DRYING APPARATUS. WALTER H. SOLLE, Wilbur, Oreg. Filed May 19, 1924. Serial No. 714,448. 7 Claims. (Cl. 34—89.)



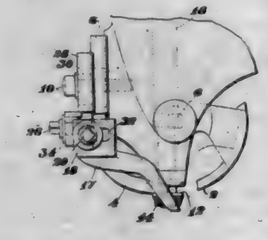
1. A fruit drier comprising a casing, means dividing the casing into an upper drying chamber and a lower heating chamber, heating means within the lower heating chamber, a blower mechanism arranged between the heating chamber and drying chamber and including a rotatable drum having a longitudinal discharge opening leading into the drying chamber, a centrifugal fan rotatable within the drum, and means to turn the drum upon its longitudinal axis.

1,534,093. WAX POT. JOHN F. STANDISH, Winthrop, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 22, 1921. Serial No. 463,503. 5 Claims. (Cl. 12—79.5.)



1. In a burnishing machine having a rotary burnishing tool, a wax pot comprising a supply compartment for solid wax and a communicating well for liquid wax, a disc-shaped feed wheel mounted in said well, means for rotating the feed wheel to apply liquid wax to the tool, means for heating the wax pot to convey heat to the wax and to the wheel, means for applying a flame to the rotatable wheel at a point thereon which is above the waxpot and away from the tool to preheat the wheel, and means constructed and arranged to limit the depth of liquid in the wax pot and conserve the excess supply of wax.

1,534,094. FINISHING MACHINE. JOHN F. STANDISH, Winthrop, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Nov. 10, 1922. Serial No. 600,169. 32 Claims. (Cl. 12—77.)

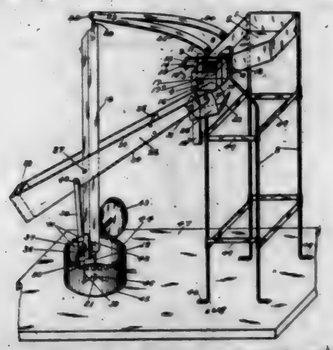


1. In a machine of the class described, a self heating burnishing tool comprising a series of burnishing elements arranged to rub against each other, and means for actuating said elements to heat the tool and burnish the work.

1,534,095. TRAY AND SUPPORT THEREFOR. THOMAS BATES WALKER, Nashville, Tenn. Filed May 5, 1924. Serial No. 711,132. 3 Claims. (Cl. 45—51.)

1. A tray and its support of the character described including a rigid frame having inturned engaging members at one side in spaced apart relation and an inturned engaging member at its opposite side opposing the first mentioned engaging members and located below and between the same, and a tray having a pivotal connection with one side of the frame and having an adjustable supporting arm at the opposite side of the frame and in movable connection with the latter.

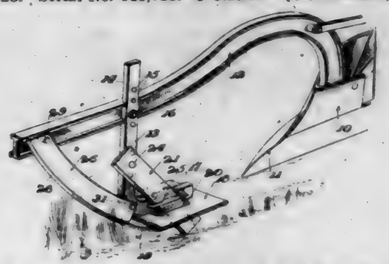
1,534,096. TRIMMING MACHINE. FRANK H. WARREN, Swampscott, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Sept. 29, 1920. Serial No. 413,465. 12 Claims. (Cl. 12—83.5.)



1. A shoe-trimming machine comprising means for trimming surplus material from the marginal portion of the upper on the bottom of a lasted shoe, a roll arranged to engage the channel flap of the sole, and a gage formed and arranged to project into the channel of the sole to turn up the channel flap into engagement with said roll and to regulate the closeness of trimming.

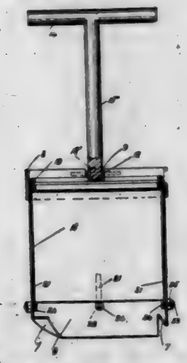
9. A shoe-trimming machine comprising three members, two of which are arranged and operated to trim surplus material from the marginal portion of the vamp standing up from the bottom of a lasted shoe, and two of which are formed and arranged to turn up, in two successive stages, the less erect portions of said surplus material.

1,534,097. MECHANICAL TOY. JOSEPH WILHELM and CHARLES A. KAYS, McKees Rocks, Pa. Filed Aug. 25, 1920. Serial No. 406,020. 5 Claims. (Cl. 46—37.)



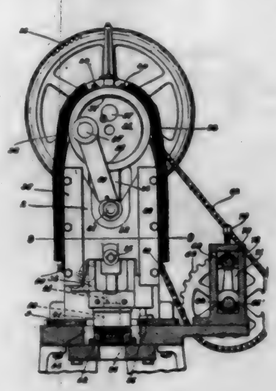
1. A toy comprising a base, an elevated marble trough supported on the base, a vertical post on the base in proximity to said trough portable about its vertical axis, a transverse beam pivotally carried on the post having a marble receiving bucket at one end thereof, means for normally maintaining the bucket end of the beam in elevated position, said beam being adapted to rock downwardly when a marble is received in the bucket, means actuated through the movement of said beam for feeding marbles into the bucket from said trough one at a time

to effect a rocking movement of the beam, cooperating gearing on the post and base for effecting a rotative



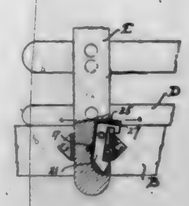
movement of the post, and means operatively connecting the beam with said gearing for operating the same when the beam is rocked.

1,534,098. CUTTER ATTACHMENT FOR PLOWS. WALTER GEORGE WOOD, Fellsmere, Fla. Filed June 6, 1923. Serial No. 643,723. 5 Claims. (Cl. 97—208.)



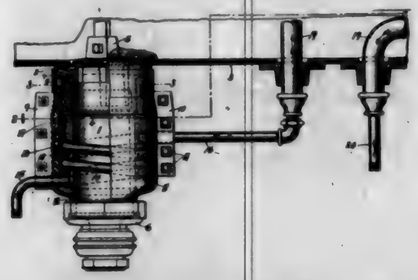
1. In combination with a plow of the character described, a ground-engaging shoe secured to the beam of said plow and adapted to move forward to the plow, whereby to crush and pack weeds or the like, a cutter projecting beneath said shoe and in alignment with said plow, and a second cutter extending between the forward end of the shoe and the beam.

1,534,099. ICE-CREAM DISHER. JULIUS BALZAK, Chicago, Ill. Filed June 26, 1924. Serial No. 722,483. 4 Claims. (Cl. 226—19.)



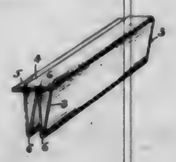
1. A dispensing device, comprising a cylinder open at each end and having undercut slots in its upper end, and a handle pivoted to the upper end of the cylinder at one side thereof and provided with arms which engage with the undercut slots and form an abutment for a container which is slidable in the cylinder.

1,534,100. MACHINE FOR MANUFACTURING CRIMPED PAPER CUPS. EDWIN L. ELWELL, Baltimore, Md. Filed Apr. 16, 1921. Serial No. 461,855. 12 Claims. (Cl. 93—60.)



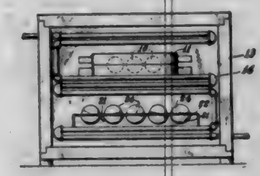
1. In a machine for crimping paper and the like in the manufacture of paper wrappers, means for feeding a web, a reciprocating cutter and a cooperating die, reciprocating crimping mechanism, means for carrying the cut blanks from the cutting mechanism to the crimping mechanism, the same having an intermittent motion and means for timing the parts so that the cutter and the crimping mechanism operate during the dwell of the carrier.

1,534,101. STAKE OR GATE HOLDER FOR TRUCKS. LEO EDWARD FISHER, Detroit, Mich. Filed June 28, 1923. Serial No. 648,328. 7 Claims. (Cl. 296—43.)



1. The combination with a desk, of a stake stocket carried by said deck, a stake fitted within said socket and removable therefrom, and a latch carried by said stake for engagement with said socket including means for yieldably urging the latch to a locked position, and means for facilitating movement of the latch to an unlocked position, said means being movably carried by the latch for movement to a position for releasably retaining the latch in an unlocked position.

1,534,102. HEATED DISCHARGE-OUTLET CASING FOR TANK CARS. CLYDE H. FOLMSBEE, Bayonne, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 13, 1922. Serial No. 552,426. 4 Claims. (Cl. 257—207.)

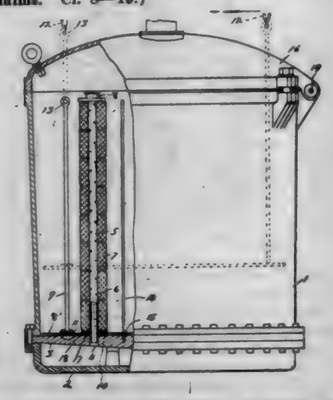


4. A tank discharge outlet casing, a heating coil surrounding said casing and a sectional heat insulating covering engaging the ends of said coil and securing said coil to said casing.

1,534,103. CHIMNEY STOP. BENJAMIN F. FOSS, Portland, Me. Filed June 7, 1924. Serial No. 718,967. 1 Claim. (Cl. 20—0.5.)

A fire stop for the spaces around a chimney and the like, which consists of a sheet of non-inflammable material folded to form a series of horizontal corrugations to fit into said space and having at its top a portion which bends over and covers said corrugations.

1,534,104. GOLF BALL AND METHOD OF MAKING THE SAME. JOHN R. GAMMETER, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 26, 1921. Serial No. 472,734. 1 Claim. (Cl. 154—3.)



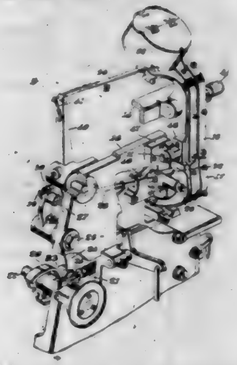
The method of making a golf ball which comprises producing a frozen pellet of normally mobile material, thereafter enclosing said material, while frozen, in an imperforate, vulcanizable-rubber envelope, then vulcanizing said envelope, again freezing said material, and, while it is so frozen, applying additional material to said envelope.

1,534,105. FLUX FOR MAGNESIUM AND ALLOYS THEREOF. JOHN A. GANN, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich., a Corporation of Michigan. Filed Aug. 1, 1923. Serial No. 655,143. 8 Claims. (Cl. 148—24.)

6. In a method of preparing a flux for use with molten magnesium and alloys thereof, the steps which consist in intermixing the proportionate amounts of sodium and calcium chlorides, such calcium chloride being in hydrated form, heating until such calcium chloride is dehydrated, adding to the molten mixture a magnesium chloride salt retaining water of crystallization, and heating the resulting mixture until such water is driven off.

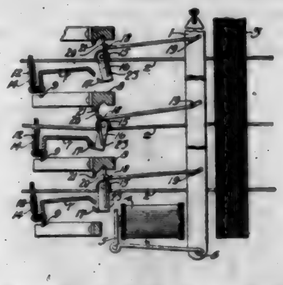
1,534,106. DYEING AND BLEACHING MACHINE. WALTER S. GATES, Detroit, Mich., assignor to Insulating Materials Company, Detroit, Mich., a Corporation of Michigan. Filed Apr. 21, 1924. Serial No. 708,028. 11 Claims. Cl. 8—19.)

10. In a machine of the class described, the combination with a kier having a true bottom and a false bottom, secured to the true bottom of yarn holders detachably secured to said false bottom, and means in the kier for raising the yarn packages off of said yarn holders to facilitate the removal thereof from the kier.



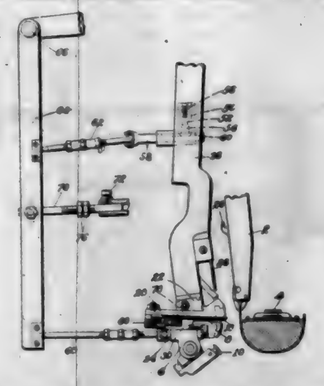
1,534,107. FASTENER-SETTING MACHINE. PERLEY R. GLASS, Wayland, Mass, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed May 17, 1922. Serial No. 561,667. 16 Claims. (Cl. 218—15.1.)

12. The combination with fastener-inserting mechanism including a high-speed operating shaft, of fastener supplying mechanism comprising a reciprocatory carrier, a raceway and hopper carried by said carrier, a



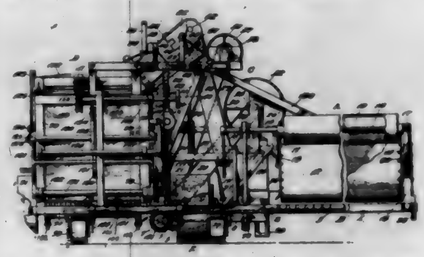
rotary device arranged to feed fasteners from said hopper to said raceway, and transmission means arranged to be operated by said shaft to drive said feeding device and including planetary speed-reducing gearing carried by said carrier.

1,534,108. FASTENER-SETTING MACHINE. PERLEY R. GLASS, Wayland, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Original application filed Sept. 11, 1919, Serial No. 323,164. Divided and this application filed Jan. 22, 1923. Serial No. 614,184. 26 Claims. (Cl. 218—15.1.)



1. The combination with a machine comprising a frame and fastener-setting mechanism, of a detachable unit comprising a raceway the lower part of which is movable relatively to the upper part, means for fastening said upper part to said frame, said means having provision for adjusting the delivery end of the raceway to cooperate with said setting mechanism, and mechanism for operating said delivery end to present fasteners successively to the setting mechanism.

1,534,109. AUTOMATIC TELEPHONE SWITCH. HAROLD W. GOFF, New York, N. Y., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed July 12, 1922. Serial No. 574,387. 5 Claims. (Cl. 179—27.5.)

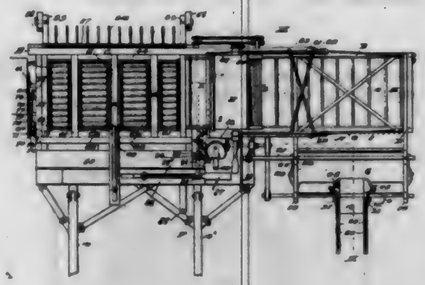


1. In a switching mechanism, sets of active contacts, a pivotal element associated with said sets of contacts, a pair of operating bars, a latching member loosely connected to said pivotal element and to one of said operating bars, means of operating said operating bar to move said pivotal member into operative relation with the other of said operating bars, and other means operable to move the second of said operating bars thereby effecting an additional movement in said pivotal member to interconnect said contact sets.

1,534,110. MACHINE FOR WORKING UPPERS OVER LASTS. JOSEPH GOULDBOURN, Leicester, England, assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Feb. 7, 1923. Serial No. 617,603. 22 Claims. (Cl. 12—4.)

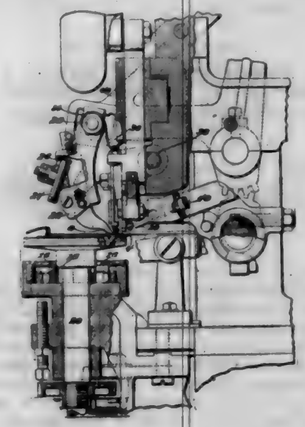
1. In a machine of the class described, the combination with means for operating on a shoe movable inwardly over the bottom of the shoe against resistance of the shoe materials, of mechanism for imparting inward movement to said operating means including a member yieldable in response to resistance to such inward movement, a device for preventing said member from yielding to cause it to act positively to impart inward movement to said operating means, and a cam controlled by the shoe for operating said device to release the member at a point in the inward movement of said operating means determined by the shoe.

1,534,111. HARVESTER AND STACKER. DAVID M. GRAHAM, Bordulac, N. Dak. Filed May 10, 1917. Serial No. 167,726. 27 Claims. (Cl. 56—1.)



1. In a harvesting machine, the combination of cutting apparatus, an endless apron for receiving and conveying the cut grain immediately from the cutting apparatus, and a pneumatic grain elevator having an air trunk elongated along said apron to which said grain is delivered by the apron.

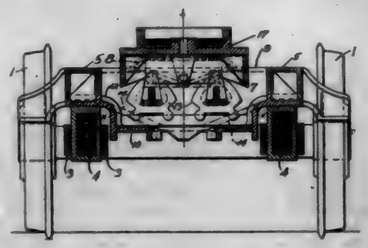
1,534,112. APPARATUS FOR CUTTING AND STACKING GRAIN. DAVID M. GRAHAM, Bordulac, N. Dak., assignor to Graham-Roach Harvester and Stacker Company of North Dakota. Filed Apr. 6, 1918. Serial No. 227,072. 20 Claims. (Cl. 56—1.)



1. A stack former having an elongated body for the formation of a stack of grain which is elongated in one horizontal direction and relatively narrow in the other horizontal direction, combined with means for forming ventilating air space openings through the stack in the direction of its narrower dimension.

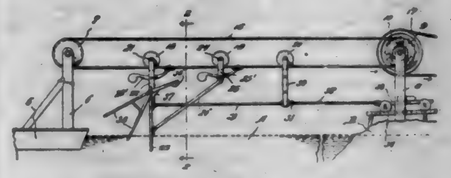
20. The method of curing grain and the like by producing a stack, the base of which is horizontally elongated in one direction and relatively narrow in the transverse

direction and forming ventilating air spaces at different heights in said stack and extending parallel with the narrower dimension of the stack, for the purpose described.



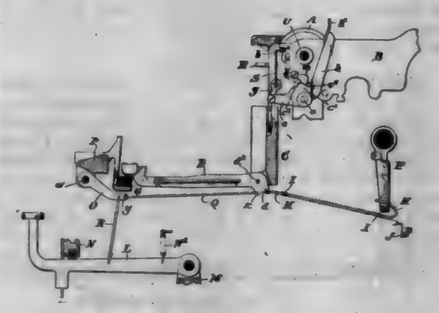
1,534,113. INSOLE-REENFORCING MACHINE. JOHN B. HADAWAY, Swampscott, and THOMAS H. SEELY, Malden, Mass., assignors to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed Aug. 1, 1919. Serial No. 314,688, 22 Claims. (Cl. 12—20.)

4. An insole reenforcing machine having, in combination, means for forming a bead about the insole lip, including a reciprocating inside former, a transversely movable outside former, and means for actuating the formers to press the top of the reenforced lip between them and for thereafter actuating the outside former to bend the lip inward and apply pressure at its base while the inside former is reciprocated.



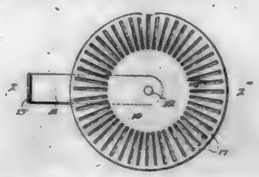
1,534,114. RAILWAY TRUCK. EINAR G. HALLQUIST, Edwardsville, Ill., assignor to Commonwealth Steel Company, St. Louis, Mo., a Corporation of Missouri. Filed Aug. 26, 1924. Serial No. 734,197. 17 Claims. (Cl. 105—189.)

4. In a railway truck transom having a vertically disposed body wall, a load carrying flange on one side of said wall disposed independently of the line of strain in the transom produced by the load, and a reinforcing



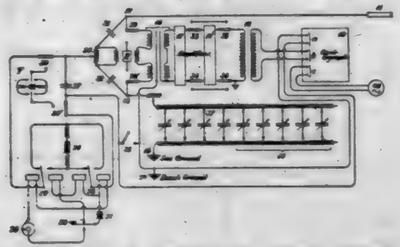
flange on the other side of said wall disposed along said line of strain.

1,534,115. WAVE MOTOR. FRED HARKORT, Monterey, Calif. Filed Oct. 17, 1924. Serial No. 744,210. 8 Claims. (Cl. 258—14.)



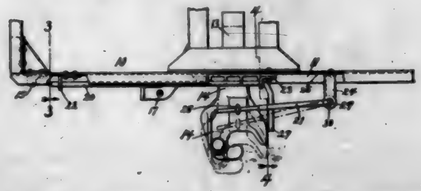
1. In a wave motor of the character described, an endless belt trained over spaced pulleys anchored above the shore line and water surface respectively, a wave engaging blade operatively connected to the belt and adapted to actuate the same when engaged by the waves, means upon the shore for automatically returning the blade and belt to initial position, and means whereby machinery may be operated by the actuation of said belt.

1,534,116. TYPEWRITING MACHINE. EDWARD B. HESS, Manhattan Beach, N. Y., assignor to Royal Typewriter Company, Inc., New York, N. Y., a Corporation of New York. Filed June 22 1922. Serial No. 570,176. 9 Claims. (Cl. 197—144.)



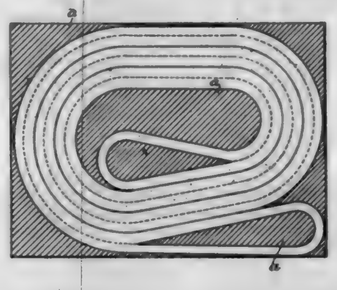
1. In a typewriting machine, the combination with a main cylindrical platen, of an auxiliary platen of relatively hard material, means for moving said auxiliary platen from active to inactive position in the line of print, and means for causing this movement to be tangential to the main platen.

1,534,117. ATTACHMENT FOR CHECK-CONTROLLED APPARATUS. HUGO E. HEYNE, Chicago, Ill. Filed May 21, 1924. Serial No. 714,983. 2 Claims. (Cl. 235—1.)



1. A device of the class described comprising a member having a series of coin slots, means in association with each slot for indicating the insertion of a coin therethrough, and means adapted to support said member over the inlet opening of a coin receptacle, said supporting means permitting the member to be moved to bring said slots successively into registry with said opening.

1,534,118. METHOD OF ADJUSTING BALANCE BETWEEN ELECTRICAL CONDUCTORS OR NETWORKS. HARRY W. HITCHCOCK, Berkeley, Calif., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Dec. 16, 1922. Serial No. 607,422. 10 Claims. (Cl. 178—63.)



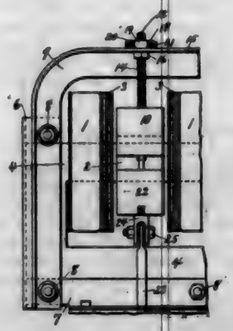
1. The method of adjusting the balance between a signaling conductor and its artificial line, which consists in making definite impedance modifications of various types at various places along said line and in each instance applying a single standard impulse of electromotive force to said conductor and line in parallel and recording the resulting unbalance current between said conductor and line in series, then observing the normal unbalance current with the same impulse of electromotive force, but without any such impedance modification on the artificial line, and then modifying the artificial line in accordance with those records into which the normal unbalance current may be analyzed, so as to eliminate such normal unbalance.

1,534,119. UNCOUPLING DEVICE. OSCAR HOCHBERG, New York, N. Y., and JOHN W. STEINMEYER, East Orange, N. J., assignors to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Mar. 8, 1921. Serial No. 450,770. 2 Claims. (Cl. 213—163.)

1. In an uncoupling mechanism for cars having a coupler and a relatively low platform, an operating member mounted for operation on one side of the coupler, a pin lifting lever fulcrumed on the opposite side of said coupler and adapted for engagement with the operating member, said operating and pin lifting members extending with their adjacent ends past each other above said coupler and below the floor line of the car.

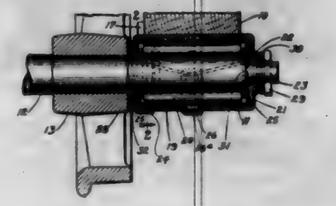
1,534,120. ENDLESS BELT. WILLIAM HOWARTH, Rochdale, England. Filed Dec. 22, 1922. Serial No. 608,516. 2 Claims. (Cl. 74—62.)

1. The method of forming an endless belt, which consists in cutting the material from which the belt is to be made to form a compact coil, said coil being twice the desired width of the belt and merging at its opposite ends into loops, the width of the material of the loops being that of the desired width of the belt, and cutting along the center line of the coil from loop to loop.



1,534,121. WOOD STEAMER. WILLIAM D. INGLIS, Richford, Vt. Filed July 3, 1923. Serial No. 649,277. 1 Claim. (Cl. 144—271.)

A plant for steaming logs comprising a vat having a horizontal intermediate portion, and inclined end portions which form the bottom of the vat, chains trained longitudinally around the bottom of the vat, rails extending the full length of the bottom of the vat and mounted thereon, perforated pipe sections disposed between the rails and lying below the plane in which the upper surfaces of the rails lie, a hood spaced from the vat, said hood having an intermediate portion which lies parallel with the intermediate portion of the bottom of the vat, and inclined end portions which are disposed parallel with the corresponding end portions of the bottom of the vat, chains trained around the hood, cross chains connecting the chains around the hood with the chains around the vat, and closures for bridging the space between the ends of the hood and the corresponding ends of the vat.

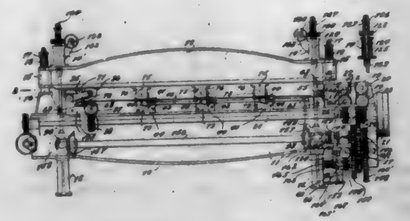


1,534,122. ELECTRIC RIVET HEATER. WILLIAM S. JOHNSON and JOHN W. SHEFFER, Berwick, Pa., assignors to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Feb. 28, 1921. Serial No. 448,313. 6 Claims. (Cl. 219—13.)

1. An electric rivet heater having a secondary coil, a normally fixed upper electrode on said coil, a support for said electrode, threaded means connecting said electrode and said support and means on said threaded means and engaging on opposite sides of said support

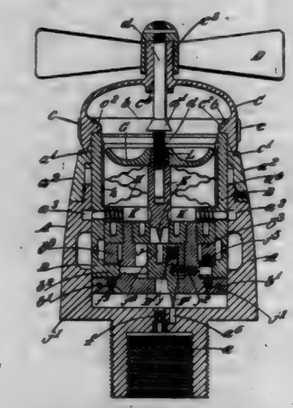
adapted to adjust the position of said electrode with respect to said support and to lock said electrode in fixed position.

1,534,123. ROLLER-BEARING JOURNAL BOX. WARREN V. JOHNSON, Bloomsburg, Pa., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 5, 1922. Serial No. 527,106. 4 Claims. (Cl. 64—39.)



1. A journal box comprising a housing and attaching frame-work extending to opposite sides of said housing and providing a car body engaging face, removable and fixed wall portions covering respectively the inner and outer ends of said housing, and box alining flanges on opposite sides of said housing and in the plane of said removable wall member.

1,534,124. PAD HOLDER. JOHN B. KEMP, Ridgewood, N. J. Filed Feb. 26, 1924. Serial No. 695,217. 9 Claims. (Cl. 129—13.)

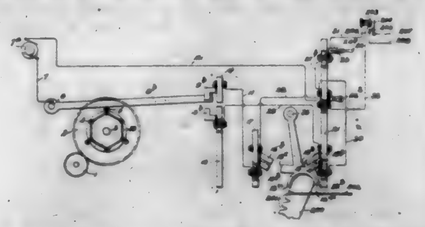


9. In a device of the character described, in combination, a group of superposed members and a plurality of interlocking members adjacent one edge thereof for maintaining said group of superposed members in superposed relation and angularly with reference to a supporting surface.

1,534,125. BOX-BLANK-FORMING MACHINE. JAMES B. LADD, Ardmore, Pa., assignor to M. D. Knowlton Company, Rochester, N. Y., a Corporation of New York. Filed July 19, 1923. Serial No. 652,530. 33 Claims. (Cl. 93—54.)

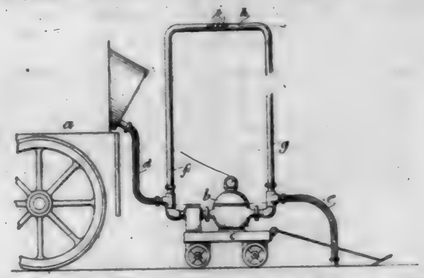
1. In a machine of the class described, the combination with a reciprocating head, of means carried by the head for creasing a blank, means carried by the head for cutting the blank adjacent the crease, and means for shifting the creasing and cutting means alternately into and out of operative position.

1,534,126. FUSE FOR BOMBS AND OTHER MISSILES ADAPTED TO BE DROPPED FROM AIRCRAFT. OWEN DAVID LUCAS and FREDERICK GEOFFREY LEES JOHNSON, Westminster, London, England, assignors to Vickers Limited, Westminster, England, a British Company. Filed Jan. 2, 1925. Serial No. 24. 13 Claims. (Cl. 102—39.)



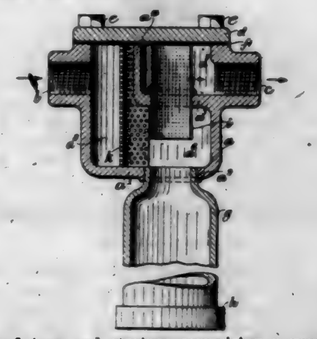
7. In a fuse for an explosive missile for aircraft, adapted to operate selectively according to whether the missile strikes a solid body or the surface of water, instantaneous firing mechanism and time set firing mechanism, means for firing alternatively through one or other of the said mechanisms, a timing ring for the time set firing mechanism, a fluid pressure operated piston within the said timing ring and a striker for the time set firing mechanism associated with the said piston.

1,534,127. HARNESS STOP AND SIGNAL DEVICE FOR LOOMS. SEBASTIANO MAGNANO, Lawrence, Mass., assignor to Magnano Corporation, Essex, Mass., a Corporation of Massachusetts. Filed June 15, 1923. Serial No. 645,539. 12 Claims. (Cl. 139—337.)



1. A mechanism for use with a loom having a plurality of harnesses and a stop motion, and comprising

a signal device corresponding to each of said harnesses, and means automatically operative upon failure of a

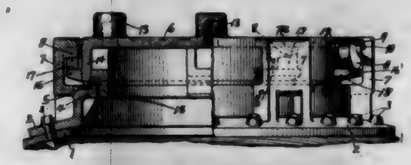


harness properly to function for actuating said stop motion and for energizing the corresponding signal device.

1,534,128. APPARATUS FOR MEASURING LIQUIDS. WILLIAM L. MARDEN, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 9, 1923. Serial No. 611,572. 1 Claim. (Cl. 137—78.)

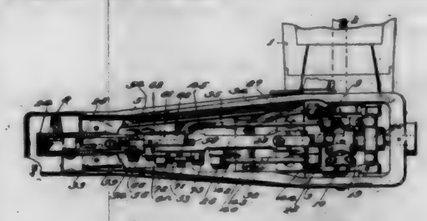
An apparatus for measuring liquid in its flow from one point to another comprising in combination a source of liquid supply, a meter, a truck on which the meter is mounted, a pipe connection from the source of supply to the meter, a discharge pipe from the meter, stand pipes connected respectively to said pipe connection and said discharge pipe in proximity to the meter to permit the free discharge of air from said pipe connection and the free admission of air to said discharge pipe, and a perforated pipe connecting said stand pipes.

1,534,129. SAND TRAP AND STRAINER. WILLIAM L. MARDEN, New York, N. Y., assignor to Neptune Meter Company, New York, N. Y., a Corporation of New Jersey. Filed June 13, 1923. Serial No. 645,212. 1 Claim. (Cl. 210—165.)



A sand trap and strainer comprising a vessel having an inlet and an outlet, an open top with a removable cap and a discharge opening in its bottom, a transverse and vertical partition forming a chamber within the main vessel, a finely foraminous, substantially cylindrical strainer supported in the transverse partitioon and having its lower end open and its upper end in contact with the removable cap and a coarsely foraminous partition interposed in the main vessel between the inlet and the finely foraminous strainer and bearing at its lower end against the bottom of the main vessel, at its vertical edges against the sides of the main vessel, and at its upper edge against the removable cap.

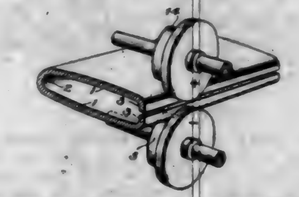
1,534,130. PROCESS OF RECOVERING ALUMINUM CHLORIDE. ALMER MCDUFFIE MCAFEE, Port Arthur, Tex., assignor to Gulf Refining Company, Pittsburgh, Pa., a Corporation of Texas. Filed Jan. 26, 1922. Serial No. 531,949. 4 Claims. (Cl. 23—96.)



1. The process of recovering aluminum chloride from spent residues containing the same which comprises boiling the said residues in a body of oil, cooling the evolved vapors to condense therefrom aluminum chloride high boiling oil, separating the aluminum chloride from the condensed oils and removing the separated aluminum chloride from the system.

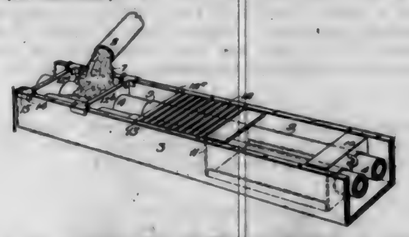
1,534,131. TANK-CAR-DOME CLOSURE. JOHN J. MCBRIDE, Bayonne, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Oct. 29, 1921. Serial No. 511,460. 9 Claims. (Cl. 220—55.)

9. A manhole closure comprising a cover adapted to be rotated to a closed position and means operating automatically upon rotation of said cover towards closed position to prevent rotation of said cover away from closed position.



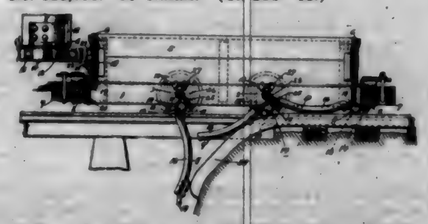
1,534,132. DIFFERENTIAL FEEDING MECHANISM. JAMES R. MOFFATT, Chicago, Ill., assignor to Union Special Machine Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 20, 1921. Serial No. 508,931. 9 Claims. (Cl. 112—208.)

1. The combination with a vertically extending frame member, a work supporting arm at the upper end thereof projecting laterally therefrom, an operating shaft extending into said frame member, a main feed dog, a main feed bar extending lengthwise of the work supporting arm and terminating adjacent said frame member, means for moving said feed bar back and forth including a lever pivoted to the work supporting arm along side of said main feed bar and extending into the vertically extending frame member, devices actuated



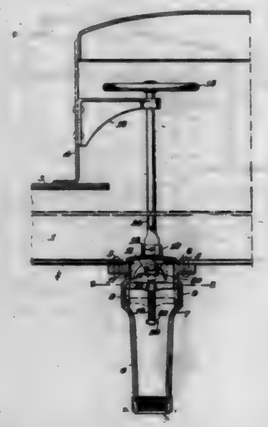
by the operating shaft for oscillating said lever, a link connected with the lever at a point intermediate the ends of the main feed bar and extending rearwardly and pivotally connected to the rear end of the main feed bar, and means for raising and lowering said main feed bar.

1,534,133. WELDING. THOMAS E. MURRAY, Jr., Brooklyn, N. Y. Filed Aug. 22, 1922. Serial No. 583,522. 7 Claims. (Cl. 219—6.)



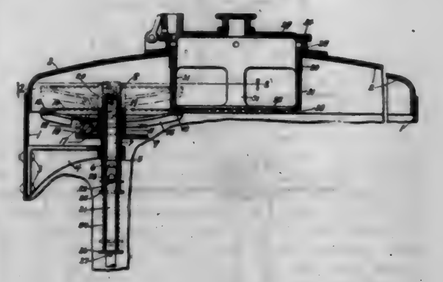
1. The herein described method of electrically welding the ends of a single piece of metal which consists in bending it to a hollow comparatively flat shape with meeting edges at an end of the longer dimensions of its cross-section and with flat portions of substantial width adjacent to such edges approximately at right angles to the longer dimensions and butt welding such edges to each other by pressing them together by means of electrodes in line with such edges and passing a current between said electrodes and across the joint.

1,534,134. APPARATUS FOR MOLDING HOLLOW ARTICLES. THOMAS E. MURRAY, Brooklyn, N. Y. Filed Sept. 13, 1924. Serial No. 737,472. 6 Claims. (Cl. 25—121.)



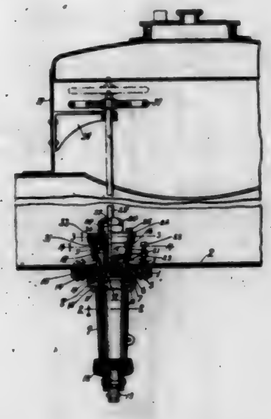
1. An apparatus for molding a plurality of hollow articles comprising a mold box, partitions therein, and a core passing through the several partitions so that the same core serves in the several compartments to mold the duct in the several blocks, in combination with a shield carrying a tube surrounding said core and passing through said partitions.

1,534,135. SELF-DUMPING MINE CAR. RALPH G. NICHOLS, Richmond Hill, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 30, 1921. Serial No. 518,891. 13 Claims. (Cl. 214—63.)



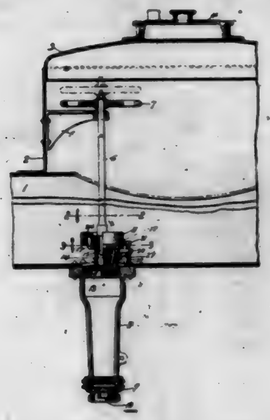
1. In a dumping car, a plurality of dumping doors and a locking means for one of said doors mounted independently of said doors and controlled by the other of said doors.

1,534,136. VALVE FOR TANK CARS. ALLEN E. OSTRANDER, Ridgewood, N. J., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 17, 1920. Serial No. 381,946. 16 Claims. (Cl. 137—21.)



8. In a tank car discharge valve, a discharge outlet casing having a valve seat, a valve for said seat operating means adapted to rotate said valve on said seat and means in said outlet opening adapted to raise said valve from its seat upon a predetermined degree of rotation of said valve on said seat.

1,534,137. TANK-CAR VALVE-OPERATING MECHANISM. ALLEN E. OSTRANDER, Ridgewood, N. J., assignor to American Car and Foundry Company, St. Louis, Mo., a Corporation of New Jersey. Filed Feb. 10, 1921. Serial No. 446,294. 23 Claims. (Cl. 137—21.)

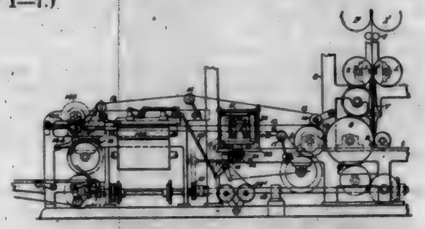


13. In a tank car, a longitudinally movable valve operating mechanism, rotatable means to operate said valve operating means and a manhole cover adapted to operate said rotatable means to seat the valve during the seating of the cover, said valve operating means being adapted to hold said valve to its seat upon the removal of said cover.

1,534,138. DISCHARGE-VALVE MECHANISM. ALLEN E. OSTRANDER, Bronxville, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed May 1, 1922. Serial No. 557,712. 9 Claims. (Cl. 137—21.)

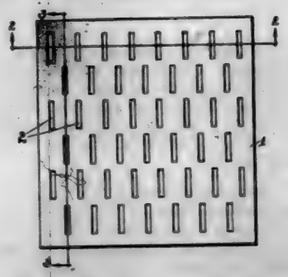
1. In a tank discharge valve, a member having a discharge opening and adapted to be secured to a tank sheet, a discharge outlet casing detachably connected to said member and a valve cage carried by said member.

1,534,139. DISCHARGE-VALVE MECHANISM. ALLEN E. OSTRANDER, Bronxville, N. Y., assignor to American Car and Foundry Company, New York, N. Y., a Corporation of New Jersey. Filed June 2, 1922. Serial No. 565,484. 17 Claims. (Cl. 137—21.)



15. In a tank discharge valve mechanism, a discharge outlet for said tank, a valve cage mounted in said discharge outlet and lying within said tank and means within said tank securing said cage against rotation.

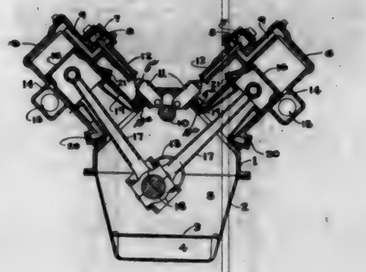
1,534,140. CUFF LINK. VICTOR BEAM ROGERS, Buffalo, N. Y. Filed Jan. 7, 1925. Serial No. 958. 6 Claims. (Cl. 24—102.)



1. A cuff link, including a shank, a conical helical spring on the shank and a hollow dome like button member housing the spring whereby the latter is universally connected to the shank.

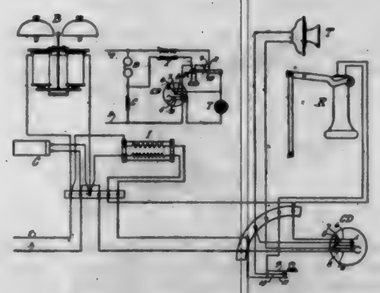
1,534,141. STAPLING MECHANISM. OSCAR ROSEN, Brooklyn, N. Y., assignor to R. Hoe and Co., New York, N. Y., a Corporation of New York. Filed Apr. 14, 1920. Serial No. 373,687. 30 Claims. (Cl. 1—7.)

1. The combination of means for forwarding a product, a stapling mechanism, and means for actuating the stapling mechanism to insert a line of staples in the product on the fold line either transversely or longitudinally of the run of the product.



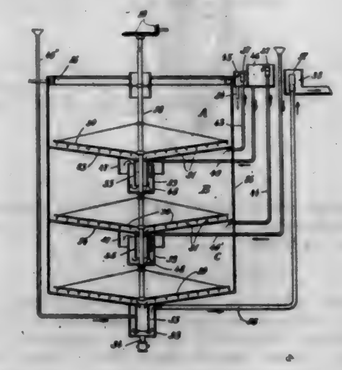
1,534,142. KEYED INSULATING BOARD. CHARLES A. ROLFS, St. Paul, Minn. Filed Aug. 17, 1921. Serial No. 493,154. 2 Claims. (Cl. 72—116.)

1. In an insulating board the combination of a face board of firm texture and considerable thickness having a definite mechanical strength and a backboard of loose texture and considerable thickness joined thereto having lesser strength but having high insulating properties, the two boards forming the completed composite board being of comparatively equal thickness.



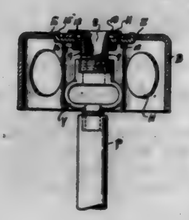
1,534,143. STEAM ENGINE. LEWIS L. SCOTT, St. Louis, Mo. Filed Mar. 27, 1922. Serial No. 547,104. 3 Claims. (Cl. 121—1.)

3. In a single acting reciprocating engine, a crankcase, a cylinder having flanged lower end attached to said crankcase, a piston operating in said cylinder, a drain located at the lower end of said cylinder for conducting off any fluid that might pass down the cylinder wall, a stationary sleeve adapted to closely fit the inside



diameter of said piston for preventing said fluid from passing into the crankcase of said engine, said sleeve being flanged at its lower end and attached to crankcase.

1,534,144. AUTOMATIC SUBSTATION TELEPHONE CIRCUIT. ARTHUR BESSEY SMITH, Evanston, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Filed June 7, 1922. Serial No. 566,563. 2 Claims. (Cl. 179—81.)

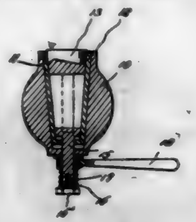


1. In a substation telephone circuit, two line conductors, a bell and a condenser bridged permanently across said conductors, an induction coil having two windings, one of said windings being in series with one of said line conductors, a calling device having control contacts, a transmitter, said control contacts and said transmitter being connected in series in the other of said line conductors, a receiver, a third conductor connected at one end to a point between said bell and said condenser, the other winding of said induction coil and said receiver connected in series in the order named in said third conductor, three switch hook contacts at each of which a different one of said conductors terminates, said contacts adapted to close together when said receiver is lifted, and three shunt contacts on said calling device adapted to close together when said device is off normal, one of said shunt contacts connected to one side of said transmitter, the second shunt contact permanently connected to the other side of said transmitter, and the third shunt contact connected between said receiver and said other winding.

1,534,145. TREATMENT OF PULPS. WILLIAM ARMOR STEDMAN, Westport, Conn., assignor to The Dorr Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 22, 1921. Serial No. 524,127. 17 Claims. (Cl. 23—270.)

1. The improvement in the method of treating pulps which comprises hydraulically regulating the discharge of thickened material from a body of pulp undergoing sedimentation in response to the rate of accumulation of solids therein.

1,534,146. FIXTURE STUD. GEORGE C. THOMAS, JR., Elizabeth, N. J., assignor to The Thomas & Betts Co., Elizabeth, N. J., a Corporation of New Jersey. Filed June 30, 1924. Serial No. 723,091. 17 Claims. (Cl. 240—85.)

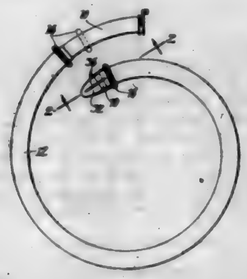


1. In combination, an electrical fixture box having openings therein, a fixture supporting shank, an elliptical flange formed on one end of the shank and adapted to be passed through the standard size opening of the box and overlap said opening thus disposing the other end of the shank concentrically in the box opening, said flange resting directly on the outside box wall, means embracing a shank and engaging the box serving to lock the shank and box against relative motion, and means clamping the embracing means in operative position.

1,534,147. AIR-BRAKE-PIPE CONNECTION. HENRY A. VEAL, Douglas, Ga. Filed Dec. 5, 1923. Serial No. 678,701. 3 Claims. (Cl. 303—88.)

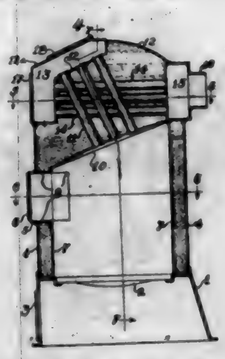
1. A by-pass for installation in an air brake pipe line between the air supply pipe and the triple valve, said by-pass comprising a single unit including a pair of

spaced strainers connected together by a valved conduit, said conduit including a substantially J-shaped inverted branch, connected with the top of the upper strainer



and having the horisontal portion thereof disposed on a plane above the strainer to prevent passage of water through the by-pass.

1,534,148. **SOUND-TRANSLATING APPARATUS.** HANS VOGT, Berlin-Schoneberg, and JOSEF ENGL and JOSEPH MASSOLLE, Grunewald, Germany, assignors to Tri-Ergon Limited, Zurich, Switzerland. Filed Apr. 4, 1921. Serial No. 458,632. 15 Claims. (Cl. 179—121.)



1. Sound translating apparatus, comprising the combination of a circuit including an anode and cathode adjacent thereto with a gas discharge path between them and a source of potential, ionising means for said path separate from said source, and means for causing sound waves to be directed through the air upon said discharge path to modify the electrical conditions in said path.

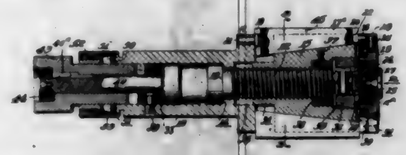
1,534,149. **BRACELET SPRING CLAMP FOR TUBE CORES AND METHOD OF MANUFACTURING TUBES.** HARRY WILLSHAW, Buffalo, N. Y., assignor to Dunlop Tire and Rubber Corporation of America, Buffalo, N. Y., a Corporation of New York. Filed Apr. 2, 1924. Serial No. 703,614. 15 Claims. (Cl. 18—43.)

3. In combination with a core used for the vulcanization of rubber tubes, a circular tension spring for beveling or skiving the tube on said core.

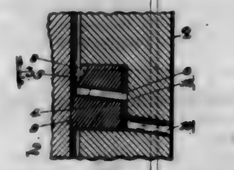
1,534,150. **HOT-WATER BOILER.** CHARLES GALE ADAMS, Joliet, Ill. Filed Oct. 2, 1922. Serial No. 591,714. 2 Claims. (Cl. 122—49.)

1. In a water heating boiler, a cylindrical outer steel shell, an inner steel shell coaxial therewith forming a water jacketed fire box, a crown sheet over said inner shell, a smoke box at the front and top of the outer shell, a plurality of substantially vertical flues leading from said crown sheet into the upper portion of said smoke box, a second smoke box and chimney connection near the top and rear of said outer shell, and horizontal flues leading from the lower portion of said first mentioned smoke box to said second smoke box.

1,534,151. **AUTOMOBILE MAP HOLDER.** EUGENE K. BAHALER, Tyngsboro, Mass. Filed Mar. 17, 1924. Serial No. 699,936. 3 Claims. (Cl. 35—6.)



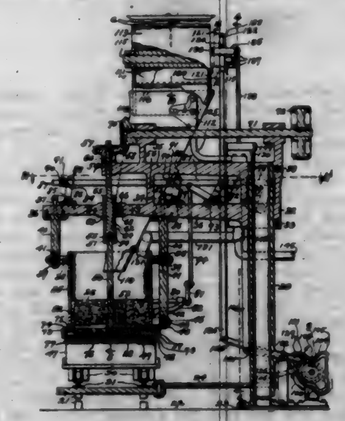
1. A combined road map case and holder comprising a sheet metal body including a rear wall, a forwardly extending bottom wall, forwardly extending side walls, guides formed on the side walls, dividing the body into a map receiving compartment and a road book receiving compartment, a hinged cover carried by the bottom wall adapted to swing in parallel relation to the body for supporting a map when the same is to be viewed, a resilient catch carried by the upper edge of the cover to engage with the body, and means for detachably connecting the case with the instrument board of an automobile.



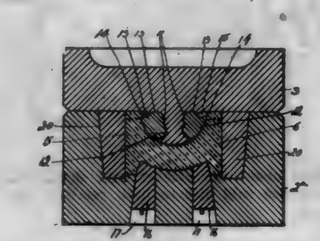
1,534,152. **ADJUSTABLE INTERNAL GAUGE.** JOHN BATH and ROBERT H. C. GRUNEWALD, Worcester, Mass., assignors to John Bath & Co. Inc., a Corporation of Massachusetts. Filed Oct. 27, 1919. Serial No. 333,651. 11 Claims. (Cl. 33—178.)

1. An adjustable internal gauge comprising a body, a threaded rod rotatable therein but held from axial movement relative thereto, a plurality of gauge bars having faces inclined to the longitudinal axis of said rod, an adjusting member threaded on said rod and slidably supporting said bars, said member having inclined faces cooperating with the inclined faces of said gauge bars to adjust them radially when said member is moved axially of said rod and longitudinally of said gauge bars,

a sleeve fixed in said body, and a second sleeve mounted on said rod and axially movable thereon but held from angular movement relatively thereto, said sleeves having cooperating portions which, when brought into engagement by axial movement of one of said sleeves, prevent angular movement of said rod relative to said body.

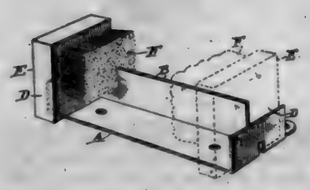


1,534,153. **PISTON RING.** LIONEL D. BAX, Denver, Colo. Filed June 9, 1924. Serial No. 718,866. 3 Claims. (Cl. 74—109.)



3. As a new article of manufacture, a piston ring having an upper face, a bevel at the outer edge of said face, and apertures slanting downwardly from the lower portion of the bevel to the inner circumferential surface of the ring.

1,534,154. **APPARATUS FOR MAKING BUILDING BLOCKS AND THE LIKE.** OTTO E. BORNHAUSER and JOHN E. HERMAN, Sandusky, Ohio. Filed Oct. 12, 1923. Serial No. 668,102. 31 Claims. (Cl. 25—41.)

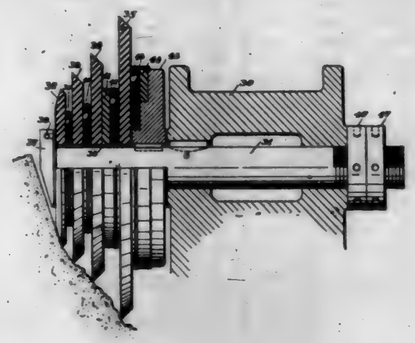


1. In apparatus for making cementitious building blocks and the like, the combination, with a substantially horizontally movable mold having its material-receiving chamber extending to the top of the mold, a hopper for supplying wet or moist cementitious material to said chamber, said hopper being arranged over and movable from and toward the path of said mold and having an outlet arranged to discharge into said chamber when the mold is in its material-receiving position, and a valve controlling communication through said outlet, of an actuating member movable intermittently and in opposite directions alternately, means for operating said actuating member, and means whereby the aforesaid hopper is actuated into its upper position during movement of said actuating member into its extreme position in one direction, said hopper being free to descend by gravity and adapted to seat on said mold during movement of said actuating member from said extreme position into its extreme position in the opposite direction.

1,534,155. **MOLD FOR POTTERY WORK.** WILLIAM BERNARD BUTLER, Trenton, N. J. Filed Feb. 9, 1924. Serial No. 691,589. 3 Claims. (Cl. 25—129.)

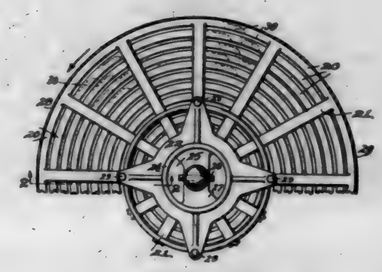
2. A mold for producing articles from highly shrinkable material, consisting of a base, a body, a face and a top section, so assembled as to be readily disassembled, an insert removably set in the base for forming a portion of the base of the article to be molded, two inserts removably set in the body for giving contour to the back of said article, an offset carried by the face section, two spline plugs removably fitted to said offset, said plugs and offset constituting that portion of the mold for forming the undercut inside of said article and an insert forming a portion of said offset.

1,534,156. **SHOE CLEANER.** WARD G. CALLENDER, Mansfield, Ohio. Filed June 23, 1922. Serial No. 570,524. 1 Claim. (Cl. 15—112.)



As a new article of manufacture, a shoe cleaner consisting of a flat attaching base, a vertical sole scraping blade struck up from said base at a right angle thereto, and a pair of walls extending upward from the ends of the base and arranged to form in connection with the ends of said scraping blade a pair of brush holders at the ends of said scraping blade, all formed from a single blank sheet of sheet-metal bent to the desired shape.

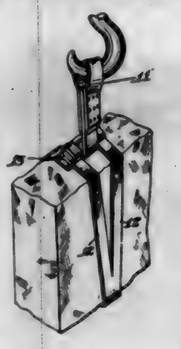
1,534,157. **GRANITE-WORKING MACHINE.** ELROY A. CHASE, Northfield, Vt. Filed Feb. 11, 1921. Serial No. 444,221. 10 Claims. (Cl. 125—37.)



1. A granite working tool comprising a shaft, a plurality of work-engaging discs centered on said shaft and

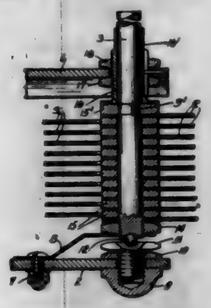
slidable axially thereon toward and from each other and each freely and independently rotatable in substantially

radial planes about the axis of said shaft, and thrust bearings between said disc to limit relative axial movement thereof.



1,534,158. WHEEL FOR DRESSING STONE. ELROY A. CHASE, Northfield, Vt. Filed Jan. 17, 1923. Serial No. 613,263. 4 Claims. (Cl. 51—209.)

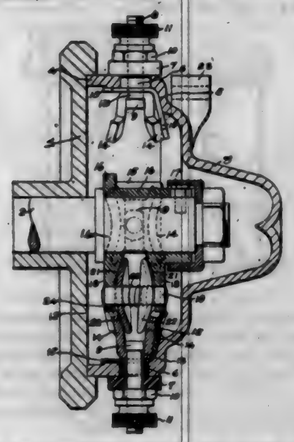
1. A wheel for dressing stone having, in combination, a rotatable supporting structure and a plurality of work engaging members disposed in an outwardly extended series of curved paths on the lower face of said supporting structure, said members providing a composite working face for said wheel and having a plurality of recesses formed in their work engaging faces, said recesses extending entirely through said members from edge to edge radially of the wheel, and having the outer portion of the rear wall of each recess projected forwardly in the direction of rotation of the wheel to a point in advance of the inner portion of the front wall of said recess.



1,534,159. SLING FOR HANDLING STONE. ELROY ALBERT CHASE, Northfield, Vt. Filed Aug. 29, 1924. Serial No. 734,961. 5 Claims. (Cl. 294—74.)

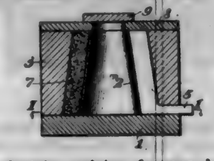
1. As an article of manufacture, a sling for use in handling and turning stone comprising a wide belt of material with a soft surface having a loop end and adapted to be placed around the stone, said belt being slit longitudinally at the other end to provide two integral diverging ends, and a bar arranged crosswise and fixed

to said ends, the ends being separated enough to permit the loop end of the sling to pass under the bar through the space between them for the purpose described.



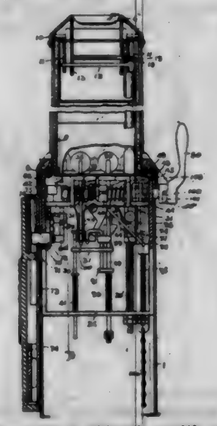
1,534,160. CONDENSER. SAMUEL COHEN, Brooklyn, N. Y. Filed Feb. 17, 1925. Serial No. 9,754. 2 Claims. (Cl. 250—41.)

1. In a condenser, the combination of end plates having aligned openings, a ball bearing member having a threaded shank extending through one of said openings, nuts threaded upon the said shank and located upon opposite sides of the adjacent end plate and adapted to hold the said ball-bearing member in position, a hollow and externally threaded locking member passing through the opening in the other end plate, nuts mounted upon the externally threaded shank of said locking member and located upon opposite sides of the adjacent end plate and adapted to hold the said locking member in position, means adapted to prevent the revolution of the said locking member, a spindle passing through the said hollow locking member and having its inner end adapted to hold a ball in co-operation with the said ball bearing member, the end of said spindle adjacent the said ball having a lock nut, a series of rotor plates having intermediate spacing members mounted upon [illegible] said spindle intermediate the lock nut and the adjacent end of the said locking member, the said rotor plates being adapted to be firmly held in spaced relationship between the said locking member and the said lock nut.



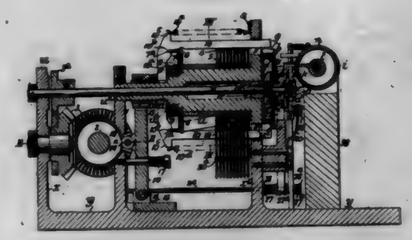
1,534,161. TIMING SYNCHRONIZER. HARRY B. COLSTOCK, Plymouth, Ind. Filed Mar. 9, 1921. Serial No. 450,939. 8 Claims. (Cl. 200—24.)

1. In timing mechanisms, a plurality of stationary duplex tracks, a pair of rollable disks, means for successively moving said disks past the tracks and in engagement therewith, a common support for the disks on which



they have free movement, and elastic means placed between them to press the disks outwardly independent of each other.

1,534,162. ELECTRIC FURNACE. OSWALD CORADI, Zurich, Switzerland. Filed Jan. 10, 1923. Serial No. 611,803. 8 Claims. (Cl. 204—64.)

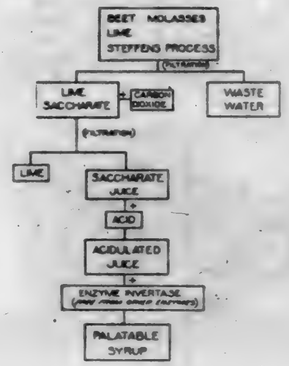


6. In an electric resistor furnace having a furnace chamber; a resistor of loose material surrounding the chamber, and electrodes contacting with the resistor, the cross-section of the resistor varying uniformly to produce a uniform resistance in substantially all horizontal layers.

1,534,168. FARE BOX. WILLIAM COX, Toronto, Ontario, Canada. Filed Apr. 5, 1923. Serial No. 630,074. 24 Claims. (Cl. 232—7.)

1. In a farebox, the combination with a rigid support, of means for locking the box to said support, a fare inspection chamber provided with a fare opening and means connected with the locking means adapted to close the opening to said fare inspection chamber on the unlocking of the box from its support.

1,534,164. PRINTING APPARATUS SUITABLE FOR PRINTING TELEGRAPHIC MESSAGES. FREDERICK GEORGE CREED, Croydon, England. Filed Aug. 7, 1920. Serial No. 401,991. 12 Claims. (Cl. 178—34.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

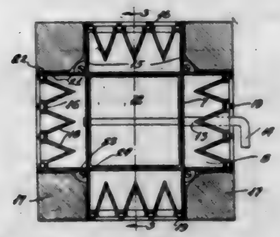


1. Printing apparatus of the kind herein referred to, comprising a main driving shaft, a secondary driving shaft driven from said main shaft but at a greater velocity than that of said main shaft, a printing device in frictional driving connection with said secondary shaft and provided with type characters, type selecting mechanism comprising a series of differentially notched combs and a series of selector bars adapted to co-operate therewith, each of said selector bars being adapted, when moved into its operative position, under the control of said combs, to arrest the said printing device in proper printing position without stopping the secondary shaft, means for setting said combs in accordance with the particular type character to be printed, or a space to be left on sheet material, signal controlled mechanism actuated at each rotation of the main shaft adapted to operate the comb setting means in accordance with the particular signal character to be printed, or a space to be left, means adapted to be quickly operated at each rotation of the main shaft to cause a printing character that may be in position, rapidly to make an impression on said sheet material and means actuated at each rotation of the main shaft for causing the selector bar quickly to return to its inoperative position and allow displaced combs to return towards their normal position after each printing operation.

1,534,165. ROOFING. DONALD A. CUMPER, Chicago, Ill. Filed Feb. 7, 1921. Serial No. 443,016. 3 Claims. (Cl. 108—7.)

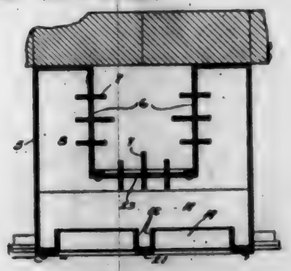
1. A shingle strip having a plurality of shingle-like sections covered on both sides with a divided mineral, and having visible indications on both sides in the same respective transverse planes dividing the strip into sections, said indications extending from each longitudinal edge toward the transverse center of the strip.

1,534,166. PALATABLE BEET SIRUP AND PROCESS OF PREPARING THE SAME. HENRY W. DAHLBERG, Denver, Colo., assignor to The Great Western Sugar Company, Denver, Colo., a Corporation of New Jersey. Filed Feb. 29, 1924. Serial No. 696,005. 20 Claims. (Cl. 127—35.)



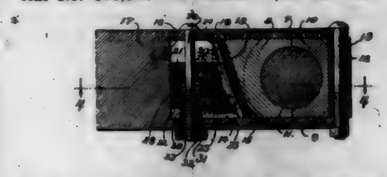
19. The process of rendering palatable the unpalatable beet sirups formed during the process of beet sugar manufacture, which process includes the treatment of the unpalatable liquids to be changed and remaining after the cold dilute treatment of beet sugar solutions with lime by adding commercial invertase, and thus rendering the liquid palatable.

1,534,167. COMPOSITION FOR CLEANING PIPES. HENRY M. DEAVITT, Chicago, Ill., assignor to Central City Chemical Co., Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1922. Serial No. 552,662. 2 Claims. (Cl. 87—5.)



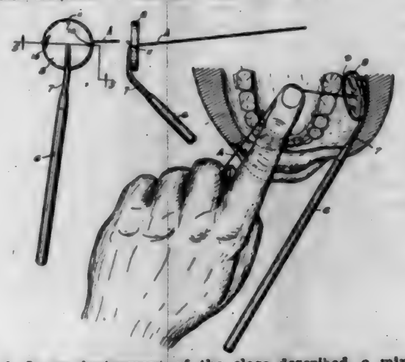
1. A pipe cleaning mixture comprising ten parts by weight of caustic soda, four parts by weight of caustic potash, and one part by weight of silicon.

1,534,168. HEAT-RADIATING DEVICE. JOSEPH L. DONAT, Chicago, Ill. Filed Mar. 3, 1923. Serial No. 622,667. 2 Claims. (Cl. 257—165.)



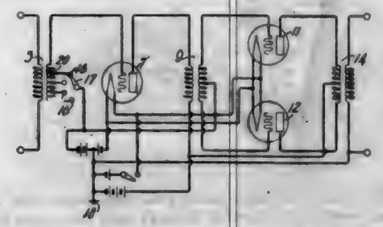
2. A heat radiating device adapted to replace a section of a chimney and having a central rectangular flue providing a normally unobstructed straight passage for the chimney gases, passages adjacent each side of said flue, heat radiating surfaces each forming one wall of one of said passages, means for obstructing the flow of such gases through said flue to deflect such gases through such passages, and a masonry pier at each corner of the heating device extending between the portions of the chimney so separated.

1,534,169. HEATING DEVICE. JOSEPH L. DONAT, Chicago, Ill. Filed Apr. 30, 1923. Serial No. 635,484. 2 Claims. (Cl. 257—166.)



2. A heating device comprising a hollow U-shaped casing adapted to be inserted in an aperture in the wall of a chimney, the recessed portion of the walls of the casing being in contact with the chimney gases, air inlet and exit openings in said casing opposite said recessed portion of the walls, and means for controlling the flow of air through one of said openings.

1,534,170. WEAR-COMPENSATING DEVICE. OTHO J. DONSEY, Philadelphia, Pa. Filed Oct. 18, 1921. Serial No. 508,594. 6 Claims. (Cl. 64—55.)

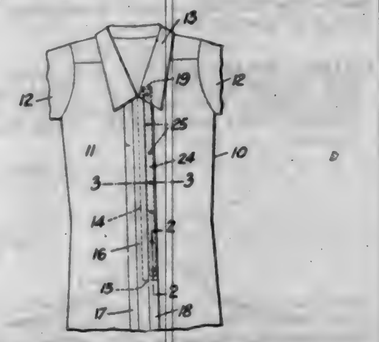


6. A bearing comprising a U-shaped frame, a bearing block movable in the frame and having a longitudinally inclined shoulder having serrations thereon, a longitudinally movable wedge having a tapered surface extending parallel to the inclined surface on the lower bearing also provided with serrations engaging the first mentioned serrations, resilient means urging the wedge longitudinally, and resilient means urging the bearing block vertically.

1,534,171. DENTAL-FLOSS-GUIDING MEANS. JOSIAH B. FICKES, Omaha, Nebr. Filed Aug. 13, 1923. Serial No. 657,036. 2 Claims. (Cl. 132—91.)

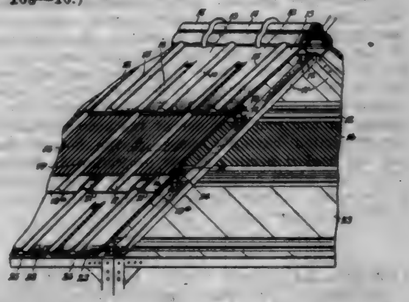
1. In an instrument of the class described, a mirror-frame having at a plurality of points on the marginal portion thereof means for detachably connecting therewith a thread or strand of dental floss, and a mirror held in said frame.

1,534,172. AMPLIFIER CIRCUITS. FRANK E. FIELD, Somerville, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 1, 1922. Serial No. 604,154. 3 Claims. (Cl. 179—171.)



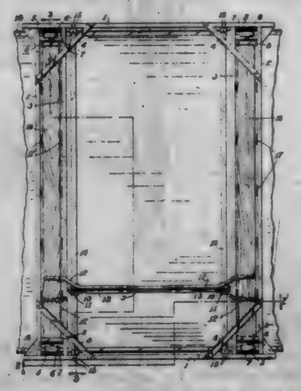
3. An amplifier comprising a plurality of electron discharge devices connected in tandem, a portion of the output circuit of the last of said devices being grounded, potential adjusting means connected to the input conductors of a preceding discharge device, and a low impedance connection from said adjusting means to ground.

1,534,173. HIGH-PRESSURE LUBRICATING APPARATUS. VANUS C. FOGELBERG, Chicago, Ill., assignor to E. Edelmann & Co., Chicago, Ill., a Corporation of Illinois. Filed Aug. 31, 1922. Serial No. 585,345. 3 Claims. (Cl. 184—105.)



1. A lubricating apparatus comprising a gun, and means for connecting the gun to a fitting comprising a discharge member having a passage therein, a guide on said member, a tubular plunger arranged within the guide to make discharge connection with the fitting, a pin movable in the guide, a spring on the pin for normally holding it out of locking position, and means on the guide for thrusting the pin into locking engagement with the fitting.

1,534,174. GARMENT. FRED E. FRANK, New York, N. Y., assignor to Henry A. Dix & Sons Corporation, New York, N. Y., a Corporation of New York. Filed Apr. 25, 1924. Serial No. 708,929. 1 Claim. (Cl. 2—115.)

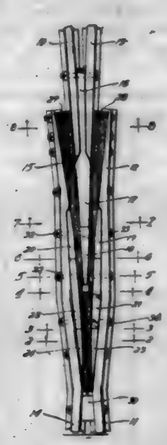


In a garment, a longitudinally disposed placket formed by overlapping inner and outer portions, each having a series of equi-distant button holes in register with each other, the said outer portion being provided with an extension at its top having one of the said button holes located therein, a fabric tape having buttons securely fastened thereto, equidistant from each other, the said tape being secured to the garment by insertion of its buttons through the series of button holes in the inner portion of the said placket and having its buttons co-operating with the button holes in the outer portion of the said placket for the purpose of closing the same, one of the said buttons cooperating with the button hole in the extension of the outer portion and its registering button hole in the inner portion, and a flap at the outside of the garment covering the said buttons.

1,534,175. ROOF STRUCTURE. CHERI S. FREUND, Chicago, Ill., assignor to Continental Cement Tile Company, Chicago, Ill., a Corporation of Delaware. Filed Nov. 3, 1921. Serial No. 512,410. 10 Claims. (Cl. 108—10.)

1. In a roof structure, supporting purlins, a plurality of opaque tile sections and transparent roof sections, some of the opaque sections overlying the transparent sections, and said transparent sections overlying others of said tile sections, and means extending under the transparent sections and over the tile sections where said sections overlap.

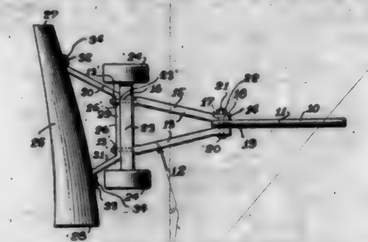
1,534,176. CEMENT-ROAD-MAKING MACHINE. CHESLEIGH GRAY, Indianapolis, Ind. Filed June 20, 1923. Serial No. 646,580. 6 Claims. (Cl. 94—45.)



1. In a road finishing apparatus, the combination with a supporting frame arranged to be moved longitudinally of the road, transversely extending guide members shaped to conform to the camber of the road mounted on said frame and a straight edge strike extending substantially longitudinally of the road during its entire operation and movable transversely of the road on said guide members.

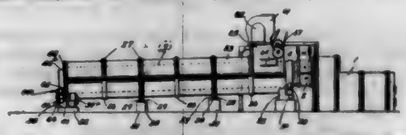
1,534,177. ROOF BRICK. CHARLES GUEST, Cleveland, Ohio. Filed Feb. 18, 1922. Serial No. 537,460. 1 Claim. (Cl. 72—55.)

A roof brick for furnaces and the like, having a body portion which is adapted to be substantially vertically disposed in a roof, the upper end of the body portion having one edge thereof notched and being provided upon the opposite side thereof with a correspondingly shaped lateral projection, the side portions of the brick below the shoulder and projection being flat so that a brick can be dropped in position from the top of the roof and the projection thereof caused to engage the notch of a previously placed brick, the notch having an undercut shoulder at the bottom thereof and the projection having a hook at the bottom thereof, and the hooked portion of the projection having an inclined face which cooperates with the undercut shoulder of the notch to draw the freshly place brick toward the previously placed brick.



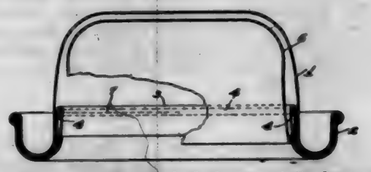
1,534,178. RAILROAD FROG. PAUL HOFFMAN, Western Springs, Ill. Filed May 19, 1924. Serial No. 714,276. 12 Claims. (Cl. 246—460.)

3. In combination, intersecting railroad rails, and a hard metal frog secured between said rails, said frog comprising a replaceable point and separately replaceable rail wear portions on opposite sides respectively of said point and adjacent thereto.



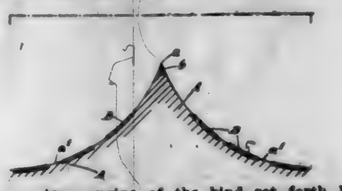
1,534,179. CLEANING DEVICE. LOUIS KLINGER, Brooklyn, N. Y. Filed May 21, 1924. Serial No. 714,770. 10 Claims. (Cl. 37—53.)

1. A portable cleaning device for snow or the like, comprising, in combination, a operating member, a shaft, supporting wheels rotatably carried by said shaft, a cleaning element, supporting means for said cleaning



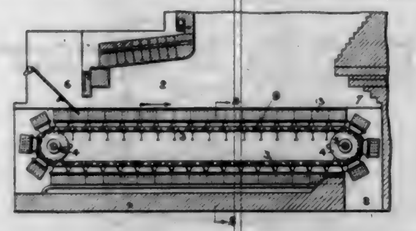
element, and attaching means associated with said operating member and passing through said shaft and said supporting means.

1,534,180. DRIER. GUSTAV KOMAREK, Chicago, Ill., assignor, by mesne assignments, to Malcolmson Engineering and Machine Corporation, St. Louis, Mo., a Corporation of Missouri. Filed Feb. 7, 1921. Serial No. 442,976. 53 Claims. (Cl. 34—7.)



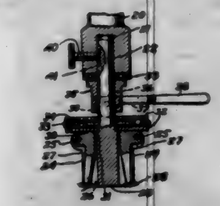
2. The combination of a furnace, a rotatable drying cylinder, and a flue connection between said furnace and cylinder, the same comprising suspension means, and members adjustably holding and clamping said connection to said furnace.

1,534,181. HAT LINING. SAMUEL KRAINER, Chicago, Ill. Filed May 15, 1922. Serial No. 560,879. 1 Claim. (Cl. 2—175.)



In a hat, a sheath attached thereto at its lower edge, and a tape extending around the upper free edge of said sheath and fastened to the portion thereof around the front of the hat, the ends of said tape extending through an aperture in the hat.

1,534,182. ROTARY ENGINE. JOHN LITHGOW, Wakefield, England, assignor to Diamond Coal Cutter Company Limited, Wakefield, York, England, a British Company. Filed June 19, 1923. Serial No. 646,423. 3 Claims. (Cl. 121—70.)

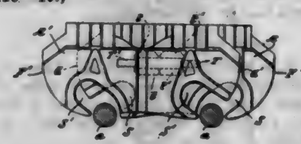


1. In a rotary engine of the kind set forth having rotors with intermeshing helical blades, a rotor casing and a lining in the said casing of anti-friction non-abrasive material arranged in the form of parallel strips following the lines of the helical rotor blades.

1,534,183. FURNACE GRATE. FRANK H. MCHUGH, Philadelphia, Pa., assignor of one-half to Charles A. McHugh, Philadelphia, Pa. Filed Mar. 18, 1921. Serial No. 453,293. 3 Claims. (Cl. 110—40.)

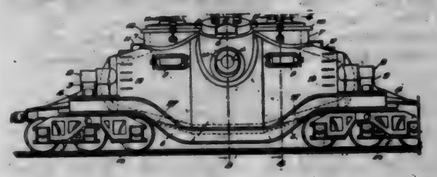
1. In an invention of the character stated, the combination of a combustion chamber, with an endless travelling grate having an air space between the upper and lower layers thereof, said grate consisting of a plurality of independent transverse grate sections jointedly connected to form an endless apron providing a shallow trough-like structure upon its upper traveling surface and having air passages therethrough, said sections having their end portions provided with side walls of uniform height, said walls being hollow and having air passages therethrough on the side adjacent to the fire bed and directly communicating with said air space.

1,534,184. CAPPING DEVICE. GAETANO MARCHESINI, New York, and CARLO DALBONI, Staten Island, N. Y. Filed June 11, 1924. Serial No. 719,430. 1 Claim. (Cl. 113—25.)



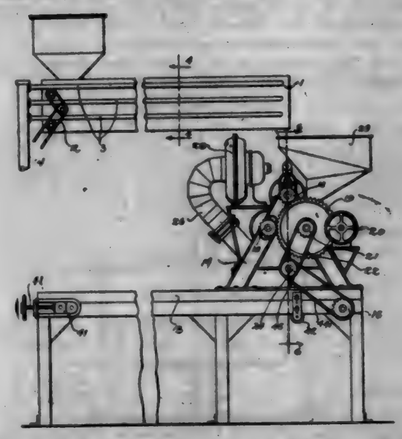
A capping device comprising a chuck, pivoted levers on the chuck, roller dies carried by said levers, a shank connected to the chuck, a sleeve on the shank, a handle carrying cams, a ring engaged by the cams, whereby, on actuation of the lever, the dies will be moved to operative position, a shaft to rotate the shank, means to operate the shaft, a standard to support the shaft, said means and the chuck, and a rest beneath the chuck.

1,534,185. CABLEWAY AND METHOD OF OPERATING THE SAME. THOMAS SPENCER MILLER, South Orange, N. J. Filed Apr. 6, 1921. Serial No. 459,071. 7 Claims. (Cl. 37—195.)



1. The method of operating by a steam engine a load-supporting cable suspended from spaced supports, which consists in admitting to the engine steam pressure sufficient to overcome the friction of the engine and raise the cable, and then reducing the steam pressure to sustain the cable by engine friction and reduced steam pressure.

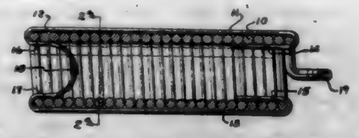
1,534,186. CHAIN-GRATE STOKER. GEORGES MOUBLAM and MARCEL SUTTER, Paris, France, assignors to The Babcock & Wilcox Company, New York, N. Y. Filed July 30, 1920. Serial No. 399,987. 10 Claims. (Cl. 110—40.)



2. A compound link for a chain grate in which a plurality of links are connected by means of connecting rods, comprising a pair of members each having slots adapted to engage the rods of the chain and interlocking portions between the said members adapted to prevent the withdrawal of the link from the chain by gravity and to permit the withdrawal of the link by a movement of the members thereof in the vertical plane of the link and while the remaining links of the chain are in their respective operative positions.

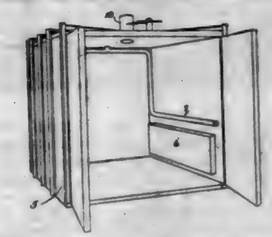
1,534,187. HOT-METAL CAR. JOHN D. PUGH, Mount Washington, Baltimore, Md. Filed May 26, 1921. Serial No. 472,677. 10 Claims. (Cl. 22—83.)

1. A large capacity car for treating, transporting storing and discharging hot metal comprising an elongated car body having an enlarged rounded central portion with conical end portions, mounted on trunnions adjacent its longitudinal axis, a spout on said central portion above the axis thereof, and means extending through the upper portion of said car body for electrically heating the contents thereof.



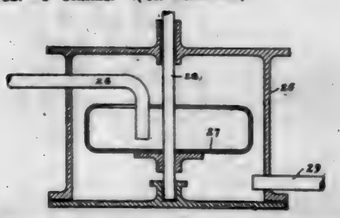
1,534,188. BLANCHING MACHINE. EUGENE J. RANCHINI, Chicago, Ill. Filed Mar. 3, 1924. Serial No. 696,413. 6 Claims. (Cl. 146—32.)

1. A nut blanching machine comprising means for delivering nut kernels, three rolls having spongy peripheries in juxtaposed relation with each other said rolls



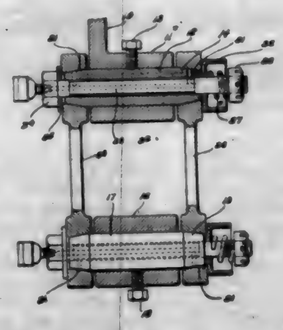
defining a way therebetween for the passage of nut kernels from said means, said way comprising two portions, the first portion comprising a pair of said rolls, the second portion comprising the other roll and one of said pair, the rolls in each of said portions traveling in opposite directions and at different speeds.

1,534,189. TIE FOR COIL SPRINGS. JOHN W. RICHARDSON, Stratford, Conn., assignor to John Chatillon & Sons, New York, N. Y., a Corporation of New York. Filed Dec. 31, 1923. Serial No. 683,602. 6 Claims. (Cl. 266—4.)



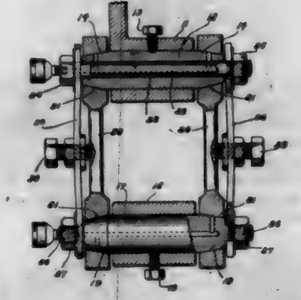
1. The combination with a coil spring, of a binding means on opposite sides thereof, each of said means comprising a longitudinal member extending over both ends of the coil and projecting into the same, and means to preserve the spaced relation of said binding means.

1,534,190. OVEN. GEORGE P. SIMPSON, New Haven, Conn., assignor to The Oven Equipment & Mfg. Co., New Haven, Conn., a Corporation. Filed July 13, 1921. Serial No. 484,312. 2 Claims. (Cl. 34—19.)



1. The combination with an oven having a baking-chamber, of a heating-unit located in the lower part of the said chamber, so as to radiate heat directly thereinto, and means located directly over the said unit in close proximity thereto and adapted to force jets of air downward against the currents of heated air rising therefrom, so as to deflect the same downward toward the bottom of the chamber, whereby the heat radiated from the heating-unit is prevented from rising to the top of the chamber until it has first diffused itself throughout the lower portion thereof.

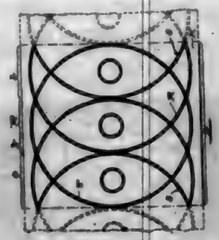
1,534,191. CENTRIFUGAL CLEANER FOR CIRCULATING LIQUIDS. WALTER W. STRYKER, Dayton, Ohio; Edward T. Jones administrator of said Walter W. Stryker, deceased. Filed Aug. 3, 1920. Serial No. 401,042. 5 Claims. (Cl. 233—21.)



1. In a centrifugal separator, a fluid-tight chamber having an inlet and an outlet, a rotatable bowl mounted in the chamber and having an imperforate bottom and an inbent side wall forming an annular trough, and means for conducting material to be treated from the chamber inlet into the bowl in a stream directed against the bottom of the same at a point adjacent the axis of rotation and arm thereof.

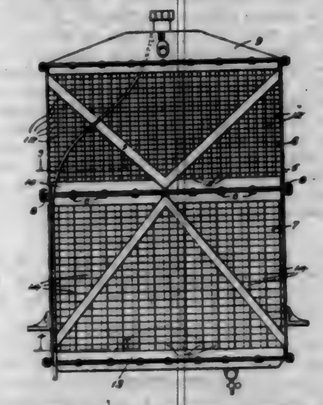
1,534,192. SHACKLE. WILLIAM A. TRYON, Providence, R. I. Filed Feb. 9, 1923. Serial No. 618,133. 3 Claims. (Cl. 267—54.)

1. A spring shackle for vehicles comprising a bearing pin removably held at its medial portion in the chassis parts and having tapering protruding opposite ends extending beyond its chassis bearing, a corresponding pin similarly mounted in the spring parts, a pair of parallel spaced apart connecting links having tapering holes to engage the corresponding ends of said pins, and springs at the ends of said pins acting upon said links to automatically take up the wear upon the tapered portions.



1,534,193. SHACKLE. WILLIAM A. TRYON, Providence, R. I. Filed Feb. 9, 1923. Serial No. 618,134. 6 Claims. (Cl. 262—54.)

1. A spring shackle for vehicles comprising bearing pins, each tapered on its opposite ends, one mounted in the chassis parts and one in the spring parts, links connecting the corresponding ends of said pins and having bearing openings to fit the tapered ends thereof, and spring means acting on said links midway their ends to automatically take up the wear upon their bearings.



1,534,194. ORNAMENTED FABRIC AND METHOD OF PRODUCING THE SAME. HENRY A. VAN LIEW, Springfield, N. J., assignor to Oriental Silk Printing Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 9, 1923. Serial No. 611,662. 1 Claim. (Cl. 101—375.)

Apparatus for printing a design pattern upon a strip of fabric material consisting of a roller having in relief upon its periphery a fractional section only of the pattern of the complete design, the lines of the design section upon the roller being symmetrical with relation to the median dimensions of the design section and

the lines of the design section upon the roller having points which register with each other at the surface of the roller whereby the pattern section upon the roller is devoid of break.

1,534,195. NONFREEZING RADIATOR. GEORGE E. WALTER, Cutes, Ind. Filed Aug. 17, 1922. Serial No. 582,898. 1 Claim. (Cl. 257—129.)

An automobile radiator comprising a casing, a pair of radiator sections disposed in said casing one above the other in vertical alignment, each of said sections being provided with water tubes, the tubes of the upper section being of smaller diameter than the tubes of the lower section, water reservoirs disposed at the top and bottom of the casing, in communication respectively with the upper and lower radiator sections, an additional water reservoir disposed in the casing intermediate of said radiator sections and communicating therewith, and water supply and exhaust pipes for said radiator sections.

1,534,196. ABRASIVE COMPOUND. JOHN F. WEBBER, Denver, Colo., assignor to The Zip Manufacturing Co., Denver, Colo., a Corporation of Colorado. Filed Mar. 28, 1921. Serial No. 456,171. 9 Claims. (Cl. 51—280.)

1. A metal grinding preparation free from oil comprising a non-alkaline plastic clay, an abrasive, water, calcium chloride, lime and glycerine.

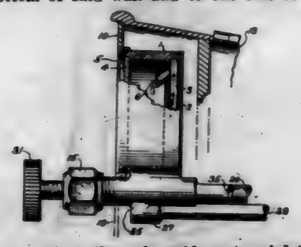
1,534,197. SAFETY BELT STRAP. ELBERT CECIL WILLIAMS, Dayton, Ohio. Filed June 27, 1923. Serial No. 648,170. 1 Claim. (Cl. 241—9.)

The combination of a garment having a belt loop thereon, a belt passing through the loop, a strip secured to the belt at one side of the loop and extending over the loop, and detachable securing means, carried partly by

the free end of the strip and partly by the belt, for detachably securing the free end of the strip to the belt at the other side of the belt loop.

1,534,198. PACKING RING AND PISTON. JOHN T. WILSON, Pilot Hill, Calif. Filed Apr. 26, 1921. Serial No. 464,497. 2 Claims. (Cl. 74—109.)

1. The combination with a cylinder and piston having a circumferential groove wider adjacent the exterior surface of the piston than at the bottom, the greatest depth of said groove being adjacent the explosion chamber, of a cut resilient expansible flanged packing ring of a shape in cross section substantially matching and loosely fitting the groove, its exterior surface frictionally engaging the interior surface of the cylinder, the flange extending beyond the vertical surfaces of the groove and ring at P, the entire edge surface adjacent the explosion chamber being in a plane at right angles to the longitudinal axis of the piston, and the free ends being fashioned to form a lapped joint; the end of the piston next the explosion chamber being entirely closed so that explosion and charge compression pressures can reach the under surface of the ring only by passing over the outer edge of the piston, the vertical surface of the groove and the vertical surface of the edge of the ring remote from the explosion chamber at P matching to form a tight joint, and the flange of the ring and the wall defining the shallow portion of the groove each having a surface oblique to the axis of the piston and said surfaces spaced apart to form an oil groove.



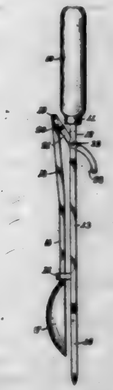
1,534,199. MANUFACTURE OF SILICA BRICKS. JOHN WILSON, Crook, England, assignor to John Wilson and Pease and Partners Limited, both of Darlington, Durham, England. Filed Sept. 29, 1922. Serial No. 591,428. 3 Claims. (Cl. 106—9.)

2. The herein described method of manufacturing highly refractory bricks, which consists in intimately mixing china clay and lime each in a finely divided condition with natural siliceous stone also in a finely divided condition, the percentage of china clay being of the order of about 2.5% and that of the lime about 1.5%, and forming the mixture into bricks.

1,534,200. AIR MOISTENER FOR INTERNAL-COMBUSTION ENGINES. JAMES A. WISH and BENJAMIN J. TABBUTTON, Sandersville, Ga. Filed July 23, 1924. Serial No. 727,799. 1 Claim. (Cl. 261—59.)

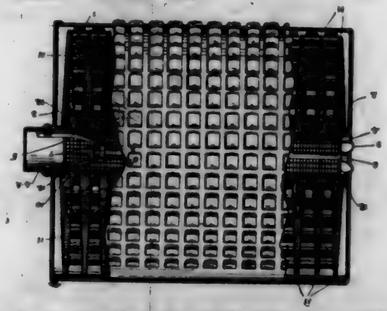
In a device of the character described, the combination of a vertically disposed chamber; an inlet to said chamber comprising a passageway located in the vertical rear wall of said chamber, one end of said passageway terminating in an angularly disposed outlet into said chamber overhanging said wall and located at the top portion

thereof, a water supply for said chamber connecting with the other end of said passageway; a valve controlling said water supply; an outlet from said chamber located at the bottom of said wall and to one side of the verti-



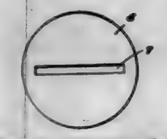
cal plane passing through said water inlet; an air supply communicating with said last named outlet to admit air to mix with the water flowing from said outlet; and a tapered valve controlling said air supply.

1,534,201. DRAWER-GUIDE CONSTRUCTION. JULES ARMAND BLIN, Paris, France. Original application filed Nov. 14, 1921, Serial No. 515,109. Divided and this application filed Apr. 8, 1922. Serial No. 550,890. 2 Claims. (Cl. 45—77.)



1. An article of furniture, a drawer guided therein, metal guide-strips having rolled edges fast to the internal side walls of the furniture and parallel with the sides of the drawer, fixed spindles and freely turning rollers mounted thereon on the external face of the fixed strips, a movable slide with rolled edges riding on and embracing each pair of rollers on each fixed guide strip, and a superposed roller and a pair of sublocated spaced rollers positioned on opposite edges of the movable slide and mounted along the sides of the drawer to run on the edges of each movable slide, as described.

1,534,202. COOKING AND SERVING UTENSIL. LEONARD W. BOLBY and JACOB S. BRENNER, New York, N. Y. Filed Dec. 1, 1924. Serial No. 753,051. 5 Claims. (Cl. 30—22.)

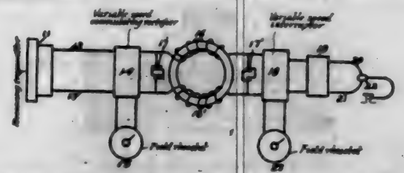


1. A serving utensil comprising a plurality pronged fork having a straight shank bifurcated at its opposite end, a handle fixed on the bifurcated end, an eye rigid on said shank, a spoon having a stem slidable in said eye, a finger lever fulcrumed on the bifurcated portion of said shank, and a pivotal connection between the lever and said stem.

1,534,203. AIR FILTER. LEWIS L. DOLLINGER, Rochester, N. Y. Filed Jan. 30, 1924. Serial No. 689,438. 6 Claims. (Cl. 183—71.)

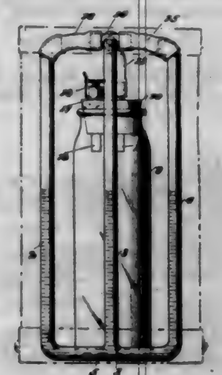
6. In an air filter the combination of a series of filtering units each comprising a hollow disc having a central opening at each side thereof, an annular flange surrounding each of the openings in the sides of said filtering units, said flanges being adapted to telescope into one another and form a continuous series of self-supporting filtering units having a common outlet at one end thereof, a cylindrical casing surrounding said series of filtering units, said cylindrical casing having openings in the wall thereof to admit the air to said filtering units, an outlet in said cylindrical casing and means for supporting said series of filtering units at each end of said cylindrical casing and in line with said outlet in said cylindrical casing.

1,534,204. SHRAPNEL PLUG. MATTHEW E. DUNLAP, Madison, Wis., assignor to United States of America. Filed Nov. 5, 1918. Serial No. 261,208. 1 Claim. (Cl. 217—56.)



A cylindrical plug for shrapnel shells comprising a body of wood having one portion of an external diameter greater than that of the hole to be plugged, a threaded portion for retaining said plug in said hole, said body having a cavity formed in one end extending into said body beyond said threaded portion, and a portion of lesser diameter than said hole and said screw threaded portion, arranged between said threaded portion and said portion of greater diameter than said hole.

1,534,205. ELIMINATING DISTURBING ENERGY. REGINALD A. FESSENDEN, Brookline, Mass., assignor to Submarine Signal Company, Portland, Me., a Corporation of Maine. Filed Aug. 20, 1917. Serial No. 187,121. 5 Claims. (Cl. 177—386.)

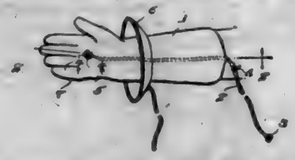


1. Apparatus for the utilization of the energy of electric impulses; comprising a generator of electric impulses, receiving conductors, an interrupter, a choke coil, a second commutator, and a device for utilizing the energy of electric currents, in series in the order given; whereby electric currents flowing from the receiving conductors to the first commutator, and of a desired frequency, are commutated into substantially continuous currents by means of the first commutator; and currents of undesired frequencies are not so commutated; and the

passage of the energy of the currents of undesired frequencies is opposed by the choke coil, while the passage of the substantially continuous current is not so opposed by said choke coil; and said substantially continuous

current is then commutated to periodic currents of a desired frequency by the said second commutator; and said periodic currents utilized in said electric energy utilizing device.

1,534,206. RATE-OF-CLIMB INDICATOR FOR AIRCRAFT. ANGIER H. FOSTER, Omaha, Nebr. Filed Sept. 22, 1920. Serial No. 411,993. 8 Claims. (Cl. 264—1.)

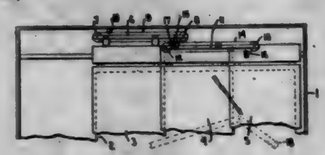


8. In a rate-of-climb indicator for air craft, the combination of a liquid-containing transparent indicator tube having two side branches and a third intermediate branch arranged in substantial parallelism therewith and open to the atmosphere, a casing containing the side branches of the indicator tube and having an exterior channel through which the intermediate branch extends, a reading scale disposed in the said channel of the case in suitable proximity to the tube branch extending therethrough, an air container in communication with the indicator tube, and means for establishing communication between the air container and the outside air through a restricted aperture.

1,534,207. PROCESS AND APPARATUS FOR SCALDING ANIMALS. GROVER J. FOSTER, Sioux City, Iowa. Filed Aug. 9, 1924. Serial No. 731,048. 15 Claims. (Cl. 17—15.)

13. A scalding apparatus including an elongated tank and a stationary rack therein extending longitudinally of the tank and supported near the normal level of the scalding liquid contained in the tank, said rack being adapted to immerse in the liquid animals propelled thereunder.

1,534,208. FOUNTAIN GLOVE. DELSWORTH E. GIBSON, Dunkirk, N. Y. Filed Nov. 30, 1923. Serial No. 677,899. 1 Claim. (Cl. 15—127.)

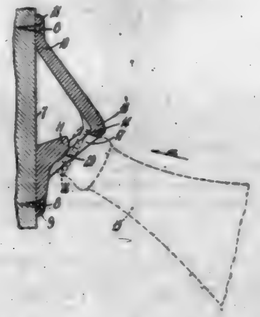


A glove having means for introducing water through the palm thereof, a shield for preventing water dripping from the glove on to the arm or clothing of the user of the glove, said shield comprising a circumferential flange surrounding and integrally formed with the wrist portion of the glove and directed toward the tip of the glove to form the drip catching groove.

1,534,209. ARM REST FOR CRUTCHES. JOHN B. GLOWACKI, Chicago, Ill. Filed Jan. 3, 1922. Serial No. 526,616. 8 Claims. (Cl. 135—52.)

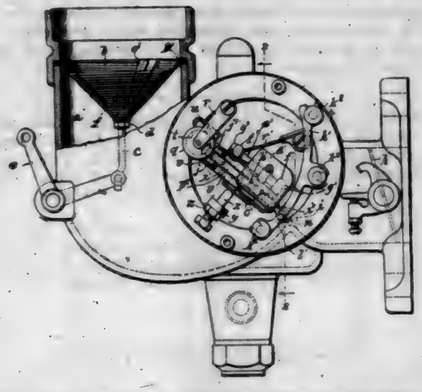
1. A crutch comprising two upright longitudinal members, a casting connecting said members at their upper ends, a cushioning device, and a flexible non-stretching suspension device slidable through said cushioning device with the ends of said suspension device removably secured to said casting to hold the cushioning device suspended in position.

1,534,210. OPERATING MECHANISM FOR ELEVATOR DOORS. THOMAS E. GRIFFITH and LEE L. DODDS, Cleveland, Ohio, assignors to The W. S. Tyler Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 16, 1923. Serial No. 645,833. 2 Claims. (Cl. 268—8.)



2. Speed actuating mechanism for three parallel traveling doors, comprising flexible means carried at the top of the first door for connecting said first door to the enclosure and to the second door, and flexible means carried at the top of said second door, said last named means connecting said third door to said first and second doors, both of said flexible means being operable in the plane of the movement of the doors and being adapted to cause the second door to travel twice as fast as the first door, and to cause the third door to travel three times as fast as the first door.

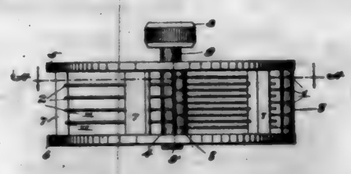
1,534,211. BOTTLE-CAP PULLER. THOMAS C. HAMILTON, Boston, Mass. Filed Sept. 18, 1924. Serial No. 738,385. 2 Claims. (Cl. 65—46.)



1. A cap puller for bottles comprising a base adapted to be attached to a support, a projection on said base constituting a fulcrum and adapted to engage the central portion only of a bottle cap on a bottle, means on said

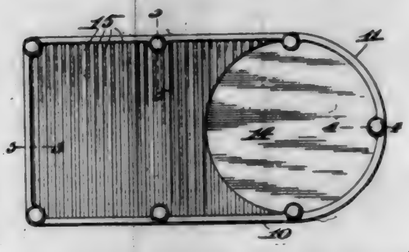
base adapted to partially encircle and position said cap relatively to and laterally of said projection with a lip thereon to engage beneath the edge of said bottle cap, there being an opening between said positioning means and projection through which a portion of said cap may project, whereby upon tipping said bottle on said

projection the cap will be removed from the bottle, and an arm projecting upwardly from said positioning means and inclined inwardly terminating in alignment with the inner face of said base and spaced apart therefrom, whereby said cap puller may be further attached to said support.



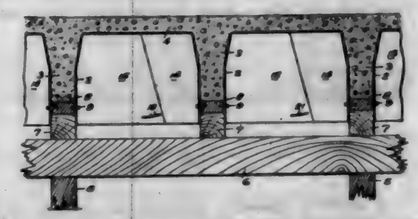
1,534,212. CARBURETOR. WILLIS C. HESS, Detroit, Mich. Filed Mar. 2, 1923. Serial No. 622,403. 10 Claims. (Cl. 261—50.)

1. In a carburetor, a pressure-operated vane having a hub at its upper end, said hub having a passage extending axially through it communicating with a distributing-chamber in the vane extending to its lower edge, said hub having journals which pivotally support the vane in the walls of the mixing-chamber, means for supplying gasoline to one end of said hollow hub, and a needle-valve adjustably supported in the other end of said hub and adapted to control the inlet of fuel at the opposite, inlet end of the hub.



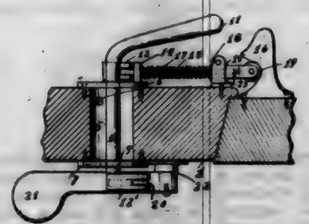
10. In a carburetor, a vane in the mixing-chamber having a fuel-distributing chamber and adapted to normally swing down to closed position and to be opened by inrushing air, said vane having a hollow hub, a fuel-valve controlling the inlet of fuel to said hollow hub, a float-chamber connected to said hollow hub by a channel, a bleed opening a' being provided for said channel at a point above the normal level of the liquid in the float-chamber to thereby prevent siphonic action carrying fuel into the mixing-chamber after the engine is stopped.

1,534,213. VARIABLE CONDENSER. GUY HILL, Washington, D. C. Filed Feb. 3, 1923. Serial No. 616,759. 4 Claims. (Cl. 250—41.)



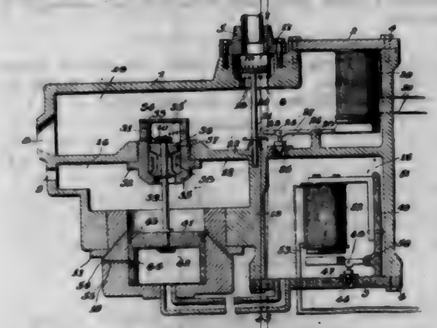
1. In a variable condenser, the combination of a plurality of alternately arranged stationary and movable plates, a central shaft, said movable plates having their centers maintained a fixed distance apart by suitable attachment to said central shaft and having their peripheries maintained the same fixed distance apart by peripheral supporting elements, said movable plates being free from mechanical contact with said interleaving stationary plates, the dielectric between said plates consisting entirely of air, said central shaft being provided with means for rotating said movable plates.

1,534,214. BATHTUB MAT. JOHN T. HOLT, Los Angeles, Calif. Filed Apr. 9, 1924. Serial No. 705,245. 1 Claim. (Cl. 4—185.)



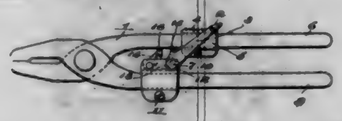
A bath mat comprising a section of flexible waterproof material provided in its under face adjacent to its edges with shallow recesses, the material in the body of the mat around said recesses being extended downward to form annular depending flexible lips, the upper surface of the body of the mat at one end being provided with a round smooth flat portion and the remaining portion of the upper surface of the mat body being formed with transversely disposed corrugations.

1,534,215. CONCRETE FORM. CECIL B. HOPKINS, San Francisco, Calif. Filed July 23, 1923. Serial No. 653,118. 8 Claims. (Cl. 25—131.5.)



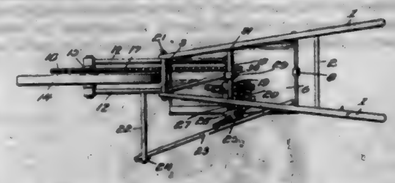
1. A metallic arch form having a flexible top plate of fixed width and a two-part end closure head in which the two parts are relatively movable on flexure of the top plate to permit collapsing of the form.

1,534,216. LATCH FOR REFRIGERATOR DOORS. ANTON N. HORNUNG, Los Angeles, Calif. Filed Aug. 27, 1924. Serial No. 734,414. 8 Claims. (Cl. 292—255.)



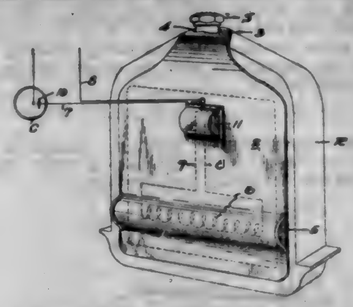
1. The combination with a door and an automatic latch thereon, of a shaft journalled in the door and bent at one end to form a handle at one side of the door; and means operable by the foot of an attendant and connected to rock the shaft to retract the automatic latch.

1,534,217. AUTOMATIC AIR-BRAKE-CONTROL MECHANISM. FRANK N. JOHNSTON, Cheyenne, Wyo., assignor of one-half to C. Y. Beard, Cheyenne, Wyo. Filed Nov. 5, 1924. Serial No. 747,930. 14 Claims. (Cl. 303—20.)



1. In an air brake control mechanism, a housing interposed between the train pipe line and the air brake mechanism, said housing being divided into a plurality of chambers, valve means between certain of said chambers for controlling communication therebetween, other valve means arranged between certain others of the chambers for controlling the passage of air from one of said chambers into the other and to the air brake mechanism, and pressure actuated means in said last mentioned chamber connected to the last mentioned valve means for effecting operation thereof.

1,534,218. LOCK FOR TONGS. BYRON Q. JONES, Washington, D. C. Filed July 12, 1924. Serial No. 725,620. 5 Claims. (Cl. 294—41.)



1. In a gripping tool having a plurality of pivoted operating arms, a clip adapted to be mounted on one of said arms, a lever pivoted on said clip, and a ratchet device on the other of said arms to be engaged by said lever for the purpose described.

1,534,219. BOLL-WEEVIL EXTERMINATOR. RHESA P. KENNEDY, Hattiesburg, Miss. Filed Oct. 6, 1923. Serial No. 666,943. 8 Claims. (Cl. 43—142.)

1. A machine of the character described comprising a movable receptacle, a rotary agitator disposed entirely over said receptacle and rotatable in the direction of movement of said receptacle, and a lateral guide member engageable with a cotton plant to bend the same over the receptacle and into engagement with the agitator.

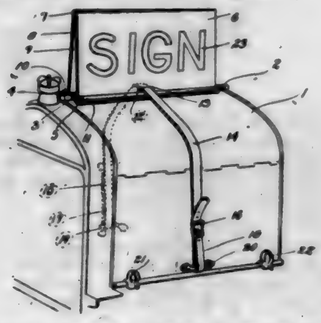
1,534,220. AUTOMOBILE RADIATOR HEATER. ARTHUR J. KRECHER, Berkeley, Calif. Filed June 12, 1922. Serial No. 567,875. 5 Claims. (Cl. 219—385.)

1. A device for warming motor radiators comprising an electric heating element, means for suspending the element adjacent the lower part of the radiator and a reflector arranged behind the heating element to reflect radiated heat against the radiator.

1,534,221. ELECTRIC FLOOR HEATER. ARTHUR J. KRECHER, Berkeley, and WILLIAM WESLEY HICKS, San Francisco, Calif. Filed Mar. 10, 1924. Serial No. 698,090. 9 Claims. (Cl. 219—34.)

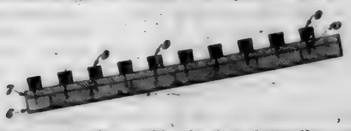
1. In an electric heater, a casing, an apertured cover for the casing, and means forming with the interior walls of the casing a passageway extending around the element and communicating with the interior near its bottom, said passageway also communicating with the interior near its top, through a path distinct from the apertures in the cover.

1,534,222. VEHICLE DIRECTION INDICATOR. ALBIN J. LACKSTROM, Oakland, Calif. Filed July 30, 1924. Serial No. 729,107. 3 Claims. (Cl. 40—132.)



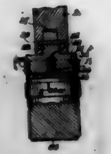
1. A vehicle direction indicator comprising a cylindrical housing open at both ends; outwardly turned flanges formed upon the ends of the housing; a lighting

element mounted within the housing and arranged to be connected to a source of electrical energy; transparencies mounted within the open ends of the housing, said transparencies bearing outwardly directed arrows visible from in front or rear of the automobile to indicate the direction of a proposed turn; lugs cut from the flanges and



turned inwardly to form backing elements for the transparencies and to form gaps in said flanges; and rims detachably engaging the flanges to hold the transparencies against the lugs, said rims having retaining lugs movable into engagement with the flanges through the gaps formed therein.

1,534,223. ADVERTISING DEVICE. GEORGE E. LA PORT, St. Joseph, Mo. Filed Dec. 18, 1924. Serial No. 756,706. 3 Claims. (Cl. 40—129.)

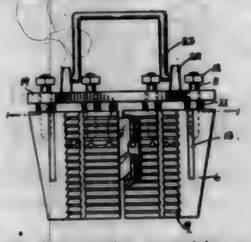


1. A sign comprising a panel, a grooved member receiving the lower end of the panel, the groove in the member being adapted to receive the hinge of the hood of a motor vehicle to prevent sidewise movement of the sign, means for fastening the sign to the hood, said means comprising a tying member passing through the sign and secured to the lower edges of each side of the hood.

1,534,224. CONCENTRATOR CONSTRUCTION. RICHARD A. LEAHY, Bonne Terre, Mo. Filed Sept. 15, 1922. Serial No. 588,389. 13 Claims. (Cl. 83—88.)

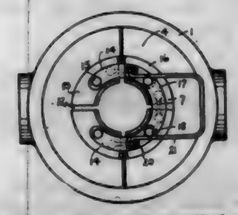
1. A concentrating table having laterally resilient riffles of reenforced soft rubber extending transversely to the flow of material across the surface thereof, and fastening members engaging with the reenforcements to fix the riffles against bodily displacement on said surface.

1,534,225. PUMP PISTON. FRANK J. LEMIEUX, Pawtucket, R. I. Filed Sept. 28, 1923. Serial No. 665,565. 4 Claims. (Cl. 22—70.)



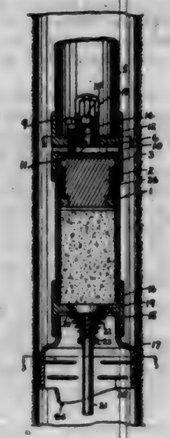
1. A piston of a type adapted for permitting a predetermined amount of molten metal to pass therethrough during its reciprocating movement within a cylinder, said piston comprising a piston rod, and a piston head formed of a plurality of separate parts detachably secured to said rod, one of said detachable parts having a passageway therethrough adapted for permitting the flow of metal through said head.

1,534,226. PROCESS FOR BLEACHING SULPHURIC ACID. WILLIAM CLELAND LEONHARD, Passaic, JOHN ROY DUFFORD, Paterson, and ARTHUR HOUGH, Summit, N. J. Filed Jan. 18, 1924. Serial No. 687,123. 10 Claims. (Cl. 204—59.)



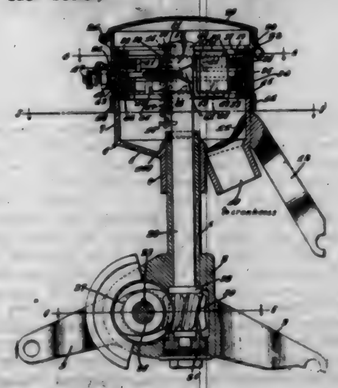
1. A process of bleaching sulphuric acid containing organic matter which comprises the step of passing a current of electricity through such sulphuric acid containing a small percentage of manganese compound in solution.

1,534,227. PIPE-ENGAGING SLIP. GERALD R. LIVERGOOD, Houston, Tex. Filed Jan. 21, 1922. Serial No. 530,800. 7 Claims. (Cl. 24—263.)



1. In a slip for rotaries comprising a plurality of pipe engaging jaws, means to hold said jaws loosely together comprising a segmental plate, a pin on each jaw slidable in said plate and having a limited movement relative thereto, bearing means for said pins, mortices in the adjacent faces of each of said jaws, a key fitting loosely in the mortices of two adjacent jaws, and serving to connect said jaws flexibly together and means to retain said keys in said mortices.

1,534,228. MULTIPLE-JAW SLIP FOR ENGAGING PIPE. GERALD R. LIVERGOOD, Houston, Tex. Filed Feb. 5, 1924. Serial No. 690,832. 7 Claims. (Cl. 24—263.)



1. A device of the character described comprising a downwardly tapered bowl, a pipe-engaging means tapered to fit therein comprising a plurality of pairs of jaws toothed on their inner faces to engage the pipe, pivotal means to hold each of said jaws loosely to an adjacent jaw, connecting plates securing each pair of jaws at their upper ends, and a holding plate pivotally joining said connecting plates in the manner described.

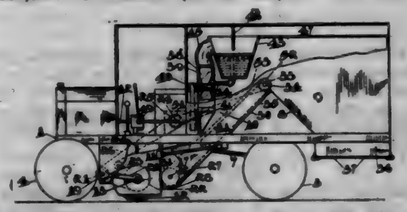
1,534,229. FISHING TOOL. GERALD R. LIVERGOOD, Houston, Tex. Filed July 12, 1924. Serial No. 725,608. 9 Claims. (Cl. 294—86.)

1. In a fishing tool for wells, a cylinder, a piston therein, a valve-controlled opening below said piston, a shoe secured to the lower end of said cylinder, a closure for the upper end of said cylinder having openings therein for the passage of flushing fluid and means to raise the valve from its seat in said opening when the device is lowered to the bottom of the well, whereby flushing fluid may be pumped through said openings against said piston to force it downwardly within said cylinder, for the purpose described.

1,534,230. TIMER. JESUS M. LÓPEZ, San Antonio, Tex. Filed May 5, 1922. Serial No. 558,822. 3 Claims. (Cl. 123—146.5.)

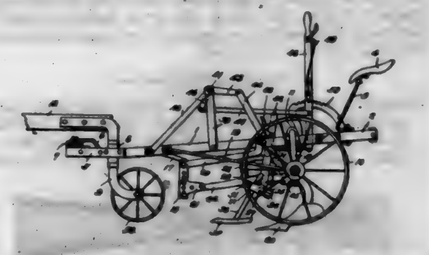
3. In a device of the class described, a support comprising a pedestal and a cup-shaped head assembled with the pedestal, a shaft journaled in the pedestal, a track in the head, and a contact element carried by the shaft and cooperating with the track, the head being provided with means independent of the pedestal for receiving oily vapor from the crank case of an internal combustion engine and for conducting the oily vapor to the head, said means being so constructed as to transfer liquid oil from the head to the crank case of an internal combustion engine, the track being of annular form to facilitate the pouring of liquid oil into said means and into the bottom of the head.

1,534,231. BRUSH. LOUIS V. LUCIA, Hartford, Conn., assignor to The Fuller Brush Company, Hartford, Conn., a Corporation of Connecticut. Filed Mar. 4, 1922. Serial No. 541,078. 5 Claims. (Cl. 15—195.)



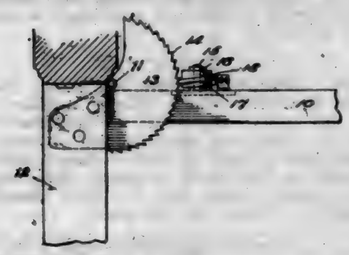
1. A brush including bristles secured in a loop formed by strands twisted together, a form over which the bristles are extended forwardly, said strands engaging and inclosing a portion of the form and twisted together forwardly of the engaged portion to secure it against movement lengthwise of said strands, and means for retaining the bristles in forwardly arranged position.

1,534,232. FOUR-BEND WING-RAIL TRACK FROG. GEORGE D. LUND, Portland, Oreg. Filed Apr. 17, 1924. Serial No. 707,124. 3 Claims. (Cl. 246—482.)



1. A four bend wing rail frog comprising a base plate supporting bent rails having the balls of the rail partially cut away to permit the wheel flange to pass therethrough, a casting engaging with the web of the rails to hold the same in alignment, through bolts holding the rails and casting in place, and a fish plate to reinforce the web of the rail.

1,534,233. STREET-SWEEPING MACHINE. JOHN C. LUNDY, Brantford, Ontario, Canada, assignor, by direct and mesne assignments, of three-fifteenths to Elias E. Slaght and three-fifteenths to Samuel L. Squire, both of Toronto, Ontario, Canada, and four-fifteenths to William H. Hammond, Brantford, Ontario, Canada. Filed Jan. 30, 1922. Serial No. 532,896. 6 Claims. (Cl. 15—11.)



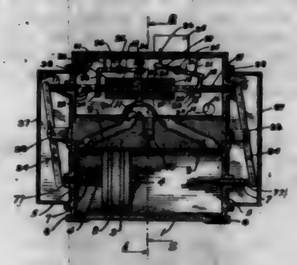
1. In street sweeping apparatus, the combination of a cylindrical brush; a hood therefor having ends in which the brush is journalled; forwardly extending links pivotally connected to the hood and the frame of the machine; and rearwardly extending links pivotally connected to the frame and to the hood at points above the points of connection of the forwardly extending links.

1,534,234. IMPLEMENT-ADJUSTING MEANS. RILEY MCCLASKEY, Idaho Falls, Idaho. Filed Jan. 23, 1923. Serial No. 614,441. 1 Claim. (Cl. 97—157.)

In a device of the class described, a wheel-mounted frame, a depending hanger carried by the frame, a beam located below the frame and having its forward end pivoted to the hanger, upstanding bearing posts on the frame to the rear of the hanger, a first shaft journaled in the bearing posts, the first shaft having a depending arm and a rearwardly extended arm, a first lever under the control of an operator and fulcrumed on the frame, means for holding the first lever in adjusted positions, a first link located above the frame and pivoted to the first lever and to the depending arm of the first shaft, a second link disposed between the shaft and the first lever and disposed at an acute angle to the vertical, the second link being pivoted to the rearwardly extended arm of the first shaft, and to the beam near to the rear thereof, a second shaft mounted to rock on the beam, a forwardly extended arm carried by the second shaft, a downwardly extending soil engaging element mounted on the last-specified arm, an upstanding second lever mounted on the second shaft, a latch mechanism carried by the second lever, and a segment on the beam, the latch mechanism cooperating with the segment.

1,534,235. DOORCHECK. FRANCIS J. MCLOUGHLIN, Brooklyn, N. Y. Filed Mar. 8, 1922. Serial No. 541,929. 6 Claims. (Cl. 16—82.)

1. A door check comprising two cooperating members mounted respectively on the door and its frame, one of said members being revoluble by pressure of the other in one direction only and one of said members being adapted to ride idly over the other in the other direction only.



1,534,236. INDUSTRIAL UTILIZATION OF STRAW-LIKE MATERIALS. EMERIC MARKÓCSI and STEPHEN J. ADAM, Budapest, Hungary, assignors of one-half to Felix R. Wiesner and Hugo Mechwart, both of Budapest, Hungary. Filed Nov. 7, 1922. Serial No. 599,506. 18 Claims. (Cl. 92—13.)

3. The process of the industrial utilization of straw-like materials, which consists in crushing the material and chopping it into a chaff, then subjecting the chaff, in wet condition, to a natural souring (self-fermentation) accelerated by transmitting to the chaff the waste heat of the exhaust-steam or the heat of the condensation water of the steam plant, cooking (digesting) the fermented chaff in a closed space (boiler or digester) at temperatures exceeding 212° F., at first with water, then with an excess of alkali, increasing the temperature (pressure) in the boiler (digester) in both cookings during the whole cooking operation, increasing the concentration of the alkali during the whole alkaline cooking, washing and beating the digested fibrous material (raw-pulp) by means of beating tools made of wood, india-rubber, horn, leather or other similar soft, but tough and elastic material, making paper from the beaten pulp in the customary way, substantially as described.

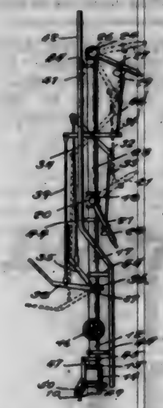
1,534,237. REFRACTORY FURNACE LINING. DANIEL H. MELOCHE, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Continuation of application Serial No. 581,239, filed Aug. 11, 1922. This application filed Apr. 2, 1923. Serial No. 629,517. 5 Claims. (Cl. 263—43.)

1. The method of protecting and repairing the refractory lining of a furnace which consists in first heating the refractory surface of the furnace to between 300° and 500° F., then painting the heated surface of the furnace with a wash containing not over 10% of soluble silicate in solution and a considerable quantity of powdered fire clay in suspension, then heating the surface of the furnace, then applying another thin coat of fire clay with the soluble silicate binder, again heating the surface of the furnace and repeating the operation until the desired thickness of fire clay is applied to the surface of the furnace.

1,534,238. LIQUID-MEASURING DEVICE. JAMES D. MERCER, Hugo, Colo. Filed Apr. 12, 1924. Serial No. 706,007. 2 Claims. (Cl. 73—30.)

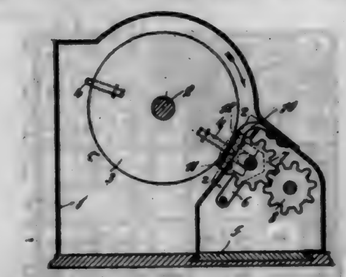
1. In a fluid metering device, in combination, a cylinder, a piston mounted for reciprocation therein, cylinder heads attached to the ends of the cylinder, a housing attached to one side of the cylinder, the wall of the cylinder having intake ports extending from the interior of the housing to the ends of the cylinder, said wall being also provided with an exhaust port opening into the housing at a point intermediate the intake ports, a V-slide valve slidably connected with the side having the port openings, means for moving said slide valve at the end of each stroke of the piston, said means comprising a tubular member operatively connected to the slide valve, said member having a spring abutment intermediate its ends, a spring in each end of said tubular member, a rod slidably connected to the tubular member at each end thereof, said rods projecting through the end walls of the housing, a lug on the tubular member, a detent pivotally connected to the housing, said detent being adapted to engage said lug, resilient means for holding the detent in lug engaging position, means on the rods for moving the detents to a position away from said lug, and means for making said last-named means operative when the piston reaches the end of its stroke.

1,534,239. SANDING DEVICE FOR AUTOMOBILES. LOUIS MILLER, Brooklyn, N. Y. Filed Feb. 14, 1924. Serial No. 692,850. 3 Claims. (Cl. 291—3.)



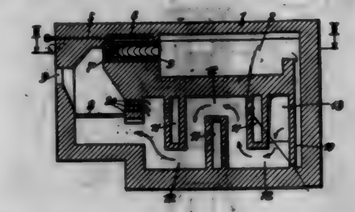
1. A sanding device for automobiles and the like, comprising a sand container, a cup open to the container arranged therebeneath, a sliding plate arranged in the container formed with an opening and a plurality of stirring members, said plate acting as a sand valve, means for guiding the plate as it is actuated, a manually actuated lever for moving said plate stirring members and guiding means, a plurality of pipes extending from said cup for leading the sand therefrom to a point near certain of the wheels of the automobile, and means for forcing air into said cup whenever said sand valve is open.

1,534,240. CEMENT PAINT. SPENCER B. NEWBERRY, Cleveland, Ohio; Andrew W. Newberry, executor of the estate of said Spencer B. Newberry, deceased, assignor, by direct and mesne assignments, to Sandusky Cement Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 29, 1922. Serial No. 564,594. 8 Claims. (Cl. 134—46.)



8. A cement paint base containing Portland cement incorporated with a water-soluble aluminum salt and a hygroscopic salt.

1,534,241. STOCK DRENCHER. CHARLES E. NICHOLS, Bellefontaine, Ohio. Filed Nov. 24, 1923. Serial No. 676,798. 8 Claims. (Cl. 299—73.)

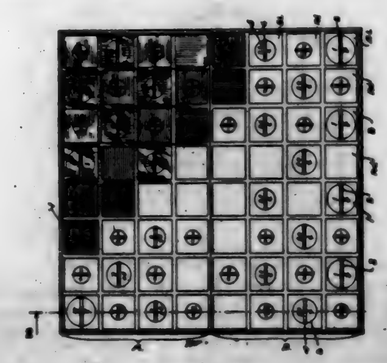


1. A stock drencher adapted to be disposed beside a track and including a vertical pipe rotatably supported at its lower end and connected to a source of water, a nozzle carried by said pipe and projecting out therefrom, and mounted for oscillation on and relative to the pipe, a shield mounted upon pipe for rotation therewith and extending longitudinally with the pipe and disposed behind said nozzle and extending above and below the same, and manually operable means carried by the pipe and disposed behind said shield for imparting oscillation to the nozzle and thereby controlling the direction of discharge.

1,534,242. CALCULATING MACHINE. VALENTIN JAKOB ODHNER, Stockholm, Sweden. Filed Nov. 2, 1922. Serial No. 598,621. 4 Claims. (Cl. 235—79.)

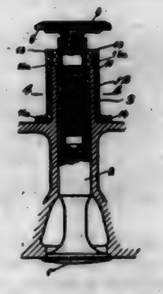
1. A transfer mechanism for calculating machines including pin wheels, an immovable shaft, adjustable ten's transferring members mounted on said shaft, adjustable transfer actuating pins located in the pin wheels and brought into active position by means of said adjustable ten's transferring members, toothed wheels engaged by said pins during the rotation of the pin wheels, numeral wheels actuated by said toothed wheels, each transfer actuating pin being provided with an element adapted to contact with fixed members arranged outside of the periphery of the pin wheels and provided with guiding shoulders adapted to cooperate with said elements for forcing the pin into inactive position after it has turned its corresponding toothed wheel one step.

1,534,243. METHOD AND DEVICE FOR THE PRODUCTION OF HIGH TEMPERATURES. WILHELM OHNM, Dusseldorf, Germany. Filed Sept. 20, 1921. Serial No. 502,007. 4 Claims. (Cl. 110—56.)



1. In a heating furnace for consuming solid fuel, the combination with a grate to support said fuel and above which grate is a combustion chamber, of a burner communicating with said combustion chamber and constructed with communicating arrow-shaped or converging slots, a heating chamber with which said burner communicates, and a pipe for admitting compressed air to said burner, said pipe terminating in a discharge nozzle centrally disposed relative to said converging slots.

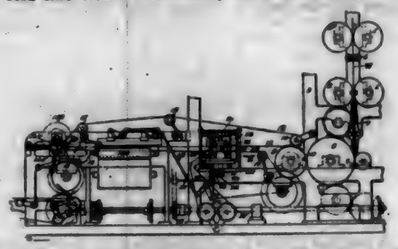
1,534,244. PROCESS OF PRODUCING LOW-SULPHUR PIG IRON FROM HIGH-SULPHUR FURNACE BURDENS. SAMUEL PEACOCK, Wheeling, W. Va., assignor to Alec J. Gerrard, Chicago, Ill. Filed Mar. 14, 1924. Serial No. 699,814. 3 Claims. (Cl. 75—14.)



1. The process of making pig iron low in its sulphur content from an iron ore having a high content of sulphur which consists in adding to the usual furnace burden sodium chloride in a quantity of at least twice that required to chemically combine with all the sulphur and phosphorus present; smelting said ore in the presence of said chloride; and recovering the iron thus produced.

1,534,245. GAME BOARD. JAMES G. PITTON, Denver, Colo. Filed May 8, 1924. Serial No. 711,802. 4 Claims. (Cl. 273—130.)

1. A game board of the type employed for checkers having alternate squares of the first, second and third rows provided with slots of the proper size to receive United States coins each row having a different size slot.

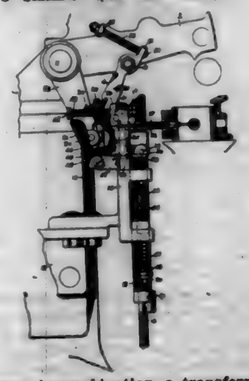


1,534,246. LOCKING DEVICE FOR ADJUSTABLE VALVES. FERDINAND PORSCHE, Stuttgart-Unterturkheim, Wurttemberg, Germany, assignor to Daimler-Motoren-Gesellschaft, Stuttgart-Unterturkheim, Wurttemberg, Germany, a Corporation of Germany. Filed Nov. 30, 1923. Serial No. 677,754. 8 Claims. (Cl. 123—90.)

1. A locking device for the adjusting members of adjustable valves, comprising, in combination, a valve stem having a threaded bore, a threaded stem screwed into said bore, a plate rigidly connected with the free end of said second stem and forming the head of the valve, a spring so arranged as to be adapted to lift said plate, means for coupling the spring end which is adjacent to the said plate with latter to resist independent rotation of said plate and the second stem, and means preventing independent rotation of said spring, as set forth.

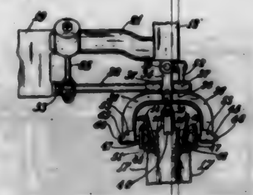
1,534,247. STAPLING AND FOLDING MECHANISM. OSCAR ROESEN, deceased, late of New York, N. Y., by Isabella Roesen, executrix, Brooklyn, N. Y.; said Oscar Roesen assignor to R. Hoe & Co., New York, N. Y., a Corporation of New York. Original application filed Apr. 14, 1920, Serial No. 373,687. Divided and this application filed Nov. 28, 1923. Serial No. 677,420. 16 Claims. (Cl. 270—38.)

1. The combination with means for forwarding a product, of stapling mechanism, means for positioning the stapling mechanism to insert staples in the product on the fold line either transversely or longitudinally of the



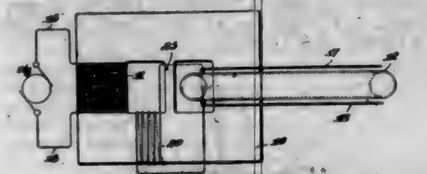
run of the product, and means for folding the stapled product.

1,534,248. BUMPER. CHARLES G. ROSS, Cleveland, Ohio, assignor of one-half to William L. Ross, Chicago, Ill. Filed Nov. 22, 1922. Serial No. 602,553. 5 Claims. (Cl. 293—55.)



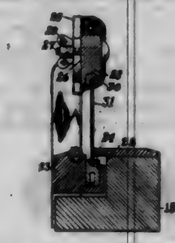
5. A bumper of the class described comprising, in combination, a transversely extending supporting member, a pair of spaced impact members arranged one above the other in a common vertical plane and having their respective extremities connected to the respective extremities of said supporting member, a bowed resilient buffer bar having its medial portion adjacent said impact members and its extremities bearing against said supporting member, and a device connecting said impact members with the medial portion of said buffer bar and said supporting bar and so arranged that movement of said impact members away from said supporting member is limited but movement of the impact members inwardly relative to the supporting members is permitted.

1,534,249. WEFT-DETECTING MECHANISM. EPPA H. RYON, Waltham, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 17, 1921. Serial No. 470,335. 5 Claims. (Cl. 139—242.)



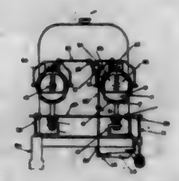
1. In a loom, in combination, a transferrer, an actuating device therefor having a regularly repeated operative movement, a normally inoperative connector between said transferrer and said operative device, and means to move said connector to operative position upon indication of substantial exhaustion of weft on the active weft carrier.

1,534,250. TIRE-MAKING APPARATUS. FLORAIN J. SHOOK, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y., a Corporation of New York. Filed May 10, 1920. Serial No. 380,208. 8 Claims. (Cl. 154—10.)



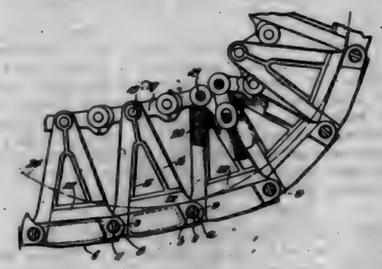
1. In tire-making apparatus, the combination with a rotatable tire-forming core of a fabric-shaping wheel, a pivoted arm constituting a mounting for said wheel, yielding means for urging said arm about its pivot, a mounting for said pivoted arm, and means for adjusting said mounting from and toward the axis of the core to swing said arm in a direction parallel with the plane of the core to vary the action of said yielding means.

1,534,251. ELECTRIC LIGHT. CHARLES G. SMITH, Cambridge, Mass. Filed Jan. 28, 1918. Serial No. 214,175. 1 Claim. (Cl. 176—122.)



An apparatus for producing light comprising a transformer having a high voltage primary winding, and a secondary consisting of an hermetically sealed torus of transparent insulating material containing a gas adapted to be rendered luminous by electro-magnetic induction when the primary winding is energized, and means for starting the flow of current through the gas consisting of electrodes arranged entirely outside but close to the torus, and connections from the transformer to the electrodes for impressing a voltage between the electrodes sufficient to initiate ionization of the gas without causing actual electrical discharge or breakdown therethrough.

1,534,252. REED HOLDER. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Feb. 11, 1924. Serial No. 691,930. 9 Claims. (Cl. 139—188.)

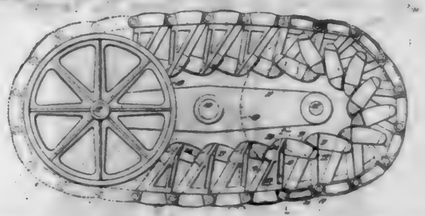


1. In a loom, a lay, a reed, and a reed holder located on the lay, said holder having slots of unequal depth formed therein to receive the bottom of the reed, said holder being capable of assuming a plurality of positions on said lay to locate the bottom of the reed at a plurality of levels with respect to the lay.

1,534,253. VEHICLE HEADLIGHT. JOSEPH HENRY ANSON, South Porcupine, Ontario, Canada, assignor to Alfred Henry Reamsbottom, South Porcupine, Canada. Filed Oct. 30, 1924. Serial No. 746,826. 12 Claims. (Cl. 116—42.)

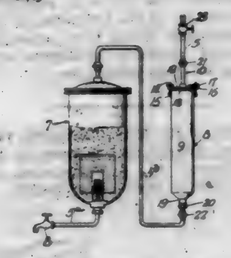
1. In vehicle headlights, a pair of headlights standing on supporting spindles, suitably journalled in rigid bearing brackets, a horizontal bar at the rear of said headlights and operatively connected thereto having a slot engaging a crank pin of a vertical shaft, said vertical shaft operatively connected to a rod gear of a steering mechanism, lenses in contrasting colors in each of said headlight and pivotally supported to close over the upper portion of the headlight, a rod gear operatively connecting said lenses to an operating member in the vehicle, and rotatable headlights connected to said rod gear and steering mechanism.

1,534,254. SHOE FOR TRACKLAYING VEHICLES. ISAAC H. ATHEY, Chicago, Ill., assignor to Athey Truss Wheel Co., Chicago, Ill., a Corporation of Illinois. Filed Oct. 21, 1922. Serial No. 595,905. 9 Claims. (Cl. 305—10.)



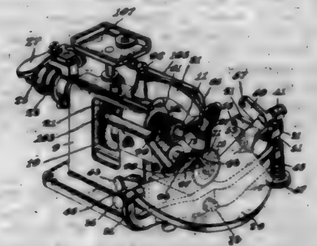
3. A unitary track-shoe comprising a tread member projecting bearing lugs which serve in connecting the shoe with other shoes, a truss structure bridging and reenforcing the connections between the tread member and the bearing lugs and adapted to co-operate with the truss structures of adjacent shoes to hold the track rigid under load, and a shoe-aligning plate bridged to the truss structure; the tread member, bearing lugs, truss structure and shoe-aligning plate being integrally formed.

1,534,255. VEHICLE. ISAAC H. ATHEY and ROBERT W. BAILY, Chicago, Ill., assignors to Athey Truss Wheel Co., Chicago, Ill., a Corporation of Illinois. Filed Feb. 1, 1923. Serial No. 616,393. 12 Claims. (Cl. 305—10.)



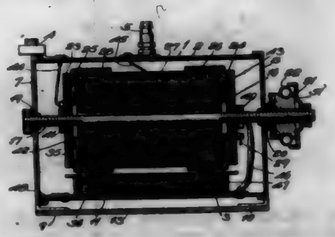
1. A track chain for a vehicle comprising a plurality of shoes, each of said shoes comprising a tread member, the adjacent edges of said tread members being pivotally connected, a truss arm extending inwardly from each end of one side of each of said tread members, a truss arm extending inwardly from each end of the opposite side of said tread member, and inclining toward said first named truss arms, resilient buffers

secured to the front and rear sides of said last named truss arms, and a truss link rigidly connected to the upper ends of the truss arms of each link and pro-



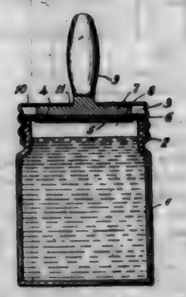
jecting between the inclined truss arms of the next adjacent shoe, said link having a head at its free end for engaging the buffer on one side of said inclined truss arms.

1,534,256. STERILIZING ATTACHMENT FOR WATER-SUPPLY PIPES. WALTER S. BACHMAN, Chicago, Ill. Filed Mar. 20, 1922. Serial No. 544,982. 4 Claims. (Cl. 210—36.)



1. A sterilizing attachment adapted to be interposed in a water supply line, comprising a casing closed at both ends and adapted to contain a sterilizing agent, a pipe extending through said casing and through the closed ends thereof, which casing provides a closed chamber surrounding a part of said pipe, that part of said pipe between the closed ends of said casing having one or more holes therein, and a screen of porous material closing each of said holes.

1,534,257. HEEL-TRIMMING MACHINE. JAMES A. BROGAN, Lawrence, Mass., assignor to United Shoe Machinery Corporation, Paterson, N. J., a Corporation of New Jersey. Filed June 21, 1922. Serial No. 569,800. 12 Claims. (Cl. 164—60.)

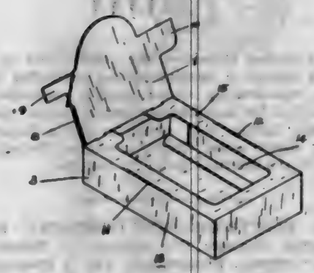


1. A machine for trimming a fin from a molded rubber heel or similar article having, in combination, a rotary disk cutter, a support over which the work may be presented to the cutter, means for rotating the cutter, and an idly-mounted, rotatable, thin-edged guard having its work-engaging portion extending in front of the cutter whereby a face of the article may be held against the guard and so fed as to cause the fin to be severed substantially flush with said face.

1,534,258. IGNITION COIL. CHARLES H. CAINE, Chicago, Ill., assignor to Brown & Caine, Inc., Chicago, Ill., a Corporation of Illinois. Filed Aug. 2, 1923. Serial No. 655,151. 13 Claims. (Cl. 175—357.)

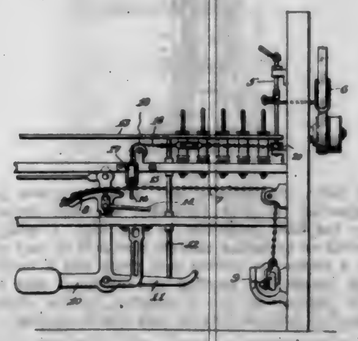
1. In combination, a shell of insulating material, metal end caps closing said shell, said end caps having depending portions, a magnetic core having windings disposed within the shell, a bolt passing through the end caps and through the core and holding the same together in permanent relation, and a clamping base plate removably secured to said depending portions of the end caps.

1,534,259. POLISHING DEVICE. JOHN D. DEMPSEY, Olean, N. Y. Filed Jan. 16, 1923. Serial No. 612,890. 4 Claims. (Cl. 91—67.2.)



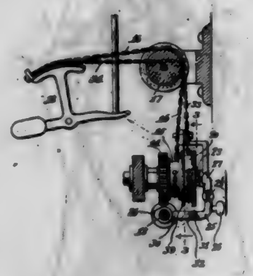
1. A polishing device comprising a wide mouthed container, a perforate cover therefor through which the polish is dispensed, a polishing tool having a relatively impermeable body with a polishing surface on the bottom thereof and adapted to engage the upper surface of the perforate cover to effectively seal the same, and a second cover for holding the polishing tool in engagement with the perforate cover when not in use.

1,534,260. VALVE. HARRY FELDBUSH and HERMAN MILLER, Cincinnati, Ohio, assignors to Worthington Pump and Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 5, 1922. Serial No. 572,861. 4 Claims. (Cl. 251—119.)



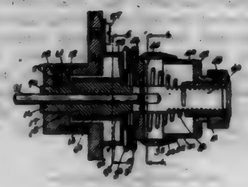
1. The combination with a valve seat having one or more ports, of a plurality of thin elastic valve plates arranged in superposed relation to each other over said port or ports and mounted to bend uniformly in functioning.

1,534,261. CARTON. HENRY FORSTE, Cincinnati, Ohio, assignor to The United States Printing and Lithographing Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 3, 1922. Serial No. 592,157. 3 Claims. (Cl. 206—44.)



1. The combination with a carton of the class described having sides and a lid adapted to act as a complete closure for the carton when in box formation and being also foldable to expose parts of its outer surface for display purposes, the carton being provided with openings at the upper edges of the sides, and lugs carried by the lid extending on opposite sides of the line of fold of the lid and bendable upon the lid to enter the openings at the tops of the sides.

1,534,262. SPINNING-FRAME STOPPING MECHANISM. ROBERT W. GOSSETT, Spartanburg, S. C., assignor to Manufacturers' Equipment Company, Spartanburg, S. C., a Corporation of South Carolina and North Carolina. Filed Apr. 8, 1924. Serial No. 705,070. 4 Claims. (Cl. 118—6.)

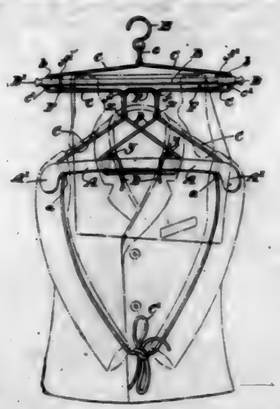


1. In a stopping mechanism for power-driven spinning-frames, devices for cutting off the power, a builder mechanism and means actuated thereby on the power stroke of one of its elements for positively and directly actuating the power cut-off devices.

1,534,263. BUILDER MECHANISM. ROBERT W. GOSSETT, Spartanburg, S. C., assignor to Manufacturers' Equipment Company, Spartanburg, S. C., a Corporation of South Carolina and North Carolina. Filed Apr. 17, 1924. Serial No. 707,129. 9 Claims. (Cl. 242—43.7.)

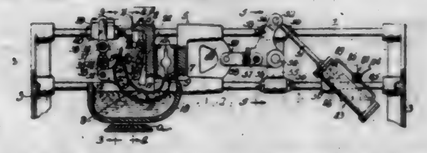
1. In a builder mechanism for spinning-frames, a chain-pulley carrying a half-pulley, said half-pulley being rotatively mounted on said pulley, and means for locking the half-pulley in each of its adjusted positions against rotation in either direction.

1,534,264. TENSION DEVICE FOR SEWING MACHINES. RODNEY L. HANSON, Dayton, Ohio, assignor, by mesne assignments, to National Sewing Machine Company, Belvidere, Ill. Filed Jan. 4, 1923. Serial No. 610,645. 4 Claims. (Cl. 242—150.)



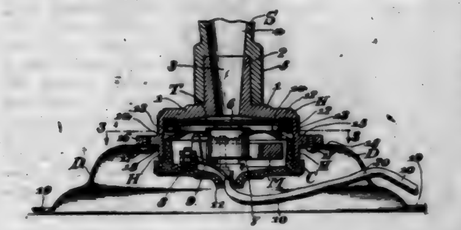
1. A tension device, for sewing machines and the like, comprising a stud; a thread take up spring surrounding said stud, a cooperating adjustment disc mounted upon said stud and enclosing the said take up spring; cooperating tension discs loosely mounted upon said stud, one of which seats against said adjustment disc; a sleeve mounted on said stud and seating against the other of said tension discs, a nut adjustably positioned on the stud, said nut having a circular flange constructed to extend into the said sleeve, and a spring surrounding the stud and positioned within the said sleeve and the circular flange of the nut, the one end bearing against the sleeve and the other end against the nut, and tension indicating marks on the flange of the adjustable nut.

1,534,265. GARMENT HANGER. WILLIAM HENRY HARRISON, Philadelphia, Pa. Filed Feb. 9, 1924. Serial No. 691,801. 5 Claims. (Cl. 211—18.)



2. A garment hanger comprising upper and lower cross-pieces, cords connecting the two cross-pieces and hold-

ing them a suitable distance apart and which extend downwardly below the lower cross-piece to a greater



extent than the sleeve length of a coat and provide means for holding the sleeves of a coat in proper position for hanging or packing.

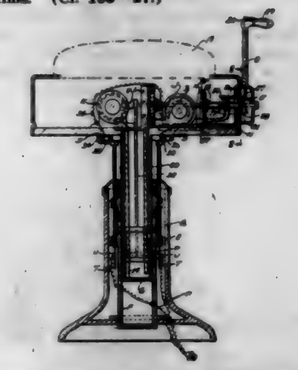
1,534,266. DIE-CASTING MACHINE. EDWARD HOTTER, Chicago, Ill. Filed Oct. 29, 1923. Serial No. 671,287. 17 Claims. (Cl. 22—69.)

1. In a casting machine, the combination of a support, a mold carried thereby and having an inlet opening, a container movably mounted on said support to supply the mold with molten metal and having a discharge nozzle to enter the inlet opening of said mold, means for moving said container to carry its nozzle into and out of said inlet opening, and means for adjusting the container to register its nozzle with inlet openings of molds of different sizes.

1,534,267. LOUD SPEAKER. ARTHUR ATWATER KENT, Ardmore, Pa. Original application filed May 1, 1924, Serial No. 710,240. Divided and this application filed Dec. 24, 1924. Serial No. 757,786. 10 Claims. (Cl. 179—179.)

1. An amplifying telephone comprising a telephone housing, a diaphragm supported thereln,,a second housing member, a telephone magnet system secured thereon, a base secured to said housing independently of said second housing member, and a horn separate from said base carried by said housing.

1,534,268. SPRING STRUCTURE AND METHOD OF ASSEMBLING SAME. WILLIAM H. KINNEY, Chicago, Ill., assignor to Kinney-Rome Company, Chicago, Ill., a Corporation. Filed Apr. 19, 1920. Serial No. 375,018. 3 Claims. (Cl. 5—269.)

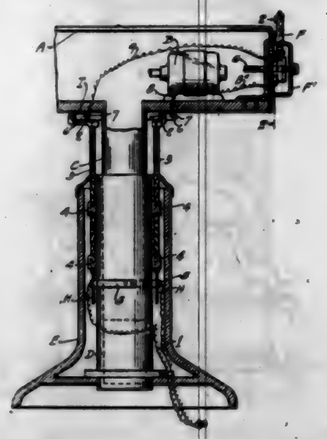


1. In a spring structure, the combination of an upholstering spring, a spacing spring extending laterally from the upholstering spring, and a connector which holds a coil of the upholstering spring against the end of the spacing spring, said connector being formed with vertically spaced arms having apertures through which the end of the spacing spring is inserted.

1,534,269. ELECTRODE-JOINT COMPOUND. BETHUNE G. KLUGH, Chicago, Ill., assignor to Federal Phosphorus Company, Birmingham, Ala., a Corporation of Alabama. Original application filed Nov. 8, 1920, Serial No. 421,944. Divided and this application filed Apr. 17, 1922. Serial No. 553,976. 5 Claims. (Cl. 204—64.)

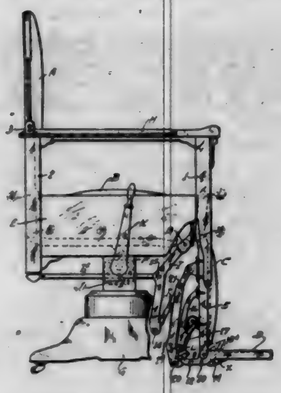
1. An electrode joint compound, composed of carbonaceous material, and a binder intimately mixed and of a character to become softened and brought into contact with a hot electrode in service to insure the necessary fluidity to completely fill all voids in the joint between the hot electrode section and the section to be joined thereto.

1,534,270. BARBER'S CHAIR. WALTER F. KOKEN, St. Louis, Mo. Filed Mar. 3, 1923. Serial No. 622,518. 10 Claims. (Cl. 155—27.)



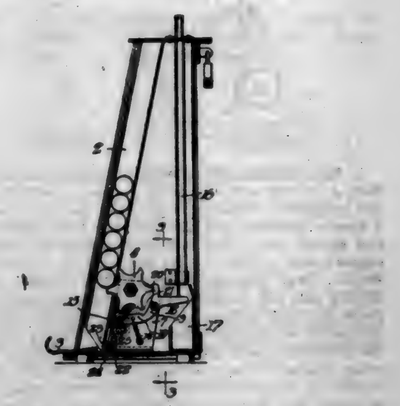
1. A chair, comprising a seat, a back, a piston device for adjusting the seat vertically, a piston device for moving the back relatively to the seat, a pump for circulating an operating medium that acts on said piston device, a motor for driving said pump and a manually-operable means for starting and stopping said motor and for controlling the circulation of the operating medium that acts on both of said piston devices.

1,534,271. ELECTRICALLY-OPERATED BARBER CHAIR. WALTER F. KOKEN, St. Louis, Mo. Filed Mar. 3, 1923. Serial No. 622,520. 6 Claims. (Cl. 155—27.)



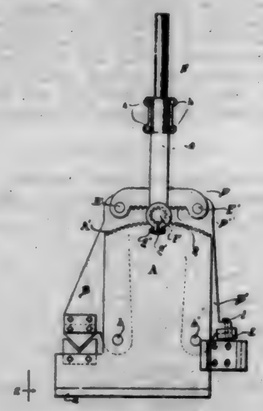
1. A barber's chair or the like, comprising a standard or base provided with guides, a vertically-adjustable stem revolvably mounted in said standard, a seat frame rigidly connected to said stem, contacts in said standard

to which a supply circuit is connected, conductor bars slidingly mounted in the guides on said standard and arranged in sliding engagement with said contacts, a collector ring rigidly connected to said seat frame and provided with separate portions to which the opposite



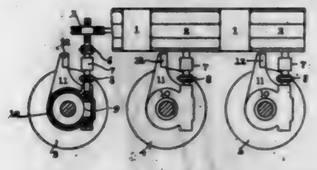
sides of an electric circuit are connected, and co-operating means on the separate portions of said ring and on the respective conductor bars that maintain electrical connection between said bars and ring when the seat frame is adjusted vertically or is being revolved.

1,534,272. FOOT-REST-OPERATING MECHANISM FOR RECLINING CHAIRS. WALTER F. KOKEN, St. Louis, Mo. Filed Dec. 14, 1923. Serial No. 680,722. 13 Claims. (Cl. 155—171.)



1. A chair provided with an adjustable apron that is adapted to be moved from a vertical position into a horizontal position and vice versa, an adjustable foot rest combined with said apron, means for holding the foot rest rigid and in a position at substantially right angles to the apron when the apron is disposed vertically and during the first portion of the upward movement of the apron, and an independent means that assists in holding the foot rest in rigid longitudinal alignment with the apron when the apron is disposed horizontally, said independent means causing the foot rest to turn into angular relationship with the apron during the downward movement of the apron.

1,534,273. VENDING MACHINE. JOHN F. KREMA, Chicago, Ill., assignor to Ode D. Jennings, Chicago, Ill. Filed May 16, 1923. Serial No. 639,252. 4 Claims. (Cl. 194—25.)

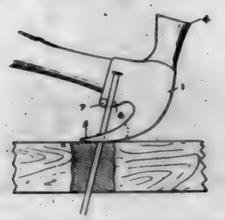


1. In a vending machine, the combination of a magazine for articles to be dispensed, a star wheel projecting into the magazine for controlling the discharge of articles therefrom, a coin controlled escapement mechanism normally operable to advance the star wheel one step for each coin of a certain denomination that is inserted in the machine and operable at predetermined intervals by a single coin of the same denomination to effect a two step advance of the star wheel.

1,534,274. ANGLE-IRON CUTTER. NIC KRUMP, Chicago, Ill. Filed Jan. 18, 1923. Serial No. 613,888. 2 Claims. (Cl. 74—14.)

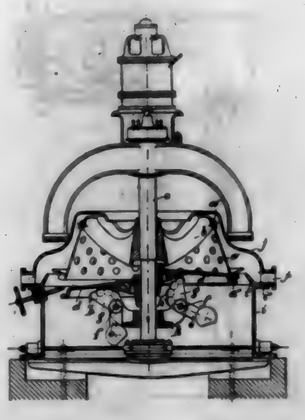
1. Pivotally mounted levers, geared racks mounted on pivots on the upper ends of said levers, in combination with rigidly mounted gear teeth in spaced relation to the path of travel of the teeth of said racks, a gear pinion positioned between said rigidly mounted gear teeth and the gear teeth of said racks and means to turn said pinion.

1,534,275. TURBINE-DRIVEN CAR AND LOCOMOTIVE. WARD LEATHERS, Haworth, N. J. Filed Sept. 2, 1920. Serial No. 407,798. 3 Claims. (Cl. 105—38.)



1. In a turbine driven vehicle a rigid member, a turbine, a driving axle, a gearing system, a vertical, flexible and extensible connecting member, a gearing housing and a torsion member, said rigid member being located above and spaced away from said driving axle and adapted to support said turbine and the first gearing of said gearing system, said gearing housing being located on said driving axle and adapted to enclose and support the final gearing of said gearing system, said vertical, flexible and extensible connecting member being adapted to connect the gearings of said gearing system, said torsion member being attached to said gearing housing and provided with a guide on its outer extremity, said turbine being adapted to drive said driving axle through said gearing system and said vertical, flexible and extensible connecting member.

1,534,276. WINDSHIELD WIPER. CHARLES R. LOCKLIN, Detroit, Mich. Filed Mar. 26, 1921. Serial No. 456,028. 6 Claims. (Cl. 74—14.)



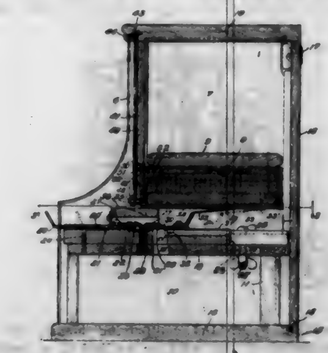
1. In mechanical power transmission for driven instruments mounted upon vehicles, the combination with a vehicle provided with a transmission, a flexible speedometer shaft connected with said transmission, a motion translating device insertable as a unit in said speedometer shaft line to translate the rotating motion into reciprocating motion, and a linear push and pull member for conveying the reciprocating motion to a remote point for doing work.

1,534,277. CLAW-HAMMER NAIL PULLER. CARL N. LOVEN, Oakland, Calif. Filed Dec. 11, 1923. Serial No. 679,930. 1 Claim. (Cl. 254—26.)

A claw hammer comprising a body portion having a bifurcated claw, a downward projection on the body portion above said claw and laterally extending portions on opposite sides of said projection, which portions together with the claw are adapted to engage with nails to provide for extraction thereof.

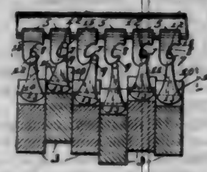
1,534,278. HYDRO-EXTRACTOR. CHARLES LUMPF, Lyon, France. Filed Feb. 25, 1921. Serial No. 447,659. 1 Claim. (Cl. 210—74.)

A centrifugal drying machine, comprising, in combination, a rotatable shaft, a basket secured to said shaft for rotation therewith and having a bottom slidable on said shaft, a pair of bell-crank levers carried by said shaft, one arm of each said levers forming a cam member supporting said bottom and the other arm having a counterweight adapted to swing the lever on its pivot thereby to cause said bottom to slide into and out of contact with said basket, the action of said counterweights being controlled by the speed of rotation of the shaft.



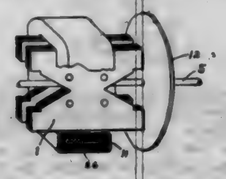
1,534,279. ILLUMINATED INSTRUMENT. FLOYD J. METZGER, New York, N. Y., assignor to Air Reduction Company, Incorporated, a Corporation of New York. Filed May 23, 1922. Serial No. 562,938. 8 Claims. (Cl. 240—2.)

1. A measuring instrument having an enclosed space, the length of which varies with the conditions which the instrument is adapted to measure, and means for defining the length of the space by causing an electrical discharge therethrough.



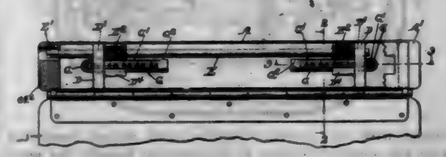
1,534,280. CARD-VENDING MACHINE. JOHN F. MEYER, Chicago, Ill. Filed July 14, 1921. Serial No. 484,554. 4 Claims. (Cl. 194—1.)

4. In a vending machine, a coin compartment, a second compartment, vending mechanism in said second compartment, means for securing said vending mechanism to said coin compartment, said securing means being controlled from within said coin compartment, a door to



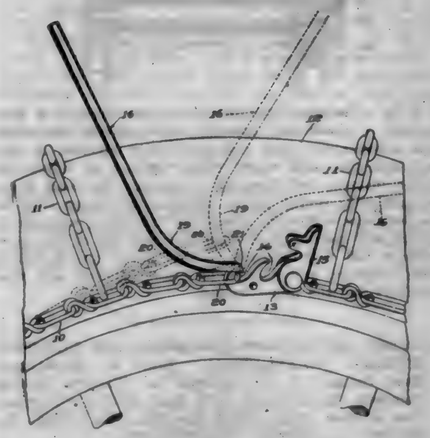
close said coin compartment and a second door covering said first named door and closing said second compartment.

1,534,281. ARCH FOR BOILER FURNACES. CHARLES N. MORGAN, Albany, and ANDREW L. KEELER, Troy, N. Y. Filed Apr. 13, 1923. Serial No. 631,935. 9 Claims. (Cl. 110—99.)



1. In a furnace having an arch, the combination with a support; of a hanger depending from said support said hanger having on its lower end a laterally open hook and having an inclined surface extending above and outwardly beyond the opening to the hook; an arch-block provided in its upper side with an undercut opening; a link detachably connecting said block with said hanger, said link having on its upper end a member engageable with the hook of the hanger, the upper end of said link being engageable with said inclined surface on the hanger, said link being rockably engageable with said opening in the block and having a member engageable with the undercut portion of said opening.

1,534,282. ELECTRIC MOTOR. GRANVILLE F. PACKARD, Wilkinsburg, Pa. Filed Oct. 20, 1920. Serial No. 418,200. 19 Claims. (Cl. 172—278.)

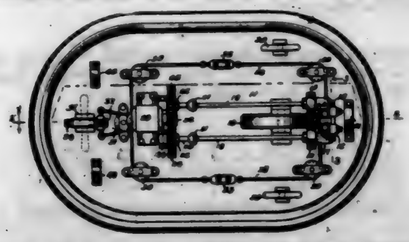


1. An alternating-current motor comprising a magnetizable core member having a series of longitudinal polar projections, a revoluble shaft, a closed secondary member surrounding alternate polar projections, a plate of conducting material secured to said shaft and arranged in inductive relation to said polar projections, and an energizing coil surrounding said magnetic structure and said shaft.

1,534,283. FLEXIBLE-POST BINDER. LESLIE M. PARKER, Evanston, Ill. Filed July 31, 1922. Serial No. 578,577. 21 Claims. (Cl. 129—41.)

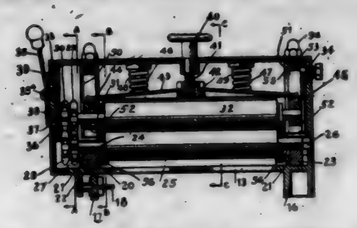
1. In a loose leaf binder a pair of covers and means for drawing them together, including a flexible member of generally circular cross section and means for gripping it intermediate its ends and for moving it in and out, said flexible member being formed of substantially inflexible material.

1,534,284. TIRE-CHAIN TOOL. ALPHONSE J. PELLETIER, Greenville, N. H. Filed Dec. 5, 1923. Serial No. 678,651. 2 Claims. (Cl. 254—78.)



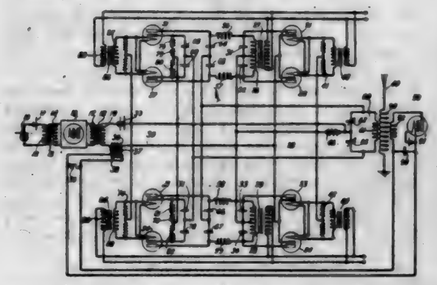
1. A non-skid tire chain applying tool formed of a bar having a shank adapted to be grasped by the hand and having a pocket adjacent its inner end to receive the free end of the hook of a non-skid chain, and a lip at the inner end of the bar to engage said hook and holder bar upon the hook with the latter projecting into the pocket, said bar having its inner end portion disposed at a substantial angle to the shank and connected to the shank by a curved portion bowed toward the portion of the chain it engages and the concave surface of which is adapted to engage a link of a chain and to guide the link into engagement with the hook as the bar is moved in the chain tightening direction.

1,534,286. AMUSEMENT APPARATUS. HENRY ELMER RIEBEL, Brooklyn, N. Y. Filed June 2, 1923. Serial No. 643,042. 5 Claims. (Cl. 180—21.)



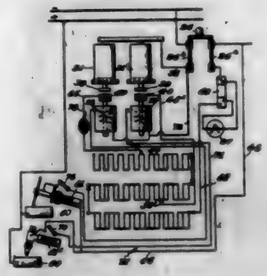
5. In a vehicle having a traction wheel, an arm pivoted at one end and extending outwardly relatively to the traction wheel, a bearing at the other end of the

arm, a shaft in the bearing, a disc on the shaft for engaging the traction wheel, a steering column movable relatively to the body of the vehicle, steering means con-



nected with the steering column, and means connected with the steering column to be operated thereby for moving the said other end of the pivoted arm inwardly.

1,534,286. SAFETY WRINGER MECHANISM. EDWIN C. ROCKE, Bloomington, Ill. Filed Dec. 19, 1921. Serial No. 523,253. 3 Claims. (Cl. 68—32.)

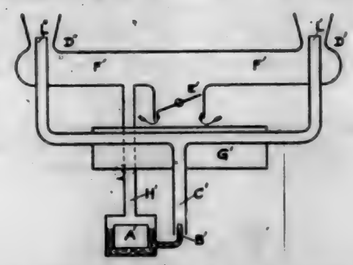


1. In a wringer mechanism, in combination, a base portion, a lower roll therein, and upwardly projecting end members, an upper casing pivotally mounted on said end members, said upper casing having an adjustable upper wringer roll, bearing blocks for the said upper wringer roll, spring plates abutting the upper sides of the bearings, adjustable means for tensioning said spring plates, and means for positioning either end of the upper wringer roll with relation to said lower roll, including yoke members, and adjustable means between said yoke members and the upper casing.

1,534,287. METHOD OF AND MEANS FOR ELECTRIC ENERGY TRANSLATION. JOHN C. SCHELLENG, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Dec. 21, 1923. Serial No. 681,920. 14 Claims. (Cl. 179—171.)

12. The method of preventing undesired modulation in waves produced by a modulated wave producing device which comprises utilizing a portion of the output of modulated wave energy to effect a correcting action by operating upon the power supply source of said device.

1,534,288. GRID-RESISTANCE PANEL FOR ELECTRIC WELDING APPARATUS. ANDREW SMITH, San Mateo, Calif. Filed June 14, 1921. Serial No. 477,417. 5 Claims. (Cl. 219—8.)



4. Arc-welding apparatus comprising means for preheating the metal at the weld by an arc of a predetermined amperage, means for effecting the weld by an arc of lower amperage, and means for breaking the circuit of the welding arc including means for automatically reducing the amperage just prior to the breaking of the arc.

1,534,289. PROCESS OF AND COMPOSITION OF MATTER FOR KILLING PLANTS. EUGENE TEPPET, Grenoble, France, assignor to the Firm of Albert Charpillos, Bevilard, Switzerland. Filed Oct. 16, 1922. Serial No. 594,995. 6 Claims. (Cl. 167—9.)

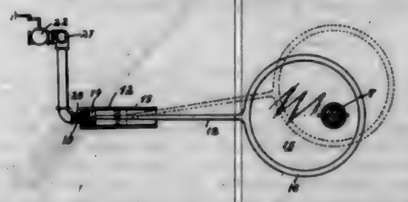
1. A process of destroying weeds by subjecting the same to contact with a herbicide containing a chlorate which is non-corrosive of metal, non-toxic to animals and toxic to weeds; and in thereby causing the weeds to absorb the thereto toxic chlorate.

4. The hereinbefore described composition of matter for use as a weed killer, the same comprising an aqueous solution of sodium chlorate forming a sprayable liquid non-poisonous to animals and non-corrosive of metal, the said sodium chlorate being in an amount to have a toxic effect on growing plants, and being a herbicide when in contact with weeds.

1,534,290. VAPORIZER. STANLEY M. UDALE, Detroit, Mich. Filed Mar. 14, 1921, Serial No. 452,053. Renewed June 9, 1924. 3 Claims. (Cl. 123—122.)

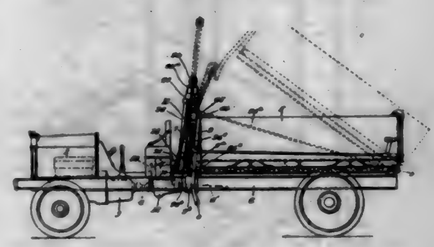
1. In a vaporizer for supplying fuel to internal combustion engines, the combination of a fuel receptacle and a fuel nozzle connected thereto, means for mixing air with the fuel at said nozzle, an exhaust passage for the engine, an intake manifold for the engine having discharge openings and an air inlet, a throttle valve in said air inlet, and a fuel passage leading from the fuel nozzle through the exhaust passage and then forking, one branch extending to each discharge opening of the intake manifold.

1,534,291. ELEVATOR SAFETY APPLIANCE. DANIEL ARMS MACASKILL, Brooklyn, N. Y., assignor of one-half to Lawrence Cunningham, Brooklyn, N. Y. Filed Jan. 9, 1924. Serial No. 685,227. 8 Claims. (Cl. 187—39.)



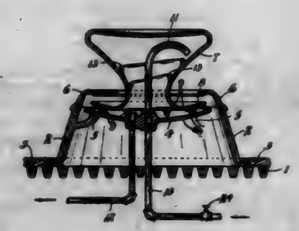
8. A safety appliance for elevators comprising an element adapted to be swung into gripping engagement with the safety control cable of the elevator car, a lever adapted to engage said gripping element to move the same toward gripping position, a solenoid, the core of which is adapted to engage said lever and cause the same to move the gripping element, an electric circuit including said solenoid, and manually operable means controllable from the elevator car to close said circuit to energize the solenoid.

1,534,292. ART OF COLOR PRINTING. JAY O. BALL, New York, N. Y., assignor to Sidney Blumenthal & Company, Inc., New York, N. Y., a Corporation of New York. Filed Oct. 23, 1922. Serial No. 596,522. 2 Claims. (Cl. 101—211.)



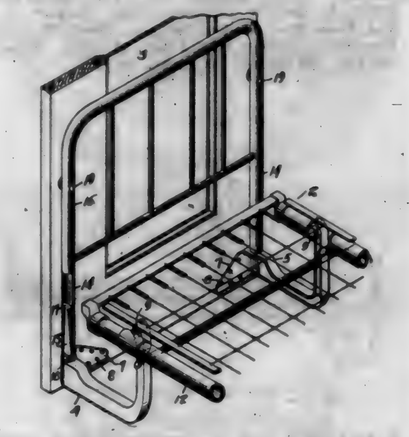
1. In the art of color printing, the method of producing color printing plates comprising, making one or more original color printing plates, making one or more duplicate color printing plates by the molding process from one or more of the original color printing plates, and removing the desired portions of the printing surfaces of said color printing plates to a greater or lesser extent some areas being entirely removed and removing other areas to a lesser degree to print over the impression of another plate or plates.

1,534,293. BRAKING MECHANISM. ROY BANCROFT, Oakland, Calif., assignor of one-half to John P. Gallaghan, Oakland, Calif. Filed Sept. 13, 1923. Serial No. 662,417. 7 Claims. (Cl. 188—99.)



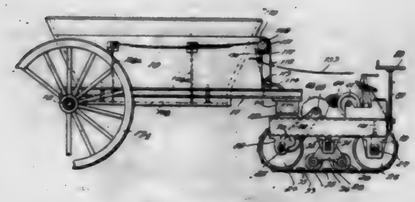
1. Braking mechanism comprising in combination with a pair of rotatable members adapted for variable relative speeds, independent fluid-pressure-generating means operated by each of said members, a common discharge chamber associated with said generating means, and means for controlling the discharge of the fluid from said chamber.

1,534,294. DUMP-TRUCK HOISTING MECHANISM. PERCY E. BARKER, Cleveland, Ohio, assignor to The Van Dorn Iron Works Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 27, 1921. Serial No. 496,116. 19 Claims. (Cl. 298—21.)



1. In a dump truck, the combination of a chassis, a truck body mounted thereon and capable of raising and lowering movement, a cable having its ends secured to fixed parts of said chassis and truck body respectively, a sheave about which said cable extends, a support for said sheave, guide means for said sheave extending upwardly from the body end of said cable, and means for projecting said support bodily so as to move said sheave along said guide means.

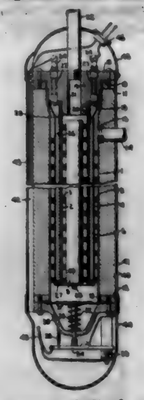
1,534,295. LIQUID-FUEL BURNER. LORN CAMPBELL, Jr., Minneapolis, Minn., assignor to United States Welding Company, Minneapolis, Minn., a Corporation of Minnesota. Filed Dec. 13, 1922. Serial No. 606,618. 10 Claims. (Cl. 158—64.)



10. An oil burner having in combination, an upper portion including an upwardly flaring hollow head having a constricted zone at its lower end and a dish-shaped plate therebeneath, a fuel supply means extending upwardly into said head and adapted to deliver oil to the inner wall of said head, a casing surrounding said plate and lower part of said head having an upper inturned flange spaced slightly from the edge of said plate, said first mentioned portion also including a plurality of passages communicating with said zone and leading to adjacent the edge of said plate, whereby air may rise in said casing and mix with vaporized fuel issuing from said passages.

1,534,296. FOLDABLE-BED-SUPPORTING MEANS. GORDON F. CANE, Oakland, Calif., assignor to American Automatic Lock and Lift Company, San Francisco, Calif., a Corporation of California. Filed Jan. 18, 1922. Serial No. 530,169. 2 Claims. (Cl. 5—162.)

1. In a bed movable as a whole in a horizontal plane, a pair of brackets adapted to be fixed to a movable panel or the like and arranged to lie at the sides of the bed, a bed-frame pivotally supported on said brackets for movement in a vertical plane, upwardly extending studs formed on said brackets, a head-frame comprising a tubular member having vertical side posts open at their lower extremities whereby said studs may be inserted within said posts, and means adjacent the upper extremities of said posts for attaching said head-board to said panel.

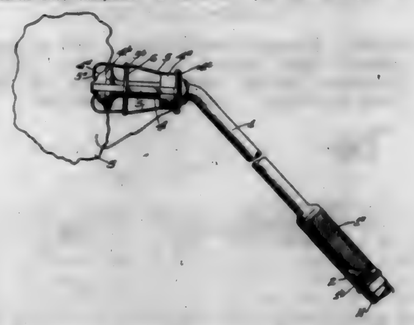


1,534,297. TRACTOR VEHICLE. LE GRAND G. CAREY, Cleveland, Ohio. Filed Dec. 22, 1921. Serial No. 524,230. 8 Claims. (Cl. 298—35.)

1. The combination with a load carrying body having dumping doors, of a tractor supporting the forward end of the body, a pivotal connection between the body and the tractor, means for propelling the tractor, and mechanism actuated by said means for closing said dumping doors, said mechanism including a flexible connection extending from the vehicle body to the tractor and passing through the pivotal connection between the body and the tractor.

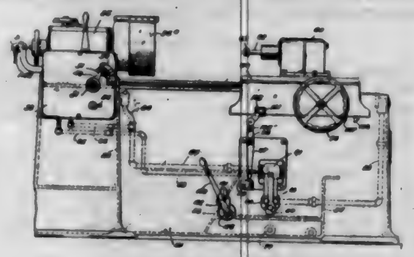
1,534,298. WATER-HEATING DEVICE. WARREN FRANKLIN CLARK, Cleveland, Ohio. Filed July 14, 1921. Serial No. 484,801. 8 Claims. (Cl. 219—39.)

1. In a liquid heating device, in combination, a sheet metal tube having its wall corrugated in a helical manner to produce an integral rib, a cylindrical metal tube removably seated against such ribs and defining with



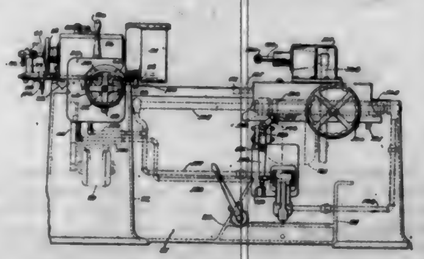
the first tube a narrow helical passageway, and an electric heating unit closely fitting the wall of one of said tubes.

1,534,299. CORRUGATION-FORMING DIE FOR METAL PLATES. WILLIAM M. CONNERY, Philadelphia, Pa. Filed Dec. 21, 1921, Serial No. 523,921. Renewed July 17, 1924. 20 Claims. (Cl. 153—76.)



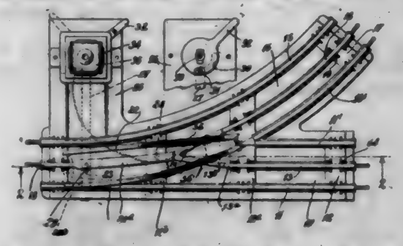
1. A pair of corrugation forming dies having their adjacent cooperative faces provided with interengaging corrugation forming means, the corrugation forming means of one of the dies being cut away to receive the varying thicknesses of plate metal during the formation of a corrugation therein.

1,534,300. SPONGE-HOLDING APPARATUS. FERMOR N. COLTRANE, Long Beach, Calif. Filed Mar. 13, 1924. Serial No. 698,938. 3 Claims. (Cl. 15—130.)



1. In a sponge holding apparatus, a long rigid tubular handle member, a nozzle member provided with an enlarged outer discharge end and detachably secured to one end of said handle, a plurality of flexible retaining members, each having one of its ends mounted at the inner end of said nozzle member and provided at their opposite ends with hook portions adapted to extend partially over the enlarged outer end of said nozzle member and a clamping ring slidably positioned around said retaining members and engaging the outer surfaces only of said members for yieldably drawing the same into sponge clamping position.

1,534,301. GRINDING MACHINE. PRENTICE CONRADSON, Evansville, Wis., assignor to Giddings & Lewis Machine Tool Company, Fond du Lac, Wis., a Corporation of Wisconsin. Filed Feb. 15, 1923. Serial No. 619,122. 11 Claims. (Cl. 51—95.)

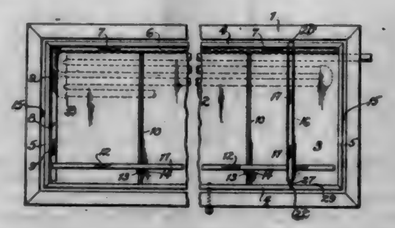


2. A grinding machine having, in combination, a slidably mounted carriage, pressure fluid means for reciprocating said carriage including a control valve, a lever for operating said valve, and a stop on said carriage arranged to engage said lever and move said valve to neutral position to discontinue the movement of said carriage.

1,534,302. GRINDING MACHINE. PRENTICE CONRADSON, Evansville, and HERBERT E. KEMPTON and KEITH F. GALLIMORE, Fond du Lac, Wis., assignors to Giddings & Lewis Machine Tool Company, Fond du Lac, Wis., a Corporation of Wisconsin. Filed Feb. 23, 1923. Serial No. 620,604. 32 Claims. (Cl. 51—50.)

1. A grinding machine having, in combination, a base, two spindle carriages mounted to move in horizontal planes at an angle to each other, means for feeding one of said carriages, hydraulic mechanism for actuating said feeding means and for reciprocating the other carriage, a gage arranged to enter the bore of the work which is mounted on one carriage, and means automatically operable upon such entry of the gage to stop said feeding means and cause said hydraulic mechanism to move said other carriage from its grinding to an idle position.

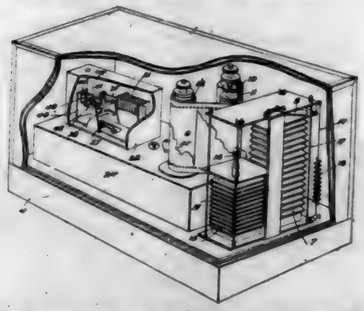
1,534,303. TOY TRAIN TRACK. JOSHUA L. COWEN, New York, N. Y., assignor to The Lionel Corporation, a Corporation of New York. Filed Mar. 21, 1923. Serial No. 626,683. 8 Claims. (Cl. 246—419.)



1. In a toy electric railroad having a main track including a "third rail" and a branch track including a "third rail," switch tongues for guiding the toy train from one to the other of said tracks, and insulators secured to said switch tongues on the sides thereof adjacent said "third rails."

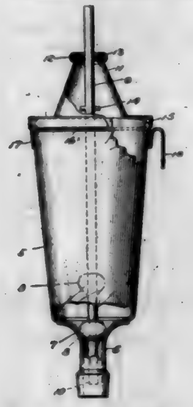
1,534,304. METHOD OF PRODUCING DESIGNS IN PILE FABRICS. SAMUEL E. CREASEY, New York, N. Y., assignor to Sidney Blumenthal & Co. Inc., New York, N. Y., a Corporation of New York. Filed Aug. 30, 1924. Serial No. 735,195. 2 Claims. (Cl. 8—5.)

2. A method of ornamenting fabrics comprising yarn dyeing the threads with permanent and dischargeable dyes, discharging the dischargeable dyes in areas corresponding with the ornamentation to be produced, and printing a design over the prepared surface of said fabric.



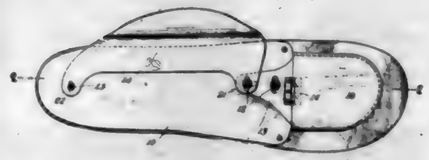
1,534,305. ANCHORING BAR FOR CURTAIN STRETCHERS. EVERETT F. DAILEY, St. Louis, Mo., assignor to Merchants Chemical Company, St. Louis, Mo., a Corporation of Illinois. Filed Jan. 5, 1923. Serial No. 610,819. 3 Claims. (Cl. 45—24.)

1. In combination with a curtain-stretcher frame having parallel side bars provided with a series of openings, means for anchoring the terminal end of a curtain, comprising a bar having a pair of pins at one end for engaging in the openings of one bar, and a pin at its opposite end for engaging in the openings of the other bar, resilient means at one end of the bar against the



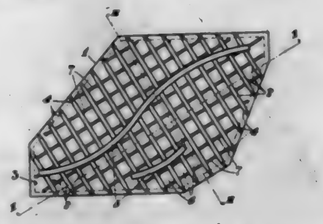
resistance of which the said pair of pins are inserted into their openings after the said single pin has been inserted in its opening, and means on the bar for engaging the terminal end of the curtain to hold it in a stretched condition.

1,534,306. BAROGRAPH. GEORGE DE BOTHEZAT and IVAN I. EBERMEFF, Dayton, Ohio. Filed Mar. 9, 1922. Serial No. 542,515. 4 Claims. (Cl. 234—20.)



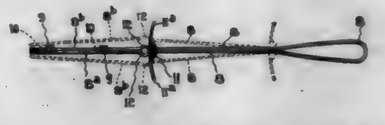
1. In a barograph, an air-tight casing, a movable record sheet, a motor to actuate the record sheet, a bellows in said casing interiorly open to the atmosphere and adapted to contract under decreased pressure, another bellows in said casing interiorly open to the atmosphere and adapted to expand under increased pressure, recording styluses arranged to be actuated by both of said bellows, a motor-controlling bellows in said casing also interiorly open to the atmosphere and adapted at a predetermined pressure to stop the motor, and a valve for admitting atmospheric pressure to said casing controlled by the motor-controlling bellows.

1,534,307. SHAVING-CREAM DISPENSER. FRANK DE PALMA, Brooklyn, N. Y. Filed June 3, 1921. Serial No. 474,589. 1 Claim. (Cl. 221—94.)



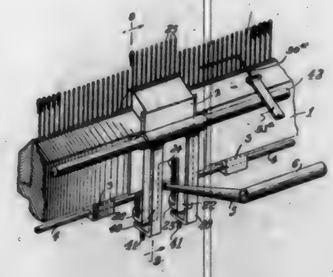
A dispenser for unctuous cosmetics, comprising a container having a depending and restricted neck and an open upper end, a centrally perforated frusto-conical cover for said container, a stem vertically reciprocative in said container and extending through the cover perforation, a yieldable packing member carried by said cover around said stem, means on said stem adapted to engage said packing member to limit upward movement of the stem, a valve on said stem inwardly of the lower end thereof to seat on the inner end of said neck, and a plunger in said neck below the valve, said plunger comprising the lower end of said stem.

1,534,308. ARCH SUPPORT. MARTIN DIETZ, Brooklyn, N. Y. Filed Feb. 27, 1924. Serial No. 695,421. 3 Claims. (Cl. 36—71.)



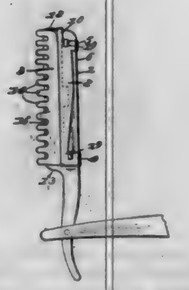
2. An arch support comprising a base plate, an attaching plate adjustably connected to the base plate at its forward end, a toe plate hinged to the attaching plate, cushions carried by the base and toe plates, and a flexible insole covering the base and toe plates.

1,534,309. METAL SOUND BOARD FOR PIANOS AND THE LIKE. FRIDOLF FRANKEL, Stockholm, Sweden. Filed Aug. 24, 1923. Serial No. 659,113. 4 Claims. (Cl. 84—196.)



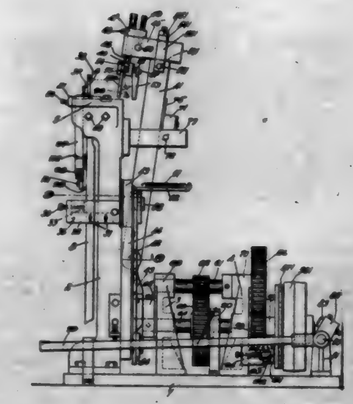
1. A metal sounding plate provided with bent-up ribs having approximately V-shaped cross section and projecting above the front side of the sounding plate, the portions of the plate between said ribs being contracted in relation to said ribs in a direction substantially parallel to said ribs.

1,534,310. HOLDER FOR STROPPING SAFETY-RAZOR BLADES. CHARLES F. GAUNT, Birmingham, England. Filed Sept. 21, 1922. Serial No. 589,714. 1 Claim. (Cl. 30—25.)



A holder for use in stropping safety razor blades consisting of a strip of metal bent back upon itself in the form of a pair of spring arms terminating in blade gripping ends of reduced width and of curved cross-section and having parallel side edges one of said ends having studs and the other openings registering with the studs, said arms at a point a slight distance from the looped end extending towards each other to provide a reduced portion and being inclined away from each other towards their free ends; and a ring encircling the arms and adapted to be located in position encircling the reduced portion when the arms are sprung apart and movable towards the free ends thereof for the purpose of springing the arms together; and projections upon the arms at the inner ends of their blade gripping portions, said projections limiting the movement of the ring towards the blade gripping ends, said ring being cruciform to provide laterally extending finger-holds.

1,534,311. KNITTING APPARATUS. RANDOLPH C. GEBBEN, East Elmhurst, N. Y. Filed Sept. 8, 1922. Serial No. 586,873. 3 Claims. (Cl. 66—30.)



1. In a knitting machine, a needle bar having a part of its needle supporting side cut away to provide a reduced portion in said bar, a needle bar section located in said cut away part and adapted to seat against said reduced portion, a guide member engaging between said needle bar section and the needle bar permitting said section to slide relative to the needle bar substantially in the plane of the needles, and a stop member adapted to engage the needle bar section to hold the latter against reciprocation with the needle bar.

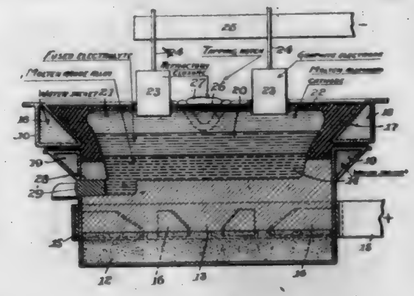
1,534,312. SAFETY ATTACHMENT FOR RAZORS. JESSE R. GOZA, Louisville, Miss. Filed July 22, 1921. Serial No. 486,823. 2 Claims. (Cl. 30—12.)

1. The combination with a straight razor blade, of a safety attachment including a comb portion adapted to engage one side of the blade and provided on one edge with teeth which project beyond the cutting edge of the blade and are curved outwardly away from said cutting edge, a lug arranged on the opposite edge of said portion, a curved resilient member engaging said lug and adapted to clamp the comb portion to the razor blade and having a plurality of integral hooks adapted to engage the rear edge of the razor blade and an additional integral hook to engage the edge of one end of the razor blade, the inherent resiliency of the resilient member causing the hooks to tightly engage the razor blade and the comb portion to frictionally engage the blade, and means integral with said portions for detachably securing the comb portion to the resilient member.

1,534,313. HEEL-BUILDING MACHINE. EDWIN HANSALPAKAR, Brockton, Mass., assignor to Brockton Heel Company, Inc., Brockton, Mass., a Corporation of Massachusetts. Filed Aug. 21, 1920. Serial No. 405,131. 20 Claims. (Cl. 12—50.)

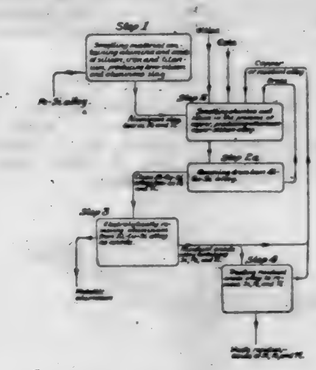
1. In a heel building machine, a support, a presser adapted to be moved both transversely of a previously assembled heel blank on said support and longitudinally of such heel blank so placed, and having jaws for centrally placing the lifts.

1,534,314. METHOD OF BENDING METAL. LEO I. HEINTS, Philadelphia, Pa., assignor to Heints Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 30, 1923. Serial No. 635,478. 1 Claim. (Cl. 153—32.)



A method of the character described, which consists of bending a piece of sheet metal transversely about a flexible mandrel comprising flexibly connected rigid units to give said sheet a substantially closed, hollow, cross-sectional shape, and bending said shaped sheet and mandrel longitudinally to give said shaped sheet longitudinal curvature without altering its said hollow cross-sectional shape, and withdrawing said mandrel from said sheet so shaped without altering either its cross-sectional shape or its longitudinal curvature.

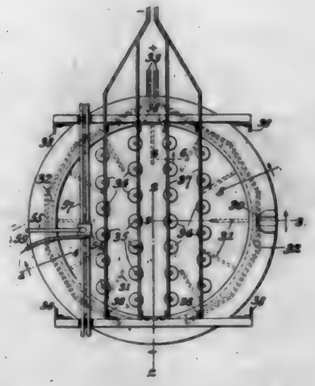
1,534,315. ELECTROLYTICALLY REFINED ALUMINUM AND ARTICLES MADE THEREFROM. WILLIAM HOOPES, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1922. Serial No. 608,282. 5 Claims. (Cl. 204—20.)



1. As a new commercial product, substantially pure electrolytically refined metallic aluminum, softer than

all other base metals except tin and lead, in ductility equal to copper and exceeding tin in tensile strength, having an aluminum content of at least 99.8 per cent,

and capable of being immersed in dilute hydrochloric acid for long periods of time without material corrosion thereby.



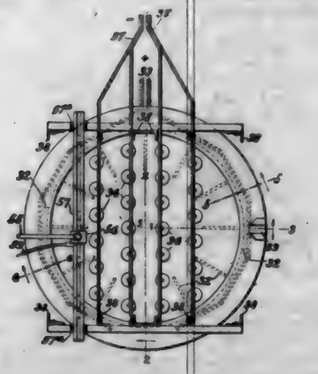
1,534,316. PRODUCTION OF METALLIC ALUMINUM FROM IMPURE MATERIALS. WILLIAM HOOPES, Pittsburgh, and FRANCIS C. FRARY and JUNIUS D. EDWARDS, Oakmont, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1922. Serial No. 608,283. 46 Claims. (Cl. 204—20.)

1. A process of producing metallic aluminum, comprising treating aluminous material to remove ingredients thereof objectionable in the subsequent refining operation and leave a highly aluminous residue; smelting said aluminous residue in the presence of added material desirable in the said refining operation, to produce aluminum alloy; treating said alloy for further removal of objectionable material; and refining the treated alloy in a molten state to recover aluminum in metallic form therefrom.

1,534,317. ELECTROLYTIC PRODUCTION OF ALUMINUM. WILLIAM HOOPES, Pittsburgh, and FRANCIS C. FRARY and JUNIUS D. EDWARDS, Oakmont, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1922. Serial No. 608,284. 49 Claims. (Cl. 204—20.)

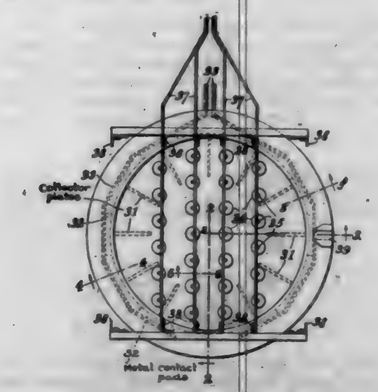
1. In the refining of aluminum, the steps comprising electrolyzing a molten bath with a molten alloy as anode containing aluminum materially in excess of the amount required to maintain the alloy mobile at a temperature

too low to cause objectionable alteration of the bath, and depositing said excess aluminum in the molten state on a molten aluminum cathode in contact with said bath.



1,534,318. ELECTROLYTIC REFINING OF ALUMINUM. WILLIAM HOOPES, Pittsburgh, and FRANCIS C. FRARY and JUNIUS D. EDWARDS, Oakmont, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1922. Serial No. 608,285. 36 Claims. (Cl. 204—20.)

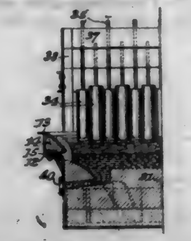
1. In the electrolytic refining of aluminum, the steps comprising establishing between a lower layer of molten metal containing aluminum, as anode, and an upper layer of molten aluminum as cathode, an intermediate layer of molten electrolyte of greater density than the molten aluminum and composed essentially of fluorids and substantially free from chlorid, and passing current from the anode metal through the electrolyte to the aluminum cathode whereby aluminum is removed from the anode metal and deposited in the molten state on the cathode.



1,534,319. REFINING ALUMINUM ELECTROLYTICALLY WITH FUSED ELECTROLYTES. WILLIAM HOOPES, Pittsburgh, and FRANCIS C. FRARY, Oakmont, Pa., assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1922. Serial No. 608,286. 37 Claims. (Cl. 204—20.)

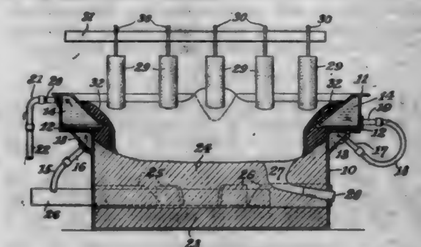
1. In the electrolytic refining of aluminum, the steps comprising electrolyzing a molten body of impure metal or alloy containing aluminum, as anode, with a superimposed fused bath containing aluminum fluorid, and

removing alumina from the bath as may be necessary to keep the bath unsaturated therewith.



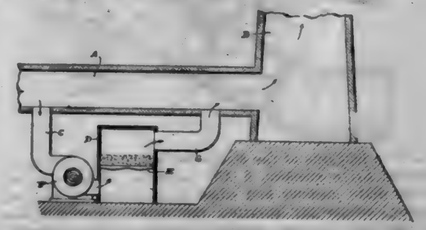
1,534,320. CELL FOR ELECTROLYTIC REFINING OR SEPARATING PROCESS. WILLIAM HOOPES, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1922. Serial No. 608,287. 49 Claims. (Cl. 204—20.)

1. An electrolytic refining cell having a metal shell divided horisontally into electrically neutral and electrically live upper and lower sections, and having a refractory insulating lining extending over the joint between the shell sections and into the upper section to insulate molten metal in the upper section from electrical connection therewith.



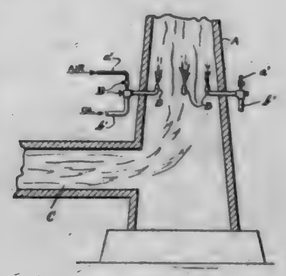
1,534,321. METHOD OF LINING CELLS FOR ELECTROLYTIC REFINING. WILLIAM HOOPES, Pittsburgh, Pa., assignor to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1922. Serial No. 608,288. 16 Claims. (Cl. 204—20.)

1. In the art of forming an electrically insulating lining in an electrolytic cell, the improvement comprising fusing by electrical energy in a metal shell and in contact with the shell surfaces to be lined, material having a suitable freezing point, and artificially cooling such surfaces to freeze thereon from the molten material



a closely adherent crust; while maintaining in electrically neutral condition a portion of the said shell surfaces above an electrically separated lower portion.

1,534,322. ELECTROLYTIC CELL AND METHOD OF LINING THE SAME. WILLIAM HOOPES, Pittsburgh, JUNIUS D. EDWARDS, Oakmont, Pa., and BASIL T. HORSFIELD, Badin, N. C., assignors to Aluminum Company of America, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 21, 1922. Serial No. 608,289. 24 Claims. (Cl. 204—20.)

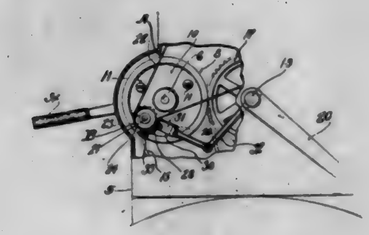


1. The process of producing a refractory insulating lining for an electrolytic cell, comprising freezing from a fused bath therein a lining containing the constituents of the bath in substantially different proportions from those in the liquid and substantially more refractory than a lining having the same composition as the liquid.

1,534,323. PROCESS OF AND APPARATUS FOR TREATING WASTE SMELTER GASES. WILLIAM H. HOWARD, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Nov. 7, 1922. Serial No. 599,510. 9 Claims. (Cl. 266—17.)

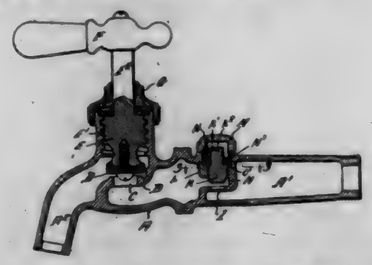
1. The process of treating waste metallurgical gases while being discharged from a metallurgical furnace, which consists in withdrawing gases from the discharge conduit of the furnace, subjecting such withdrawn gases to the action of a reducing agent, and then returning such gases to the discharge conduit of the furnace.

1,534,324. PROCESS OF DISCHARGING SMELTER GASES. WILLIAM H. HOWARD, Salt Lake City, Utah, assignor to American Smelting and Refining Company, New York, N. Y., a Corporation of New Jersey. Filed Jan. 4, 1923. Serial No. 610,552. 2 Claims. (Cl. 266—17.)



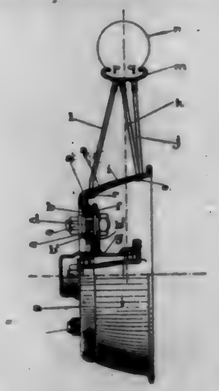
1. In an apparatus for discharging smelter gases high into the air to diffuse the obnoxious elements thereof before the same come into contact with vegetation, the combination with a stack or chimney, of a plurality of burners spaced around the interior of the stack or chimney and located a sufficient distance below the top of said stack or chimney to permit an increase in the velocity of the gases prior to their discharge.

1,534,325. LIQUID CONTACT INSECTICIDE. LESTER F. HOYT, East Aurora, N. Y., assignor to Larkin Co. Inc., Buffalo, N. Y. Filed Jan. 7, 1924. Serial No. 684,843. 6 Claims. (Cl. 167—6.)



1. An insecticide in concentrated form which is the product formed when free nicotine is chemically combined with the fatty acids of vegetable oils to form a soap.

1,534,326. MOVING-PICTURE PROJECTOR. HOWARD E. HUSSEY, Milwaukee, Wis., assignor, by direct and mesne assignments, to Rotograph Motion Picture Machine Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed May 8, 1922. Serial No. 559,800. 6 Claims. (Cl. 88—17.)

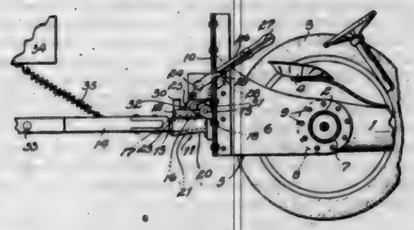


1. In a machine of the character described, a revolvably mounted drive member, a film engaging member carried by the drive member and offset with respect to the axis thereof, means for rotating the drive member, means for rotating the film engaging member in the direction of rotation of the drive member, the film engaging member intermittently feeding a film engaged therewith, and means for advancing or retarding the rotation of the film engaging member a desired degree with respect to the drive member to regulate the positioning of the film fed thereby.

1,534,327. COCK FOR FAUCETS WITH STOP VALVES. PETER R. RICHARDS, Cleveland, Ohio, assignor to The Republic Brass Company, Cleveland, Ohio, a Corporation of Ohio. Filed May 9, 1923. Serial No. 637,667. 2 Claims. (Cl. 277—67.)

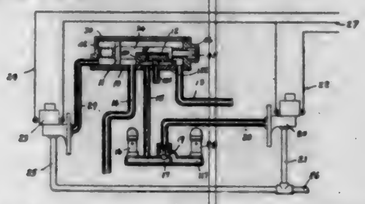
2. A cock or faucet stem having a partition therein said stem being tapped through the upper side and through the partition and providing a valve seat in said partition, a valve having a seat, a threaded portion and a stem, concentric washers surrounding said stem, a disk or plate for holding said washers in place and a cap screwed into the top of the stem and protecting the upper end of the stop valve.

1,534,328. REMOVABLE WHEEL. LOUIS ROUANET, Ivry-Port, France, assignor to The Compagnie de Applications Mecaniques, Paris, France. Filed July 25, 1923. Serial No. 653,650. 1 Claim. (Cl. 301—9.)



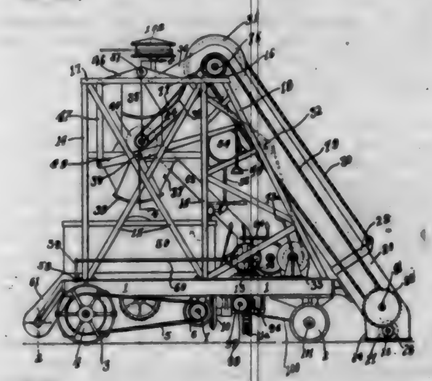
In a wheel with metal wire spokes for vehicles, a hub of light cast metal the length whereof is greater than the width of the rim of the wheel, said hub comprising a substantially convex part whose thickness decreases towards the inner side of the wheel, a flat annular flange and an annular rib having a semi-circular cross-section and connecting said convex part to said flat annular flange, the thickness of said rib being greater than that of the two latter parts, apertures provided in said flat annular flange and adapted for the passage of securing bolts, said flange carrying bosses around said apertures and conical bearing surfaces for the securing bolts being provided in said bosses.

1,534,329. TRACTOR. WILLIAM H. SARGENT, Webster Groves, Mo., assignor of one-third to George Rixmann and one-third to Julius Seidel, both of St. Louis, Mo. Filed July 15, 1922. Serial No. 575,204. 7 Claims. (Cl. 280—33.15.)



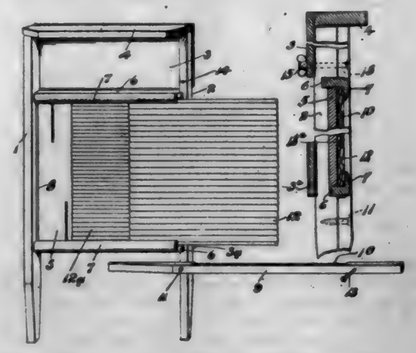
1. In a tractor, the combination of a frame, a driver's seat supported thereupon, said frame having an extension

projecting rearwardly, and having a transversely disposed guard behind the driver's seat, a coupling device



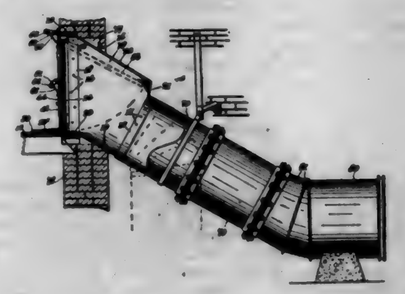
disposed at the rear side of the said guard, and means within reach of the driver's seat for controlling the coupling device.

1,534,330. TRAIN-CONTROL VALVE CONSTRUCTION. CLINTON F. SHADLE, Indianapolis, Ind., assignor, by mesne assignments, to Indiana Equipment Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Feb. 26, 1923. Serial No. 621,262. 28 Claims. (Cl. 303—18.)



1. The combination of a fluid pressure conduit, an exhaust therefor, a second exhaust connected therewith, a single valve means controlling both exhaust connections, another valve interposed in said exhaust connection for controlling one of said exhausts, and electrical means for controlling said second valve.

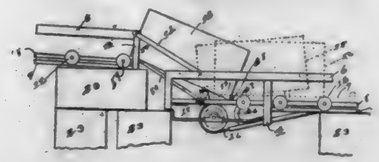
1,534,331. CONTINUOUS FOUNDRY-SAND-MULLING MACHINE. HERBERT S. SIMPSON, Chicago, Ill. Filed Nov. 12, 1923. Serial No. 674,134. 12 Claims. (Cl. 22—89.)



1. In a machine of the class described, comprising a continuously propelled structure having an inclined chute, a sand conveyor traveling in said chute, a receiving hopper at the upper end of said chute, sand purifying mechanism below said hopper, a discharge hopper below said purifying mechanism, simultaneously operated valves for alternately opening and closing said hoppers, a mulling apparatus below said discharge hopper, means for operating said apparatus, and means for discharging sand therefrom.

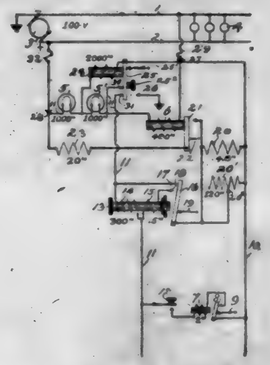
1,534,332. WASHBOARD. NELS SORENSEN, Traverse City, Mich. Filed Nov. 9, 1921. Serial No. 513,872. 2 Claims. (Cl. 68—29.)

1. A wash board comprising spaced apart side bars a fixed back rigidly connecting the side bars, upper and lower transverse guide bars rigid with the side bars and located at the upper and lower edges of the back and provided thereat with guide flanges, a rubbing plate supported against the said back and having its upper and lower edges fitted in the guide grooves formed between said back and said flanges, one of the said side bars being split longitudinally in substantially the plane of the front face of the back to form front and rear sections, the front section being pivoted to the rear section of the side bar below the lower guide bar and adapted to swing outwardly at one side of the wash board to permit the removal of the rubbing plate and means for rigidly securing the front section upon the rear section of the said split side bar.



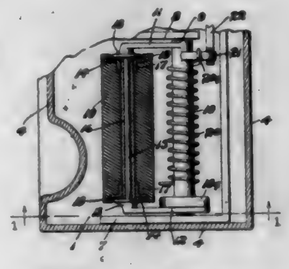
1,534,333. TUBULAR FIRE ESCAPE. ARTHUR H. STURGES, Omaha, Nebr. Filed Sept. 4, 1924. Serial No. 735,899. 1 Claim. (Cl. 227—7.)

In a tubular fire escape, the combination of a frame adapted to fit in a wall opening, an entrance section mounted in the frame and projecting outwardly therefrom to the exterior of the wall, a door hinged in the top of the frame to swing at its lower end outwardly and upwardly into the entrance section out of the way and leave the sides of the entrance section free of obstructions, a latch at the bottom of the door, a threshold



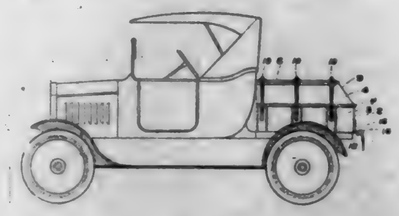
arranged at the bottom of the frame and provided with a detent to receive said latch and normally maintain the door closed, and a releasing handle mounted upon an intermediate part of the door at its inner side and connected to said latch for manually releasing the same to open the door.

1,534,334. CONVEYER SYSTEM. LEWIS E. STUTSMAN, Milton, Oreg. Filed Aug. 13, 1923. Serial No. 657,088. 7 Claims. (Cl. 198—173.)



1. In a conveyer system an interconvertible track, rollers operably mounted on said track, a traveler operably mounted in said track to form a power track, means to operate said traveler, a stop rigidly attached to the power track, means to receive and separate the load on the power track from the gravity track, said means operably uniting said power and gravity tracks and means to elevate the load from the power track, by its own power, to the gravity track, said means operably uniting said tracks.

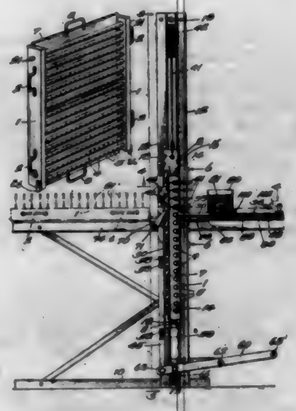
1,534,335. SYSTEM OF ELECTRIC-CURRENT DISTRIBUTION. CHARLES A. TURNER, Chicago, Ill., assignor to Gisholt Machine Company, Madison, Wis., a Corporation of Wisconsin. Filed Sept. 25, 1922. Serial No. 590,277. 3 Claims. (Cl. 177—7.)



1. A system of electric current distribution including a source of current; supply mains in circuit with said source of current, one of said mains being grounded; supply conductors provided with terminals for connection with said mains; an electro-magnet having an armature switch; a high resistance included in series with this magnet in a bridge of said mains; a second electro-magnet also having an armature switch; a translating device in series with this second magnet and together therewith in parallel with the first magnet; a normally open switch for including the second magnet and the translating device in circuit; a shunting resistance element brought in parallel with the translating device and in shunt of the first magnet by the armature switch of the second magnet upon the attraction thereof to de-energize the first magnet; a normally open shunt about said high resistance and established by the armature switch of the first magnet upon the release thereof; a resistance in the connection between one terminal of the shunting resistance and the source of current; a relay in bridge of the supply conductors, this relay including an armature switch having one contact connected with the supply conductor that pertains to the grounded supply main and a grounded complemental contact, these contacts being engageable when this switch is released and a device in the supply conductor circuit between a supply conductor terminal and the corresponding main for rendering the supply conductor circuit inoperative upon reversal of the connections of the supply conductors with the mains.

1,534,336. PRESSER-ROLLER CONSTRUCTION. ANTHONY VANDERVELD, Grand Rapids, Mich. Filed Oct. 13, 1921, Serial No. 507,525. Renewed Dec. 4, 1924. 2 Claims. (Cl. 33—129.)

1. In a construction of the class described, two spaced apart supporting arms, each terminating in a bell-shaped head, said heads being turned in toward each other from the ends of the arms, a rod located between and carried at its ends by said heads, a sleeve mounted on the rod and extending between the heads, two cup-like members secured one at each end of the sleeve, and a roller located around the sleeve between said members, said roller at its ends having recesses into which said members are inserted and said heads extending into the said members, substantially as described.

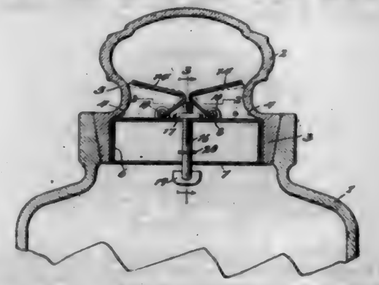


1,534,337. REAR COMPARTMENT FOR VEHICLES. ROBERT M. WATSON, Shippensville, Pa. Filed Mar. 27, 1924. Serial No. 702,228. 1 Claim. (Cl. 296—24.)

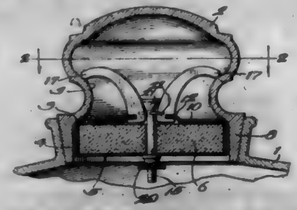
In a rear compartment for vehicles, a rectangular box or bed for such vehicle having vertical side walls in combination with a combined cover and seat structure for each side of said bed, each of said structures comprising a seat-member and a back-member arranged edge-to-edge and hinged together at the juxtaposed edges, one edge of said structure being arranged in juxtaposition and hinged to the upper edge of the side-wall of its respective side of said bed whereby said structures are adapted to fold over and co-operatively form a cover

for said bed, also to be extended and arranged in such position that the leaf in juxtaposition to said side-wall shall project horizontally outwardly therefrom to form a passenger-carrying seat and the other member of said structure shall be positioned vertically to form a back for said seat, a plurality of angle-braces for each of said structures each secured through one of its legs to one of said back-forming members, the other leg of each of said braces being free and provided at its lower extremity with a T-head, and a vertically-slotted guide for each of said braces secured to the outer face of said side-walls for the reception and operation of the T-head of its respective brace whereby said combined cover and seat structures are adapted to be arranged and retained in the aforesaid seat and back-forming positions.

1,534,338. TEMPLATE-FILLING MACHINE. HENRY A. WEIHMANN, Chicago, Ill., assignor to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed Feb. 13, 1922. Serial No. 535,974. 2 Claims. (Cl. 107—7.)



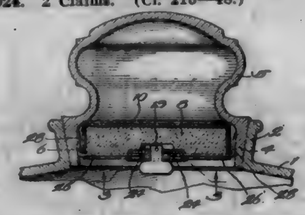
1. In a machine of the class described, a template holder, a magazine for containing the skewers, guides leading from the magazine to the template, and means for simultaneously pushing a plurality of skewers from the magazine through the channels and into the template, the magazine being removable from the machine, and the guides being formed in two sections, one section being stationary in the machine and the other permanently connected to the magazine, and removable with it.



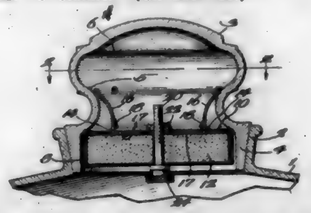
2. A template filling machine having a main frame, a template holder, means for guiding the holder in a vertical direction in the frame, the holder being adapted to hold the template in a vertical plane, manually operable ratchet and pawl mechanism for intermittently elevating the holder, a magazine for holding the skewers, and separate manually operated means for intermittently transferring a plurality of skewers from the magazine to the template, the ratchets and pawls being retractable, whereby they may be rendered non-active to permit the holder to be lowered preparatory to filling the template.

1,534,339. DEVICE FOR REGULATING HUMIDITY OF CONTAINERS. INA D. PERRY, Chicago, Ill., assignor to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed Dec. 18, 1922. Serial No. 607,731. 4 Claims. (Cl. 215—48.)

1. A device of the character described having a receptacle for containing dehydrating material, arms articulately connected to said receptacle, and swingable into and out of the chambered portion of an internally chambered stopper, and means for controlling the position of said arms whereby the receptacle may be attached to and detached from the stopper, the arms being comparatively rigid whereby they may lock the receptacle in position.

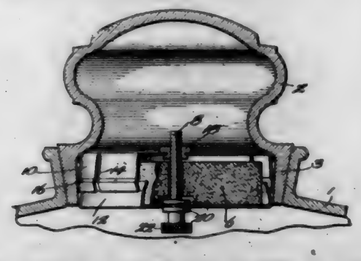


1,534,340. DEVICE FOR REGULATING HUMIDITY OF CONTAINERS. DOMINIK M. BERNOTOW, Chicago, Ill., assignor to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1923. Serial No. 614,923. 4 Claims. (Cl. 215—48.)



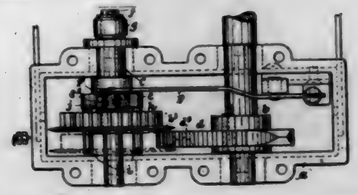
1. A device of the character described, comprising a receptacle adapted to contain a moisture-regulating substance, rigid arms articulately connected to said receptacle and adapted to swing into and out of the chambered portion of an internally chambered stopper, a rod passing up through the receptacle and between the arms, and a head at the upper end of the rod between and overlying a portion of the arms, adapted when drawn downward to wedge the arms apart and thereby force them outward into the chambered portion of the stopper.

1,534,341. DEVICE FOR REGULATING HUMIDITY OF CONTAINERS. DOMINIK M. BERNOTOW, Chicago, Ill., assignor to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1923. Serial No. 614,924. 2 Claims. (Cl. 215—48.)



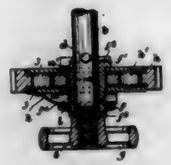
1. A holder for humidity regulating material, said holder being of the type designed to be attached to the stoppers of candy jars and the like wherein the stopper is internally chambered, said holder having radially slidable rods arranged approximately in a common horizontal plane for projecting into the chambered portion of the stopper, a multi-part cam arranged in the same plane as the rods and centrally positioned for projecting them radially outward, and means for rotating said cam.

1,534,342. DEVICE FOR REGULATING HUMIDITY OF CONTAINERS. HENRY A. WEIHMANN, Chicago, Ill., assignor to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed Jan. 25, 1923. Serial No. 614,795. 3 Claims. (Cl. 215—48.)



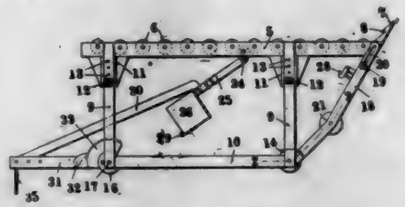
1. In a device of the class described, the combination of a holder adapted to receive moisture-regulating substance, a loose cover for the holder, arms pivotally mounted in the cover and having feet which underlie the cover and are adapted to be supported upon the contents of the holder, and means for controlling the position of the cover vertically with reference to the holder.

1,534,343. DEVICE FOR REGULATING HUMIDITY OF CONTAINERS. DOMINICK M. BERNOTOW, Chicago, Ill., assignor to Bunte Brothers, Chicago, Ill., a Corporation of Illinois. Filed July 21, 1923. Serial No. 652,986. 4 Claims. (Cl. 131—30.)



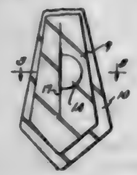
1. A device for regulating the humidity of containers comprising a retainer for holding the moisture regulating substance, said retainer consisting of an expansion member and an expander adapted to wedgingly engage the same for expanding the walls thereof.

1,534,344. DWELL-MOTION MECHANISM. WILLIAM S. WELLS, Bethlehem, Pa., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed July 7, 1924. Serial No. 724,598. 2 Claims. (Cl. 74—7.)



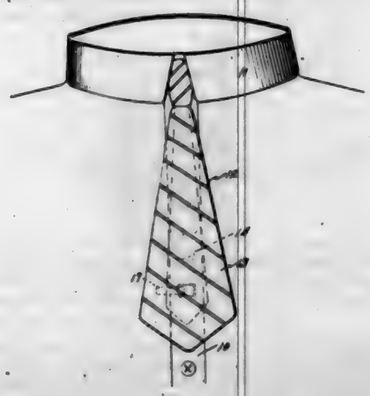
1. A dwell-motion mechanism, including, with supporting means, a peripherally toothed driven rotary gear, an eccentric driving rotary gear having its axis parallel with that of the first gear and the high part of its periphery toothed and adapted to intermesh with the toothed periphery of the first gear, one gear being shiftable laterally into and out of the plane of the other to permit such intermeshing, and means to shift the shiftable gear into and out of said plane, the first gear having a peripherally projecting flange flanking its teeth and arranged to flank the teeth of the other gear and obstruct such shifting when in the rotation of the second gear the toothed high part thereof adjoins the first gear.

1,534,345. TAKE-UP MECHANISM FOR LOOMS. WILLIAM S. WELLS, Bethlehem, Pa., assignor to Benjamin Eastwood Company, Paterson, N. J., a Corporation of New Jersey. Filed Apr. 2, 1923. Serial No. 629,273. 4 Claims. (Cl. 139—310.)



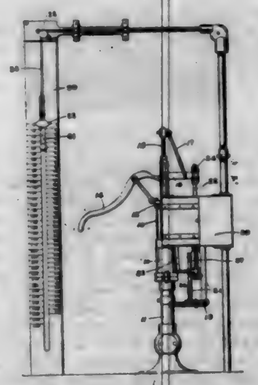
1. In a loom, the combination of a supporting structure, a beam journaled therein, a coupling member for the beam adapted to revolve concentrically thereon, said beam and member having releasable means to interlock them for rotation together, means to drive the beam including a driver concentric with the beam, and means to maintain a slip-friction-grip between the driver and coupling member.

1,534,346. TRUCK. JOHN S. WHITE, St. Louis, Mo. Filed Feb. 25, 1924. Serial No. 694,830. 7 Claims. (Cl. 280—49.)



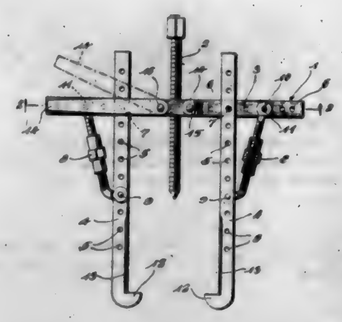
3. In a device of the class described, a wheeled platform provided with a lifting lip, front wheels forming a fulcrum, a pivoted weight arranged below the platform and swinging in the direction of the length of the device to change the center of gravity, and a lifting lever operatively connected to said weight.

1,534,347. NECKTIE. ROBERT A. ACCHIONE, Detroit, Mich. Filed July 5, 1924. Serial No. 724,256. 5 Claims. (Cl. 2—145.)



1. A necktie one end of which is adapted to overlie the other, the underlying end portion of said tie provided with an opening therethrough and the overlying end portion of said tie provided with a tab on its under side adapted to be extended through said opening.

1,534,348. NECKTIE. ROBERT A. ACCHIONE, Detroit, Mich. Filed July 16, 1924. Serial No. 726,245. 1 Claim. (Cl. 2—145.)

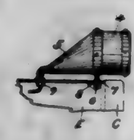


A necktie, one end portion of which is adapted to overlie and substantially conceal the other end portion, said outer end portion of the tie provided on its underside with a part secured thereto along three sides and being open at one side, said part being so disposed that the free edge of its open side is in substantially parallel proximity to a longitudinal edge of the under tie and portion and adapted to be gripped thereto to fasten two end portions of the tie together in overlying alignment.

1,534,349. TAPE-CONTROLLED MEASURING PUMP. JOHN ALBRECHT, Kewaunee, Wis. Filed Oct. 27, 1921. Serial No. 510,939. 10 Claims. (Cl. 221—103.)

1. Apparatus of the class described comprising a normally locked pump including a reciprocable rod, arranged to reciprocate as the pump is operated, a cam member, means operable by the reciprocations of said rod to manipulate said cam member, a bar, indicator mechanism associated with said bar and manually operated to unlock the pump, means operable by said cam member for controlling the movement of said bar in one direction, and locking mechanism associated with said bar which operates automatically upon the bar reaching a predetermined position to lock said rod and the pump against operation.

1,534,350. WHEEL PULLER. LEONARD L. BASSETT, Sioux Falls, S. Dak. Filed May 17, 1923, Serial No. 639,624. Renewed Jan. 23, 1925. 4 Claims. (Cl. 29—85.)



1. A wheel puller comprising a cross arm having a central shaft engaging thrust device, a pair of pull hooks pivoted to the end portions of said cross arm and longitudinally and laterally adjustable thereon and braces having a pivotal and adjustable connection at one end with said cross arm and at their opposite ends with said pull hooks, said braces being formed in adjustably connected sections.

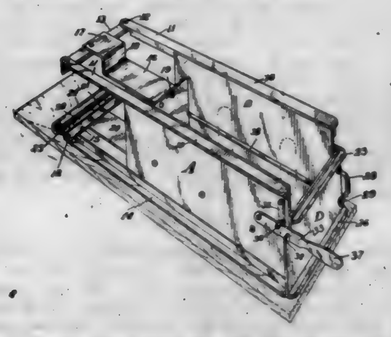
1,534,351. VAT DYE. WILHELM BAUER and ALFRED HERRE, Opladen, near Cologne, Germany, assignors to Farbenfabriken vorm. Friedr. Bayer and Co., Leverkusen, near Cologne-on-the-Rhine, Germany. Filed May 19, 1923. Serial No. 640,225. 1 Claim. (Cl. 260—49.)

The herein described new dyestuff containing a beta-naphthisatin nucleus combined with a chlorinated 1-anthrol nucleus, which dye is a bluish-black powder soluble in concentrated sulfuric acid with a slate blue coloration; yielding an orange-brown vat with caustic soda solution and hydrosulfite which dyes the textile fibre deep blue-black shades, substantially as described.

1,534,352. HEADLIGHT MOUNTING. OLAF BENSON, Red Wing, Minn. Filed Apr. 21, 1924. Serial No. 707,841. 2 Claims. (Cl. 240—7.)

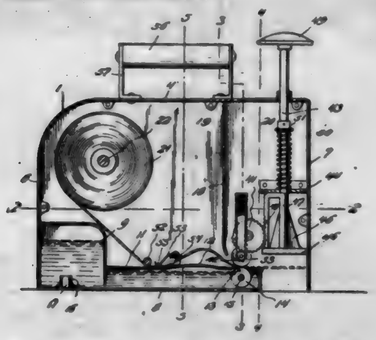
1. The combination with the hood of a motor vehicle, of a pair of headlights secured to the forward end of the hood, each of said headlights having a rearwardly tapered extension rigidly fastened to the hood, and circuit cables extending from the lights, through said extensions and under the hood.

1,534,353. FRACTURED BLOCK AND METHOD OF MAKING THE SAME. HERMAN BESSER, Alpena, Mich. Filed Apr. 19, 1923. Serial No. 633,106. 20 Claims. (Cl. 28—60.)



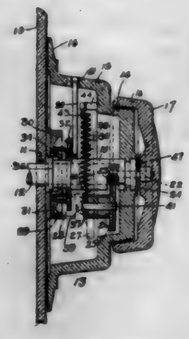
1. The method of making artificial building blocks, comprising molding in an integral mass rich concrete material having imbedded therein brittle bodies of ma-

terial contrasting with their surrounding concrete, allowing the block to fully harden, then fracturing the same transversely of its face, said line of fracture splitting the bodies which it intersects.



17. A concrete building block having on one face thereof a surface of concrete material having bonded therein pebbles split in the plane of said surface.

1,534,354. MOLD BOX. HERMAN BESSER and JESSE H. BESSER, Alpena, Mich. Filed May 12, 1923. Serial No. 638,602. 24 Claims. (Cl. 25—121.)



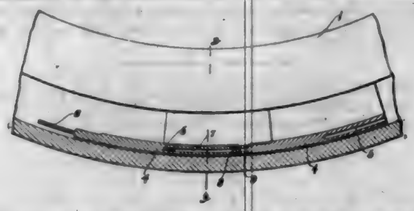
1. A mold comprising side and end plates, the rear end plate being mounted within the sides and the front plate overlapping the ends of the side plates and pivoted to one of them.

1,534,355. AUTOMATIC LABEL-PASTING MACHINE. GEORGE D. BISHOP and CLARENCE P. HARTMAN, Carlisle, Pa. Filed Apr. 12, 1924. Serial No. 706,111. 3 Claims. (Cl. 216—25.)

1. In combination, a platform, a spring tensioned toward the platform for frictionally engaging a strip of paper with a portion of the platform, said platform provided with an opening, a roller journaled below the opening of the platform, a second roller journaled above the opening of the platform, means for rotating the first mentioned roller, a cutting means associated with the platform and operatively connected with said means for operating the roller, said platform being convexed upwardly between the spring and the opening.

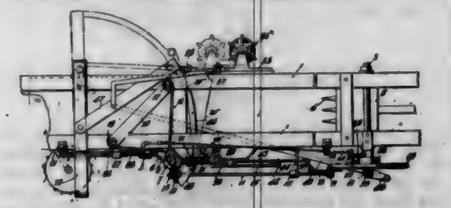
1,534,356. MICROMETER TUNING DIAL. JAMES P. BURKE, Newark, N. J. Filed Aug. 1, 1924. Serial No. 729,460. 7 Claims. (Cl. 74—7.)

1. In a micrometer device, the combination with a low speed shaft and a relatively high speed shaft, of a clutch acting therebetween, a housing secured to one of said shafts, and means mounted upon said housing and connecting said shafts to cause one of them to rotate at a lower velocity than the other as aforesaid, said housing being manually operable in co-operation with said clutch to render ineffective the means aforesaid and to cause said shafts to rotate at the same rate, said means mounted upon the housing comprising a clutch member tending to oppose the action of the first mentioned clutch and having a mechanical advantage to render the second mentioned clutch superior to the other clutch.



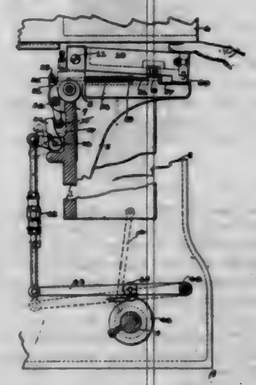
1,534,357. SOAP-DISPENSING HAND BRUSH. IRA A. BURNETT, Chicago, Ill. Filed Mar. 1, 1924. Serial No. 696,127. 1 Claim. (Cl. 15—138.)

In a device of the class described, the combination with a hollow body, of a tube located within said body and supported at at least one of its ends by said body, of an outlet conduit communicating with said tube between its ends and extended through said body at an angle to the tube, said conduit forming a partial support for said tube, a brush back mounted on the body around the discharging end of said conduit, a rod located in said conduit and having at its inner end a transversely disposed projection and at its other end means to close the discharge end of said conduit, a plunger mounted in said tube for reciprocal movement therein and having between its ends a reduced portion provided with an inclined slot to cooperate with the projection of the aforesaid rod for imparting reciprocating movement to the same when said plunger is reciprocated.



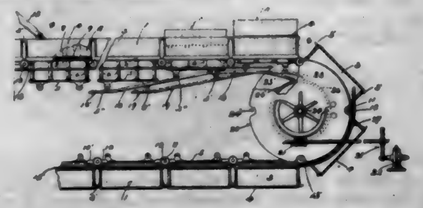
1,534,358. INTERNALLY-ARMORED TIRE. FRANK A. BURNS, Anaconda, Mont. Filed Feb. 24, 1923. Serial No. 621,064. 1 Claim. (Cl. 152—18.)

The combination with a tire shoe, of a protector arranged therein and including a plurality of transversely bowed plate sections, each having one end provided with a longitudinal bifurcation, and its opposite end provided with a transversely bowed tongue which is slidably received in the bifurcation of the adjacent plate section, the tongues being provided with longitudinal slots, an element passing transversely through the bifurcated end and received in the slot whereby to limit the longitudinal movement of the plate sections in either direction, and



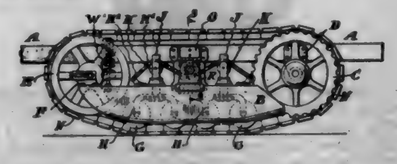
transversely bowed double walled protective members slidably received on the sections and adapted to overlie the connected ends of the sections, the inner faces of the protective members being flush with the inner faces of the plate sections.

1,534,359. BALING MACHINE. HENRY GERARD COLLINS, Williamsburg, Kans. Filed Jan. 12, 1924. Serial No. 685,842. 12 Claims. (Cl. 100—20.)



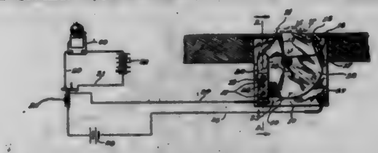
1. In a baling press the combination with sectional gears, of means operating in timed relation for bringing together the segments of each gear and rotating said gears.

1,534,360. SAFETY DEVICE. EUGENE A. COPELAND, Worcester, Mass., assignor to Hobbs Manufacturing Company, Worcester, Mass., a Corporation of Massachusetts. Filed May 5, 1921. Serial No. 467,131. 4 Claims. (Cl. 192—132.)



1. In a machine of the class described, the combination with a stationary anvil portion, a yieldable reciprocatory adjustable box form adapted to cooperate with said anvil portion, and a rotatable shaft for actuating said box form, of cam controlled mechanism operable by said actuating shaft for rendering said box form rigid at a predetermined point in its movement toward said anvil portion.

1,534,361. BLOCK-MAKING MACHINE. CHARLES F. CRAIG, Los Angeles, Calif. Filed Apr. 16, 1923. Serial No. 632,323. 2 Claims. (Cl. 25—99.)



1. An apparatus for forming hollow blocks from viscous plaster, comprising a plurality of molds conjoined to have relative pivotal movement, a track upon which the molds are movable, each mold provided with a plurality of vertical cores, a pallet in each mold provided with openings through which said cores extend, a carriage for each mold, means to support said pallet above and connect said pallet with said carriage, and an inclined track disposed in the path of said carriage to elevate the pallet and eject the block from the mold by gradual movement, said track having an initial incline to produce a very slight gradual movement of the pallets and effect the initial breakage of the cohesion between the block and the mold.

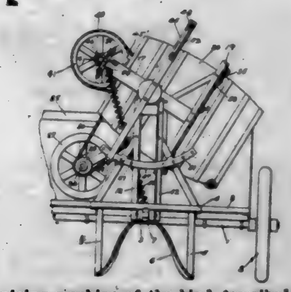
1,534,362. ENDLESS-TRACK VEHICLE. LEWIS K. DAVIS, Washington, D. C. Filed Mar. 21, 1923. Serial No. 626,521. 8 Claims. (Cl. 305—9.)

1. An endless track vehicle comprising a vehicle body, endless tracks on opposite sides thereof, a subframe or longéron on each side of the vehicle body, body supporting devices engaging the tracks and carried by the longérons, a bracket attached to the vehicle body, a member connected to the longéron intermediate its front and rear ends, and passing through said bracket, and yielding devices interposed between the bracket and the member to allow the longéron to rock fore and aft about a horizontal axis extending through said bracket.

1,534,363. BURGLAR ALARM. JOHN H. DAY, Des Moines, Iowa. Filed Apr. 19, 1921. Serial No. 462,510. 2 Claims. (Cl. 200—52.)

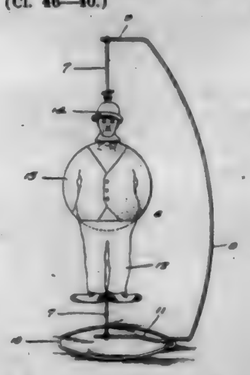
1. In an alarm device of the class described, a frame member designed to be inserted in a table top, a rotary member mounted therein, said rotary member having a part of its edge normally projected above the frame member and also having an arm projected outwardly from the edge and then in a direction approximately concentric therewith, there being a slot between the arm and the edge of the rotary member, and an electric contact device mounted in the frame to co-operate with the movable member.

1,534,364. APPARATUS FOR RAISING VEHICLES. FRANCISCO FABRICIO Y DIAZ, Sagua la Grande, Cuba. Filed Oct. 16, 1922. Serial No. 595,013. 4 Claims. (Cl. 254—02.)



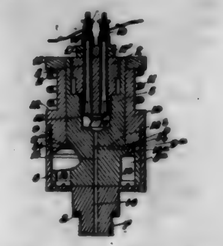
1. Lifting apparatus of the class described comprising a turntable element and means to mount and support the same, said mounting means including an internal gear, lifting screws threadedly engaged with said turntable element, a platform connected to said screws to be raised or lowered thereby, a shaft mounted on said platform and having a pinion engaged with said internal gear, and a motor mounted on said platform and geared to said shaft.

1,534,365. COMBINED CUSHION AND PNEUMATIC TIRE. THOMAS A. DUNN, Jamaica, Iowa. Filed Sept. 15, 1921. Serial No. 500,925. 1 Claim. (Cl. 152—10.)



An improved pneumatic and cushion tire, comprising a casing formed with an integral, circumferentially extending cushion member on the inner periphery of its tread portion, said cushion member being substantially circular in cross-section, subtending an arc of not less than one hundred and eighty degrees and of sufficiently great diameter that it extends substantially one-half the distance from the periphery of the casing to the rim portion thereof when in normal condition, thereby producing annular grooves between said cushion member and the opposite side walls of the casing, which grooves are substantially V-shaped in cross-section when the tire is inflated, and whereby the normal thickness of the casing at opposite sides of said cushion member is not materially increased.

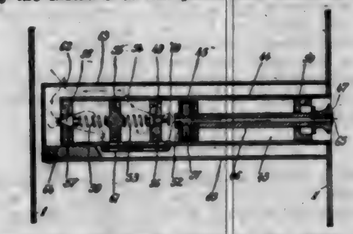
1,534,366. MIXING MACHINE FOR CONCRETE MIXTURES AND THE LIKE. HOWARD B. EVANS, Portland, Oreg. Filed Sept. 27, 1922. Serial No. 590,902. 1 Claim. (Cl. 83—73.)



In a mixing machine of the kind described, the combination with a supporting frame, supporting members thereon, a tilting-frame comprising side pieces, and opposite supporting shafts operatively connecting said side pieces and the supporting members, of means for rotating a mixing-chamber carried in the tilting-frame independently of the tilting of said frame, means for adjustably tilting the tilting-frame in opposite directions, and a compensating tensile spring attached at one end to the tilting-frame and at the other end to the supporting frame.

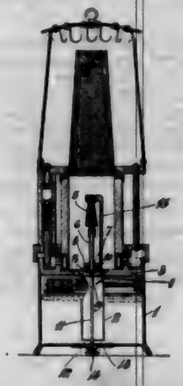
1,534,367. FIGURE TOY. FRANK A. FANUCCI, Scranton, Pa. Filed Oct. 26, 1923. Serial No. 670,900. 3 Claims. (Cl. 46—40.)

1. In a figure toy, a molded lower limb simulating element, an inflatable body element having a neck portion on one end, said inflatable body element being adapted for connection with said lower limb element, and a hollow head and neck element through which is adapted for extension the neck portion of said inflatable body element.



1,534,368. IGNITION SYSTEM FOR INTERNAL-COMBUSTION ENGINES. HOWARD E. FELLOWS, Hammersmith, London, England. Filed July 10, 1923. Serial No. 650,662. 5 Claims. (Cl. 123—145.)

1. Ignition means for explosive engines including a member provided with variable capacity explosive charge receiving means and with an inlet aperture to said means adapted to be connected with the explosion chamber of an engine, a heat retaining element effected by the amount of compression of an explosive charge contacting therewith to ignite the same, and means between said inlet aperture and said variable capacity explosive charge receiving means to vary the effective capacity of the latter.



1,534,369. AIR PUMP FOR SAFETY LAMPS. LOUIS ERNEST FRANÇOIS FERRETTE, Paris, France. Filed Nov. 21, 1923. Serial No. 676,154. 5 Claims. (Cl. 158—50.1.)

1. In a lamp, the combination, with a liquid fuel reservoir, of an air pump for placing the fuel under pressure; said pump comprising a pump casing within the reservoir having an inlet and an outlet for air, a hand-operated piston in the pump casing, a normally-closed delivery valve in said casing adapted to be opened during the instroke of the piston for admitting to the

air outlet the air forced ahead of the piston, and a normally-closed safety valve in said pump casing adapted to open automatically when the pressure in the reservoir becomes excessive.

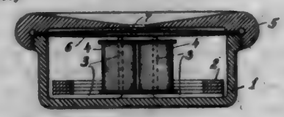
1,534,370. INCANDESCENT SAFETY LAMP FOR MINES. LOUIS ERNEST FRANÇOIS FERRETTE, Paris, France. Original application filed Feb. 17, 1922, Serial No. 537,295. Divided and this application filed Nov. 21, 1923. Serial No. 676,155. 6 Claims. (Cl. 67—73.)

1. A safety lamp, comprising a normally-open valve for controlling the supply of illuminant to the burner, adapted to move automatically into closed position when the lamp is overturned to shut off the supply; and a flexible diaphragm for supporting the valve adapted to be adjusted to vary the normal position of said valve with relation to the supply opening for the illuminant.

1,534,371. MULCH. DOZIER FINLEY, Berkeley, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Sept. 19, 1922. Serial No. 589,252. 4 Claims. (Cl. 47—9.)

1. A mulch, comprising a sheet saturated with asphaltum, said sheet containing a chemical agent possessing the qualities of killing fungus and preventing decay of the mulch.

4. A mulch comprising a felt sheet saturated with a semi-solid asphalt having a softening point ranging between 70° and 120° F., and coated with a brown asphalt having a softening point of about 200° F.



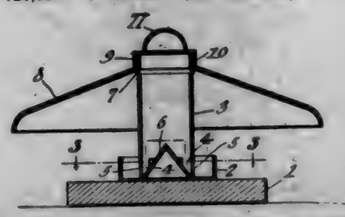
1,534,372. MULCH. DOZIER FINLEY, Berkeley, Calif., assignor to The Paraffine Companies, Inc., San Francisco, Calif., a Corporation of Delaware. Filed Sept. 19, 1922. Serial No. 589,253. 4 Claims. (Cl. 47—9.)

1. A mulch comprising a sheet saturated with a dark material possessing the quality of inhibiting the growth of micro-organic and other destructive agencies and permanently surfaced with dark pulverulent material in the form of a dust finish to increase the heat absorptive qualities of the mulch.

3. A mulch comprising a sheet saturated with a coal tar pitch and surfaced with an embedded dust finish of pulverulent carbonaceous material.

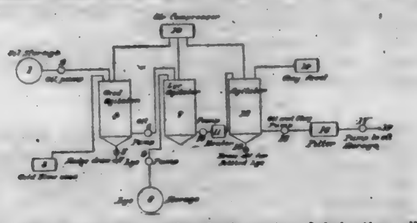
4. A mulch comprising a sheet saturated with a low carbon semi-solid tar and coated with tar having a softening point of substantially 170° Fahrenheit.

1,534,373. DIAPHRAGM FOR TELEPHONE RECEIVERS. HERMANN FISCHER, New York, N. Y., assignor to C. Brandes, Inc., a Corporation of New York. Filed Oct. 25, 1922. Serial No. 596,741. 10 Claims. (Cl. 179—116.)



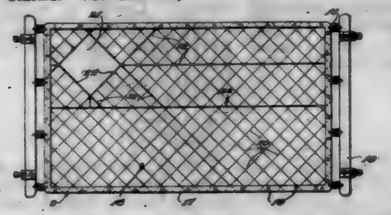
7. In a sound producing instrumentality, a pair of superposed diaphragms, one of said diaphragms being provided with an f-hole at its center portion, and means for actuating the other of said diaphragms for producing sound vibrations.

1,534,374. DRIVING SIGNAL. ARTHUR H. WANE and OSCAR H. FISHER, San Francisco, Calif. Filed Oct. 30, 1922. Serial No. 597,718. 1 Claim. (Cl. 177—329.)



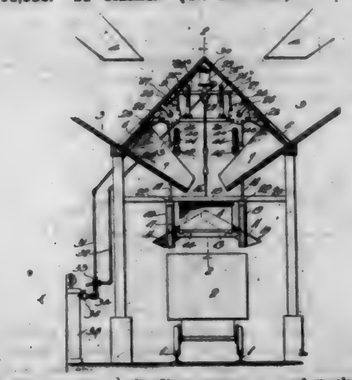
A hand signal comprising an elongated rectangular lamp casing of substantially the width of one finger of a person's hand, secured at right angles to a spring support member so shaped as to fit over the backs of three fingers and partially embrace each, whereby when the device is positioned on the backs of the extended fingers, the casing extends longitudinally along the back of one finger, a switch lever extending from one end of the casing between two fingers, the free end being in position to be operated by the thumb of the same hand, a lamp in the casing, a translucent cover for the casing and means for connecting the signal to a source of electric supply separate and apart from the device.

1,534,375. CHICKEN FEEDER. PROCTOR DUTTON FOUCHT, Topeka, Kans. Filed July 22, 1924. Serial No. 727,534. 2 Claims. (Cl. 119—52.)



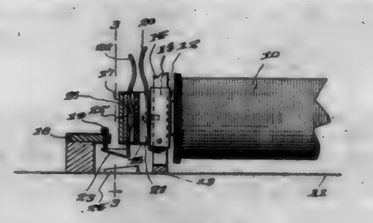
1. A chick feeder comprising a feed pan, a cylindrical hopper rising therefrom and communicating therewith, a stop carried by the upper end of said hopper, a hood having an upstanding flange encircling said hopper and resting on said stop, and a cap fitting over the upper edge of the hopper and the flange of the hood.

1,534,376. PROCESSING HYDROCARBON LUBRICATING OILS. HENRY GUY FOWLER, Associated, Calif., assignor to Associated Oil Company, San Francisco, Calif., a Corporation of California. Filed Oct. 16, 1923. Serial No. 668,817. 4 Claims. (Cl. 196—41.)



1. The process of treating hydrocarbon lubricating oils comprising initially treating the oil with sulphuric acid; then treating said acid-treated oil with alkali; then rapidly settling out from the alkali-treated oil approximately all the alkali solely by quickly heating the oil; then treating the oil with a decolorizing agent; and finally separating said decolorizing agent from the oil.

1,534,377. WINDOW GUARD. DANIEL P. FURIATE, Toledo, Ohio, assignor of one-half to George W. Zay, Tiffin, Ohio. Filed Apr. 10, 1924. Serial No. 705,587. 5 Claims. (Cl. 20—71.)



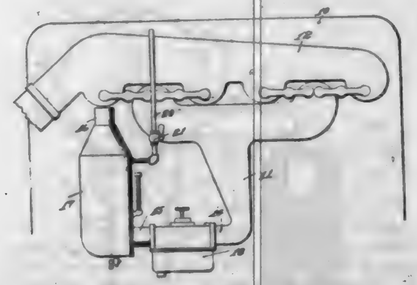
1. In a window guard, a frame, a screen stretched in said frame, means for yieldingly supporting the frame before a window; said means comprising brackets adapted to be secured around the window, said brackets having jaws, bars fitting snugly in said jaws, adjusting bolts for said bars in said jaws, and resilient elements connecting said bars with the frame.

1,534,378. CAR-LOADING MEANS. ANDREW GERMEK, Edwardsville, Pa. Filed June 5, 1924. Serial No. 718,134. 11 Claims. (Cl. 214—38.)

1. In a coal car loading means, a coal pocket at one side of a car track having a gate for controlling discharge of coal, a vertically swingable chute into which said pocket discharges when the gate is opened, said chute being adapted to direct the coal into a car to be loaded, a stationary pressure cylinder having a piston provided with a projecting piston rod, a cross arm to which said piston rod is secured, connecting means between said cross arm and said gate for opening and closing the latter, connecting means between said cross arm and said chute for lowering the latter when the gate is opened and again raising said chute when the gate is closed, and means for supplying fluid under pressure to either end of said cylinder.

1,534,379. CONTACT BREAKER. ANDREW GILBERTS, Chicago, Ill. Filed Aug. 24, 1921, Serial No. 494,815. Renewed Mar. 5, 1925. 4 Claims. (Cl. 200—80.)

1. In a make and break means for an electro-magnet, an armature mounted for movement toward and away from the magnet, a spring finger on the armature and in metallic contact therewith, an insulated member carried by the armature and having a channel therethrough, a sliding spring finger frictionally supported in the channel and movable into engagement with the first spring finger upon movement of the armature away from the magnet, and into contact therewith when the armature moves toward the magnet.



1,534,380. DUMPING GRATE. JESSE E. HANCOCK, Du Pont, Ga. Filed June 7, 1923. Serial No. 643,903. 3 Claims. (Cl. 126—162.)

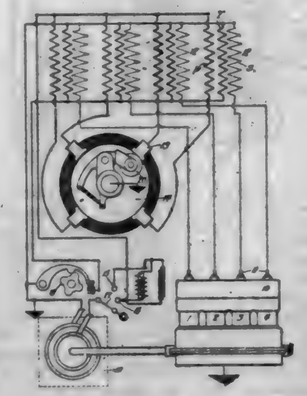
3. In a grate of the class described, a main frame, alined bearings on said main frame, a dumping frame having alined journals receivable in said bearings, arms projecting downward from said bearing, said arms being provided with a plurality of spring end receiving openings, springs engaged in selected openings in said arms, means on the main frame for securing said springs thereto under tension, other arms projecting downwardly from said journals, rocking levers pivoted to the main frame, links connecting said rocking levers and the last mentioned arms, means to hold the rocking levers in selected positions, said means each comprising a member pivoted to the main frame and movable to swing across the path of the respective rocking lever intermediate its extreme positions.

1,534,381. AIR-MOISTENING DEVICE FOR ENGINES. ROBERT H. HANNEMANN, Wausau, Wis. Filed Mar. 27, 1924. Serial No. 702,361. 2 Claims. (Cl. 123—25.)

1. The combination with an internal combustion engine, of a water receptacle, an angular conduit disposed within the receptacle and having one end extending through the side of the receptacle and connected with the carburetor of the engine, the other end of the conduit being open and disposed in close proximity to the exhaust manifold of the engine to receive heated air, a foraminous baffle in the receptacle above the water level,

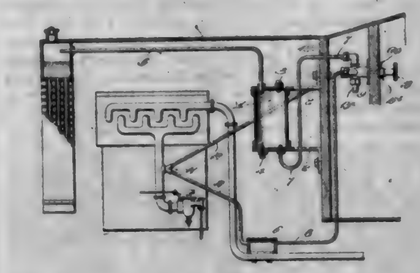
the end of the receptacle adjacent said manifold being tapered, the portion of the conduit inwardly of the said tapered end of the receptacle being perforated to draw vapor from the receptacle under the suction induced through the carburetor by the pistons of the engine.

1,534,382. SPINNING VISCOSE. JACQUES CORNRAAD HARTOGS, Arnhem, Netherlands. Filed June 30, 1924. Serial No. 723,365. 2 Claims. (Cl. 18—54.)



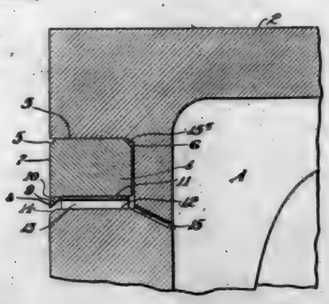
1. A process of making artificial silk or other artificial textile products which consists in spinning viscose in a bath of a dilute solution of sulphuric acid containing between 0.1 per cent and 5 per cent of nitric acid.

1,534,383. DISK WHEEL FOR VEHICLES. WILLIAM HASLAM, South Melbourne, Australia, assignor of one-half to Wilhelm Alfred Damschke, South Melbourne, Australia. Filed Apr. 10, 1924. Serial No. 705,612. 4 Claims. (Cl. 301—63.)



3. A disk wheel for vehicles comprising a disk or body member provided with an integral tire retaining bead or lip extending around its outer periphery, a circumferential groove or channel formed in the outer face of said disk immediately adjoining and concentric with said lip or bead, and pockets or recesses formed in said outer side face of the disk and opening into said groove or channel, a tire carrying rim comprising a tire seating portion of substantially flat cross section having an integral tire retaining lip or bead extending around its outer side edge and having a plain or unobstructed inner side edge adapted to freely fit into said circumferential groove or channel in the disk and to freely pass the inner circumference of the tire, lugs projecting radially inwards from said tire carrying rim at its inner side edge, said lugs being adapted to fit into said pockets or recesses of the disk, and studs outstanding from said disk within the pockets or recesses thereof, said studs passing through coinciding holes in said radial lugs of the tire carrying rim.

1,534,384. IGNITION SYSTEM. WILLIAM W. HAWKINS, Brooklyn, N. Y., assignor to Webster Electric Company, Racine, Wis., a Corporation of Wisconsin. Filed Feb. 20, 1922. Serial No. 537,985. 14 Claims. (Cl. 123—148.)



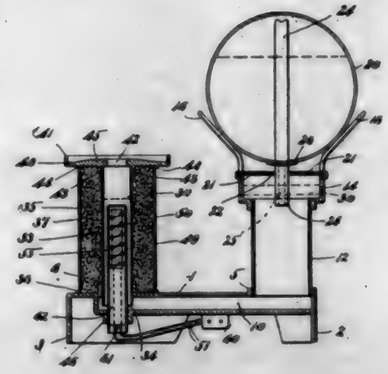
1. In an ignition system, a plurality of ignition coils each comprising a primary winding, a secondary winding in inductive relation to the primary winding, a tertiary winding from which the current traversing the primary winding is at all times excluded, said tertiary winding adapted when included in a closed circuit to neutralize the inductive effect of the primary upon the secondary, and distributor mechanism for selectively energizing said primary windings.

1,534,385. AIR AND VAPOR SUPPLYING AND CLEANING DEVICE FOR ENGINES. GEORGE W. HENKEL and ALFRED B. UPDIKE, San Francisco, Calif. Filed Aug. 16, 1923. Serial No. 657,760. 7 Claims. (Cl. 123—25.)

1. In a device of the class described, a cleaning liquid tank, a pipe communicating therewith at the upper end thereof, the free end of the pipe being adapted to communicate with a vapor supply, a superheater, piping extending from the bottom of the tank to said superheater and including a valve, a passage leading from the superheater for connection to the intake manifold of a motor, and a valve-controlled by-pass around the superheater connected at its opposite ends to said piping.

1,534,386. PISTON RING. WILLIAM R. HESLEWOOD, Oakland, Calif., assignor to M. and H. Piston Ring Co., Oakland, Calif., a Corporation of Nevada. Filed July 25, 1922. Serial No. 577,285. 2 Claims. (Cl. 74—109.)

1. The combination with a piston having a circular ring groove formed in its exterior surface, of a split circumferentially expansible ring adapted to be received by the groove, a bevelled annular surface formed on the upper edge of the ring, an annular knife like scraping edge formed on the lower exterior surface of the ring, said ring having a vertical height which is less than the vertical height of the ring groove to form a space between the lower side of the ring and the lower face of the groove, a spring ring insertible in said space and engageable with the piston ring to maintain it in constant engagement with the upper surface of the ring groove, and a drain duct formed in the piston and communicating at one end with the interior of the piston and at the opposite end with the space formed between the piston ring and the groove.



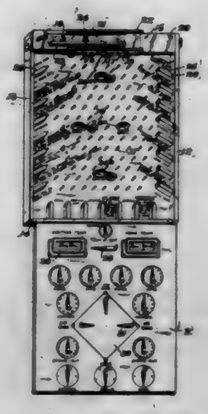
1,534,387. METHOD OF TREATING AND PREPARING YEAST. FRANK M. HILDEBRANDT and CHARLES N. FREY, Pittsburgh, Pa., assignors, by mesne assignments, to The Fleischmann Company, a Corporation of Ohio. Filed Jan. 5, 1921. Serial No. 435,237. 14 Claims. (Cl. 99—10.)

1. The method of treating yeast subsequent to propagation for enabling it better to retain its baking properties, which comprises causing a yeast product to undergo a conditioning fermentation without substantial cell multiplication with aeration in a nutrient solution containing sugar and nutrient salts, the sugar in solution being in substantially the ratio of from 2 to 5%, and then separating the conditioned yeast from the solution.

10. The method of treating yeast subsequent to propagation for enabling it better to retain its baking properties, which comprises causing a yeast product to undergo a conditioning fermentation with aeration in a nutrient solution containing sugar and nutrient salts, causing the conditioned yeast to pass into a dormant state by lowering its temperature to a point at least as low as 0° C. for a period of time sufficient to suspend the normal activity of the yeast, thereafter thawing the yeast to restore it to normal temperature, mixing cornmeal with the yeast to absorb the exuded moisture, desiccating the resultant mass, filming the yeast particles with refined mineral oil and sufficient water to make a pasty mass, and finally desiccating the pasty mass.

1,534,388. ELECTRICALLY-HEATED HUMIDIFYING APPARATUS. OLIVER D. HOGUE, Brookline, Mass. Filed May 9, 1922. Serial No. 559,668. 17 Claims. (Cl. 219—38.)

1. Humidifying apparatus, comprising a vaporising receptacle wherein a substantially constant liquid level is maintained, a liquid supplying reservoir larger than said vaporising chamber and having a corresponding liquid level, and automatic liquid supplying connections to said larger receptacle, permitting liquid supply

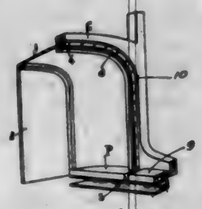


thereto without materially disturbing the maintained liquid level in the vaporising receptacle, in combination with removable electrical heating means and heat insulation means for said vaporising chamber.

1,534,389. TREATMENT OF BITUMINOUS SUBSTANCES. ALBERT C. HOLZAPFEL, New York, N. Y. Filed Apr. 30, 1923. Serial No. 635,773. 5 Claims. (Cl. 106—31.)

1. A non-inflammable roofing composition comprising a mixture of a bituminous substance and calcium chlorid.

1,534,390. GAME. EUGENE L. HORTON, San Francisco, Calif. Filed May 31, 1922. Serial No. 564,829. 7 Claims. (Cl. 273—88.)

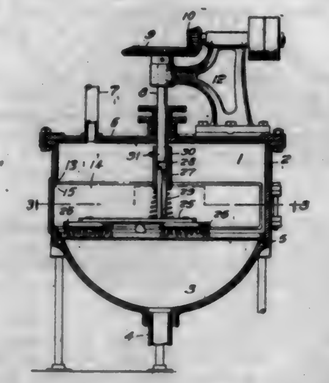


5. A baseball game comprising a board having spaced elements projecting upwardly therefrom and also having a plurality of pockets formed therein, and a runway above the base of the board at one end thereof and having perforations through which a ball may drop onto the board and roll from under said runway along the board and roll against and between said elements and enter a pocket.

1,534,391. SUPPORT FOR STRANDS OF HAIR SWITCHES. ETHEL P. HUNTON, Los Angeles, Calif. Filed Apr. 10, 1923. Serial No. 631,167. 6 Claims. (Cl. 34—36.)

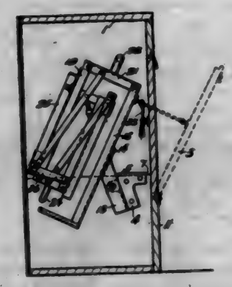
1. A holder for the strands of a hair switch comprising a body portion having a plurality of holding hooks thereon, said body portion comprising two twisted wires, said loops being formed by extending one of the strands and twisting said extended strands to form a loop.

1,534,392. WINDSHIELD HOLDER. JEAN FERNAND JANSSEN, Levallois-Perret, France. Filed July 3, 1923. Serial No. 649,317. 2 Claims. (Cl. 296—28.)



1. In an automobile, a chassis, a standard or windshield frame mounted thereon, and a cowl also mounted on the chassis and disconnected from and free to vibrate independently of the standard frame.

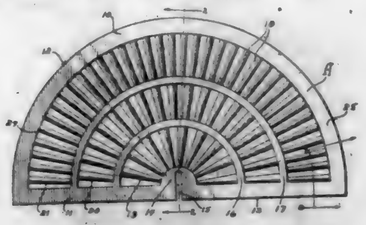
1,534,393. PROCESS OF GRINDING. HARRY F. JOSEPH, Davenport, Iowa, assignor to Micro Machine Company, Bettendorf, Iowa, a Corporation of Iowa. Original application filed May 15, 1923, Serial No. 639,141. Divided and this application filed Aug. 17, 1923. Serial No. 657,891. 6 Claims. (Cl. 51—278.)



1. The process of grinding a cylindrical internal recess which comprises rotating a spindle carrying a grinding wheel in said recess, causing a relative orbital and longitudinal movement between the wheel and cylinder, and causing a layer of liquid to move with a relatively higher speed around said cylinder in the same direction as said relative orbital movement and to spread transversely across the orbital path of the wheel.

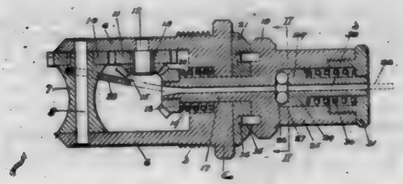
1,534,394. COLOR-SIFTING MACHINE. JULIAN KASIENKO, Rosebank, N. Y. Filed Jan. 22, 1924. Serial No. 687,889. 9 Claims. (Cl. 83—56.)

1. A color sifting machine formed with an opening to permit the bodily removal therethrough of the sifting screen, a door for said opening, means carried by said door to assist in securing the screen in place.



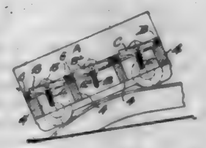
1,534,395. FOLDING BED. JOSEPH A. KELLY, Clinton, Iowa. Filed July 11, 1922. Serial No. 574,181. 3 Claims. (Cl. 5—136.)

1. A folding bed unit comprising a bed and a support therefor, cooperating hinge elements carried by said support and bed for pivotally mounting the latter, said hinge elements being formed with means for normally maintaining said bed in stable equilibrium about its pivotal axis but close to a position of instability.



2. A folding bed unit comprising a cabinet having an open front, a folding bed pivotally mounted within said cabinet and swingable relative thereto about a pivotal axis when said bed is folded, cooperating means carried by said bed and cabinet for normally maintaining said bed in stable equilibrium about said axis but close to a position of instability, a door for closing the open front of said cabinet and tractive means operatively connecting said door and the upper part of the folded bed, said means being of such length as to permit the bed to be tipped to a position of unstabled equilibrium by the opening movement of said door.

1,534,396. DRAWING INSTRUMENT. LAWRENCE YASUKICHI KIMURA, Richmond, Calif. Filed Mar. 17, 1924. Serial No. 699,904. 8 Claims. (Cl. 33—1.)

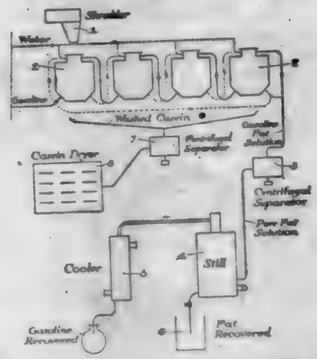


1. A drawing instrument for use in producing arcuate dotted or broken lines consisting of a body having a hub provided with a notch and radially extending spaced apart ribs formed on said hub.

1,534,397. PLUMB BOB. JOSEPH A. KLESLER, Portland, Oreg. Filed Oct. 10, 1919, Serial No. 329,783. Renewed Oct. 18, 1922. Serial No. 595,448. 2 Claims. (Cl. 33—217.)

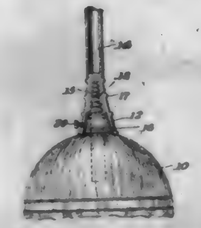
1. In a plumb bob having cord reeling means, a cap having an aperture centrally through its top, a head, a shaft on said head extending through said aperture, a tubular extension on said head opposite to the shaft, the bottom of said tubular portion being tapered inwardly, means adapted to close the outer end of said extension, there being aligned bores through said shaft and closing means, balls seated in the tapered portion of said tubular extension, and means comprising a spring and plunger adapted to cooperate with said tapered portion and closing means to urge said balls inwardly whereby to grip a bob-supporting line passed through said bores.

1,534,398. PALLET FOR SINTERING MACHINES. JOHN KNOX, Perth Amboy, N. J., assignor to Dwight Lloyd Sintering Company, New York, N. Y., a Corporation of Delaware. Filed Mar. 10, 1920. Serial No. 364,643. 24 Claims. (Cl. 266—21.)



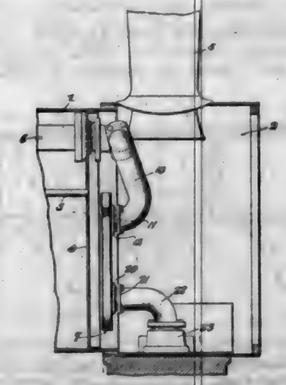
1. In an ore sintering apparatus, the combination of a track having curves in vertical planes, and a series of pallets each of which is a self-supporting unit movable bodily relatively to those adjacent to it and having a two-part apertured bottom, the two parts providing a normally flush ore-supporting surface and one part being adapted to automatically move under action of gravity relatively to the other to and from its normal position.

1,534,399. FLEXIBLE COUPLING. MCCLELLAN B. KRAFT, Spring Grove, Pa. Filed Jan. 25, 1922. Serial No. 531,754. 4 Claims. (Cl. 285—58.)



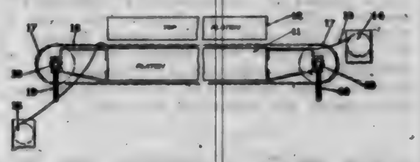
1. A flexible half coupling comprising a series of interlocking ring shaped sections, a piloting yoke, substantially as shown and described, fixed to one end of said series of ring shaped sections, and a series of contractile springs arranged around the outside of said ring shaped sections, the opposite ends of each spring being connected to the respective end ring shaped sections of said series.

1,534,400. PROCESS FOR RECOVERING FAT AND CASEIN FROM CHEESE. EDMUND KURRE and RUDOLPH E. POSPISIL, Chippewa Falls, Wis. Filed July 18, 1923. Serial No. 652,357. 2 Claims. (Cl. 87—6.)



2. The process of recovering fat and casein from waste cheese material, which consists of placing cheese in a finely divided condition in a battery of extractors and passing a fat-dissolving agent serially through said extractors, centrifugalising the fat solution obtained from the extractors to obtain a pure fat solution and separating the dissolving agent from the fat, washing the residue in the extractors with warm water and centrifugalising this washed residue to remove the casein therefrom.

1,534,401. BROOM. EDWARD D. LAPPERT, New Martinsville, W. Va. Filed Mar. 18, 1924, Serial No. 700,100. Renewed Mar. 18, 1925. 2 Claims. (Cl. 15—145.)

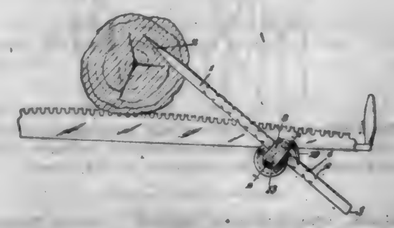


1. In a broom, a threaded member extending from the head of the broom, a handle having a threaded socket at one end thereof for detachable engagement with the threaded member and an outwardly flared apron extending from the mouth of the socket for receiving and covering the head of the broom.

1,534,402. COMBINED STEAM SUPERHEATER AND DRAFT-DISTRIBUTING DEFLECTOR. TEODORO LARREY and LUIS GODARD, Mexico City, Mexico. Filed Apr. 16, 1923. Serial No. 632,464. 6 Claims. (Cl. 122—461.)

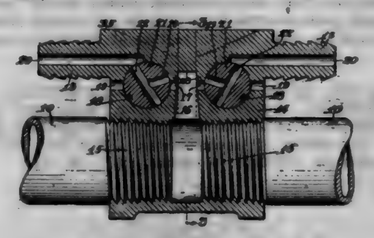
1. A steam superheater for boilers, comprising a hollow case dividing means in said case spaced from the front and rear walls thereof to form separate front and rear steam conduits or chambers, said dividing means being marginally spaced from the peripheral wall of the case to provide a communication passage between the chambers thereof; piping for supplying saturated steam from the boiler to one chamber; and piping leading from the other chamber to deliver the superheated steam from the case for use, both the supply piping and the delivery piping opening through the same side of the case.

1,534,403. STRIPPING VULCANIZED MATERIAL FROM MOLDS. FRANK J. LAWLER, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1921. Serial No. 510,926. 3 Claims. (Cl. 18—2.)



3. A device adapted to strip material from a mold comprising a freely rotatable roller means to move said roller between the material and the surface of the mold and means to maintain said roller out of contact with said surface.

1,534,404. RAZOR HOLDER. EDGAR H. LUSHER, Portland, Oreg. Filed May 28, 1924. Serial No. 716,408. 1 Claim. (Cl. 30—25.)

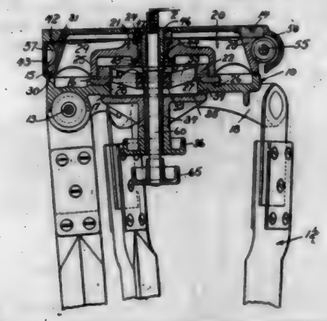


A holder for razor blades having, in combination, a somewhat elliptical elongated frame constructed of wood and split along its major axis; a pivot joining the halves of said frame near its middle, separating the handle end from its blade holding end; a fastener at the extreme end of said handle portion; and a spring clamp at the extreme end of its blade holding portion, said clamp consisting of a wire ring whose ends intersect and turn parallel along side of said holder and the tips of whose ends turn inwardly and engage holes formed in the outer sides of the blade holding end of said frame.

1,534,405. SAW SUPPORT AND GUIDE. GEORGE N. LYON, Powers, Oreg., assignor of one-half to William B. Sullivan, Powers, Oreg. Filed Aug. 11, 1923. Serial No. 656,856. 1 Claim. (Cl. 143—163.)

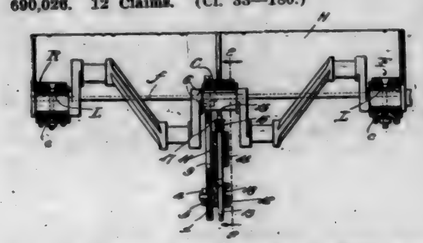
In a device of the class described, a bar having an end to be driven into a log to be sawed, a member slidable along the said bar and removable therefrom and reversible end for end, the bar having a series of notches in one longitudinal edge presented in one direction, and another series of notches presented in the opposite direction, a pawl upon the said member engageable with the notches of one series when the member is applied to the bar in one position, the pawl being engageable with notches of the other series when the said member is applied in an end-wise reversed position, and means upon the said member for supporting a saw blade for reciprocation.

1,534,406. COMBINED COUPLING AND VALVED OUTLET. JOSEPH A. MARTOCELLO, Philadelphia, Pa. Filed Dec. 8, 1921. Serial No. 519,597. 6 Claims. (Cl. 137—69.)



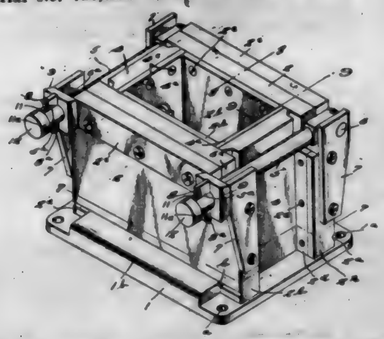
4. A valved coupling and outlet, comprising a coupling having coaxial threaded openings, one at each end to receive pipe sections and having a lateral passage, in combination with a pair of valves connected with said passage and having oppositely extending outlets from said valves parallel with the axis of the threaded connections.

1,534,407. TRIPOD HEAD. GEORGE A. MITCHELL, Los Angeles, Calif., assignor to Mitchell Camera Co., Los Angeles, Calif., a Corporation of California. Filed Feb. 23, 1921. Serial No. 447,287. 9 Claims. (Cl. 248—45.)



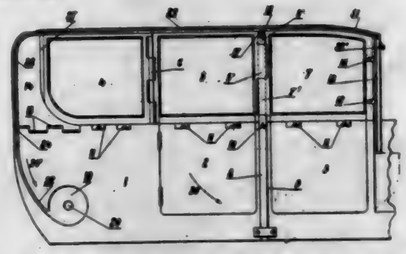
1. In a tripod head, a frame having an upwardly facing bearing surface near its center and an upwardly facing bearing surface near its periphery, and a member rotatably mounted on the frame and including two parts

vertically adjustable relative to each other, one of said parts having a downwardly facing bearing surface adapted to bear on the bearing surface near the center



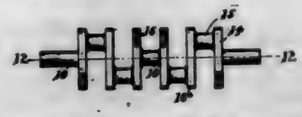
of the frame and the other of said parts having a downwardly facing bearing surface adapted to bear on the bearing surface near the periphery of the frame.

1,534,408. CRANK-SHAFT TESTER. JOHN F. PARROTT, East Moline, Ill. Filed Feb. 1, 1924. Serial No. 690,026. 12 Claims. (Cl. 33—180.)



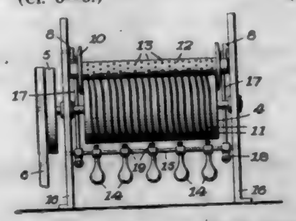
1. A crank shaft tester comprising a support to extend under a motor when the lower half of the crank case is removed, said support having attaching means for engagement with the usual flanges of the upper crank case half, and indicating means carried by said support and provided with a shoe to contact with an intermediate main bearing portion of the crank shaft.

1,534,409. MOLD FOR MAKING HARD-RUBBER CONTAINERS. JOSEPH E. PERRAULT, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed July 16, 1924. Serial No. 726,342. 9 Claims. (Cl. 18—36.)



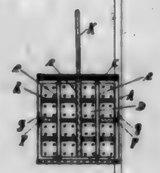
1. In a mold of the character described, a bottom plate having flanges along two of its opposite sides, a removable bottom mold face member carried by said bottom plate and of less width than the distance between said flanges, removable side plates having their lower ends seated in said grooves, end plates adapted to rest upon the bottom plate between said side plates, and means for drawing said side plates towards each other.

1,534,410. CONVERTIBLE VEHICLE BODY. RAYMOND ANDRÉ JACQUES PLANTUREUX, Paris, France. Filed June 18, 1923. Serial No. 646,268. 2 Claims. (Cl. 296—98.)



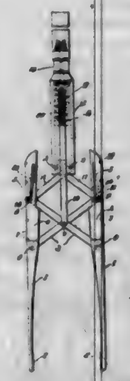
1. In a convertible vehicle body suitable for motor vehicles, a rear frame, permanent side walls on each side of the vehicle and supporting the frame, two upright solid removably attached members in the rear frame and forming the rear thereof on each side of the vehicle, and means binging the solid members to the top of the permanent side walls and permitting the solid members to be brought down horizontally to form the rear arm and elbow rests of the rear seat.

1,534,411. METHOD AND MEANS OF COUNTERBALANCING CRANKSHAFTS. LYMAN J. POTTER, San Francisco, Calif. Filed Jan. 3, 1924. Serial No. 684,268. 6 Claims. (Cl. 22—203.)



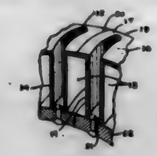
1. A method of counterbalancing crankshafts which comprises filling the space between the webs of the crankshaft and rigid circular bands arranged about the webs concentric with respect to the axis of the crankshafts with material in a fluid condition, and then permitting said material to harden to form a rigid bond between said bands and said webs.

1,534,412. METHOD OF HANDLING YARN AND MACHINE THEREFOR. ARTHUR L. REMINGTON, Worcester, Mass., assignor to Warp Compressing Machine Company, Worcester, Mass., a Corporation of Massachusetts. Filed Aug. 28, 1919. Serial No. 320,505. 5 Claims. (Cl. 8—5.)



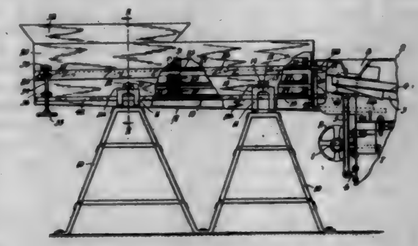
4. A method of preparing yarn which consists in first winding a plurality of ends of yarn upon a jack spool, then transferring the yarn to a dummy spool with a traversing motion, whereby to produce a loose package comprising superimposed layers of yarn crossing each other, then dyeing the yarn on the dummy spool and finally in rewinding the yarn compactly upon the jack spool.

1,534,413. APPARATUS FOR BOILING AND WASHING LINEN. JEAN RENSON, Brussels, Belgium. Filed Aug. 5, 1924. Serial No. 730,239. 1 Claim. (Cl. 68—30.)



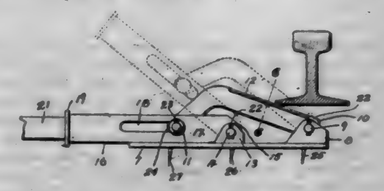
Improved apparatus for boiling and washing linen, comprising in combination: a vessel with removably slotted lid; a normally vertical oscillatory sprayer arranged within said vessel and having two central lateral trunnions removably supported in bearings fitted inside the vessel, the said sprayer consisting of two riveted metal sheets provided with reinforcing ribs and with parallel grooves forming a series of vertical tubular passages by juxtaposition of said sheets, the latter having their plane surfaces perforated; an operating handle inserted centrally in one of the vertical tubular passages and projecting through the slot in the lid of the vessel; and a false bottom fitted in said vessel and having perforations formed therein at the periphery and under the sprayer, substantially as described.

1,534,414. FISHING TOOL. THERON M. ROGERS and JOHN L. KNIFFEN, Fellows, Calif. Filed Nov. 5, 1923. Serial No. 672,764. 9 Claims. (Cl. 294—86.)



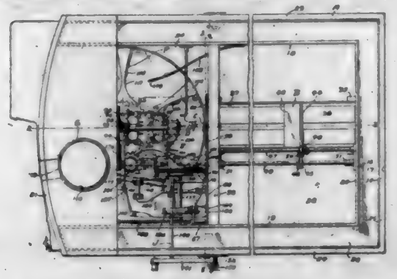
1. A fishing tool adapted to be lowered down a well hole for recovering lost parts therein, comprising opposed gripper members, said members extending in substantially a vertical direction, and means operative from the top of the well for opening and closing said gripper members while maintaining the same substantially vertical.

1,534,415. TURBINE BLADE. HENRY F. SCHMIDT, Lansdowne, Pa., assignor to Westinghouse Electric & Manufacturing Company, a Corporation of Pennsylvania. Filed July 7, 1924. Serial No. 724,562. 11 Claims. (Cl. 253—77.)



1. A one-piece turbine blade comprising a hollow blade portion and an integral flange portion thereon forming a shroud.

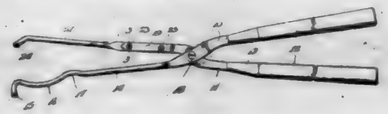
1,534,416. STARCH-CLEANING MACHINE. FRANK M. SCHULER, Winona, Minn. Filed Dec. 31, 1923. Serial No. 683,824. 19 Claims. (Cl. 107—44.)



4. A starch and candy separating and starch cleaning machine comprising a casing having a sieve bottom of comparatively large mesh, a chute beneath said bottom, a plurality of screens of much smaller mesh supported in said casing closely adjacent said bottom, said screens being arranged for longitudinal movement in said casing, a plurality of screens disposed in said casing for longitudinal movement thereof above said first mentioned screens and of larger mesh than the first mentioned screens, and means for longitudinally reciprocating said casing and screens.

1,534,417. TRACK LINER. FRANK R. SINNING, Ramsey, Ill. Filed Nov. 19, 1924. Serial No. 750,769. 4 Claims. (Cl. 254—44.)

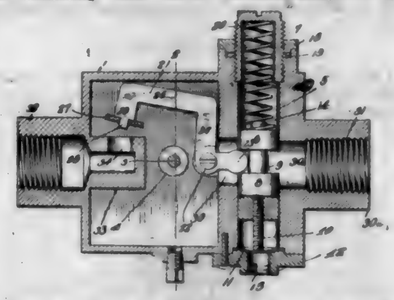
4. A track liner comprising a base, a rail engaging lever pivotally secured at its forward end to said base, a socket lever having its forward end pivotally secured to said base and to the rear of the rail engaging lever; the points of pivotal connection between said rail engaging lever and said socket lever and the base being immovable, and a sliding pivotal connection between the free end of the rail engaging lever and the socket lever whereby the angle of inclination of the rail engaging lever with respect to the base can be varied by the raising of the socket lever.



1,534,418. BUTTER CHIPPER. ALBERT SLATER, Fargo, N. Dak. Filed June 27, 1922. Serial No. 571,144. 10 Claims. (Cl. 31—6.)

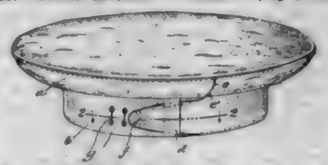
1. A butter cutting and dispensing machine comprising means for receiving a cake of butter, a cutting mechanism, means for periodically feeding the butter forwardly to the cutting means, means for receiving the butter after the same has been cut, means for feeding butter plates past the cutting means, and means for dropping the butter cut from the receiving means onto said butter plates.

19. In a butter chip cutting and dispensing machine, means for cutting butter into chips, a turn table for movement past the butter chip cutting means, a chute for supplying butter plates to the turn table, and means for delivering the butter plates one at a time at predetermined intervals to the turn table including a pair of oppositely disposed arms, each of said arms consisting of upper and lower parallel disposed bars, between which a plate is adapted to rest, pivoted studs disposed at the ends of the arms and between the parallel bars, bearings engaging in the studs, rearwardly extending levers connected with the arms, a slot and pin connection connecting the inner ends of the levers together, an operating shaft, a crank carried by the operating shaft, a link pivotally secured to the outer end of the crank, and means operatively connecting the link with one of the levers carried by said rocking arms.



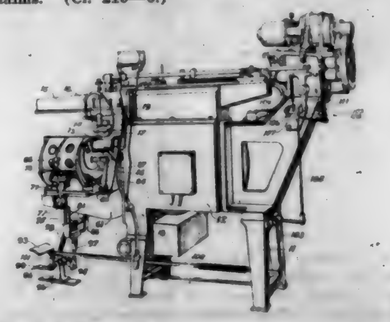
1,534,419. OBSTETRICAL FORCEPS. GEORGE SMITH, Mullen, Nebr. Filed Aug. 7, 1923. Serial No. 656,265. 1 Claim. (Cl. 128—324.)

In an obstetrical forceps, the combination of crossed pivotally connected levers having a permanently located pivotal center, one of said levers being bifurcated to form a jaw having spaced sides, the other lever extending between the sides of said jaw and being pivoted thereon, and a jaw detachably mounted upon the forward end of the latter lever to cooperate with said first mentioned jaw and having spaced sides receivable between the sides of the former jaw, the former jaw being substantially twice the length of the latter jaw and the sides of the jaws being connected at their outer ends by loops extending laterally in a common direction with respect to the jaws.



1,534,420. REGULATING VALVE. J HARLEY SMITH, San Francisco, Calif. Filed Apr. 8, 1924. Serial No. 704,999. 3 Claims. (Cl. 50—11.)

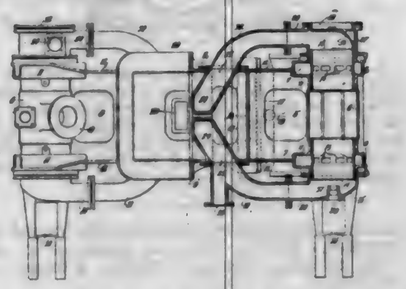
1. A device of the class described comprising a housing having two openings leading therefrom, valves connected to control said openings, a bell crank mounted for actuating said valves simultaneously, a spring



mounted to move said bell crank in one direction, and pressure controlled means connected to move it in the opposite direction.

1,534,421. HAT. RAYMOND SMITH, New York, N. Y., assignor to Bella Smith, New York, N. Y. Filed Oct. 2, 1923. Serial 666,063. 1 Claim. (Cl. 2—197.)

In a hat having a stiff head band and a lining therefor, open ends formed in the band, a pocket in the lining to receive one of said ends in telescoping engagement, the other end being adapted to overlie the outer surface of the band, a loop on the band through which the last named end passes, a fastener secured on the inner side of the last named end, co-operating fastening means sewed to the outer surface of the head band at a point beyond the loop for engagement selectively by said fastening device on the end for regulation of the size of the head band, and a seam in the crown open for an appreciable distance above the head band in proximity to the overlying ends, the side of said seam being disposed in overlapping relation.

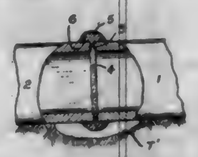


1,534,422. HOLDING FIXTURE FOR ELECTRIC WELDING OF SIDE SEAMS OF CONTAINER BODIES. WARREN A. SMITH, Geneva, and MAGNUS E. WIDELL, Maywood, Ill., assignors to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed Feb. 28, 1921. Serial No. 448,628. 11 Claims. (Cl. 219—6.)

1. In an apparatus for securing together the edges of a metal sheet to form a cylindrical body, the combination of a horn upon which the edges to be joined are

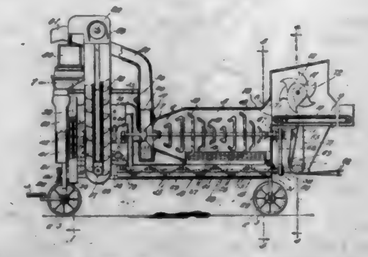
to be suitably arranged and means maintaining the longitudinal edges of the sheet flat and arranging an edge on said horn and progressively wrapping said sheet about said horn to bring the other edge into predetermined relation with said first mentioned edge.

1,534,423. LOCOMOTIVE SADDLE STRUCTURE. HERBERT W. SNYDER and ALBERT J. TOWNSEND, Lima, Ohio. Filed Dec. 18, 1922. Serial No. 607,517. 10 Claims. (Cl. 105—44.)



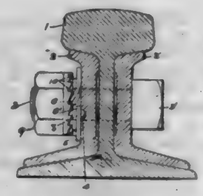
7. A locomotive saddle structure having passages for combining the exhaust steam from the main cylinder ends, with means for conveying the exhaust to said passages having a connection for admitting exhaust steam from other cylinders into the saddle along with that from the main cylinder.

1,534,424. SHOCK ABSORBER FOR VEHICLES. HUGO W. STARK and THOMAS D. REESE, Cupertino, Calif. Filed Dec. 5, 1921. Serial No. 519,848. 1 Claim. (Cl. 267—17.)



The combination with an axle supported leaf spring of a vehicle, of a lever pivoted intermediate its ends to the end of the spring, shackles connecting one end of the lever with the vehicle frame, said lever having side plates lying on opposite sides of the leaf spring, a seat connecting the side plates together below the spring, a pin extending through said seat into engagement with said spring and a coiled spring surrounding said pin and pressing it against said leaf spring.

1,534,425. PIPE JOINT. AUGUSTUS H. STOWELL, Spokane, Wash. Filed Apr. 7, 1923. Serial No. 630,537. 1 Claim. (Cl. 285—111.)

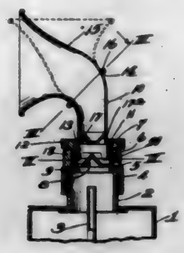


A joint comprising spaced pipe sections each having a smooth exterior face and a coating of asphaltum thereon, the adjoining ends of said pipes having beveled faces to form an opening wedge shaped in cross section, a filling of cement in said opening, and an exterior band of cement integral with said filling embedded in the asphaltum coatings.

1,534,426. CENTRIFUGAL THRASHING MACHINE. HOMER L. STRONG and THOMAS E. FORSTER, Wichita, Kans. Filed Mar. 11, 1924. Serial No. 698,585. 11 Claims. (Cl. 130—27.)

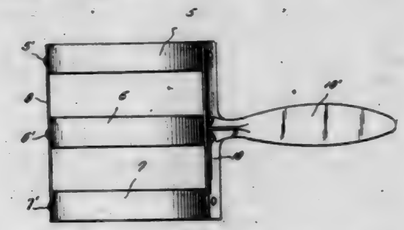
1. In a thrashing machine, the combination of a thrashing chamber having an unthreshed grain inlet at its front and a straw and chaff outlet in its rear end, said chamber also having a threshed grain outlet, rotary thrashing means mounted in said chamber, a grain cleaning device positioned in rear of said chamber, means to convey the threshed grain from the threshed grain outlet of said chamber to said device, the front of said device having a chaff outlet, a fan housing positioned between said chamber and said device and having inlets communicating with the straw and chaff outlet of said chamber and the chaff outlet of said device, and a suction fan mounted in said housing.

1,534,427. WASHER FOR NUT LOCKS. WILLIAM H. TICE, Seaside, Oreg. Filed Mar. 8, 1924. Serial No. 697,875. 2 Claims. (Cl. 151—13.)



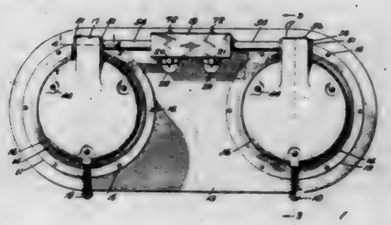
1. In a nut-locking device, the illustrated washer 5 having a hub, an integral rim on the hub with opposing integral, peripheral tongues in the rim, the surface of one end of the hub being flush with one surface of the rim and of the tongues if in alignment, the surface of the opposite end of the hub being at a convenient distance beyond the opposite surface of the rim and of the tongues if in alignment, one of said tongues having a rounded lug on its surface, the other tongue being sprung outwardly so that its free end extends slightly beyond the last mentioned surface of the hub, the said washer being arranged and adapted for the aforesaid tongue lug to engage an opposing recess and retain the washer in a fixed position, the free end of the other tongue to engage a conveniently disposed place of contact in the lower surface of a nut of common type.

1,534,428. RADIATOR FILLING AND COOLING CAP. EUGENE TOMLINSON, Kansas City, Kans. Filed June 5, 1922. Serial No. 565,825. 1 Claim. (Cl. 220—86.)



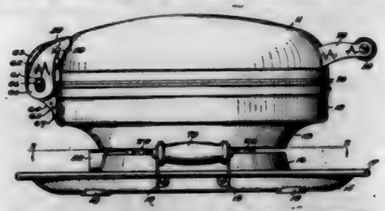
The combination with an automobile radiator nipple, of an extension threaded thereon and of reduced diameter and threaded at its upper end, a downwardly opening funnel in the upper end of said extension, a conical

deflector in the lower end of said extension and alined with the full opening and formed with a series of perforations surrounding its base, a filling member resting



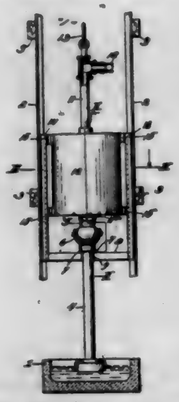
on the upper end of the extension, and a collar securing said filling member in position and having threaded engagement with the upper end of said extension.

1,534,429. JAR HOLDER. THOMAS H. TRIPLETT, Patterson, N. C. Filed July 2, 1924. Serial No. 723,756. 1 Claim. (Cl. 81—3.2.)



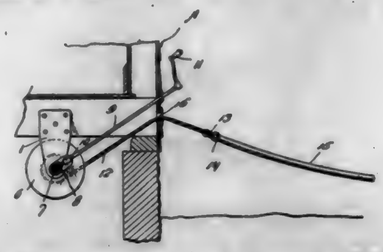
A jar holder comprising a pair of strips each having a handle located at a point intermediate its ends, a pair of bands disposed transversely of the strips, one end of one band being attached to one strip and an intermediate portion to the other strip, one end of the other band being attached to the other strip and an intermediate portion to the first strip, the portions of the bands extending from the attached intermediate portions overlapping the strips to which their ends are attached.

1,534,430. WAFFLE IRON. GEORGE F. WELLS, San Francisco, Calif., assignor to Wells Manufacturing Co., San Francisco, Calif., a Corporation of California. Filed July 17, 1923. Serial No. 652,084. 10 Claims. (Cl. 219—19.)



1. In an electrically heated cooking device, a metallic member to which heat is to be imparted, a support for said member, said support providing a supporting surface near the edge of the metallic member, an insulating ring-like gasket disposed between the support and the member, and means for fastening them together.

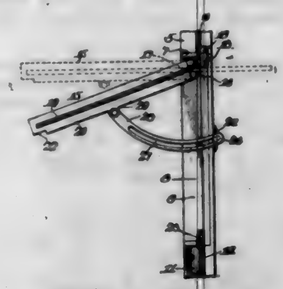
1,534,431. ELECTRIC WAFFLE IRON. GEORGE F. WELLS, San Francisco, Calif. Filed May 10, 1924. Serial No. 712,419. 15 Claims. (Cl. 219—19.)



1. In an electrical cooking utensil, a metallic supporting base having depending side portions serving as rests for the base, a metallic member in which the cooking is to be performed, a heating element for said member, and means for supporting the metallic member on the base in such manner that there is substantially an uninterrupted air space between them.

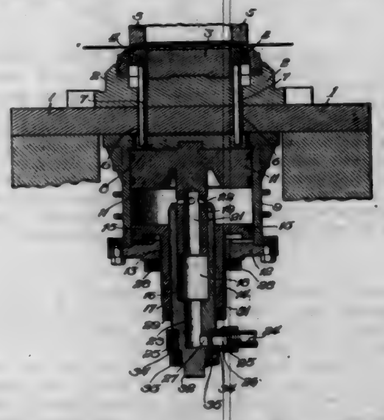
1,534,432. APPARATUS FOR DRAWING GLASS CYLINDERS. WILLIAM WESTBURY, Elmira, N. Y. Filed Aug. 25, 1924. Serial No. 733,956. 4 Claims. (Cl. 49—17.1.)

1. A glass drawing apparatus, comprising a molten glass container, means for supplying air under pressure, a holder to receive such air, a bait detachably depending from and communicating with the holder, and means for raising and lowering the holder and bait.



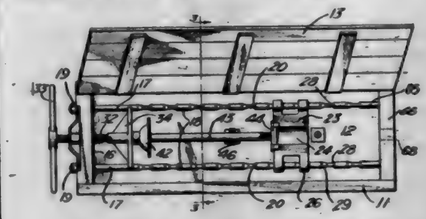
1,534,433. HOSE REEL. CHARLES M. WHITE, Fort Dodge, Iowa. Filed Sept. 22, 1924. Serial No. 739,179. 1 Claim. (Cl. 242—86.)

A hose reel comprising a pair of supporting brackets adapted to be secured to a pair of floor joists of a building, a shaft journaled between the lower ends of the brackets, a reel carried by the shaft, a cable secured



at one end to said reel, means on the other end thereof for attachment to one end of a hose, a beveled gear on one end of said shaft, an operating rod extending outwardly from the supporting bracket beyond the outside of the building, a beveled gear on the lower end thereof adapted to mesh with the aforementioned beveled gear, and a handle on the outer end of the rod for rotating the same whereby the reel is rotated and the hose is wound therearound.

1,534,434. WINDOW FOR LOCOMOTIVE CABS. OKE S. WIBERG, Chicago, Ill. Filed Nov. 12, 1924. Serial No. 749,434. 3 Claims. (Cl. 20—53.)



1. The combination in a locomotive cab and window therefor, of a sash mounted at its top in the frame of the window, said sash being open at its bottom and having a top horizontal and slotted rail pivotally mounted in said frame and provided on the inner surface of each of its sides with a groove in communication at one of its ends with said slot, each groove having its lower end closed, a glass pane removably located in said grooves and slot, and stopping means on said frame arranged to prevent the removal of said glass pane until the sash shall have been turned on its pivots to a predetermined point.

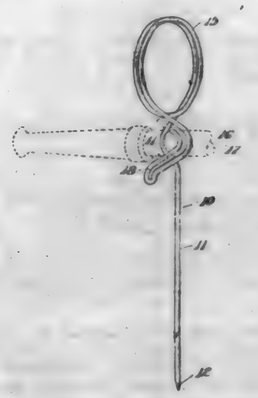
1,534,435. ADJUSTABLE AIR CUSHION FOR DRAWING DIES. MAGNUS E. WIDELL, Maywood, Ill., assignor to American Can Company, New York, N. Y., a Corporation of New Jersey. Filed May 7, 1920. Serial No. 379,473. 12 Claims. (Cl. 113—46.)

1. In a die press having dies for drawing metal articles, a descending die member and a yieldingly supported companion member, said yielding support for said die member including means forming an air cushion beneath the die and provided with outlet ports which are closed by the movement of the die, and means operated by the die movement for controlling the pressure of said cushion as the drawing action proceeds.

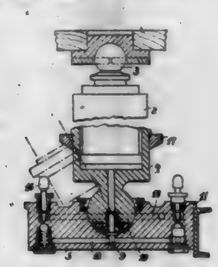
1,534,436. BENCH ARBOR PRESS. EDWIN F. WILKINSON, Los Angeles, Calif. Filed June 24, 1922. Serial No. 570,548. 9 Claims. (Cl. 29—85.)

1. In an article of the class described, the combination of: a bench having a covered recess; an anvil disposed within said recess; a crosshead horizontally movable within said recess; and a screw for forcibly moving said crosshead toward or away from said anvil.

1,534,437. SUPPORT FOR TENNIS AND LIKE NETS. HERBERT LEE WRIGHT, Birmingham, England. Filed Jan. 27, 1925. Serial No. 5,161. 13 Claims. (Cl. 273—29.)



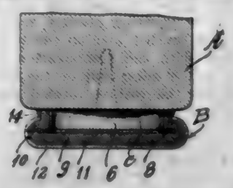
1. A support for tennis nets comprising a base fixedly mounted with respect to the ground, a post mounted on said base so as to rotate therein, means for rotating the post, means for securing the end of a cord to the post whereby rotation of the post will wind the cord thereon and draw it taut, and flanges on the post forming a narrow groove for accommodating the cord whereby its height on the post will not be altered as it is wound thereon, the lateral pull by the cord when taut causing sufficient friction between the post and its mounting in the base to prevent undesired rotation.



1,534,438. GARDEN-HOSE SUPPORT. WARREN L. ABBY, Watsonville, Calif. Filed Aug. 11, 1924. Serial No. 731,868. 1 Claim. (Cl. 248—29.)

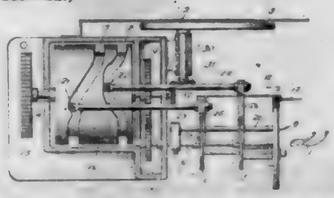
A hose support formed of a single length of wire bent to form a shank, a semi-circular jaw formed at one end of said shank, a helically wound handle of comparatively large diameter formed as a continuation of said jaw, the end of the wire forming the handle being bent to form one half of a semi-circular clamping jaw disposed opposite the other jaw for co-operation therewith, the end of the wire continuing past the jaw on the

shank and then bent back upon itself parallel to the first half of the clamping jaw to form the second half of the clamping jaw, said halves of the clamping jaw being disposed upon opposite sides of the jaw on the shank, the inherent spreading tendency of said handle causing said jaws to yieldingly grip a hose inserted therebetween.



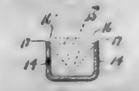
1,534,439. HYDRAULIC TILTING DEVICE. HANS BURKHARDT, Zollbruck, and ERNST WIRS, Stafa, Switzerland. Filed July 10, 1923. Serial No. 650,724. 2 Claims. (Cl. 298—22.)

1. A hydraulic tilting device for motor lorries comprising in combination a hydraulic jack, a ball joint at the lower end of said jack having a bore for the fluid under pressure and a stationary ball socket for said ball having bores for the inflow and outflow of the fluid under pressure and valves in said bores of the ball socket, a plunger for each of said valves and an annular collar on said press near the lower end designed to act on said plungers for opening the corresponding valve when said jack cylinder is in the inclined position.



1,534,440. GLIDER FOR FURNITURE LEGS AND THE LIKE. EDWARD B. CARTER, San Francisco, Calif., assignor, by direct and mesne assignments, of one-half to Aubrey B. Shapard, San Francisco, Calif., and one-half to Drake Lock Nut Company, San Francisco, Calif., a Corporation of California. Filed Dec. 21, 1921, Serial No. 523,976. Renewed Feb. 12, 1924. 7 Claims. (Cl. 16—42.)

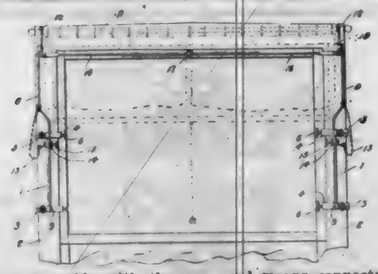
7. A glider or tip for furniture legs, comprising a metallic bowl-shaped cap, a rubber cushion inserted therein and having a rim projecting above the rim of the metallic bowl, a cup-shaped metallic member resting on the rubber cushion and having a flange at its base whereby the rim of the bowl may be crimped inwardly



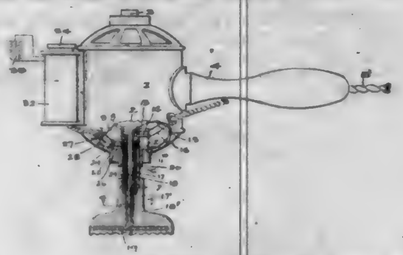
to a diameter less than that of the flange, so as to lock the parts together, and means carried by said metallic cup-shaped member for attachment to the furniture leg.

1,534,441. KNOT-TYING MECHANISM FOR USE IN WARP-TYING. JOSEPH COVELESKIE, Wilkes-Barre, Pa. Filed Aug. 1, 1923. Serial No. 655,116. 5 Claims. (Cl. 289—12.)

3. A combined knot tying and waste-end cutting mechanism for threads and the like, comprising means for forming a loop intermediate the ends of the threads, a reciprocating split hook adapted to draw the waste ends of the threads through the loop to form a knot, and a knife extending transversely through the split hook, but not reciprocable therewith, whereby when the knot is formed the waste ends of the threads are simultaneously cut off in the same operation.



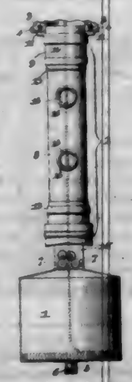
1,534,442. GEM SETTING. JOSEPH F. DONAHUE, Providence, R. I. Filed Dec. 10, 1921. Serial No. 521,508. 2 Claims. (Cl. 63—28.)



1. A gem-setting comprising a continuous seamless integral channel frame formed of sheet stock with a bottom portion and two opposite substantial parallel bendable side walls standing upwardly therefrom forming a continuous channel, whereby gems of varying diameters may be longitudinally adjusted while being set to cause their margins to closely abut, the edges of said walls being provided with a continuous beveled seat for the gems, the thin edges of said beveled walls being adapted to be folded over the edges of the gems to bind them in their different set positions in the setting.

1,534,443. CURTAIN HOLDER. THOMAS E. FARMER, Stockett, Mont., assignor of one-half to Italo Chelotti, Stockett, Mont. Filed Apr. 6, 1923. Serial No. 630,275. 3 Claims. (Cl. 156—22.)

1. A curtain fixture of the character specified, consisting of a bar, attaching clamps therefor engageable with a window frame disposed adjacent opposite ends thereof and at right angles thereto, each clamp having one of its sections as an integral part of said bar, a curtain supporting arm pivoted for swinging movement relatively to said bar, and means to normally hold said arm in operative position and against pivotal movement relatively to the bar consisting of a clip carried by the bar intermediate said clamps and having a clamp element engageable with the arm, and means connected to the clip and to the arm to limit the pivotal movement of the latter.



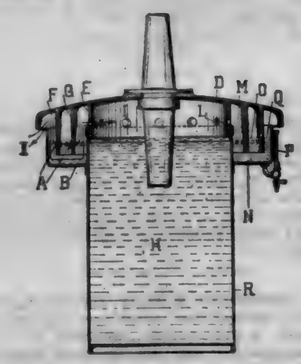
1,534,444. MASSAGE INSTRUMENT. ALBERT FELDHEYM, San Francisco, Calif. Filed July 25, 1923. Serial No. 653,684. 1 Claim. (Cl. 174—177.)

A device such as described, comprising a motor having an extended armature shaft; a source of electric current connected to said motor; an applicator detachably secured to said shaft; means in said applicator connected to said source of electric current for heating said applicator; and exposed positive and negative terminals on said applicator connected to said source of electric supply for passing faradic current to any surface with which said applicator terminals contact.

1,534,445. FABRIC RECEIVER FOR KNITTING MACHINES. GEORGE W. FITTING, Millville, N. J. Filed June 2, 1919, Serial No. 301,266. Renewed Sept. 16, 1924. 7 Claims. (Cl. 66—9.)

1. A fabric receiver for circular knitting machines adapted to move with the needle cylinder comprising a tube of transparent material through which the condition of the fabric is at all times visible to the operative.

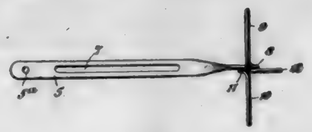
1,534,446. METHOD OF PREPARING METALS FOR PAINTING. JAMES H. GRAVELL, Elkins Park, Pa. Filed Apr. 29, 1920. Serial No. 377,447. 1 Claim. (Cl. 148—8.)



The method of preparing oiled steel for painting which consists in simultaneously chemically etching the surface and emulsifying the oil on the surface, and removing the products of the etching and emulsifying by washing the treated surface of the metal with water.

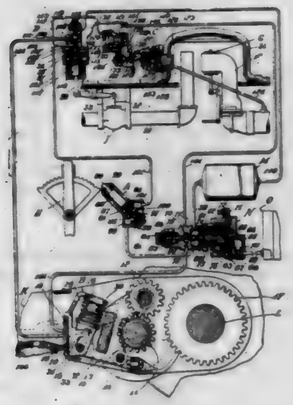
1,534,447. CENTER STRAP FOR TENNIS NETS. SAMUEL HARDY, Hoboken, N. J., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed July 10, 1922. Serial No. 574,020. 1 Claim. (Cl. 273—29.)

In combination with the center strap for a tennis net formed as an endless band, a buckle to secure the free ends of the bands adjustably together, a hook having a slotted base through which the strap is loosely passed, a vertical shank for the hook swiveled in the base with its axis substantially in line with the median line of the strap to permit the strap to revolve about its axis without twisting, and a snaffle to close the hook.



1,534,448. OIL CONTAINER FOR ELECTRIC APPARATUS. ERNST HAUSER, Schaffhausen, Switzerland. Filed Aug. 11, 1921. Serial No. 491,460. 4 Claims. (Cl. 220—85.)

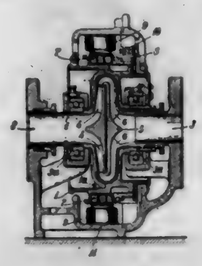
1. An oil container and a stationary cover between which cover and the oil in the container is included an air space; in combination with an air filter arranged around the joint between said container and stationary



cover, and an absorbent of moisture contained in said filter, said filter having means to compel the air passing into the container to pass through said absorbent and means to provide an emergency passage for a large volume of air from the interior of the container through the filter to the outside.

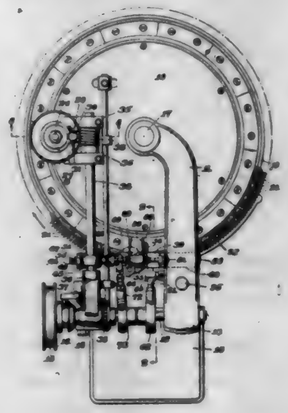
1,534,449. SNOW GUARD. BYRON A. HUDSON, Woonsocket, R. I. Filed Feb. 14, 1924. Serial No. 692,777. 2 Claims. (Cl. 108—27.)

1. In a guard for the purpose set forth, the combination of a single piece of bendable material having a slot in the body thereof and an aperture in rear of the slot; said material being provided with an upstanding loop that terminates in a portion that rests flat with respect to the body.



1,534,450. CONTROLLING MECHANISM FOR BOOSTER MOTORS. HOWARD L. INGERSOLL, Pound Ridge, N. Y. Filed Oct. 15, 1920. Serial No. 417,214. 17 Claims. (Cl. 105—48.)

1. In combination with the main driving means of a steam propelled locomotive and a booster motor for aiding the main driving means in starting the locomotive and propelling the same at low speeds; pressure controlled means actuated from the cylinder of the main driving means which operates, when subjected to pressure above a given pressure, to put the booster motor out of operation.



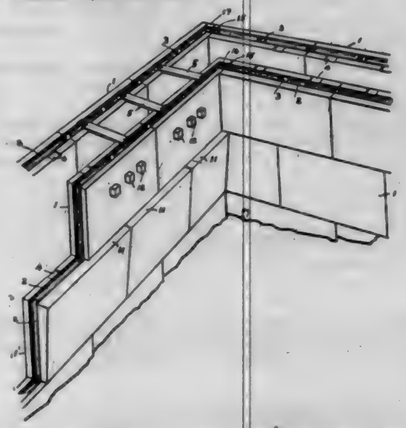
1,534,451. COMBINED ROTARY UNIT. FRANZ KAUTZ, Zurich, Switzerland. Filed Apr. 11, 1922. Serial No. 551,708. 2 Claims. (Cl. 103—87.)

1. The combination with the electrical parts of an electric motor including a stator, a stator frame and a rotor within said stator; of a pump casing concentric with an forming part of said rotor, tubular extensions integral with said casing, bearings accessible from the outside and interposed between said stator frame and said tubular extensions for rotatably mounting said rotor, and a blade for fluid within said pump casing, said tubular extensions having a length relatively to the width

of the electrical parts of said rotor that any leakage water splashed by centrifugal action clears said electrical parts.

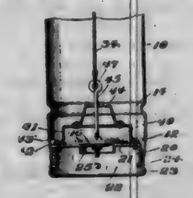
1,534,452. MACHINE FOR UNITING LOOPED FABRICS. GEORGE KEYSER, Philadelphia, Pa., assignor of one-half to John W. Hepworth, Philadelphia, Pa. Filed Dec. 20, 1922. Serial No. 607,957. 20 Claims. (Cl. 112—25.)

1. In a machine for uniting looped fabrics, the combination of a supporting frame, a ring provided with impaling pins for carrying the fabrics to be united, means to revolve said ring continuously, a reciprocative support, a sewing needle carried by the support and movable thereon, a looper carried by the support and movable thereon, means to move the needle and the looper relatively to each other and to the support carrying them to produce stitches, and means to reciprocate the support laterally of the impaling pins passing the needle during the stitch producing operations and to cause the needle to meet and move in registry with an impaling pin at each reciprocation of the support, causing the needle and the looper to follow the line of travel of the fabric when the needle is in the loops thereof.



1,534,453. WATER COOLER FOR LOCOMOTIVES. CONRAD KOHLER, Zurich, Switzerland. Filed Dec. 13, 1921. Serial No. 522,106. 2 Claims. (Cl. 261—118.)

1. In a water cooling installation for condensing plants of steam driven vehicles, a plurality of successive air channels disposed longitudinally, means to supply water to be cooled by evaporation to each of said channels, deflecting means at the discharge end of one of the channels to deflect moisture laden air past the

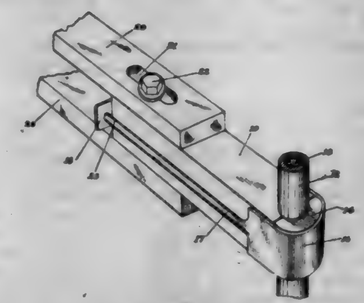


entrance to the next succeeding channel and to direct air for evaporation into the entrance to said next succeeding channel.

1,534,454. BUILDING WALL. JAMES P. LEWIS, Oakland, Calif. Filed Nov. 5, 1923. Serial No. 672,930. 3 Claims. (Cl. 72—44.)

1. A hollow wall comprising blocks having a groove extending around all of the edges, said blocks being laid in edge to edge relation in spaced rows with the grooves of the blocks in each row aligning to form a mortar receiving enclosed passage, and combined spacing and tying means extending between the rows engaging the inner walls of the aligned grooves in adjacent blocks in both rows and being formed to preserve a free channel through the enclosed passage.

1,534,455. DRILLED OR BORED WELL BUCKET. KNEUD E. LITTLE, Tahlequah, Okla., assignor to Horace Vickery Little, Pasadena, Calif. Filed May 13, 1922. Serial No. 560,732. 5 Claims. (Cl. 294—69.)

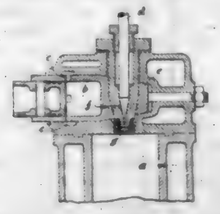


1. A well bucket, comprising a bucket body, a bottom closure attached in and closing the lower end thereof, said bottom closure provided with a port therethrough, and a valve unit detachably mounted on said bottom closure for controlling the port therein, the said valve unit comprising upper and lower spaced bearing brackets detachably mounted on the bottom closure and disposed thereabove, a valve normally seated on said bottom closure in position closing the port therethrough, a valve stem attached to said valve and mounted in alined bearings in said spaced bearing brackets for vertical movement, and a lift rod pivotally connected to said valve stem for raising said valve to unseated position opening the port in said bottom closure.

1,534,456. COMPOSITE RUBBER AND LEATHER MATERIAL AND METHOD OF MAKING THE SAME. ALLEN G. MCKINNON, Andover, Mass., assignor to Boston Rubber Shoe Company, Malden, Mass., a Corporation of Massachusetts. Filed June 5, 1923. Serial No. 643,555. 16 Claims. (Cl. 18—53.)

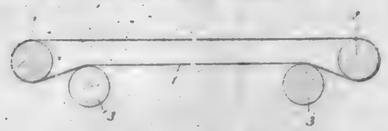
16. The method of finishing leather which comprises degreasing the leather, impregnating it with castor oil, joining to it by pressure a layer of vulcanizable material, embossing, curing by the aid of a cold cure accelerator, and superficially treating it with a solution of bromine.

1,534,457. ELECTRODE-CLAMPING DEVICE FOR ELECTRIC WELDING MACHINES. JOSEPH W. MEADOWCROFT, Philadelphia, Pa., assignor to Edward G. Budd Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 16, 1921. Serial No. 492,696. 2 Claims. (Cl. 219—4.)



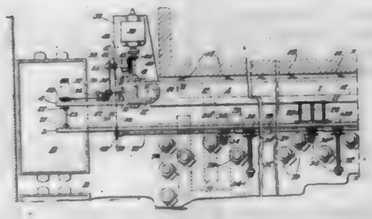
1. An electrode clamping device for electric welding machines comprising, in combination with an arm of the welding machine having a concave electrode seat at one end thereof to receive an electrode, a clamping block on the end of said arm provided with a concave seat engaging said electrode, a yoke embracing said block and provided with threaded rods, and means engaging said rods for adjustably connecting said yoke to said arm.

1,534,458. UNDERFRAME FOR VEHICLES OF ANY KIND. STEFFEN MÖHL, Copenhagen, Denmark. Filed Aug. 14, 1923. Serial No. 657,323. 1 Claim. (Cl. 280—106.5.)



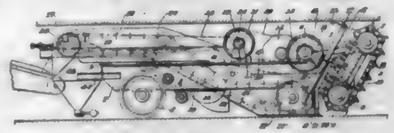
A suspension system for motor vehicles, comprising, in combination, a vehicle frame, a pair of laminated springs each connected at one end to said frame, a frame-shaped lever pivotally secured approximately at the center of its length to the vehicle frame and connected at one end to the free ends of said springs, a wheel axle carried by said lever at its opposite end, and a wheel axle carried by said springs approximately midway of their length.

1,534,459. INTERNAL-COMBUSTION ENGINE. FRIEDRICH MÜLLER, Vienna, Austria. Filed Apr. 3, 1923. Serial No. 629,672. 4 Claims. (Cl. 123—33.)



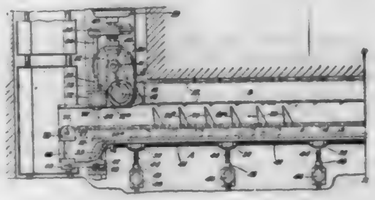
1. In combination an internal combustion engine comprising a working cylinder and an injection valve forming the delivery valve of an injection air compressor, a cylinder for the air compressor, a working cylinder head recessed to receive said compresser cylinder, said injection valve extending through the cylinder head and the air compressor cylinder.

1,534,460. PAPER-DRYING MACHINE. CLARE NELSON, Brooklyn, N. Y., assignor, by mesne assignments, to Charles C. Orcutt, New York, N. Y. Filed Apr. 13, 1922. Serial No. 552,173. 7 Claims. (Cl. 74—51.)



2. In a machine of the class described the combination of a paper-supporting apron having on each face engaging surfaces of restricted area and relatively close set, arranged in lines inclined to the direction of travel of the apron, the inclination of the lines on one face being opposite to the inclination of the lines on the other, a roller for supporting and moving the apron and by its contact with the engaging surfaces of the apron tending to move the latter laterally in one direction, and a second roller engaging said apron and arranged to exert a continuing lateral stress on said apron in a direction opposite to that in which the roller first named tends to move the apron.

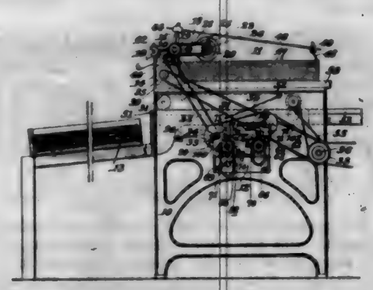
1,534,461. MINING MACHINE. EDWARD O'TOOLE, Gary, W. Va. Filed Feb. 20, 1923, Serial No. 620,246. Renewed Oct. 8, 1924. 7 Claims. (Cl. 262—30.)



1. A mining machine comprising in combination a frame, a cutter chain having cutter bits thereon mounted on said frame and movable longitudinally thereof adapted to undercut and form a kerf in the material to be mined, a housing over said cutter chain, said housing having its forward edge below the upper ends of the uppermost cutter bits in the forward or material engaging portion of said cutter chain so as to permit the entrance of the forward portion of said machine into the kerf formed by said cutter bits, a conveyer mounted to the rear of and extending parallel with said cutter chain, means for simultaneously driving said cutter chain and said conveyer, and means for advancing said machine into the material being mined.

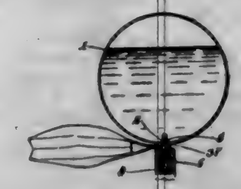
1,534,462. MINING MACHINE. EDWARD O'TOOLE, Gary, W. Va. Filed Feb. 20, 1923, Serial No. 620,247. Renewed Oct. 8, 1924. 4 Claims. (Cl. 265—5.)

1. The combination with a mining machine comprising a main frame, a cutter head, a conveyer for the cut material, and means for operating said conveyer and said cutter head, of a cover member arranged to the rear of said cutter head and extending between the roof and floor of said mine at each side of said main frame and from the roof downwardly to a point above said conveyer, between the side members of said main frame, and then rearwardly over said conveyer for an appreciable distance, and means for causing a circulation of the air in the immediate vicinity of said machine and for removing the dust therefrom.



1,534,463. LONGWALL MINING MACHINE. EDWARD O'TOOLE, Gary, W. Va. Filed Aug. 13, 1924. Serial No. 731,810. 10 Claims. (Cl. 262—28.)

1. A combined mining and loading machine comprising an elongated main frame, a cutter chain adapted to travel lengthwise of said machine around a vertical axis in a clockwise direction, the forward or cutting strand of said cutting chain having its cutting bars extending beyond the forward edge of said frame so as to undercut and form a kerf in the material to be mined and permit the material to break down on said machine, an endless conveyer mounted to the rear of said cutter chain and extending parallel with said cutter chain, said conveyer traveling around a vertical axis in a counterclockwise direction, and being provided with overhanging horizontal extending flights, so that said conveyer flights co-operate with said cutter chain to convey the material broken down on said machine lengthwise thereof.

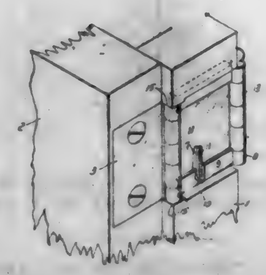


1,534,464. MACHINE FOR FEEDING SHEET MATERIAL. JOSEPH P. RENZ, Brooklyn, N. Y. Filed Mar. 5, 1923. Serial No. 622,906. 8 Claims. (Cl. 93—93.)

1. A feeding machine of the class described disposed above and geared in connection with a counting machine, means carried by the counting machine for releasing a feed control clutch and means for delivering a cover sheet from the feeding machine onto a stack of paper delivered from the counting machine when said clutch

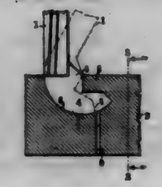
is released, said delivery means including devices to engage the two topmost cover sheets to hold the second one while the top one is drawn off.

1,534,465. BAG-CLOSING TOOL. HUNTINGTON D. SAWKINS, Baltimore, Md. Filed Jan. 12, 1925. Serial No. 1,947. 7 Claims. (Cl. 226—56.)



1. A tool for closing bags comprising a folding knife, means for supplying paste to the lateral surfaces of the folding knife, a folding arm having a cavity to fit and receive the knife, means for supporting the arm and the knife, and means for moving one of said members toward and from the other causing the knife to reciprocate into and out of the cavity.

1,534,466. LAMP-SHADE-JOINT CONSTRUCTION. ADOLPH SCHRAER, Philadelphia, Pa. Filed Feb. 1, 1923. Serial No. 616,427. 2 Claims. (Cl. 240—108.)

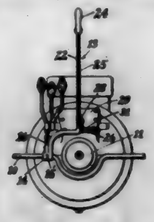


1. A lamp-shade joint including a sheet of resilient material forming the top of a shade and having the lower part of its periphery bent to form a lap, the lap being slitted into parts having their adjoining edges beveled; a sheet forming a continuous side wall with its upper edge taking into the lap, the lap having the beveled face of one slitted part overlapping the beveled face of the adjoining part, and means securing the sheet forming the side wall to the lap.

1,534,467. HINGE. JOHN J. SHEA, Jr., Elmhurst, N. Y. Filed May 13, 1921. Serial No. 469,858. 5 Claims. (Cl. 16—149.)

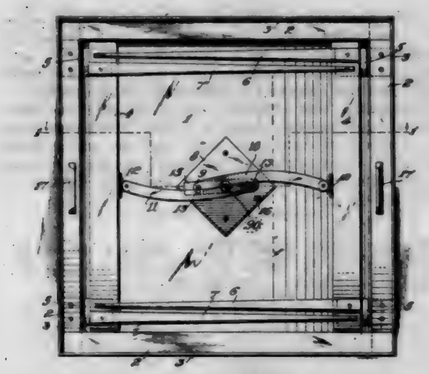
1. The combination with an outwardly swinging door and a supporting door post therefor, of a hinge for mounting the door to swing outwardly, including a section to be secured to the door and a section to be secured to the door post, means for detachably securing said sections together, said securing means including an intermediate hinge section having a pivotal connection with one of said first mentioned hinge sections, said pivotal connection being inset into the hinge mounting to protect it from access from without when the door is in closed position.

1,534,468. JOINT STRUCTURE. JOHN J. SHEA, Jr., Elmhurst, N. Y. Filed Oct. 30, 1922. Serial No. 597,709. 3 Claims. (Cl. 20—92.)



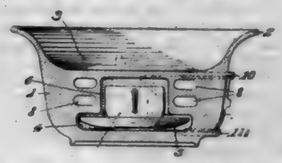
1. A structural joint, including, in combination, a structural element having a mortise therein provided with a laterally disposed lug at one extremity thereof, a second structural element having a tenon with an offset lug for engagement with said first mentioned lug for relatively bracing said structural elements against swinging movement in one direction, and bracing means, including a mortise and tenon similar to said first mentioned mortise and tenon but being reversely arranged for bracing said structural elements against swinging movement in an opposite direction.

1,534,469. COMBINED EMERGENCY BRAKE AND CLUTCH RELEASE. JAMES W. SHERMAN, Huntington Park, Calif. Filed Apr. 1, 1924. Serial No. 703,331. 2 Claims. (Cl. 74—89.)



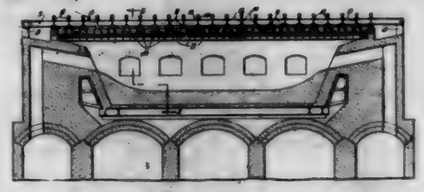
1. A combination brake lever and clutch release cam adapted for use with emergency brakes of the Ford type, said lever and cam having a common mounting sleeve and the handle of said lever being offset from said mount-

ing sleeve so as to assume a transversely central position in the automobile, and means secured to said lever, to



the transmission cover and to the side bars of the automobile for holding said lever and cam in any desired position.

1,534,470. FOLDING TABLE. GROVER D. SMITH, Montclair, N. J. Filed Apr. 26, 1924. Serial No. 709,099. 5 Claims. (Cl. 45—11.)

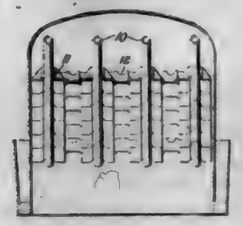


1. In a folding table, the combination with opposite legs in hinged relation to the table top, of links pivotally connected at their outer ends to said legs, an operating lever having its arms pivoted to said links so as to turn under tension past its positions of alinement of its points of said pivoting with the points of pivoting of the links to the legs, and means for limiting turning of said lever to positions slightly past said alinement positions.

1,534,471. SERVING DISH. WILLIAM LEONARD SMITH, Camden, N. J. Filed Sept. 28, 1921. Serial No. 503,754. 6 Claims. (Cl. 65—53.)

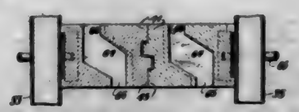
1. A serving dish comprising a one-piece molded body having its upper part shaped to form a receptacle of dinner-plate form, the portion of said body below said receptacle providing a horizontally disposed chamber having a shape and size which substantially conforms to that of a cup and saucer when disposed in conventional superposed relation, said chamber being adapted for the reception of such a cup and saucer in a position substantially in the axial line of the dish, and a horizontally slidable closure for said chamber.

1,534,472. OPEN-HEARTH-FURNACE ROOF. ENOCH P. STEVENS, Chicago, Ill.; Mary Ann Stevens executrix of said Enoch P. Stevens, deceased. Filed Nov. 20, 1922. Serial No. 602,019. 7 Claims. (Cl. 763—46.)



1. An arched furnace roof structure comprising in combination with the furnace walls, a supporting cradle and a plurality of roof tile suspended therefrom in the arc of the arch with freedom of expansion and contraction without imposing material thrusts on the furnace walls or material pressure on the tiles.

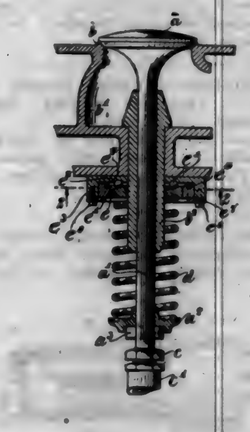
1,534,473. ALLOY ROLL STEEL. FRANK D. TAGGART, Wyomissing, Pa. Filed Apr. 10, 1923. Serial No. 631,201. 2 Claims. (Cl. 75—1.)



1. The improved alloy roll-steel described, composed mainly of iron, with percentages of carbon between 1.25 and 2.50, of chromium between 1.50 and 3.00, of vanadium approximately .25, and of molybdenum between .10 and 5.00; the minor elements present not exceeding one per cent.

1,534,474. ARCH AND ARCH BRICKS. ALFRED H. WILLETT, West New York, N. J., assignor to American Arch Company, a Corporation of Delaware. Filed Dec. 28, 1921. Serial No. 525,394. 3 Claims. (Cl. 110—87.)

1. An arch built of a plurality of invertible bricks of a single pattern, each of said bricks having on one face a supporting seat and on the other face and on each side of the supporting seat a brick engaging surface slanting inwardly from the face with the supporting seat, certain of the bricks in the arch being arranged in rows on the supports and others being arranged in rows other side down on the brick engaging surfaces of the first mentioned rows, the bricks so arranged being adjustable to different spacings between supports.



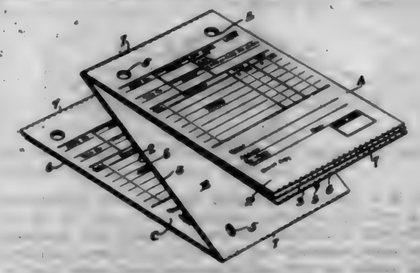
1,534,475. FIRE BRICK. ALFRED H. WILLETT, West New York, and HARRY S. MARTIN, Ridgewood, N. J., assignors to American Arch Company, a Corporation of Delaware. Filed Feb. 17, 1922. Serial No. 537,182. 3 Claims. (Cl. 110—87.)

1. A brick for sectional fire arches or fire walls having an edge for arching engagement provided with tongue and groove means for interlocking with corresponding

means on a similar brick, having its opposite edge recessed for interlocking engagement with lug means on an abutment structure, and having a crooked transverse passage therein.

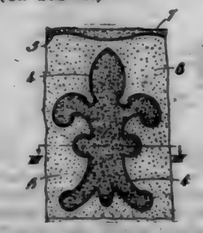
1,534,476. ROTATING POPPET VALVE. GOTTFRIED WIEBER, Plainfield, N. J., assignor to International Motor Company, New York, N. Y., a Corporation of Delaware. Filed July 27, 1923. Serial No. 654,098. 1 Claim. (Cl. 123—90.)

In an internal combustion engine, a valve having a valve stem, a spiral valve spring surrounding the valve stem, a spring seat fixed adjacent the end of the valve stem and engaged by an end of the valve spring, a thrust ball race engaged by the other end of the spring, a ball race secured to the engine cylinder, balls between said ball races, spring pressed pawls carried with the stationary ball race and engaging the movable ball race and means for reciprocating the valve.



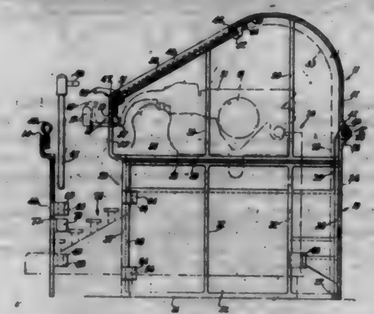
1,534,477. METHOD OF COATING ASBESTOS CLOTH WITH RUBBER. EDWIN C. WIMAN, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 24, 1920. Serial No. 426,250. 4 Claims. (Cl. 91—68.)

1. The method of coating short staple fabric with rubber which comprises, applying a rubber cement, at least partially setting the cement and then applying a coating of rubber.



1,534,478. MANIFOLDING BOOK. WILLIAM J. WISWALL, Oakland, Calif., assignor, by mesne assignments, to American Sales Book Company, Limited, Toronto, Ontario, Canada, a Corporation of Canada. Filed May 25, 1921. Serial No. 472,241. 9 Claims. (Cl. 282—12.)

1. A supply pad of the character described including, in combination, a plurality of record strips folded zigzag, the folds of one interengaged with those of the others so as to provide superposed sets of superposed leaves connected end-to-end, each of said strips having a longitudinal series of transverse weakened lines and of feed-arresting apertures, the apertures of different

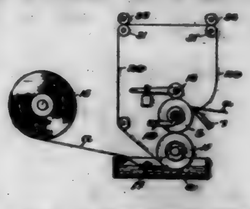


strips being at such points as to register with each other, in successive longitudinally related sets, with the weakened lines also in registry.

1,534,479. METHOD OF PRODUCING OBJECTS WITH DESIRED OUTLINE AND SURFACE. IVAR JOHAN EDVARD ÅGREN and GUNNAR ROSENQVIST, Uppsala, Sweden. Filed May 20, 1924. Serial No. 714,547. 4 Claims. (Cl. 204—6.)

1. A method of producing hollow articles with desired outline and surface, which consists in making galvanoplastic precipitations in a separable, permanent metal mold.

1,534,480. TYPEWRITING MACHINE. J FRANK ALLARD, Brooklyn, N. Y., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 13, 1921. Serial No. 469,114. 15 Claims. (Cl. 197—186.)



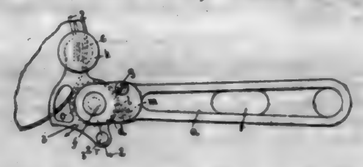
1. In a casing for a typewriting machine, the combination of a cast body portion comprising side walls, reenforcing ribs cast on the side walls, a cast cover comprising side walls, re-enforcing ribs cast on the side walls of said cover, cast ribs extending along the top edges of the side walls of the body portion to form ledges, and cast ribs extending along the lower edges of the side walls of said cover to rest upon said ledges.

1,534,481. MINERAL-SEPARATING MACHINE. OSCAR W. ALSTON, New Westminster, British Columbia, Canada. Filed Feb. 16, 1921. Serial No. 445,296. 3 Claims. (Cl. 83—85.)

1. In a mineral separating machine, the combination of a cylinder revolubly mounted and coated on its interior with a mineral-collecting substance and a coating roller and receptacle for the coating material combined with means for pivotally supporting said roller and receptacle together eccentrically with relation to the curved interior surface of the cylinder.

1,534,482. CRÊPING PAPER. EDWARD H. ANDIER, Framingham, Mass. Filed June 21, 1921. Serial No. 479,405. 16 Claims. (Cl. 92—69.)

1. The method of crêping paper comprising depositing moist stock on a smooth surfaced roll, depositing a separate impermeable band over the stock, pressing both into close adherence with the roll and crowding the stock back on itself while adhering to said roll.

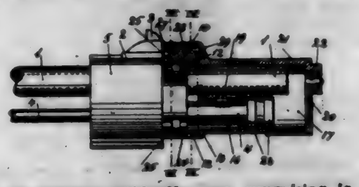


1,534,483. HEATER FOR MOTOR VEHICLES. ORLAN G. ARMSTRONG, Alliance, Ohio. Filed Mar. 21, 1924. Serial No. 700,900. 1 Claim. (Cl. 285—5.)

A heater comprising a manifold body provided at its opposite ends with openings, a pipe having its end portions passing through the openings, collars mounted upon the end portions of the pipe and partially entering the openings of the manifold body, spiders positioned against the outer ends of the collars and a rod traversing the length of the pipe and engaging the spiders and adapted to draw the spiders toward each other whereby the collars are moved along the pipe and projected into the openings of the manifold body.

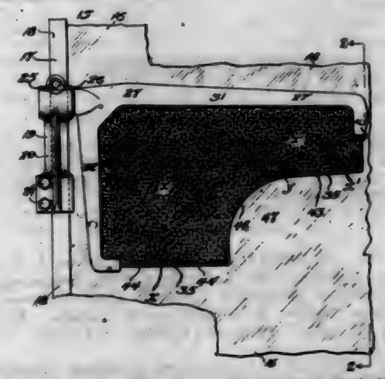
1,534,484. CAN OPENER. WILLIAM H. AVERILL, Boston, Mass., assignor of one-half to Arthur C. Erisman, Brookline, Mass. Filed May 18, 1921. Serial No. 470,529. 1 Claim. (Cl. 30—3.)

A can opener comprising a propelling wheel having a serrated edge, a plate pivotally connected to said wheel, a knife projecting from said plate at the same side thereof as the wheel and having a cutting edge directed toward the wheel, a handle, and a link connecting the handle to the wheel and having a pivotal connection with both of the last named elements, the



handle having teeth complemental to the serrations of the wheel adapted to engage therewith for imparting rotary movement thereto.

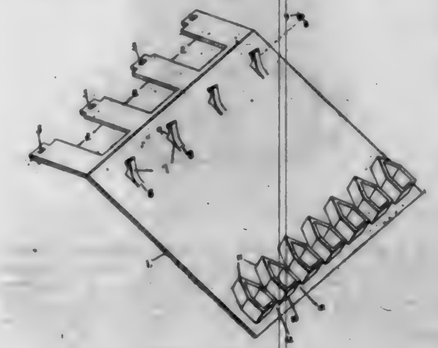
1,534,485. TOOTHACHE REMEDY. MINNITA BAILEY, New York, N. Y. Filed July 12, 1924. Serial No. 725,696. 2 Claims. (Cl. 167—9.)



1. In a medicinal product, suitable for the relief of toothache, in combination, ground black mustard seed, oleum methae piperta, oleum terebinthinae, oleum sinapis and petrolatum.

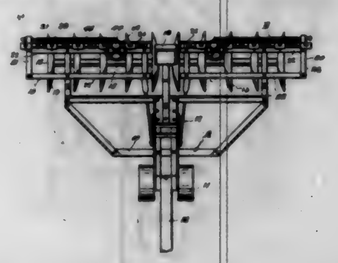
1,534,486. SELF-LOADING FIREARM. SÖREN HANSEN BANG, Copenhagen, Denmark. Filed Dec. 18, 1922. Serial No. 606,573, 4 Claims. (Cl. 42—8.)

4. A gas pressure self-loading gun, comprising, in combination, a gun barrel and a piston for moving the gun lock, a detachable hood provided with an opening for the passage of a projectile, said hood having a guiding cylinder for said piston and a chamber in communication therewith, said chamber being of larger cross-sectional area than said piston, the piston being adapted to project beyond said cylinder and into said chamber once during each operation thereof thereby to eject powder slush from said cylinder into said chamber.



1,534,487. GLARE SHIELD FOR AUTOMOBILES. JOHN D. BANKS, Colwyn, Pa., assignor, by mesne and direct assignments, to Kil-Glar Company, Audubon, N. J. Filed June 19, 1920. Serial No. 390,091. 4 Claims. (Cl. 296—97.)

1. A device of the character described including a translucent glare shield having a body portion and a comparatively narrow extension projecting laterally

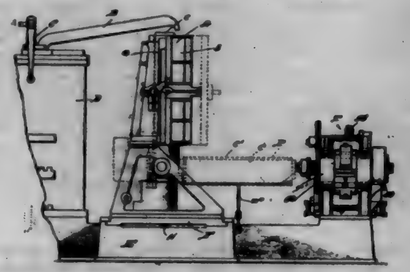


therefrom and terminating in a lower free edge portion which curves downwardly and merges into the adjacent side edge of said body portion; substantially as described.

1,534,488. MULTIPLE-UNIT HEARTH FURNACE. OSCAR L. BARNEBEY, Detroit, Mich. Filed May 7, 1921. Serial No. 467,638. 17 Claims. (Cl. 263—30.)

1. A multiple unit furnace hearth comprising an incline, integral supporting means for said incline and integral supporting means for another incline used in conjunction with said incline.

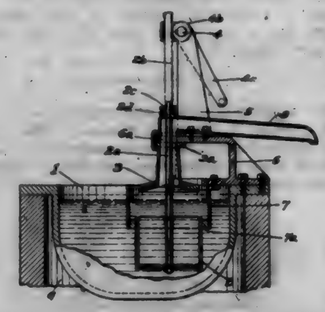
1,534,489. HARROW SCRAPER. CHESTER A. BARNES, Blue Grass, Iowa. Filed Nov. 16, 1923. Serial No. 675,225. 4 Claims. (Cl. 97—224.)



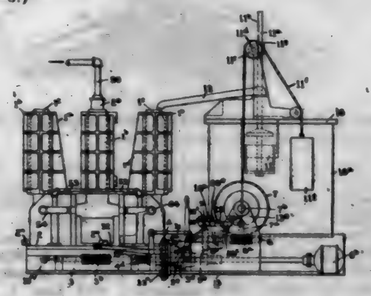
1. The combination with a harrow including a gang of harrow disks, of a scraper attachment for the disks including a horizontally disposed frame arranged above the gang of harrow disks, an arm pivotally secured to the frame for each disk, a scraper blade secured to the lower end of each arm for engaging the disk, a connecting bar arranged above the frame, means adjustably connecting each arm with the connecting bar, resilient means for normally urging the connecting bar in one direction for moving the scraper blade in an operative scraping position relative to the harrow disks, and manual means for moving the connecting bar in the opposite direction against said spring means.

1,534,490. RING EXPANDER. GEORGE C. BECK, Spokane, Wash. Filed Aug. 29, 1924. Serial No. 734,942. 10 Claims. (Cl. 74—109.)

1. A ring expander adapted to be disposed between the base of a piston groove and the ring therein, comprising a spring metal strip bent to form alternately disposed and relatively elongated ring and groove engaging sections and a relatively short supporting section between the ring and groove sections.

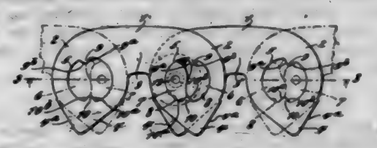


1,534,491. STEREOTYPE-PLATE CASTING AND FINISHING APPARATUS. HENRY F. BECHMAN, Battle Creek, Mich., assignor to Duplex Printing Press Company, Battle Creek, Mich., a Corporation of Michigan. Continuation of application Serial No. 39,449, filed July 12, 1915. This application filed June 9, 1917. Serial No. 173,903. 16 Claims. (Cl. 22—3.)



1. Apparatus for making and finishing tubular stereotype plates, comprising a plurality of tubular plate casting boxes, and plate trimming mechanism adapted to receive a tubular plate endwise from a casting box and trim same, and means for moving the boxes into and out of position to deliver plates to the trimming mechanism, substantially as described.

1,534,492. STEREOTYPE-METAL PUMP. HENRY F. BECHMAN, Battle Creek, Mich., assignor to Duplex Printing Press Company, Battle Creek, Mich., a Corporation of Michigan. Filed June 29, 1922. Serial No. 571,689. 19 Claims. (Cl. 22—70.)

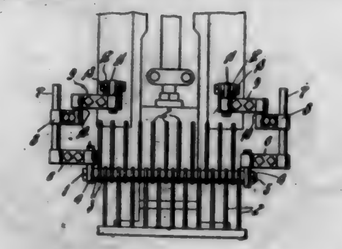


1. In a pump, a reciprocable ladle, a stationary piston, means for moving the ladle to telescope the piston and thereby discharge the fluid from the ladle; and a member surrounding the ladle whereby the fluid is caused to flow upwardly between the member and the ladle in order to enter the ladle.

1,534,493. STEREOTYPE-PLATE-CASTING APPARATUS. HENRY F. BECHMAN, Battle Creek, Mich., assignor to Duplex Printing Press Company, Battle Creek, Mich., a Corporation of Michigan. Filed July 17, 1922. Serial No. 575,070. 25 Claims. (Cl. 22—3.)

1. In apparatus of the character described; a turn table; a plurality of individual casting boxes mounted thereon; means for imparting a partial rotation to said turn table to bodily move the casting boxes thereon successively to and away from the casting point; a melting pot; a metal pump therein; means for conducting metal from the pump to the casting box in casting position; manually controlled means for releasing the turn table operating means when it is desired to shift the turn table; and means for automatically stopping the movement of the turn table when it has moved one box from casting position and brought another box into casting position.

1,534,494. POWER-TRANSMISSION CHAIN. WARREN J. BELCHER, Hartford, Conn., assignor to The Whitney Mfg. Co., Hartford, Conn., a Corporation of Connecticut. Filed Feb. 15, 1921. Serial No. 445,057. 18 Claims. (Cl. 74—32.)



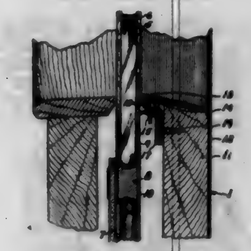
16. In a silent type chain, the combination of a plurality of overlapping links with registering apertures, two-part pintles for the joints, said parts having cooperating convex and concave surfaces in contact throughout a substantial portion of their area below the center line of the chain when the chain is under load between sprockets.

1,534,495. INTERCHANGEABLE COMBINATION KEY LOCK. EDGAR M. BENHAM, Norwood, Ohio, assignor to The Mosler Lock Company, Covington, Ky., a Corporation of Ohio. Filed Apr. 26, 1922. Serial No. 556,708. 10 Claims. (Cl. 70—70.)

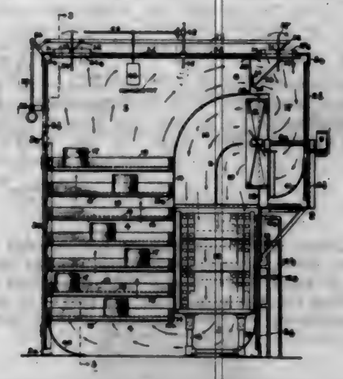
1. In a lock of the character described, in combination, a movable bolt bar, a main key mechanism including a rotatable cam member for moving said bolt bar, means, including a stop lever having a cam surface and movable into and out of dogging position with respect to said cam, controlling the operation of said main key mechanism, and means, including a movable bar covering said lever and having a pin slidably coacting with the cam surface on said lever, operable to place said stop lever out of said dogging position.

1,534,496. GUARD. LEROY A. BIGGAR, Oneida, N. Y. Filed Jan. 2, 1924. Serial No. 684,053. 2 Claims. (Cl. 164—86.)

1. A guard of the class described comprising a bolt, a plurality of fingers threaded thereon, washers threaded on the bolt for spacing the fingers apart, eye members for supporting the bolt, a pair of brackets and a plurality of hinged parts for connecting the brackets with the eye members.



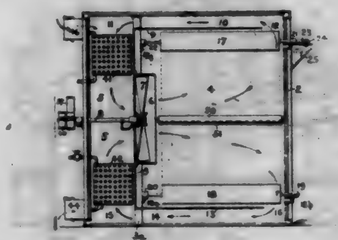
1,534,497. CONTAINER. KITCHELL M. BOOKMAN, New York, N. Y. Filed Apr. 30, 1924. Serial No. 709,978. 3 Claims. (Cl. 132—83.)



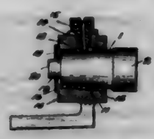
1. In a container, in combination, a flexible cover having a bottom portion and a top portion, the top portion being capable of being folded over and upon the bottom portion, a compartment carried by the inner face of the bottom portion having a plurality of exposed openings therein, a removable toilet preparation carrier within the bottom compartment having a plurality of openings in its upper face corresponding to the openings of the cover and a receptacle carrying cup within each carrier opening.

1,534,498. WEATHER-EXCLUDING MEANS. JOSEPH H. BOURGON, Detroit, Mich., assignor to The Studebaker Corporation, South Bend, Ind., a Corporation of New Jersey. Filed July 28, 1923. Serial No. 654,496. 9 Claims. (Cl. 296—48.)

1. In a device of the class described, a frame having a projection thereon forming a finish for an opening therein, a slidable closure for said opening, a projection on said closure, and a resilient weather strip between said projections on said frame and closure, said weather strip comprising a body portion and a plurality of projections thereon, said projections contacting with said projections on said frame and closure and with each other when said closure is in closed position.



1,534,499. DRYING APPARATUS. WILLIAM G. R. BRAMMER, Cranston, R. I., assignor to General Fire Extinguisher Company, a Corporation of New York. Filed June 14, 1923. Serial No. 645,225. 9 Claims. (Cl. 34—39.)

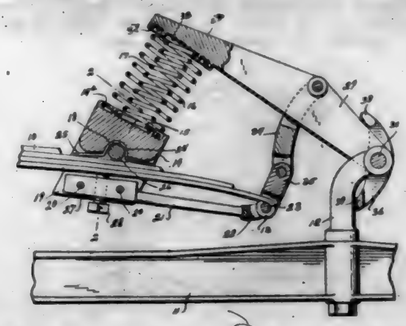


8. In a drying apparatus, a casing having a vertical division of less than the full height of the casing and dividing it into a vertical heating chamber and vertical drying chamber, said chambers in direct communication at the bottom and in indirect communication at the top, and further provided with doors on the side of the drying chamber opposite to the heating chamber, combined with suitable means for supporting the goods to be dried within the heating chamber, a blower intermediate of the communication between the upper parts of the drying chamber and heating chamber, heating coils within the heating chamber, damper means in the casing above the drying chamber and the passage leading to the blower for controlling communication between the atmosphere and the interior of the casing, and means in the communicating passage between the blower and the drying chamber and also located between the two dampers for controlling communication with the atmosphere whereby the circulation of air between the dryer and blower may be restricted by varying the resistance to its flow under the influence of the blower.

1,534,500. DRYING MACHINE FOR TEXTILE MATERIALS. WILLIAM G. R. BRAMMER, Haddonfield, N. J., and JOSEPH ROBERTS, Providence, R. I., assignors to General Fire Extinguisher Company, a Corporation of New York. Filed Oct. 23, 1924. Serial No. 745,293. 11 Claims. (Cl. 34—48.)

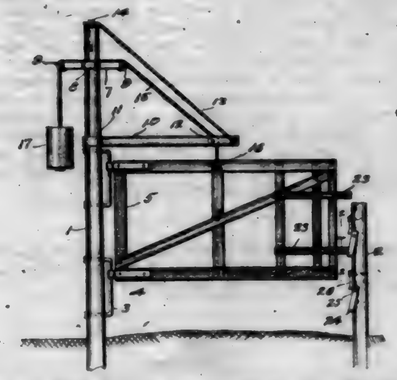
9. In a drying apparatus, a casing having a division wall providing a longitudinal drying chamber having inlet and outlet openings at opposite ends and a longitudinal heating and recirculating chamber arranged parallel to the drying chamber and in communication with it by openings transversely to its length, in combination with a plurality of parallel rollers arranged transversely along the length of the drying chamber at its upper portion, a plurality of parallel rollers arranged along the length of the drying chamber near its lower portion and about which upper and lower rollers the textil ematerial is alternately guided so as to travel largely in a vertical direction, a blower arranged in the wall opening between the drying and heating chambers for causing a circulation of air transversely to the general direction of travel of the textile material through the drying chamber, and means in the heating and recirculating chamber for heating the air during its circulation.

1,534,501. PIVOTAL BEARING. ALEXANDER T. BROWN, Syracuse, N. Y. Filed Sept. 7, 1920. Serial No. 408,497. 1 Claim. (Cl. 287—93.)



The combination of a pitman having a tapering spindle, an element having a conical bearing on the spindle, a bushing located in the bearing and encircling the spindle and connected to the bearing to be held from rotatable movement relatively to the bearing and to slide axially on the tapered spindle and in the tapered bearing and spring means carried by the pitman for pressing the bearing and bushing on the axially tapering spindle, substantially as and for the purpose specified.

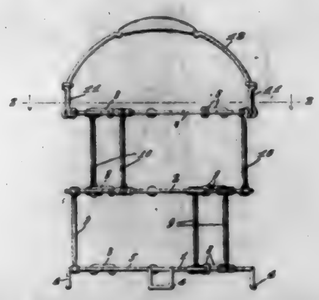
1,534,502. SHOCK ABSORBER. WILLIAM W. CASHEL, Sr., Casper, Wyo. Filed May 2, 1923. Serial No. 636,223. 4 Claims. (Cl. 267—17.)



1. In a shock absorber and in combination with a leaf spring and support therefor arranged adjacent one end of the spring, a spring seat secured to the spring at a point spaced from the end thereof, a lever pivoted to the support and having a spring seat opposing the spring seat of the spring, a spring extending between said spring seats and tending to separate the same, and a connection between the lever, at a point intermediate

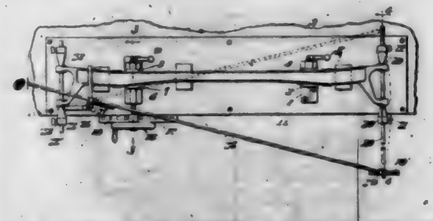
the spring seat thereof and the support, and the spring at the end thereof permitting movement of the spring toward the lever without transmitting movement from

the spring to the lever and during movement of the spring in the opposite direction moving the lever with the spring.



1,534,502. GATE. EUGENE N. COOPER, Stettler, Alberta, Canada. Filed Jan. 29, 1923. Serial No. 615,762. 1 Claim. (Cl. 39—14.)

In a device of the class described, the combination of a gate, a post, a pair of U-shaped members having their terminals piercing the post so that their intermediate portions are disposed vertically, hinge members on the gate engaging the intermediate portions of the intake members permitting the gate to swing in a horizontal position and also to move vertically, and a crane device mounted on said post consisting of a bar having an intermediate circular portion engaged with said post so as to revolve thereon, pulleys journaled in the ends of the bars, an arm provided at one end with a circular portion revolvably mounted on the post below the bar, a pulley carried in the end of the arm, a brace rod swivelly mounted at one end to the post and connected at its other end to the free end of the arm, a cable trained over said pulley and attached at one end to the gate, and a weight supported on the other end of the cable for counterbalancing the gate.



1,534,504. PORTABLE RACK. THOMAS S. CRAMPTON, Stemmersrun, Md. Filed Mar. 28, 1922. Serial No. 547,470. 1 Claim. (Cl. 211—14.)

In a rack, a shelf including spaced rings each crimped inwardly, the material of the inner ring terminating in a spiral occupying the space surrounded by the inner ring, all of the crimps occupying the same horizontal plane with the spiral, links engaging certain of the crimps of the inner and outer rings for holding said rings against relative movement, the crimps in the rings holding the links against displacement, another shelf

made up of inner and outer connected crimped rings, and connecting standards engaging certain of the crimps in the rings of the respective shelves, said crimps holding the standards against lateral displacement relative to the rings.

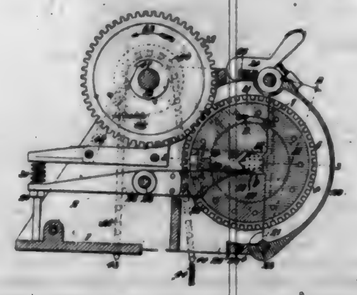
1,534,505. AXLE-SETTING TOOL. BURT W. DECATUR, Springfield, Mass. Filed Oct. 6, 1917. Serial No. 195,137. 6 Claims. (Cl. 33—180.)

1. A gaging device comprising a rod provided with measuring points, cones for centering the rod in the part to be gaged with the said measuring points equidistant from the selected point on the part to be gaged, and a measuring bar for gaging the distance between the said points.

1,534,506. DYESTUFF. GUILLAUME DE MONTMOLLIN and GÉRALD BONHÔTE, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed July 29, 1924. Serial No. 728,953. 6 Claims. (Cl. 260—96.)

1. As new products the new dyestuffs of the general formula:

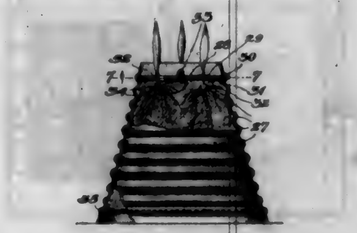
$$R_1-N=N-R_2-N\begin{matrix}R_3\\R_4\end{matrix}$$



Wherein R_1 represents a non-hydroxylated benzene nucleus carrying at least one nitro-group, R_2 a benzene nucleus not having any sulfonic group attached in ortho-position to the azo-bridge and carrying the

$$-N\begin{matrix}R_3\\R_4\end{matrix}$$

group in para-position to the azo-bridge, R_3 a residue containing a benzene nucleus, and R_4 hydrogen or alkyl, and in which only one of the residues R_1, R_2, R_3 contains one sulfonic group, which dyestuffs form orange to violet-blue and greenish-black powders, dissolving in water to orange to brown and bluish-red solutions, and

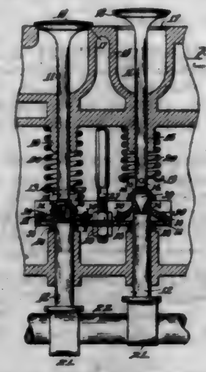


yielding on acetyl cellulose, when dyed in a feebly acid or neutral bath, from yellow to bluish-red and brown tints of good fastness to washing and of good to very good fastness to light.

1,534,507. METHOD OF AND APPARATUS FOR BISECTING FRUIT AND REMOVING A CIRCUMFERENTIAL SLICE THEREFROM. ARTHUR L. DUNCAN, Piedmont, Calif. Filed Nov. 10, 1924. Serial No. 748,821. 21 Claims. (Cl. 146—42.)

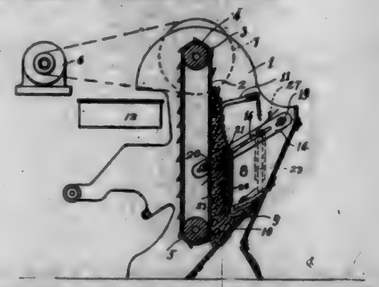
1. An apparatus for severing and removing a circumferential slice from a fruit, including means for cutting the fruit inwardly to sever a slice therefrom and for gripping the stone, means for rotating the fruit, stone and slice, and means for severing the inner surface of the slice from the fruit and for ejecting the slice from the remaining half sections.

1,534,508. APPARATUS FOR TESTING SOIL OR SEED. OSWALD CHARLES EARP-THOMAS, Richmond, Va. Filed Apr. 17, 1918. Serial No. 229,197. 8 Claims. (Cl. 47—34.)



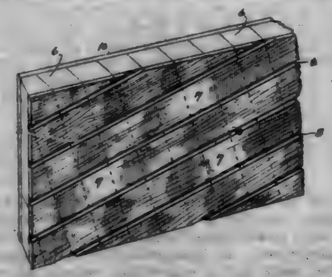
1. A device for testing soil or seed comprising a closed frusto-conical container having its end walls formed by removable disks adapted to fit the container body snugly, one of said disks being apertured to permit insertion of seed when the container is charged with soil.

6. A device for testing soil or seed comprising a container having a wall apertured for insertion of seed and a shutter device movable to control such aperturing.



1,534,509. VALVE-OPERATING DEVICE. WRAY FALWELL, Fitchburg, Mass. Filed Sept. 9, 1924. Serial No. 736,793. 4 Claims. (Cl. 123—90.)

4. In a valve lifting device of the character described, the combination of a pair of pivot pins in fixed position, a pair of cam levers pivoted on the bottom surface of said pivot pins and extending inwardly toward each other therefrom, each cam lever having a cam on the end projecting upwardly from the lever, said cams having convex surfaces and a block of hardened steel resting on the upwardly projecting ends of the cam and having a lower surface provided with oppositely slanting walls

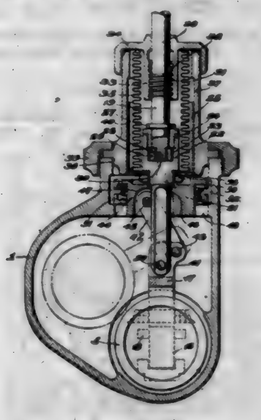


for receiving the thrust of the ends of said cams, whereby said block will be raised in a vertical direction without side motion.

1,534,510. PRESSER BOARD. JAMES M. FRASER, Stafford Springs, Conn. Filed June 18, 1924. Serial No. 720,868. 5 Claims. (Cl. 19—79.)

5. In combination, a presser board, for the purpose described, an elevating apron, means for permitting the board to automatically assume different vertical positions due to the force of gravity, said means comprising a pair of inclined supports secured to the main frame having a groove therein, a member in the groove, the presser board freely suspended on the member.

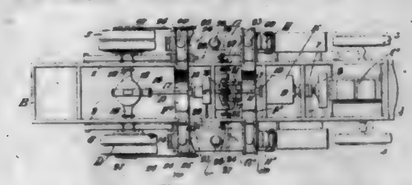
1,534,511. SHEATHING BOARD. MABEL H. FREDRIKSEN, San Francisco, Calif. Filed Mar. 17, 1924. Serial No. 699,910. 2 Claims. (Cl. 20—4.)



1. Sheathing board comprising two thin strips of material and a plurality of slats arranged between said strips and secured thereto, the said slats having their

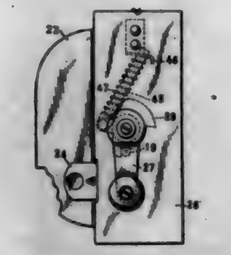
side edges abutting each other, one of said strips being divided to provide a number of spaced apart slats extending at right angles to the joints between said interposed slats.

1,534,512. 1-ARYL-5-PYRAZOLONES AND PROCESS OF MAKING SAME. HERMANN FRITZSCHE and EMIL REBER, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Oct. 8, 1923. Serial No. 667,406. 4 Claims. (Cl. 260—45.)



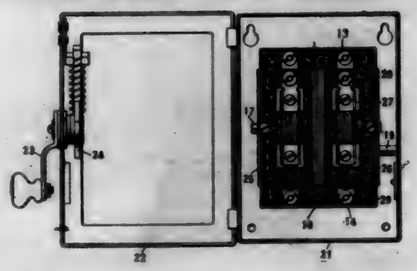
1. As new products the herein described new 1-aryl-5-pyrazolones carrying an SO_2NH_2 group in their aryl nucleus and forming colorless to slightly colored powders which dissolve easily in aqueous solutions of caustic alkalies.

1,534,513. GATE VALVE. WESTON M. FULTON, Knoxville, Tenn., assignor to The Fulton Company, Knoxville, Tenn., a Corporation of Maine. Filed Dec. 19, 1921. Serial No. 523,410. 25 Claims. (Cl. 251—15.)



1. In a gate valve, the combination of a valve housing, opposed inclined valve seats therein, a wedge-shaped valve member for wedging engagement with said inclined seats, a valve stem, a motion-multiplying connection between said valve and stem swinging said valve laterally of said stem and transversely to the axis of said seats, and a flexible member providing a fluid-tight connection between said stem and housing.

1,534,514. AUTOMOBILE TRUCK. JULIEN A. GEHRUNG, New York, N. Y. Filed Sept. 7, 1922. Serial No. 586,768. 6 Claims. (Cl. 180—9.1.)

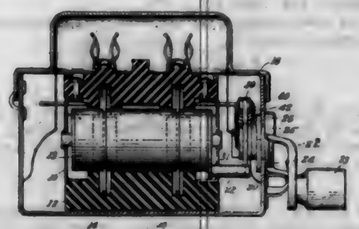


1. In an automobile truck in combination, a chassis; four wheels, one pair of which are operatively connectible with said power plane; a pair of chain-tread tractors located respectively on opposite sides of said chassis and between a front and a rear wheel; means for forcing said tractors into and out of tractive engagement with the road-bed; through cross-beams extending transversely to the said chassis secured thereto and overhanging said tractors on both sides thereof and serving as the supporting connection between said tractors and said truck and means for operatively connecting said tractors with said power plant.

1,534,515. ELECTRIC-SWITCH CONSTRUCTION. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Sept. 18, 1922. Serial No. 588,834. 15 Claims. (Cl. 200—50.)

15. In an electric switch, a sheet metal handle, a bearing washer, a spacing washer, a lost-motion washer, a sheet metal operating plate mounted on said lost-motion washer, an end washer, and securing means passing through all of said washers and said handle for securing them together.

1,534,516. SAFETY SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Oct. 31, 1922. Serial No. 598,059. 6 Claims. (Cl. 200—153.)

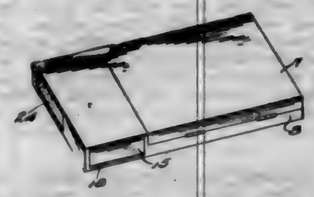


3. In an electric switch, an insulating base, oppositely disposed switch contacts with appurtenant line and load terminals carried by the opposite ends of said base, a switch blade movable between said contacts, side brackets secured to said base, a guard member detachably secured to said brackets and extending over the switch contacts and over the switch blade, line and load side fuse clips carried by said guard member and means for readily attaching the line side fuse clips with the load side switch terminals.

1,534,517. ELECTRIC SAFETY SWITCH. BENJAMIN E. GETCHELL, Plainville, Conn., assignor to The Trumbull Electric Manufacturing Company, Plainville, Conn., a Corporation of Connecticut. Filed Oct. 30, 1924. Serial No. 746,774. 7 Claims. (Cl. 74—14.)

1. A switch operating mechanism comprising a plate having a bearing, a bearing washer mounted therein, lateral supporting washers adjacent said bearing washer,

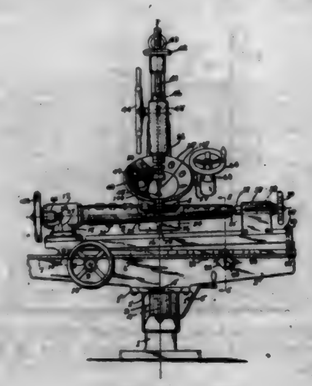
a handle having a flanged edge housing the outer washer, a throwing member having a lost motion connection with



said handle, and a throwing spring having one end supported by said plate and connected to said throwing member.

1,534,518. INDOPHENOL SULPHUR DYESTUFFS AND PROCESS OF MAKING SAME. ARMIN GOESCHKE, Basel, Switzerland, assignor to Society of Chemical Industry in Basle, Basel, Switzerland. Filed June 21, 1924. Serial No. 721,592. 4 Claims. (Cl. 260—19.)

1. The herein described process of making new blue dyestuffs containing sulfur, fast to washing and boiling soap solutions, consisting in treating with alkali metal polysulfides the indophenols which may be obtained by condensation of nitrosophenols with diphenylamine derivatives having, on the one hand, at least one CH_3-group in ortho-position to the >NH-group, and, on the other hand, at least one free para-position to the same >NH-group.



1,534,519. COMBINATION CIGARETTE AND MATCH CASE. ARTHUR T. GOODING, London, England. Filed Oct. 11, 1923. Serial No. 667,967. 2 Claims. (Cl. 206—38.)

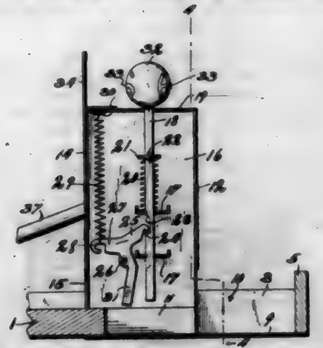
1. A combined cigarette and match case consisting of a two part hinged structure provided with an opening through which cigarettes may be simultaneously urged from both parts, a match receptacle mounted in one of said parts, and means mounted in one of said parts and operable to simultaneously urge the matches and cigarettes from both of said parts.

1,534,520. MACHINE FOR FORMING SOCKETS ON MUSICAL INSTRUMENTS. EDWARD J. GULICK and MORRIS V. HAWKINS, Elkhart, Ind., assignors to C. G. Conn, Ltd., Elkhart, Ind., a Corporation of Indiana. Filed Oct. 19, 1922. Serial No. 595,672. 24 Claims. (Cl. 153—25.)

1. In a machine of the character described the combination of a support for an instrument body having holes, means for locking said instrument body on said support against axial and circumferential displacement, the support being provided with recesses in opposition to said holes, said recesses having a diameter larger than the holes, enlarging tools located in said recesses and having the contour of a portion of a sphere, and means

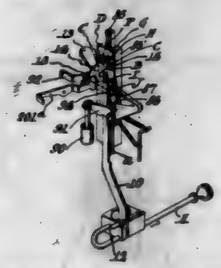
insertable into said recesses and radially insertable into the spherical part of the enlarging tools for withdrawing the enlarging tools from the body.

1,534,521. CLEANING DEVICE. OSCAR HALBECK, Brooklyn, N. Y. Filed Apr. 9, 1924. Serial No. 705,289. 1 Claim. (Cl. 15—133.)



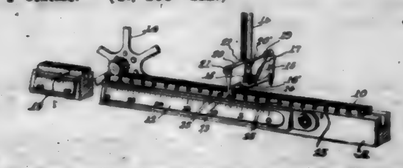
A cleaning device of the class described comprising a fluid containing receptacle, the neck of which is screw threaded on its exterior, a brush holding cup telescoping into the interior of the receptacle from the top of the latter, said cup being closed at its bottom and open at its top and being provided at the last named end with a lateral flange closing the open end of the receptacle, the outer end of said flange being directed downwardly and screw threaded to provide connection with said neck, a brush arranged in said cup and having its outer end extending beyond the corresponding end of the cup, and screw-cap threaded onto the connecting means for said cup.

1,534,522. GAME APPARATUS. LOUIS B. HALLIDAY, Cincinnati, Ohio. Filed Nov. 11, 1924. Serial No. 749,252. 4 Claims. (Cl. 273—118.)



1. A game apparatus of the class described comprising a board adapted to be traversed by a projectile, a housing at one end of the board having a forward wall provided with openings, movable indicating members supported by the housing, each of said members being positioned inwardly of an opening, means for normally urging each of said members in one direction, and a latch mechanism for each of the members for holding

the same when moved in the opposite direction, said latch mechanism being adapted to be released by the impact of a projectile entering the housing, said end



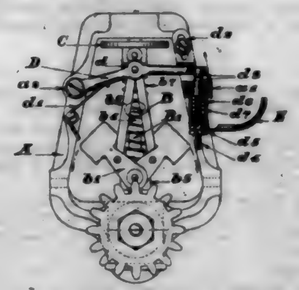
portion of the board being provided with a pocket extending inwardly of the housing below each of the latch mechanisms.

1,534,523. LINE-JUSTIFICATION-INDICATING MECHANISM. STEPHEN HARDER, Washington, D. C. Filed Nov. 7, 1922. Serial No. 599,612. 5 Claims. (Cl. 164—112).

1. In line justification indicating mechanism of the character described, the combination with a vertically movable space counting bar, of a valve actuating lever arranged in cooperative relation to the bar and having a part shifted by the bar when the bar moves to a selected position, a holding device arranged near the lever and adapted to automatically move into locking engagement therewith when the lever is shifted from the normal position, and means to advance said bar, said means also serving to operate the holding device for releasing the lever, when said means are shifted to the inactive position for resetting said bar.

1,534,524. SIGNAL MEANS FOR RECORD-STRIP COMPOSING MACHINES. STEPHEN HARDER, Washington, D. C. Filed Nov. 7, 1922. Serial No. 599,613. 4 Claims. (Cl. 164—112.)

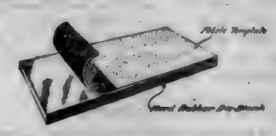
1. The combination with the longitudinally moving em rack of a record strip composing machine, of a plurality of adjustable trips arranged upon said rack, a movable member having a part thereof arranged in the path of travel of said trips, and a signal actuating element operated by said movable member.



1,534,525. ACYLATED DIAMINES. MAX HARTMANN and JOHANN KÄGI, Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed July 2, 1924. Serial No. 723,795. 5 Claims. (Cl. 260—124.)

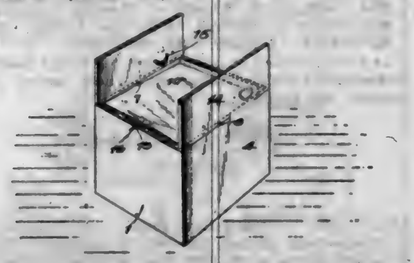
1. As new products the acylated alkylenediamines of the general formula:

$$\begin{matrix} R \\ R_1 \end{matrix}\!\!>\!N\!-\!(C_nH_{2n})\!-\!N\!<\!\!\begin{matrix} R_2 \\ R_3 \end{matrix}$$



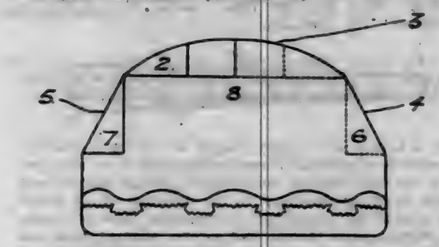
(wherein R means H or acyl, R_1 means acyl, R_2 and R_3 means H or a hydrocarbon radical, n means a whole number) which products form with acid salts are soluble in water.

1,534,526. AUTOMOBILE SPEED CONTROLLER. HENRY C. HILL Cincinnati, Ohio. Filed Jan. 24, 1923. Serial No. 614,669. Renewed Jan. 9, 1925. 1 Claim. (Cl. 200—80.



A speed controller for automobiles comprising a frame, a centrifugal spring governor mounted and revolving in said frame, an oscillating lever pivoted at one end to said frame and provided at the free end with an electrical contact point, means controlled by the travel speed of the vehicle to depress said lever, means to raise said lever when the depressing means is retracted, means adjustable to limit the reaction of said oscillating lever, a resilient electrical contact member which is impinged and depressed by the contact point in the free end of said oscillating lever when the speed limit has been reached, said impinged contact member mounted in an insulating shell and provided with a reciprocating plunger and reaction spring, means adjustable to limit the upward movement of said impinged contact member, and a conductor to connect said impinged member to a ground, whereby the current to the spark plugs is suppressed.

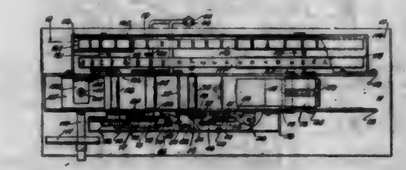
1,534,527. RUBBER FABRICATION. HENRY JOSEPH, Grayling, Mich., assignor, by mesne assignments, to Tucker Rubber Corporation, Buffalo, N. Y. Filed Apr. 16, 1921, Serial No. 461,791. Renewed Sept. 8, 1924. 22 Claims. (Cl. 18—01.)



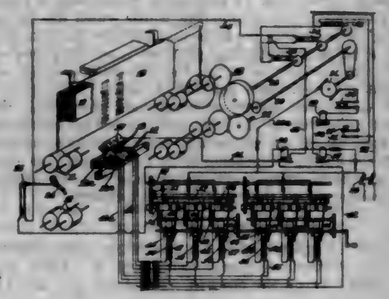
1. The process of producing a sheet rubber fabric having on the face thereof a positive reproduction of a textile fabric, which consists in impressing upon the face of a sheet of uncured hard rubber the superficial characteristics of a textile fabric, vulcanizing the said hard rubber sheet so as to produce a negative of the textile fabric, applying a sheet of uncured soft rubber to the negative, and vulcanizing the said sheet of soft rubber to form on the face thereof the positive design of the textile fabric.

1,534,528. RAT TRAP. WILLIS P. KENNEDY, Rogersville, Ala. Filed July 17, 1922. Serial No. 575,589. 1 Claim. (Cl. 43—69.)

An animal trap comprising an open top rectangular receptacle embodying end, side and bottom walls, one end wall having an open notch in the central portion of its upper edge and the side walls having transversely aligned notches in their upper edges nearer one end wall than the other end wall, a tilting platform arranged within and normally closing the top of the receptacle and including a transverse shaft having projecting ends seated in the notches of the side walls, an outwardly projecting pin carried by one end of the platform and normally seated in the notch of said one end wall to prevent downward tilting of the platform from its normal position in one direction, a weight suspended from said one end of the platform within the receptacle to normally cause the platform to assume its receptacle-closing position, upright plates removably pinned upon the upper edges of the side walls of the receptacle and overlying the projecting ends of the platform shaft to maintain the latter in the notches of the side walls, and bait receptacles supported by the upright plates and arranged at the inner sides of the latter adjacent the other end of the platform.



1,534,529. RUBBER TIRE. EDWARD BRICE KILLEN, London, England. Filed Dec. 21, 1922. Serial No. 608,251. 1 Claim. (Cl. 152—1.)

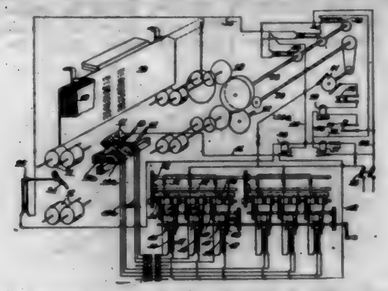


A rubber tire the tread of which has a cross-sectional profile comprising a central arcuate portion merging into right and left sloping side portions, deep grooves extending transversely of the tire from the apex of said arcuate portion down one side thereof, similar grooves in the adjacent sloping side portion and aligned with the first-mentioned grooves, other similarly formed grooves extending from the apex of the arcuate tread portion down the opposite side of the tire, the grooves on one side of said tread apex being disposed intermediate those on the other side.

11,534,530. COMBINED STAMPING AND COUNTING MACHINE. STANLEY J. KUSIEL, Holyoke, Mass. Filed June 28, 1924. Serial No. 723,054. 6 Claims. (Cl. 216—25.)

1. A combined stamp affixing and counting machine comprising a removable roller for a roll of stamps, a frame holding said roller provided with means for removably attaching it to the machine, means for advancing the strip of stamps unwound from said roll step by step through the machine, means for separating the single stamps from said roll, means for moistening the stamps, envelope supporting plate, means for depositing said separated stamps successively on an envelope deposited upon said plate, means for exerting a pressure on said stamp to affix it to the envelope, means for gaging the envelope, and the counting means actuated by said pressure exerting means to count the number of stamps used.

1,534,531. RELAYLESS COUNTER. CLAIR D. LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Filed June 17, 1922. Serial No. 569,078. 6 Claims. (Cl. 235—92.)

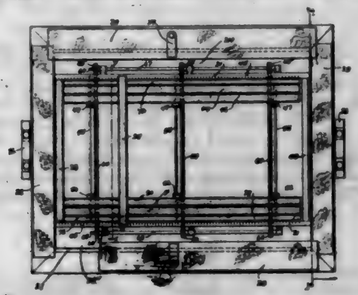


1. In a tabulating apparatus, the combination with a record card having an index point, of a record card circuit and a magnet circuit, circuit controllers in said circuits, one of said controllers being operated by the record card to establish both the card circuit and the magnet circuit, a magnet in said magnet circuit, means controlled by said magnet for interrupting the card circuit upon the establishment of the magnet circuit and means for concurrently and subsequently maintaining the flow of current in the magnet circuit.

1,534,532. RELAYLESS COUNTER. CLAIR D. LAKE, Binghamton, N. Y., assignor to The Tabulating Machine Company, Endicott, N. Y., a Corporation of New Jersey. Original application filed June 17, 1922, Serial No. 569,078. Divided and this application filed June 28, 1924. Serial No. 722,972. 4 Claims. (Cl. 235—92.)

1. In a tabulating apparatus, the combination with a record card having an index point, of a record card circuit and a magnet circuit, circuit controllers in said circuits, one of said controllers being operated by the record card to establish both the card circuit and the magnet circuit, a magnet in said magnet circuit, means

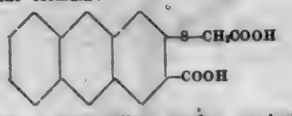
controlled by said magnet and comprising one of aforesaid circuit controllers which is operable independently



of the energisation of the magnet for shunting the card circuit and for maintaining a flow of current in the magnet circuit.

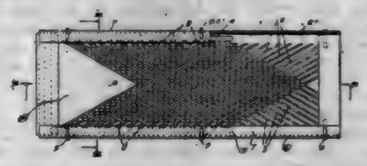
1,534,533. SPRING SUSPENSION FOR VEHICLES. CHARLES HENRY LUTMAN, Newburn, England, assignor of one-half to James Liptrot Ardern, Newcastle-on-Tyne, England. Filed June 12, 1924. Serial No. 719,609. 14 Claims. (Cl. 267—45.)

1. A spring suspension for vehicles comprising a pair of spring units, each of said units comprising a plurality of spring plates of tapering width which are in contact at their widest portions and diverge towards their outer ends, said contacting portions comprising one end of the unit, a yoke, a lip on the underside of said yoke adapted to receive the contacting ends of said pair of units, means for rigidly securing said contacting ends to said underside of the yoke, and means for connecting said yoke to one of the members of the vehicle between which the spring suspension is to be inserted, the outer ends of the plates of greater curvature being adapted to be connected to the other of said members.



1,534,534. STRETCHING AND DRYING APPARATUS. ROBERT VALENTINE LYON, Buffalo, N. Y. Filed Sept. 30, 1921. Serial No. 504,816. 4 Claims. (Cl. 45—24.)

1. In a stretching and drying apparatus, a stationary bar at one end of the apparatus adapted to hold one end of a piece of fabric, a return bar adjacent the opposite end of the apparatus adapted to engage the fabric intermediate its ends, and adjustable holding bar movable between the return bar and the stationary end bar and adapted to hold the other end of the fabric, and transversely adjustable side holding bars adapted to hold the sides of the fabric between the stationary end bar and return bar and between the return bar and the adjustable end bar.



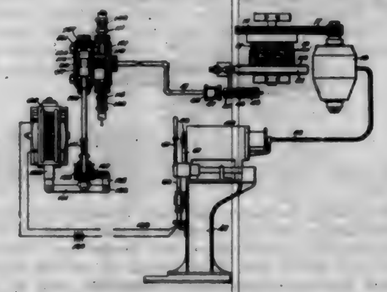
1,534,535. ANTHRACENE DERIVATIVE AND PROCESS FOR MAKING THE SAME. BERTRAM MAYER, Basel, and JAKOB WÜRGLER, Neuewelt, near Basel, Switzerland, assignors to Society of Chemical Industry in Basle, Basel, Switzerland. Filed Jan. 4, 1924. Serial No. 684,451. 1 Claim. (Cl. 260—108.)

As a new product of manufacture the herein described anthracene-2-thioglycolic-3-carboxylic acid having most probably the formula:

which forms a citron-yellow powder, sparingly soluble in nitrobenzene, alcohol, and boiling water, but soluble in boiling glacial acetic acid to a yellowish solution, in sulphuric acid to an orange solution, in chlorosulphonic acid to a solution which is at first deep red and then brown, and in hot alkalies to an olive solution.

1,534,536. CONCENTRATOR. CONRAD M. MEYER, San Francisco, Calif. Filed Sept. 2, 1924. Serial No. 735,458. 4 Claims. (Cl. 33—89.)

1. In a concentrator of the character described, an inclined element having intersecting diagonal grooves with dished bottoms and steep remote edges in the top face thereof.



1,534,537. HOLDER FOR SOCKET-WRENCH SETS. EDWIN S. MILLER, Buffalo, N. Y., assignor to The Keystone Mfg. Co., Buffalo, N. Y., a Corporation of New York. Filed May 20, 1924. Serial No. 714,586. 4 Claims. (Cl. 206—16.)

1. A holder for a socket wrench set having a plurality of sockets of different diameters adapted to be arranged in a row, said holder comprising a trough shaped body which is of tapering form in the direction of its length and adapted to receive the corresponding sizes of sockets in different parts thereof, and a cover adapted to extend lengthwise over the body and the row of sockets and confine the latter therein, said cover being provided at one end with a hook and at its other end with a bead and said body being provided at one end with an opening which receives said hook and at its other end with a spring catch which receives said bead.

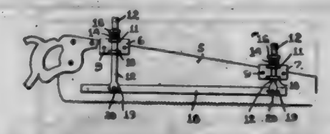
1,534,538. HOISTING APPARATUS. ALMON E. NORRIS, Brookline, Mass. Filed May 6, 1924. Serial No. 711,379. 12 Claims. (Cl. 192—2.)

1. In a hoisting apparatus, the combination with a winding drum, of a brake therefor, a spring for applying the brake, a pressure fluid device for releasing the same, an electrically controlled valve for admitting pressure fluid to or exhausting the same from said device, an alternating current motor for the winding drum, a controller therefor having connections to establish regenerative braking in lowering the load, a controller lever, and brake controlling devices operated by the lever coordinately with the controller, the same comprising a cam, a cam moved part actuated by the cam when the lever is moved between neutral and a lowering position, a switch for controlling said valve, and a lost motion connection between the cam moved part and the switch providing for the simultaneous movement of the switch with

the initial movement of the cam moved part when moved in either direction, whereby the movement of the lever to lower the load is accompanied by the quick release of the brake and the movement of the lever in the reverse direction is accompanied by a quick application of the brake.

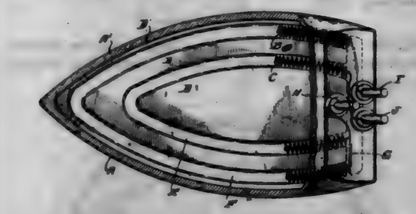
1,534,539. PROCESS OF EMULSIFYING MILK OIL. CHARLES E. NORTH, Montclair, N. J., assignor to The Milk Oil Corporation, Wilmington, Del., a Corporation of Delaware. Filed May 29, 1924. Serial No. 716,597. 3 Claims. (Cl. 99—11.)

1. The process herein described of emulsifying milk oil and fluid milk to produce a natural flavored reconstructed cream which consists in mixing relatively small quantities of milk oil and dried milk powder, adding to this mixture, as a nucleus, fluid milk and milk oil, stirring the same to produce a paste emulsion and adding to such paste the quantity of fluid milk required to produce the desired finished product.



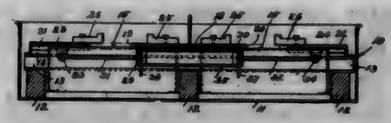
1,534,540. SHOE WITH REMOVABLE SOLE AND HEEL. JOSEPH PREZANITI, Elmsford, N. Y. Filed Apr. 11, 1923. Serial No. 631,252. 1 Claim. (Cl. 36—15.)

In a shoe having a permanent inner sole and a lining covering the same, said inner sole being provided with openings, a sole fastening means comprising conical flanges inserted into openings and impressed into the lining, prongs on said flanges lying between the lining and inner sole to retain the flanges in place, and means engaging said flanges for retaining a sole and heel on the shoe.



1,534,541. SAW GAUGE. WILLIS E. POSEY, Waco, Tex. Filed Feb. 9, 1924. Serial No. 691,752. 2 Claims. (Cl. 145—35.)

1. In a gauge for saws, saddles adapted to be secured to the said saw, guide rods having threads, means on the saddles in which the guide rods are slidable, a screw rotatably mounted on each saddle for engaging the threads of the said guide rods, means for preventing

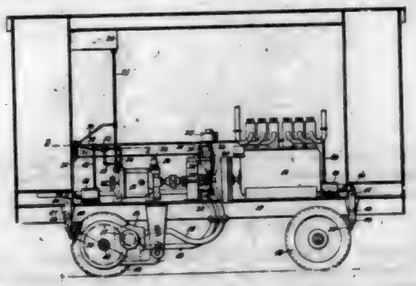


displacement of the screws, gauges having slots and elements extending through the slots for connecting the said gauges to the guide rods.

1,534,542. ELECTRICALLY-HEATED SADIRON. ALFRED E. RIMMER, New York, N. Y., and CHARLES C. WAITE, Roselle Park, N. J. Filed Oct. 11, 1920. Serial No. 416,087. 9 Claims. (Cl. 219—25.)

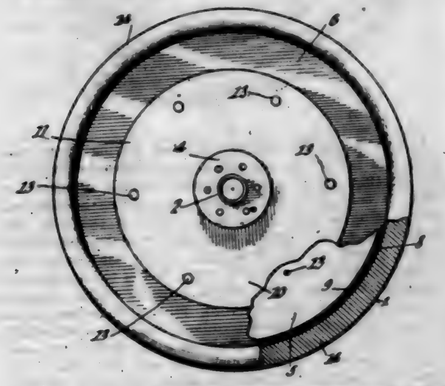
1. An electrically heated sad iron having three coupling-pins located at the apices of an isosceles triangle, two heating elements of different heating capacity located in said iron, the element of greater heating capacity being located close to the side of the iron, the element of lesser heating capacity being located nearer to the middle of the iron than is the element of the greater heating capacity, the ends of the elements being connected with the pins, and a coupling-switch adapted to contact with said coupling pins and connect said heating elements in predetermined relation, said switch having four contact terminals two of which are connected together to form one pole and the other two connected together to form the opposite pole of an electric circuit.

1,534,543. SPRING SETTING AND TEMPERING APPARATUS. PHILIP RIEDELL, PAUL B. CABOT, and KENNETH R. HERMAN, Los Angeles, Calif., assignors to United States Spring Co., Inc., Los Angeles, Calif., a Corporation of California. Filed July 11, 1922. Serial No. 574,236. 9 Claims. (Cl. 266—6.)



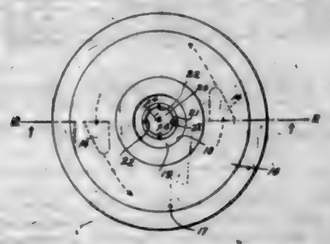
1. A spring setting and tempering apparatus, comprising a fluid reservoir, a spring setting or clamping mechanism disposed in said reservoir, and means for altering the fluid level in said reservoir.

1,534,544. VEHICLE BRAKE. JOHN ROBSON, Waterbury, Conn., assignor to Universal Engineering Corporation, Montreal, Quebec, Canada, a Corporation of Canada. Filed May 25, 1923. Serial No. 641,337. 12 Claims. (Cl. 303—10.)



1. In a power-propelled vehicle, a power plant of the type in which a liquid under pressure is used to

transmit power to the vehicle drive, a governor operatively connected with said power plant, and a brake con-

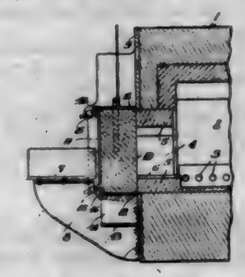


trolled by said governor to be applied automatically whenever the speed of the power plant exceeds a predetermined limit.

1,534,545. VEHICLE WHEEL. JOHN CHARLES ROGERS, Bastrop, La. Filed Oct. 10, 1924. Serial No. 742,828. 5 Claims. (Cl. 301—63.)

2. A wheel of the class described comprising a hub having annular longitudinally spaced flanges, resilient disk-like plates secured between said flanges and diverging toward their perimeters, spring steel plates mounted on the outer faces of said disks and operating as guides and supports therefor, means for connecting and adjusting the tension of said plates, and a removable tread mounted on the perimeter of said plates.

1,534,546. SPRINKLER HEAD. JOHN D. ROSS, Pasadena, Calif. Filed July 11, 1922. Serial No. 574,126. 2 Claims. (Cl. 299—19.)

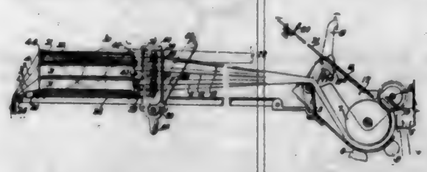


1. A centrifugal sprinkler head comprising a hollow body member provided with a fluid inlet port leading to its hollow interior and with a substantially circular outlet port in its top wall having two pairs of downwardly projecting prongs extending inwardly toward said hollow interior and formed on its edge, the said prongs being spaced equidistant from each other.

1,534,547. PENCIL SHARPENER. LAURENTS RUFF, New York, N. Y. Filed Jan. 26, 1922. Serial No. 531,838. 6 Claims. (Cl. 120—85.)

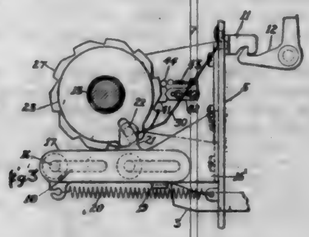
5. A pencil sharpener comprising a barrel into which a pencil may be inserted, a bracket on said barrel, a cutting blade pivotally mounted on said bracket and extending into said barrel, said blade having its cutting edge inclined in two directions, an adjustable stop on said bracket whereby the pivotal movement of said blade in an outward direction is arrested, a tubular cap mounted upon the entrance end of said barrel and including resilient fingers whereby the pencil is centered in said sharpener and a plunger connected with said barrel and provided with means for pointing the lead of said pencil.

1,534,548. FURNACE STRUCTURE. LEON D. SLADE, Rochester, N. Y., assignor to Gleason Works, Rochester, N. Y., a Corporation of New York. Filed Apr. 18, 1922. Serial No. 554,749. 13 Claims. (Cl. 263—46.)



1. The combination with a furnace having an opening through which articles are fed, of a stationary floor at the bottom of the opening, a door for closing said opening, and a movable floor section that is automatically actuated into a position adjacent to said stationary floor when the door is opened.

1,534,549. SWITCH CONTROL CIRCUIT FOR AUTOMATIC TELEPHONE SYSTEMS. ARTHUR BESSEY SMITH, Evanston, Ill., assignor to Automatic Electric Company, Chicago, Ill., a Corporation of Illinois. Original application filed Sept. 19, 1919, Serial No. 324,997. Divided and this application filed Nov. 29, 1922. Serial No. 603,934. 3 Claims. (Cl. 179—16.)



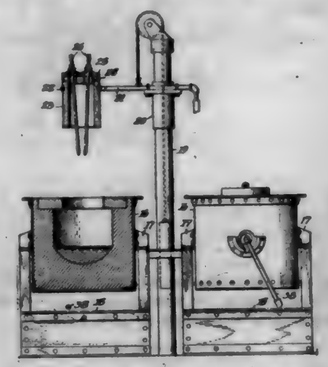
1. In combination, a line circuit, a relay and a battery in said circuit, the line being charged while the circuit is closed, a relay having contacts for intermittently interrupting said circuit, contacts on said second relay for closing a shunt path for discharge currents around said first relay every time the said circuit is interrupted, a condenser in said shunt path, a discharge circuit including a second battery for discharging said condenser while the line circuit is closed, and contacts on said second relay for closing said discharge circuit.

1,534,550. TYPEWRITING MACHINE. JESSE A. B. SMITH, Stamford, Conn., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed Dec. 11, 1920. Serial No. 429,840. 24 Claims. (Cl. 197—126.)

1. In a typewriting machine, the combination with a carriage, and a platen journaled in said carriage and around which work-webs are adapted to be fed, of an extension of said carriage, a carbon-paper carriage reciprocable upon said extension toward and from the platen, carbon-web-supplying magazines carried by said carbon-paper carriage between the work-webs for containing reserve carbon-paper web supplies interleaved between said work-webs and feedable directly forward into position for active use when required, a space being provided between adjacent magazines for the passage of a work-web, and means to prevent withdrawal of the carbon-paper webs from said magazines, except when a stretch of used carbon is to be replaced by fresh carbon from the reserve.

1,534,551. COIN-COUNTING DEVICE FOR MONEY-PAYING MACHINES. ALEXANDER E. SORUM and ROBERT T. BROCKMAN, Terre Haute, Ind., assignors to International Money Machine Company, Terre Haute, Ind. Filed May 15, 1914, Serial No. 494,887. Renewed Aug. 22, 1921. 4 Claims. (Cl. 235—91.)

1. In calculating mechanism of the class described, the combination of a support, a shaft mounted thereon, a plurality of registers carried by the shaft, each register including an operating disk and wheels adapted to be actuated from said disk, a spring retracted slide bar associated with each register and having connection with the disk of such register, and an operating member coacting with each slide bar aforesaid to cause accumulating action of the registers.



1,534,552. LIFE PRESERVER. HAROLD C. TYNER, Culver City, Calif. Filed Apr. 1, 1924. Serial No. 703,367. 2 Claims. (Cl. 9—17.)

1. In a bathing suit, a shoulder split from the neck opening to the adjacent arm hole, fasteners for detachably holding the split edges of the shoulder together, and a split ring pneumatic tube extending from the

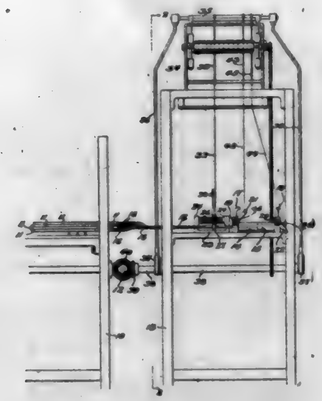
front of said split shoulder around the neck opening of the suit to the rear of said split shoulder.

1,534,553. ELECTRIC HEATING UNIT. FREDERICK VON SCHLEGELL, Chicago, Ill. Filed Sept. 13 1920. Serial No. 409,833. 17 Claims. (Cl. 204—64.)

1. A heating unit comprising a plurality of electrodes, and an insulating support holding said electrodes in substantially parallel relation to ensure maintenance of an arc between the ends of said electrodes as the latter are consumed.

1,534,554. METHOD OF TREATING WASTE OF BENZOL RECOVERY. FRED W. WAGNER, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 25, 1923. Serial No. 634,604. 4 Claims. (Cl. 196—76.)

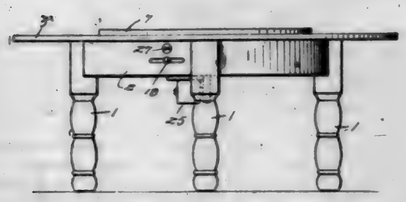
3. The herein described method of treating a residue containing coumarone which consists in adding to it petroleum oil and water, heating, allowing the mass to cool and settle, decanting, subjecting the remaining semi-solid mass to distillation, then adding oil, and allowing coagulation to follow.



1,534,555. METHOD OF TREATING WASTE OF BENZOL RECOVERY. FRED W. WAGNER, Pittsburgh, Pa., assignor to Jones & Laughlin Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Apr. 25, 1923. Serial No. 634,605. 3 Claims. (Cl. 196—76.)

2. The method herein described of treating a residue containing coumarone which consists in forming with it an aqueous emulsion, adding to the emulsion petroleum oil and allowing the whole to stand, then decanting, and subjecting the remaining substance to distillation.

1,534,556. THREAD MOVING AND CONTROLLING MEANS FOR KNITTING MACHINES, ETC. ROBERT E. WALLISER, Chicago, Ill. Filed May 14, 1924. Serial No. 713,246. 8 Claims. (Cl. 66—12.)

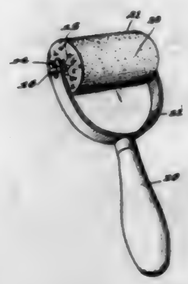


1. A thread guide; a source of energy normally held against action; operating means for said thread guide;

pattern-controlled means for releasing said energy to effect movement of said thread guide through the me-

dium of said operating means; and means for limiting to different extents the movement of said thread guide and also controlled by said pattern means.

1,534,557. SELF-SERVING TABLE. COMMODORE D. WILLIAMS, Caruthersville, Mo. Filed Mar. 9, 1923. Serial No. 623,944. 3 Claims. (Cl. 45—26.)



1. A self-serving table adapted for support on a floor comprising a stand, a table top mounted upon the stand, a rotary platform in substantially the same plane as the top and forming a continuation thereof, disposed centrally of the table top, a ring gear carried by the rotary platform, a drive shaft, means for rotating the drive shaft in one direction, and means engageable by a person while seated about the table, for connecting the drive shaft at either end to the ring gear whereby to rotate the platform in the required direction.

1,534,558. PROCESS OF MANUFACTURE OF D-*l*- AND L-*l*-COCAINE. OTTO WOLFES and HORST MARDER, Darmstadt, Germany. Filed Dec. 3, 1923. Serial No. 678,337. 1 Claim. (Cl. 260—25.)

Process of manufacture of *d-l*- and *l-l*-cocaine by converting *d-l-l*-egonine methylester by means of optically active acids into the corresponding salts, separating the *l-l*-salt from the *d-l*-salt by fractional crystallization of the latter, and isolating and benzoylating the bases in the usual manner.

1,534,559. PAPER-HANGER'S SEAM ROLLER. WILBUR R. YANT, Tulsa, Okla. Filed Apr. 11, 1924. Serial No. 705,764. 4 Claims. (Cl. 216—61.)

1. A device of the character described, comprising a yoke, a pin carried by said yoke, a roller of yieldable material upon said pin, and means carried by said pin for engaging in the yieldable material of the roller.

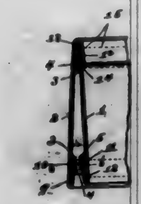
1,534,560. SAFETY CIGARETTE HOLDER. DELBERT R. BAITY, Los Angeles, Calif. Filed July 11, 1923. Serial No. 650,849. One Claim. (Cl. 131—61.)

A cigarette holder, comprising a mouth piece for holding a cigarette, and a pair of elongated members formed of a wire gauze secured together and detachably secured to said holder, said members being twisted circularly in opposite directions before securing the same together, foraminated circular plates for closing the ends of said elongated members and holding them in their twisted formation whereby to prevent accidental breakage of the members.

1,534,561. METHOD FOR USING DIRECT BLAST-FURNACE METAL FOR FOUNDRY CASTINGS. DAVID F. BAKER, Tarrytown, N. Y. Filed Feb. 29, 1924. Serial No. 696,087. 11 Claims. (Cl. 75—27.)

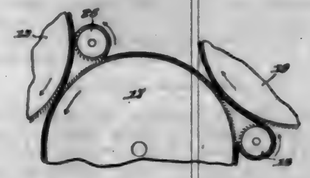
1. In the art of direct metal casting, the method which consists in varying the combined carbon in pig iron by varying the sulphur content, and maintaining the remaining elements at approximately the same percentage.

1,534,562. SOFT FOLD COLLAR. WILLIAM BARKER, Jr., Troy, N. Y., assignor to Lion Collars & Shirts, Inc., a Corporation of New York. Filed Aug. 16, 1921. Serial No. 492,779. 3 Claims. (Cl. 2—131.)



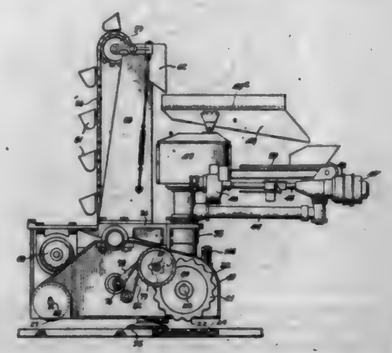
3. A fold-collar the body portion of which comprises a band and a folded-over top with inturned end edges,

and having a continuous facing strip extending transversely of the band and top at an end of the collar covering the outer surface of the end of the band and



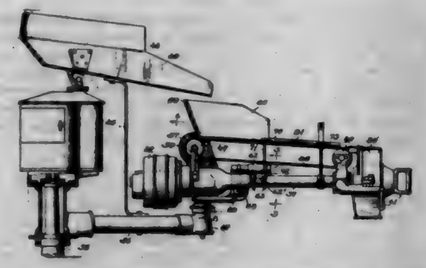
the inner surface of the neighboring end of the top, the edge of said facing strip being inturned and stitched to the inturned end edges of the band and top.

1,534,563. FOLD COLLAR. WILLIAM BARKER, Jr., Troy, N. Y., assignor to Lion Collars & Shirts, Inc., a Corporation of New York. Filed Feb. 2, 1922. Serial No. 533,674. 6 Claims. (Cl. 2—131.)



1. That improvement in the art of making fold-collars which consists in cutting a top-ply and a band-ply in forms adapted for the respective top and band to be made therefrom, running said plies together along their inner edges with the inner side of the band-ply adjacent to the outer side of the top-ply, folding the band-ply over its own inner edge, and stitching the folded-over portion of the band-ply to the top-ply along the inner edge of the latter on the opposite side of the inner edge of the band-ply from said first stitching.

1,534,564. METHOD AND APPARATUS FOR CARDING FIBROUS MATERIAL. EDDO V. BATES, Lowell, Mass. Filed June 2, 1924. Serial No. 717,241. 6 Claims. (Cl. 19—99.)

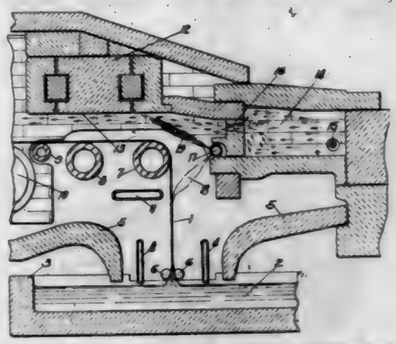


3. A machine for carding fibrous material comprising a swift having means coacting therewith to card fibrous material; a second swift also having means coacting therewith to card fibrous material, and arranged to receive carded material from said first swift in its progress through the machine; and means whereby certain portions of carded material received from said first swift may be returned thereto from said second swift for further carding.

1,534,565. PORTABLE MOLDING MACHINE. ELMER O. BEARDSLEY, Chicago, Ill., assignor to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 25, 1922. Serial No. 596,722. 19 Claims. (Cl. 22—36.)

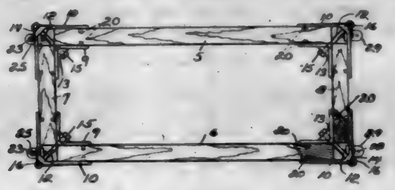
1. In a machine of the character described, the combination of a truck adapted to travel over a floor, a molding machine on the truck, means to feed sand from a pile at the front of the truck when it is facing in one direction, and mechanism for lifting the truck to clear the floor and permit it to be turned horizontally over the floor to render the feed means operable with a pile when the truck is facing in the other direction.

1,534,566. MOLDING MACHINE. ELMER O. BEARDSLEY and WALTER F. PIPER, Chicago, Ill., assignors to The Beardsley & Piper Company, Chicago, Ill., a Corporation of Illinois. Filed Dec. 4, 1922. Serial No. 604,658. 21 Claims. (Cl. 22—36.)



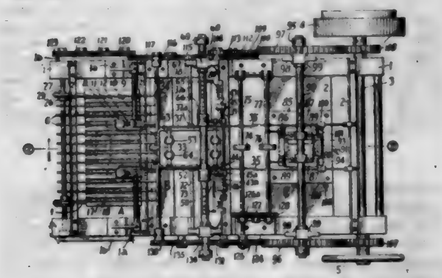
1. In a molding machine, the combination of a sand-projector comprising a rotor and a casing, means to support the projectors for horizontal bodily movement to sling sand into all portions of the flask at a substantially constant angle of delivery, means for feeding sand to the projector, means for driving the projector, and means for suspending the projector so it can be rocked laterally when desired.

1,534,567. DRAWING AND FLATTENING SHEET GLASS. CLYDE W. BELDEN, Shreveport, La., and INGLE B. BUSARD, Charleston, W. Va., assignors to The Libbey-Owens Sheet Glass Company, Toledo, Ohio, a Corporation of Ohio. Filed Sept. 5, 1922. Serial No. 586,138. 6 Claims. (Cl. 49—17.)



3. In a sheet glass drawing apparatus, wherein the sheet is drawn vertically from a bath of molten glass and then bent into the horizontal plane, means for re-

heating the sheet in its horizontal run, comprising a member of heat radiating material under which the sheet moves, a source of heat for heating this member,

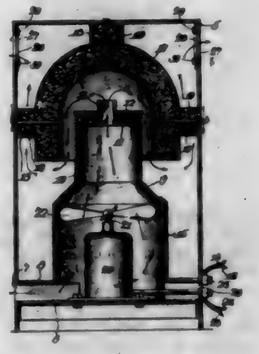


and an auxiliary heating means adapted to interchangeably play against either the vertical run of the sheet or the radiating member.

1,534,568. WOODEN FLASK. GEORGE O. BERGSTROM, Neenah, Wis., assignor to Bergstrom Stove Co., Neenah, Wis., a Corporation of Wisconsin. Filed Nov. 7, 1924. Serial No. 748,342. 7 Claims. (Cl. 22—96.)

2. In a device of the character described, the combination of a set of wooden members arranged to comprise a rectangular figure corresponding in demensions substantially to the dimensions of the interior faces of said member, the ends of said members being exposed, together with interior and exterior clamping devices arranged in sets to embrace the inner and outer faces of contiguous members adjacent their ends.

1,534,569. PAPER-BOX-MAKING MACHINE. CHARLES BUTTERFIELD, Middletown, Ohio, assignor to The Interstate Folding Box Company, Middletown, Ohio. Filed Aug. 8, 1923. Serial No. 656,397. 9 Claims. (Cl. 93—51.)

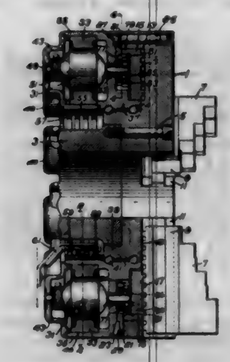


1. A paper box making machine, including in combination with mechanism adapted to form the boxes from paper blanks, means for delivering the blanks to the forming mechanism including feeding mechanism adapted to deliver the blanks singly from a supply of blanks stacked thereon, means interposed between said feeding and forming mechanisms for applying an adhesive to the blanks consisting of a reciprocating container for the adhesive timed in operation with said feeding mechanism and having a plurality of valve controlled discharge apertures for depositing the adhesive on predetermined portions of each blank.

1,534,570. METALLIC ALLOY. ALVAH W. CLEMENT, Cleveland, Ohio, assignor, by mesne assignments, to Ludlum Steel Co., Watervliet, N. Y., a Corporation of New Jersey. Filed Aug. 15, 1917. Serial No. 186,267. 12 Claims. (Cl. 75—1.)

1. A substantially nickel free alloy resistant to corrosion and to oxidation at high temperatures, containing on analysis approximately 5% to 25% of titanium, and the balance principally iron and chromium.

1,534,571. ELECTRIC HEATER. JAMES CONNING, Chicago, Ill. Filed Oct. 1, 1924. Serial No. 740,965. 2 Claims. (Cl. 219—39.)

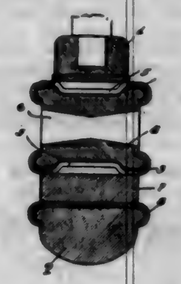


1. In a heater of the class described, the combination with a casing having means for the discharge of air in its upper portion and an inlet for air in its lower portion, a dome-shaped hood mounted within the upper portion of the casing and spaced therefrom, an auxiliary casing mounted in the lower portion of the first named casing and having communication at its lower part with said air inlet and extended at its upper portion into the cavity of said dome, an electric or resistance coil mounted on the upper portion of the auxiliary casing but insulated therefrom, electric conductors connected a said coil and leading to a supply of electricity, and a switch in the circuit provided by said conductors.

1,534,572. CHUCK. WALLACE M. CUTLER, Windsor Locks, Conn., assignor to The E. Horton & Son Company, Windsor Locks, Conn., a Corporation of Connecticut. Filed Feb. 12, 1924. Serial No. 692,401. 8 Claims. (Cl. 279—114.)

1. A chuck having in combination, a body, radially moving jaws carried by said body, a scroll wheel rotatably supported on said body and operatively connected to said jaws whereby rotation of said scroll wheel in opposite directions will move said jaws in opposite directions, an internal gear carried by said body, an internal gear carried by said scroll wheel, a differential pinion meshing with both internal gears and forming therewith gear sets of slightly different gear ratio, a carrier rotatably mounted on said body, an electric motor having

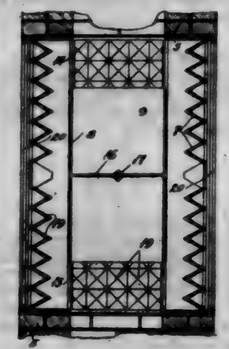
a rotor and stator both carried by said carrier, the rotor of said motor being connected in driving relation to said differential pinion, and control means for said



motor for causing the rotor thereof to rotate relatively to the stator thereof in opposite directions or said rotor to be at rest relatively to said stator.

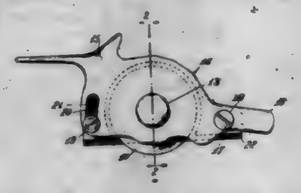
1,534,573. FUEL FOR INTERNAL-COMBUSTION ENGINES. JEAN F. P. DE LA RIBOISIERE, Washington, D. C. Filed Nov. 18, 1924. Serial No. 750,657. 7 Claims. (Cl. 44—9.)

1. An improved fuel for internal combustion engines including liquid hydrocarbons boiling above 160° C., and a smaller proportion of an ether and a compound containing a non-hydroxy phenyl radical.



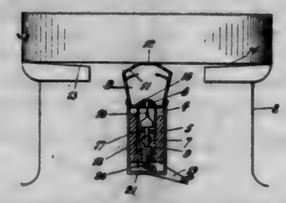
1,534,574. CUSHIONED-WHEEL CONSTRUCTION. JOSEPH L. DONAT, Chicago, Ill. Filed Feb. 1, 1923. Serial No. 616,419. 1 Claim. (Cl. 152—36.)

In a wheel structure, a felloe, outer and inner concentric resilient integral rings removably mounted on said felloe and having rims curved towards each other, cushioning means permanently disposed between said rings and retained by said rims, tongues struck inward from said rings to engage said cushioning means, and a tire mounted exterior to said outer ring.



1,534,575. HEATING DEVICE. JOSEPH L. DONAT, Chicago, Ill. Filed Feb. 15, 1923. Serial No. 619,223. 4 Claims. (Cl. 257—165.)

1. A heating device adapted to replace an entire section of a chimney, a flue of shorter length than said section adapted to register with the chimney, radiators surrounding said flue, a damper in said flue adapted to



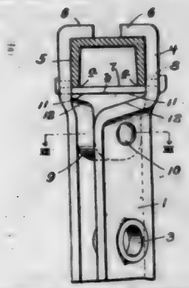
control the flow of gases from the chimney around the lower end of the flue, up the outside of the flue and around the top of the flue into the chimney again.

1,534,576. CUTTING OR TRIMMING DEVICE. FRED ERIC EDGREN, Chicago, Ill. Filed Oct. 23, 1922. Serial No. 596,196. 3 Claims. (Cl. 164—77.)

1. A device of the character described, comprising a shell or case, a gauge portion, the forward ends of the shell and gauge portion being pivotally secured together, a cutting blade rotatably mounted in the side wall of said shell or case, means arranged in the side wall of the shell whereby the cutting blade is forced toward the gauge portion and yieldingly held in normal position, and reciprocable means mounted in the side wall of the gauge portion, whereby the cutting blade may be forced laterally toward the side wall of the shell or case, out of normal position against the action of said first means.

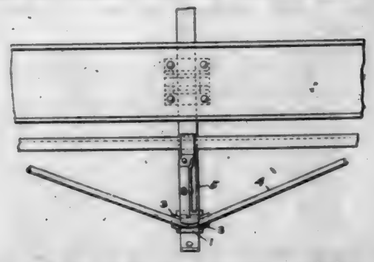
1,534,577. AUTOMATIC GAS REGULATOR. EMIL ULRIK GUSTAV ERNST, Copenhagen, Denmark. Filed Sept. 23, 1920. Serial No. 412,408. 2 Claims. (Cl. 126—52.)

1. The combination with a gas burner for cooking and a gas supply conduit, of a valve adapted to control the amount of gas supplied through the said conduit, movable means actuated by the cooking utensil when in normal position on the burner to automatically operate the said valve to supply more or less gas proper-



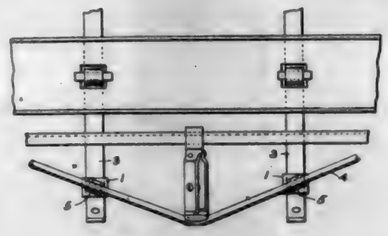
tional to the bottom area of said cooking utensil, and regulating means for the air supply operated simultaneously and in accordance with the said gas supply controlling means.

1,534,578. CHAIR GLIDE. WILLIAM E. FIELDING, Waterbury, Conn., assignor to The Mattatuck Manufacturing Company, Waterbury, Conn., a Corporation of Connecticut. Filed Dec. 11, 1924. Serial No. 755,314. 1 Claim. (Cl. 16—42.)



An integral dished chair glide made of sheet metal and having a circular form and provided with an interrupted edge and prongs located within said edge having their bases in a plane below the plane of said edge, said interrupted edge having portions extending in front of the outer faces of said prongs, the inner faces of said extensions engaging said outer faces of said prongs and reenforcing said prongs.

1,534,579. BRAKE BEAM. WILLIAM E. FOWLER, Jr., Mount Lebanon, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed May 8, 1923. Serial No. 637,491. 2 Claims. (Cl. 188—231.)

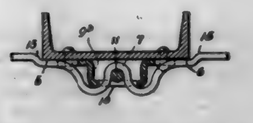


1. A brake beam having in combination a structural compression member, a strut formed by bending a strip of metal to U-shape, the sides or legs at one end of the strut being adapted to grip the compression member, a wedge passing through the sides or legs and bearing on the compression member, a spacing block arranged between the legs and adapted to serve as a guide for the wedge.

1,534,580. SHOE FOR BRAKE-BEAM SUPPORTS. WILLIAM E. FOWLER, Jr., Mount Lebanon, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,558. 2 Claims. (Cl. 188—213.)

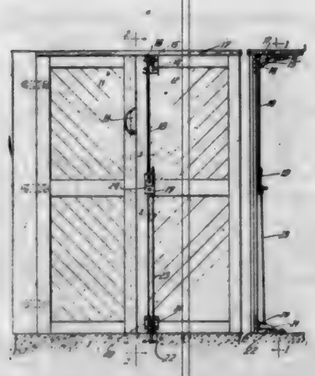
2. A shoe for brake beam supports consisting of a base or body portion slotted for the reception of a supporting rail and provided with spaced and oppositely inclined seats for engagement with the tension member of a brake beam on opposite sides of the strut.

1,534,581. SHOE FOR BRAKE-BEAM SUPPORTS. WILLIAM E. FOWLER, Jr., Mount Lebanon, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,560. 5 Claims. (Cl. 188—213.)



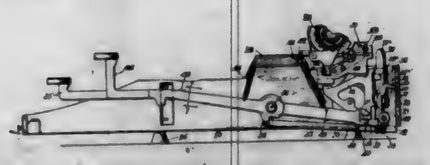
3. A saddle for a supplemental support for a brake beam consisting of a body portion slotted for the reception of a supporting rail, a saddle, one of said parts being provided with a projection and the other with a socket for the reception of the projection, the projection and socket being so constructed that the saddle may rotate on the body portion, and means for holding the saddle in position on the body portion.

1,534,582. SECURING BRAKE-BEAM SUPPORTS TO TRUCKS. WILLIAM E. FOWLER, Jr., Mount Lebanon, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,562. 5 Claims. (Cl. 188—213.)



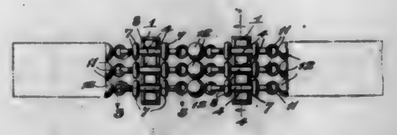
5. The combination of a truck element having a keyhole shaped opening therethrough and a supporting rail provided intermediate its ends with a projection having a head or enlargement at its end adapted to bear on the element at the sides of the narrower portion of the opening through said element, and a block fitting into the larger portion of the opening in the truck element and adapted to prevent lateral movement of the rail.

1,534,583. SECURING BRAKE-BEAM SUPPORTS TO TRUCKS. WILLIAM E. FOWLER, Jr., Mount Lebanon, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,563. 9 Claims. (Cl. 188—213.)



5. The combination of a spring plank, a supporting rail adapted to bear on the underside of the plank adjacent to its edges and having resilient portions extending downwardly from the points of bearing of the rail on the plank and having a portion intermediate the inclined portions extending towards the plank and means for securing such intermediate portion to the underside of the plank.

1,534,584. DOORLOCK. JOSEPH P. FREDRICK, Chicago, Ill., assignor of one-half to August J. Lurie, Chicago, Ill. Filed Apr. 28, 1924. Serial No. 709,846. 11 Claims. (Cl. 70—74.)

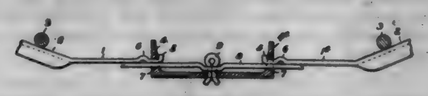


1. In a lock released, self-latching door, separate locking mechanisms for the upper and lower edges of said door each comprising a latch supported by the door and a co-operating fastener secured to the door frame, each of said fasteners having a locking shoulder, each of said locking mechanisms comprising a cam surface for automatically raising the associated latch member and dropping it behind said locking shoulder when said door is slammed shut, a lock on said door comprising a rotary member, an eccentric cam on said rotary member, a key for said lock, a single vertically reciprocable roller riding on the upper periphery of said cam, rods having operative connection with said roller and connected to said upper and lower latches, both of said rods and their associated latches being lifted vertically to unlocked position by the raising of said single roller under the action of said cam, said roller being freely liftable from the periphery of said cam to permit said automatic relatching of said locking mechanism when said door is slammed shut.

1,534,585. TYPEWRITING MACHINE. MAX GARBELL, Chicago, Ill., assignor, by mesne assignments, to O. D. Jennings & Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 25, 1921. Serial No. 464,183. 5 Claims. (Cl. 197—72.)

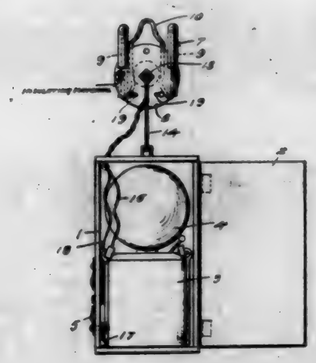
1. In a typewriting machine, the combination with a main frame, a platen carriage and carriage support adapted for case-shift movement with respect to said frame, and cooperable disengageable means on said carriage support and frame arranged to guide the carriage support in its case-shifting movements; of case-shifting means cooperable with said carriage support; cooperable case-shift stops mounted on said carriage support and frame; manually operable means for rendering said case-shift stops relatively non-cooperative; locking means cooperable with said manually operable means for automatically maintaining said non-cooperative relation of said case-shift stops; and means, mounted on the carriage support, cooperable with said locking means arranged to release the latter upon replacement of the carriage support on the main frame.

1,534,586. BRACELET. GEORGE D. HARRISON, North Attleboro, Mass., assignor to Providence Stock Company, Providence, R. I. Filed Feb. 9, 1924. Serial No. 691,789. 10 Claims. (Cl. 63—4.)



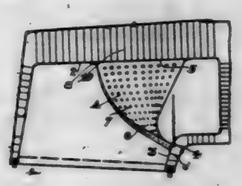
1. In a bracelet, an ornamental unit having bevelled portions which meet in a line on one face thereof and having its opposite face formed with a series of transverse grooves, links having two central portions one of which is straight and engaged in the grooves of the units and the other of which is of inverted V-shape, and engaged with the bevelled portions of the units, each of said links having two pairs of shoulders engaged with the respective opposed sides of the units and rings on the link end portions abutting the shoulders, the outer ends of the links being of approximately circular form and abutting the rings.

1,534,587. BRAKE-BEAM SUPPORT. BRODERICK HASKELL, Franklin, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed Feb. 28, 1924. Serial No. 695,795. 17 Claims. (Cl. 188—213.)



5. The combination of a spring plank having an opening therethrough, a brake beam supporting arm arranged below said plank and its ends extending beyond the sides of said spring plank and having a portion passing into and projecting through said opening, and means cooperating with said spring plank and engaging the portion of said arm projecting thru said opening for supporting said arm on said spring plank.

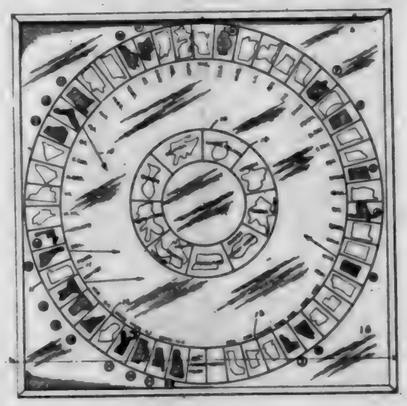
1,534,588. BRAKE-BEAM SUPPORT. BRODERICK HASKELL, Franklin, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed May 15, 1924. Serial No. 713,488. 5 Claims. (Cl. 188—213.)



3. The combination of a flanged spring plank having holes through the flanges, beam supporting rails projecting into said holes and provided with spaced shoulders adjacent to their inner ends and means for shifting the ends of the rails laterally to cause the shoulders to bear on opposite sides of the flanges.

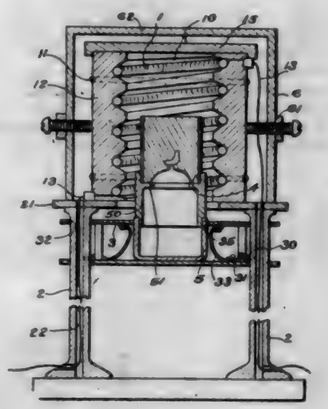
1,534,589. ELECTRIC DOORKNOB ALARM. EDWARD S. HAUSSER, Joliet, Ill. Filed Aug. 29, 1922. Serial No. 585,017. 3 Claims. (Cl. 177—314.)

1. In an alarm of the character specified, a door knob clamp comprising a knob grip and a knob and spindle clip, the latter comprising members adapted to grip opposite sides of the knob and a loop for engaging about the the knob spindle and switch means carried by the knob grip and operable through movement of the knob.



1,534,590. LOCOMOTIVE BOILER. CHARLES GILBERT HAWLEY, Chicago, Ill., assignor to Locomotive Firebox Company, Chicago, Ill., a Corporation of Delaware. Filed May 13, 1922. Serial No. 560,662. 3 Claims. (Cl. 122—71.)

3. A locomotive boiler and its contained firebox in combination with a pair of hollow stay-bolted water walls applied to the firebox, said walls being oppositely twisted and each thereof presenting a horizontally elongated intake opening at the front leg of the firebox and a like outlet opening longitudinally elongated in the crown sheet of the firebox, the lower portions of said walls constituting a partial fire arch in the lower front part of the firebox, and firebrick applied to said walls and therewith completing a fire arch in the lower forward part of said firebox.

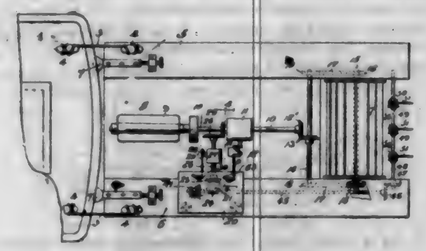


1,534,591. GAME APPARATUS. ARTHUR HODGES, Baltimore, Md. Filed Jan. 30, 1923. Serial No. 615,824. 2 Claims. (Cl. 273—134.)

2. A game apparatus having a playing surface for traverse by playing objects and having depicted thereon a pair of circular lines divided into rectangular spaces constituting States, a second pair of circular lines located within the first pair and divided into rectangular spaces to constitute territories, arrows depicted on the surface and constituting pathways from the outer circle to the inner circle, certain of said States being colored

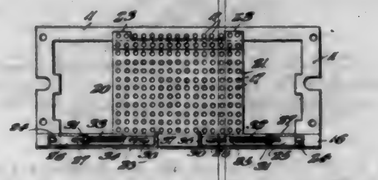
to govern the retarding or advancing movements of the playing objects, and a dial or counter to regulate the movements of the objects.

1,534,592. DENTAL OVEN. HENRY C. HOUCK, Seattle, Wash. Filed Dec. 24, 1923. Serial No. 682,540. 9 Claims. (Cl. 219—35.)



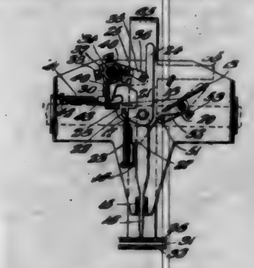
1. A dental furnace comprising a circular heating element with its axis vertically disposed, a stand supporting said heating element, a platform guided for vertical movement upon said stand beneath the heating element, a cup positioned upon but not secured to said platform, and means for supporting an investment cup above said platform and cup to drain into the latter.

1,534,593. BARGE CONVEYER. BERTELL W. KING, New York, N. Y. Filed Aug. 20, 1918. Serial No. 250,636. 2 Claims. (Cl. 114—61.)



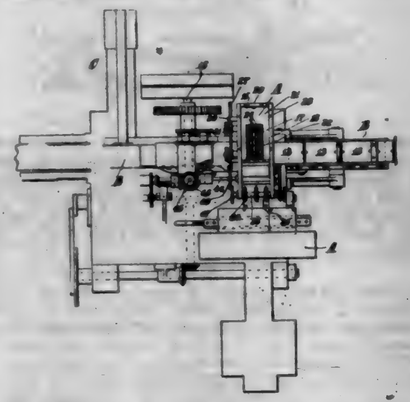
1. In a conveying barge, a pair of pontoons, rigidly united by a platform therebetween, propulsion means

and guiding means between said pontoons, a power unit on said platform for operating said propulsion means, a vertically adjustable control station also mounted to



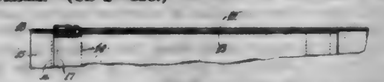
operate on said platform, and means operable by said power unit for raising and lowering said control station.

1,534,594. CARD-REGISTRATION MECHANISM. WILLIAM W. LASKER, Brooklyn, N. Y., assignor to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed May 29, 1924. Serial No. 716,698. 6 Claims. (Cl. 83—92.)



2. In a device of the character stated, the combination of a card registration mechanism comprising two spaced fixed plates forming a card passage, one of said plates having a detachable perforated section for access to a card in said passage, and means for detachably securing said section to its plate.

1,534,595. PIN-BOX CONSTRUCTION FOR SORTING MACHINES. WILLIAM W. LASKER, Brooklyn, N. Y., assignor to Powers Accounting Machine Corporation, New York, N. Y., a Corporation of Delaware. Filed May 29, 1924. Serial No. 716,699. 6 Claims. (Cl. 83—92.)

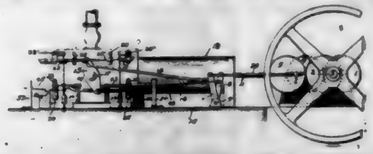


1. In a card analyzing mechanism, the combination of a registration plate, a pin box having pins normally extending into said plate, a support for said pin box, and means including a rock lift bar common to all of said pins for removing said pins from said plate to release said pin box for sliding movement on said support.

1,534,596. FEEDING DEVICE FOR WRAPPING MACHINES. FRANK W. LEE, New York, N. Y., assignor to International Packing Machine Company, New York, N. Y., a Corporation of New York. Original application filed June 2, 1920, Serial No. 386,023. Divided and this application filed June 5, 1922. Serial No. 565,974. 1 Claim. (Cl. 271—35.)

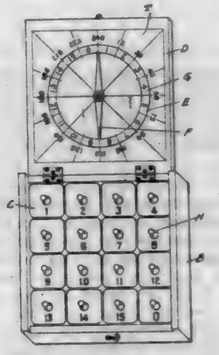
In a mechanism for feeding individual blanks from a pile of blanks in the magazine or a wrapping machine, the combination with parallel shafts disposed transversely of said magazine and adjacent opposite ends thereof, a plurality of closely spaced pulleys fixed to said shafts, separator belts, said belts presenting a plurality of closely spaced independent supporting surfaces for said pulleys at the bottom of the magazine to receive the pile of blanks and to separate the lowermost blank from the pile, a toothed rack slidably mounted longitudinally of said magazine, a pawl and ratchet mechanism for each shaft for permitting rotation in one direction only, a pinion carried by each ratchet mechanism and in constant mesh with the teeth of said rack, and a reciprocating pitman connection pivotally connected at one end to said rack for intermittently advancing the conveyor.

1,534,597. SLEEVE CUFF. LENA LUPTIS, New York, N. Y. Filed Mar. 20, 1922. Serial No. 545,108. 2 Claims. (Cl. 2—123.)



2. A sleeve cuff formed of a plurality of layers of material having their free ends doubled over inwardly on themselves, said layers being stitched together near their free ends on a line spaced from the outer margin of said turned over free ends, and an insertion formed of a piece of fabric doubled over on itself, and stitched to the overlapping free ends of said cuff at the outer margin of said cuff layers, and also stitched together independently of said cuff layers.

1,534,598. STEAM ENGINE. JAMES J. MCARDLE, Pawtucket, R. I. Filed Mar. 15, 1922. Serial No. 543,847. 5 Claims. (Cl. 121—128.)

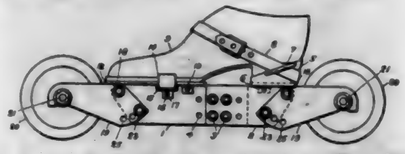


1. In a steam engine, a cylinder having an inlet and an exhaust valve at each end thereof, a pair of wrist plates pivoted between their ends at points between the said pairs of valves at the ends of the cylinder, oppositely extending latches pivoted to the wrist plates and each having a stop shoulder and a cam thereon, there being a latch for each valve, spring pressed bell

cranks connected to the intake valves and having pins engageable with the stop shoulders to allow the latches to open the intake valves, cam trips for the latches to operate the latter to effect disengagement of the shoulders from the pins, slotted arms connected to the exhaust valves, and having pins to engage the stop

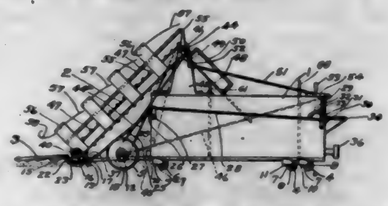
shoulders of the latches thereof, spring pressed rods having pins engaged in the slots of the slotted arms for effecting closing of the exhaust valves, rockers, rods pivoted to the rockers and to the wrist plates, pairs of intermeshing eccentric gears actuated by the engine drive shaft, and rods pivoted to the gears and to the rockers.

1,534,599. GAME. JAMES MCLENNAN, Poland, and EDWARD J. PEASE, Niles, Ohio. Filed July 11, 1922. Serial. No. 574,152. 6 Claims. (Cl. 273—132.)



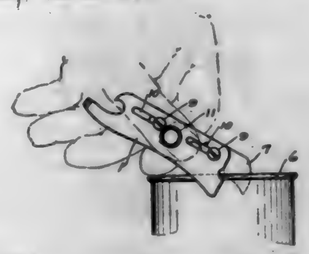
1. A game device comprising a set of men or pieces bearing distinguishing marks for arranging the same in sequence and having fixed positions within a fixed area, at least one space sufficient to accommodate one of the pieces being left blank, the object of the game being to displace at least one of the significant or sequential pieces from position in sequence and to restore all the pieces to position in sequence without lifting any of the significant pieces from the surface on which they rest, and means for indicating by chance the displacement of such piece or pieces.

1,534,600. GOLF CLUB. GEORGE W. MATTERN, Dayton, Ohio, assignor to The Crawford, McGregor and Canby Company, Dayton, Ohio, a Corporation of Ohio. Filed July 21, 1921. Serial No. 486,484. 12 Claims. (Cl. 273—77.)



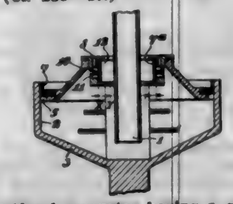
1. The combination with a golf club head, having a mortise therein, the plane of which is substantially parallel with the sole of the club head, of reentrant shoulders formed in said mortise substantially perpendicular to the plane thereof, and a counter balance weight located in said mortise, the lateral deflection of which is arrested by said reentrant shoulders.

1,534,601. ROLLER SKATE. MICHAEL NICKEFOR MATVEYEFF, New Haven, Conn. Filed June 16, 1924. Serial No. 720,316. 3 Claims. (Cl. 208—178.)



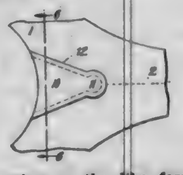
1. In a roller skate, the combination with a frame, means to attach said frame to the skater's shoe, a wheel supported in front of said frame, a second wheel supported in the rear of said frame, means to adjust the length of said frame, and means to adjust the height of said wheels in relation to said frame.

1,534,602. HAY CONVEYER. ROMEO MAUVAIS, Two Rivers, Wash. Filed Jan. 17, 1923. Serial No. 613,176. 5 Claims. (Cl. 56—358.)



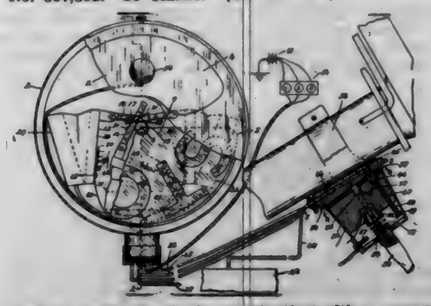
3. A conveyer for hay or the like comprising a large box in the form of a wagon body; an axle at the forward end of the body; wheels at the ends of the axle; castors under the ends of the body for supporting it; an attachment at the rear of the body through which suitable motive power may be applied to it; a frame with castors under it pivotally supported from the axle and extending ahead of it; prongs connected to the frame by individual springs and extending forward in a slightly inclined position; means under the prongs for limiting their downward movement; means for raising and lowering the frame and prongs; a conveyer with one end attached to the frame behind the prongs and the other end supported above the body; and means for operating the conveyer from the axle of the front wheels.

1,534,603. CAN OPENER. MAURITZ MECHELSEN, Seattle, Wash. Filed Oct. 22, 1923. Serial No. 669,964. 1 Claim. (Cl. 30—3.)



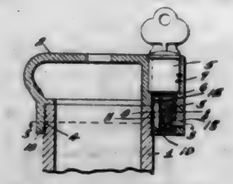
A can opener having a body portion and a member slidably attached thereto, said body portion having a lug extending downward and outward at one end and said sliding member having a curved blade that may be moved to a position somewhat beyond the lug when it is desired to use the device and that may be moved inward so that the lug will protect the blade when it is in the closed position; and said lug being adaptable to engage the bead at the edge of a can as the blade is forced into the end of the can.

1,534,604. OUTLET VALVE FOR CENTRIFUGAL SEPARATORS. GUSTAV THE MEER, Hanover-Linden, Germany. Filed Feb. 6, 1925. Serial No. 7,429. 10 Claims. (Cl. 233—47.)



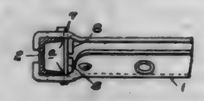
1. A centrifugal separator having a separation chamber provided with an outlet spaced inwardly from the outer wall, and a valve controlling the same, said valve automatically opening upon the accumulation of liquid to a predetermined distance inward radially from said valve, whereby solid particles of lighter specific gravity than the liquid may accumulate in the inner zone, and solid particles of heavier specific gravity than the liquid may accumulate in the outer zone, while the clearest liquid may escape from the intermediate zone.

1,534,605. AXLE HOUSING. THOMAS E. MURRAY, Jr., Brooklyn, N. Y. Filed Feb. 18, 1925. Serial No. 9,937. 2 Claims. (Cl. 74—56.)



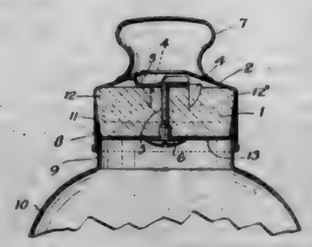
1. An axle housing or the like formed of segments united along their edges and forming a gap at an end of such edges and a filler in said gap having a grooved engagement with the edges of the segments to prevent lateral separation.

1,534,606. VEHICLE TRAFFIC SIGNAL. PRESTON MYERS, Los Angeles, Calif. Filed Oct. 8, 1923. Serial No. 667,352. 10 Claims. (Cl. 116—39.)



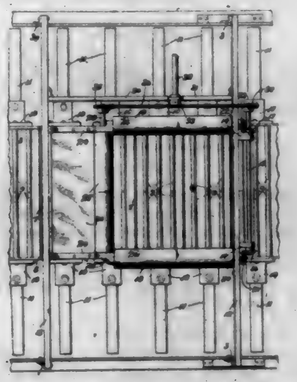
1. In a traffic signal, the combination with a support, of an indicator rotatably mounted upon said support, means for actuating said indicator comprising a bellows mounted upon said support, and a tongue struck out from said support for limiting the movement of said bellows.

1,534,607. LOCK FOR RADIATOR CAPS. JONAS L. OBERDORFER, Syracuse, N. Y. Filed Apr. 24, 1923. Serial No. 634,371. 4 Claims. (Cl. 70—90.)



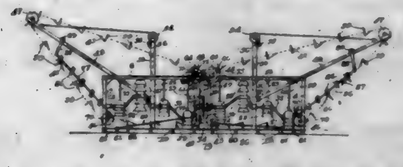
2. The combination of two parts, one threading on the other, a lock comprising a roller clutch carried by one part and coacting with the threaded surface of the other part, a carrier for the clutch and key operated means for shifting the carrier to move the roller into and out of operative locking relation, substantially as and for the purpose specified.

1,534,608. BRAKE BEAM. CHARLES F. PERKINS, Johnstown, Pa., assignor to Davis Brake Beam Company, Johnstown, Pa., a Corporation of Pennsylvania. Filed July 21, 1923. Serial No. 653,032. 3 Claims. (Cl. 188—231.)



3. A brake beam having in combination a structural shaped compression member, a strut having spaced sides bearing respectively on the outer faces of the sides of the compression member and having oppositely disposed holes in the rear of the compression member and having portions forced inwardly into alinement and in the rear of the edges of the compression member, and a wedge extending through the holes in the sides of the strut and bearing against the edges of the compression member and the inwardly projecting portions of the strut.

1,534,609. CLOSURE FOR VESSELS. LOUIS W. RICE, New York, N. Y. Filed Jan. 5, 1924. Serial No. 684,467. 1 Claim. (Cl. 220—24.)

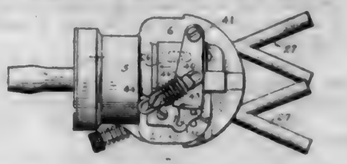


A closure for a wide-mouth vessel, comprising a cork block having tapered sides, a metal cap member spaced from the top of the cork block, central engaging means rigidly connecting the cork block to the top of the cap member, a handle on the top of the cap member, and a cylindrical guiding and protecting apron extending downward from the cap member enclosing the cork block and laterally supporting it so as to prevent loosening and injury of the block internally held by said engaging means and guided by the apron.

1,534,610. FEEDING MECHANISM FOR PLASTER-BLOCK MACHINES. GEORGE HENRY ADAM RUBY, Fort Dodge, Iowa, assignor to James R. Offield, trustee, Chicago, Ill. Filed Mar. 10, 1924. Serial No. 698,144. 8 Claims. (Cl. 25—99.)

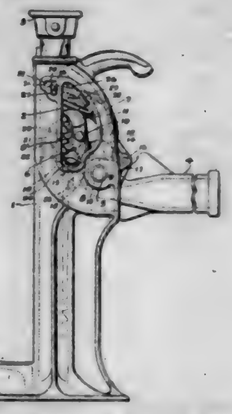
1. In combination, a plaster block machine including an endless conveyer positioned horizontal and equipped with a consecutive series of block forms having open upper sides to receive cementitious material at the upper run of the conveyer, a roller located lengthwise of the machine at each side thereof and directly over the ends of the forms, means for driving said rollers in unison and in opposite directions, and a third roller located transversely of the machine above said forms, substantially as described.

1,534,611. SNOW-CLEARING MACHINE. MICHAEL SCHMIDT, Wauwatosa, Wis. Filed Feb. 14, 1921. Serial No. 444,642. 15 Claims. (Cl. 37—41.)



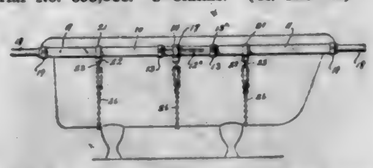
1. A machine for clearing snow from roadways comprising a wheel-supported frame, a runner supported cross-conveyor, an undermining cutter, and a co-operating set of choppers adapted to cut and break up frozen material and deliver it to the cross-conveyor.

2. A machine for clearing snow from roadways comprising a wheel-supported frame, a runner supported cross-conveyor connected with the frame and held against lateral movement by the runners, means for breaking up frozen material and delivering it to said cross-conveyor, a motor for driving the cross-conveyor, and an independent propelling tractor having flexible connections at its front and rear ends with the wheel-supported frame, said flexible connections being adapted to permit lateral turning movements of the tractor within said wheel-supported frame.



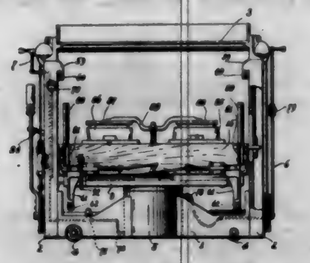
1,534,612. PULSATOR FOR MILKING MACHINES. JOHN A. SCHMITZ, Columbus, Ohio, assignor to The Universal Milking Machine Company, Columbus, Ohio, a Corporation of Ohio. Filed Nov. 28, 1922. Serial No. 603,727. 15 Claims. (Cl. 31—69.)

1. In a pulsator mechanism of the character described, wherein a fluid pressure actuated mechanism operates to alternately subject a pair of pulsation conduits to variations of fluid pressure characterized by an alternating member actuated by said pressure operated mechanism, an oscillatory control valve for the fluid under



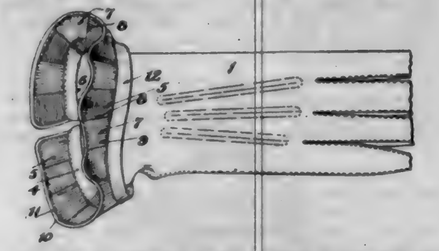
pressure and an extensible and contractible link between the alternating member and the oscillatory valve transmitting alternate push and pull movements from the alternating member to the oscillatory valve.

1,534,613. RATCHET JACK. FRANK H. SCHWERIN, West View, Pa., assignor to The Duff Manufacturing Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 3, 1924. Serial No. 696,410. 8 Claims. (Cl. 254—110.)



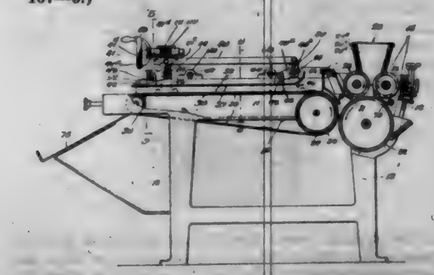
3. In a double-acting ratchet jack having a frame, a rack, an operating lever and two pawls pivoted to the operating lever, a trip hung on the frame to overlie one of the pawls, the trip being shiftable on the frame to a position in which it will be engaged by said pawl so as to cause both pawls to be swung away from the rack.

1,534,614. RADIATOR AND BATHTUB SLING. JOHN MILTON SIMS, Houston, Tex., assignor of one-half to James E. Sims, Houston, Tex. Filed Feb. 26, 1924. Serial No. 695,344. 5 Claims. (Cl. 294—5.)



1. A sling or carrier for radiators or bath tubs comprising two longitudinally extending bars having handles at the ends thereof, each bar being formed of two sections longitudinally adjustable upon each other and having overlapping engagement at the adjacent ends of the sections, and a collar loosely surrounding the overlapping ends of the sections on each bar and having a laterally projecting handle, and chains detachably and adjustably connected to said bars.

1,534,615. MOLDING MACHINE. JOHN A. SPEERY, Munnsville, N. Y. Filed Apr. 19, 1922. Serial No. 555,575. 16 Claims. (Cl. 22—32.)

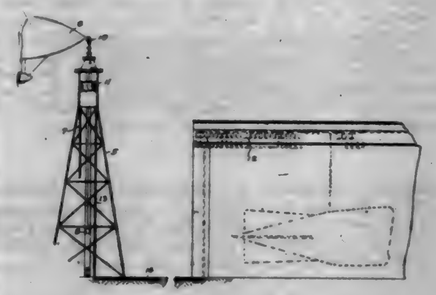


1. In a machine of the class described, in combination, a movably rotatably mounted support for a pattern and a flask to confine a quantity of sand on the face of said pattern, flexible means to raise and lower said support and spring-retractable means to hold said support in a predetermined position.

1,534,616. GLOVE. ARTHUR A. STEINBERGER, San Francisco, Calif., assignor to Steinberger Bros. Lobl Co., Inc., New York, N. Y., a Corporation of California. Filed Oct. 18, 1924. Serial No. 744,923. 2 Claims. (Cl. 2—162.)

2. A glove having a wrist portion, a laterally projecting strip secured thereto, said strip being composed of a plurality of joined sections extending radially from the glove, a similar strip secured to and adapted to lie over said first mentioned strip and form a reverse side therefor, said last mentioned strip having an inner free end surrounding the body of the glove.

1,534,617. DOUGH-MOLDING MACHINE. FRANK STREICH, Joliet, Ill., assignor to Union Machinery Company, Joliet, Ill., a Corporation of Illinois. Filed Oct. 2, 1922. Serial No. 591,753. 7 Claims. (Cl. 107—9.)

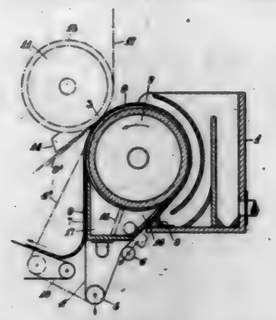


4. In a dough molding machine, the combination of a mould board, a pair of bell crank levers upon which said mould board is secured, parallel movement means connecting said levers, a worm gear segment formed on one of the said levers, a worm pinion meshing with said worm gear segment, means for rotating the worm pinion and a stationary support for said pinion.

1,534,618. VAPOR TREATMENT RECEPTACLE. WILLIAM A. TAYLOR and PHILIP J. SIBLEY, Chicago, Ill., assignors to Philip J. Sibley, Chicago, Ill. Filed Apr. 23, 1923. Serial No. 633,900. 1 Claim. (Cl. 4—182.)

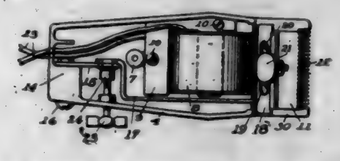
In a foot treatment apparatus, a wooden receptacle having a lid with recesses in the edges thereof to admit and partially surround the legs of a patient, a shallow tub for the bottom of the receptacle having perforations adjacent the top to permit the escape of vapor, and a wooden cover for the shallow tub providing recesses in the edges by means of which the cover can be removed, the cover providing a support for the feet of a patient.

1,534,619. AIRSHIP-MOORING MAST WITH WATER TANK AND FIRE PROTECTION FOR AIRSHIP SHEDS. STARR TRUSCOTT, Washington, D. C. Filed Nov. 19, 1923. Serial No. 675,769. 7 Claims. (Cl. 244—2.)



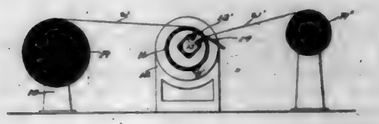
1. In a system of the character described, in combination, a mooring mast for airships provided with mooring gearing and a water tank associated with the upper part of said mast adapted to increase the stability thereof and provide a supply of water to the surrounding stations.

1,534,620. APPARATUS FOR SEPARATING LIQUIDS FROM SOLID BODIES MIXED OR SUSPENDED THEREIN. RUDOLF ERNST WAGNER, Karlstad, and JOHAN DANIEL ULLGREN, Stocksund, Sweden, assignors to Aktiebolaget Karlstads Mekaniska Verkstad, Karlstad, Sweden. Filed Jan. 11, 1923. Serial No. 611,973. 5 Claims. (Cl. 92—48.)



1. In an apparatus for separating liquids from solid bodies mixed or suspended therein, the combination of a container for liquid, an endless wire apron forming one wall of said container, a roller supporting said wire

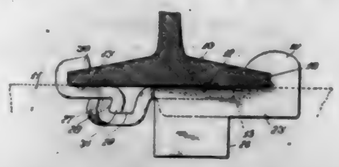
apron in said container, and a suction box attached to a portion of the surface of said roller not engaged by said wire apron, said roller being provided with surface



channels adapted to transmit and convey suction from said suction box to the portion of the roller surface engaging and supporting said wire apron.

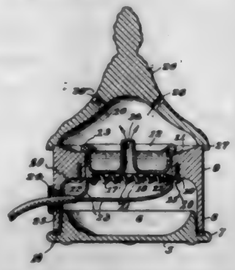
1,534,621. CLIPPER. LEO J. WAHL, Sterling, Ill. Filed May 1, 1924. Serial No. 710,312. 6 Claims. (Cl. 30—1.)

1. In a clipper the combination of a case, a stationary clipper blade carried thereby, a movable clipper blade cooperating with the stationary blade, an alternating current electro-magnet in the case, an armature for the electro-magnet and located near one side of the case and for moving the movable clipper blade, driving and pressure connections between the armature and the movable clipper blade, and a mounting for the armature located on a line near the center of the clipper blade.



1,534,622. METHOD OF DRY-CRINKLING PAPER. KURT WANDEL, New York, N. Y., assignor, by mesne assignments, to Arkell Safety Bag Company, New York, N. Y., a Corporation of New York. Filed Mar. 6, 1920. Serial No. 363,712. 5 Claims. (Cl. 92—69.)

1. The herein described method which consists in leading an unmoistened paper web upon a crinkling drum, causing adherence of the paper to the drum solely by air pressure, and clearing the paper from the drum by a doctor or abutment to produce a crinkled effect therein.

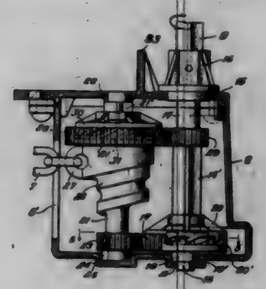


5. The herein described method which consists in causing adherence of a paper web to a crinkling drum by air suction, drawing the paper thereby from a supply roll through a coating station, and clearing the adherent paper from the drum by a doctor to crinkle the same.

1,534,623. RAIL ANCHOR. HAROLD G. WARE, Park Ridge, Ill., assignor to The P & M Company, Chicago, Ill., a Corporation of Illinois. Filed May 24, 1924. Serial No. 715,537. 14 Claims. (Cl. 238—324.)

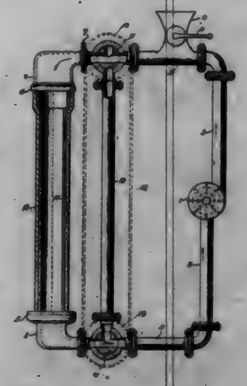
1. A rail anchor comprising two jaw members which interlock with each other beneath the rail and together embrace the base portion thereof, one of said members being made of sheet metal and provided at one end with means for engaging one edge of said rail base and at the other end with a channel shaped portion which decreases in width toward one edge of the member to provide an angularly disposed flange, and the other member being formed with a jaw for engaging the other edge of said base and with an angularly disposed flange which cooperates with the angular flange of said first mentioned member to effect said interlocking engagement.

1,534,624. ELECTRIC PERFUMER. LOUIS WEIDLICH, Stratford, Conn., assignor to The Weidlich Bros. Mfg. Co., Bridgeport, Conn., a Corporation of Connecticut. Filed June 27, 1924. Serial No. 722,676. 8 Claims. (Cl. 219—38.)



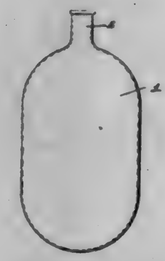
1. In a perfumer, the combination of a body, a perfume receptacle within the body, an electric heating unit attached to the body beneath the receptacle, and means for providing a circulation of air through the body and around the heating unit and over the receptacle for conveying the odors therefrom.

1,534,625. PROCESS OF MAKING MATCHED-PATTERN PLATES. JOHN R. WOOD, Irvington, N. J., assignor to New Process Multi-Castings Company, Newark, N. J., a Corporation of New Jersey. Filed Sept. 19, 1923. Serial No. 663,535. 2 Claims. (Cl. 22—191.)



1. The method herein described of producing matched pattern plates which consists in preparing a drag and a cope flask member containing, in sand, the exact impression of the pattern below and above the parting line respectively, forming from these members and the pattern supplemental drag and cope members, and associating the original drag with the supplemental cope, and the original cope with the supplemental drag spaced to an amount equal to the thickness of the plate desired and obtaining from such molds the finished matched plates.

1,534,626. HAND BRAKE FOR RAILWAY CARS. GEORGE A. WOODMAN, Chicago, Ill. Filed Jan. 10, 1921. Serial No. 436,017. 7 Claims. (Cl. 254—149.)



1. In a car brake, a power shaft, a brake chain drum, a driving gear fixedly mounted on said power shaft, a driven gear rotatively mounted on said drum and meshed with said driving gear, a driving segment gear rotatively mounted on said shaft, a gear fixedly mounted on said drum and meshed with said segment gear, one gear ratio being greater than the other, and individual overrunning ratchet elements mounted respectively on said shaft and said drum to rotate therewith, and ratchet elements on said rotatively mounted gears operatively engaging said first named ratchet elements respectively.

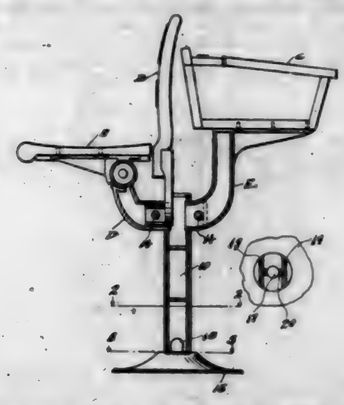
1,534,627. APPARATUS FOR APPLYING PULVERIZED OR SHREDDED MATERIAL TO THE INTERIOR OF TUBULAR ARTICLES. LUCIEN I. YEOMANS, Chicago, Ill., assignor to Pioneer Production Company, Chicago, Ill., a Corporation of Illinois. Filed May 1, 1922. Serial No. 557,633. 12 Claims. (Cl. 22—99.)

1. An apparatus for applying blacking in dry form to the interior walls of a pipe mold having, in combination, a tubular support upon which the pipe mold may stand in upright position, a cap movably supported for movement into and out of engagement with the upper end of the pipe mold, a conduit connecting said support and said cap, a fan for inducing a current of air through said conduit, the cap, the pipe mold and the support, means for introducing blacking into said conduit, a pipe arranged to communicate with said conduit at points at opposite sides of said fan, and valves controlling communication between said pipe and said conduit, said conduit being of smaller internal diameter than the pipe mold.

1,534,628. MILKING VESSEL. LUDWIG ALVINE ZOHE, Syracuse, N. Y. Filed May 16, 1922. Serial No. 561,403. 4 Claims. (Cl. 31—52.)

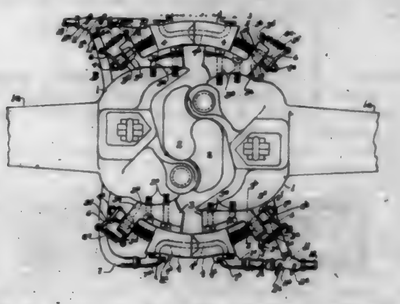
1. A milking vessel comprising an expansible and collapsible vessel having a neck for fitting the nipple of the udder and a check valve in the neck.

1,534,629. WRITING INSTRUMENT. HAROLD ANSHEN, Trenton, N. J., assignor of one-half to Corilla F. Williamson, Trenton, N. J. Filed Jan. 19, 1923. Serial No. 613,703. 2 Claims. (Cl. 120—18.)



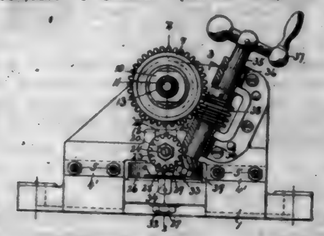
1. A writing instrument of the character described comprising a casing having a closed end and housing, a fountain pen, a bearing disposed in one end of said casing and provided with a recess having diametrically opposite longitudinally disposed grooves formed in its side walls, a pencil slidably mounted for longitudinal movement within the recess, beads formed on said pencil and being arranged in said grooves, aligned bearing brackets extending inwardly from the walls of the casing, a shaft mounted for rotation in the bearing brackets, a gear keyed to one extremity of the shaft and arranged adjacent to the opposite end of said casing, a manipulator having means movable through the closed end of the casing, a gear secured to said means for meshing with the gear of the shaft, and means formed on the inner end of the shaft for moving the pencil through the medium of the manipulator.

1,534,630. SCHOOL FURNITURE. ROGER L. AVERY, Chicago, Ill. Original application filed July 20, 1921, Serial No. 486,167. Divided and this application filed Jan. 8, 1923. Serial No. 611,384. 3 Claims. (Cl. 155—134.)



1. In a school desk comprising in combination with a desk and seat, of an I-shaped support therefor with

wedge shaped lower edges; a base having parallel wedge shaped grooves formed therein for the reception of the

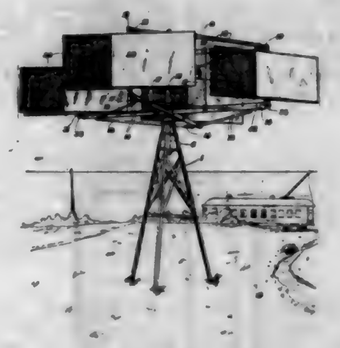


edges of said support; and means for attaching said base to said support, substantially as described.

1,534,631. CAR AND TRAIN-PIPE COUPLING. OBED C. BILLMAN, Cleveland, Ohio. Filed Feb. 26, 1920. Serial No. 361,386. 32 Claims. (Cl. 213—76.)

10. In a car and train pipe coupling, a pair of connected coupler heads provided with vertically and arcuately movable train pipe coupler members, and means for supporting and holding the latter in a relatively constant position during the lateral oscillations and vertical movements between said coupler heads when connected.

1,534,632. CAM-FORMING MACHINE. ELMER C. COOLEY, Eastwood, N. Y. Filed Nov. 13, 1922. Serial No. 600,632. 5 Claims. (Cl. 90—21.)

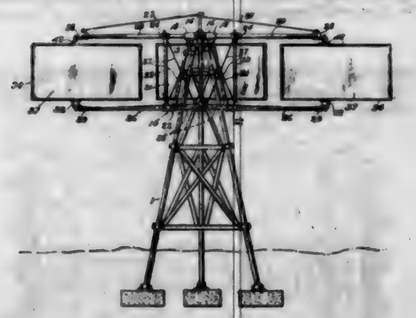


1. A cam forming machine comprising, in combination with a cutter, a support having a guideway, a carriage movable along the guideway, a rotary work-holder journaled on the carriage transversely of the guideway, a guide member adjustable on the support to different angles relatively to the axis of the work holder, a slide movable on the carriage parallel with said axis and in sliding engagement with said guide member, means for rotating the work-holder, and means for moving the slide as the work-holder is rotated.

1,534,633. SPRINKLER. HENRY F. CONGABLE, Oakland, Calif., assignor to Robinson Hardware Company, Oakland, Calif., a Corporation of California. Filed Feb. 8, 1922. Serial No. 535,075. 2 Claims. (Cl. 299—58.)

1. A lawn sprinkler comprising a tubular member having perforations therein for directing streams of water therefrom, a plurality of means on said member for slidably receiving a plurality of supporting rods whereby either of said supporting rods may be adjusted so that one of its ends may project from either end of one of said means to vary the position in which said tubular member may be supported.

1,534,634. WIND SIGN. HUGH CORRELL, Canton, Ohio; James E. Milner administrator of said Hugh Correll, deceased. Filed Feb. 8, 1922. Serial No. 535,100. 7 Claims. (Cl. 40—39.)

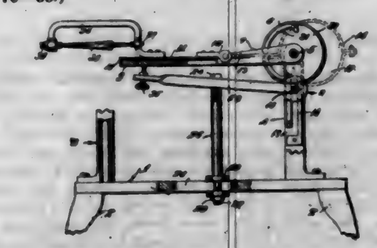


7. A wind sign including a revoluble frame, vanes journaled in said frame, one end portion only of each vane being perforated so that the other end will point with the wind.

1,534,635. WIND SIGN. HUGH CORRELL, Canton, Ohio; James E. Milner administrator of said Hugh Correll, deceased. Filed Nov. 28, 1922. Serial No. 602,753. 5 Claims. (Cl. 40—39.)

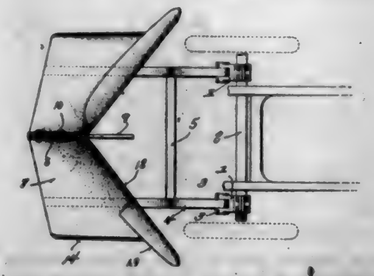
1. A wind sign including a revoluble frame, rotatable V-shaped vanes journaled in said frame, each vane being journaled at a point near the large end, the shorter end of each vane being weighted so as to point the longer end with the wind as the frame revolves.

4. A wind sign including a supporting frame, a vertical shaft journaled in the upper portion of said frame,



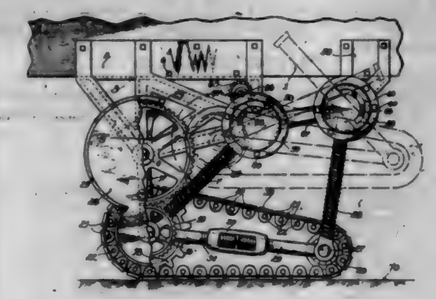
a casting fixed upon said vertical shaft, a revoluble frame suspended upon said casting and revoluble V-shaped vanes journaled in said revoluble frame.

1,534,636. WINDOW VENTILATOR. ARTHUR A. CRAIG, Chicago, Ill. Filed Jan. 14, 1922. Serial No. 529,110. 2 Claims. (Cl. 98—31.)



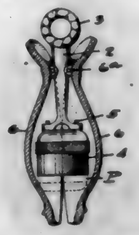
1. In combination, a ventilator comprising a plurality of panels carried in extensible relation adapted for insertion in a window frame, a plurality of adjusting bolts for locking said panels in extended position, said panels having slots therein, anti-friction means for said bolts in said slots, and means permitting free action of said anti-friction means irrespective of the degree of engagement between said panels.

1,534,637. SAW-FILING MACHINE. JOHN F. W. DIESEL, Manitowoc, Wis. Filed June 15, 1923, Serial No. 645,696. Renewed Feb. 18, 1925. 5 Claims. (Cl. 76—35.)



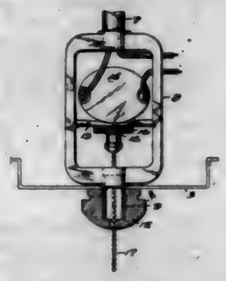
1. A saw filing machine having a rotary driving shaft and operating elements carried thereby, a table journaled to said shaft, a file holder slidable upon said table and moved back and forth by one of said operating elements, a standard carried by the base of the machine and supporting therein a lever, one end of which supports said table, and the other end of said lever engageable with another of said operating elements for imparting an up and down movement to said table.

1,534,638. SNOWPLOW ATTACHMENT. HUGO E. ERBRT, Merton, Wis. Filed Apr. 14, 1924. Serial No. 706,512. 1 Claim. (Cl. 37—44.)



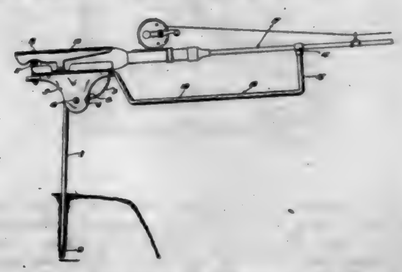
A snow plow attachment for an automobile comprising a pair of brackets adapted to be clamped to the front axle of such automobile, a pair of supporting arms pivotally carried by said brackets and extending forwardly and downwardly and terminating in rounded shoe like ends, a pair of wings secured to said arms and having upturned central portions, said upturned central portions being gradually turned in opposite directions, a reinforcing member shaped to said upturned portions and bolted therebetween, said reinforcing member having a wedge like cross section with concaved faces accurately fitting the curved portion of said wings, said wings having upturned and laterally extending rear portions with forwardly turned upper ends and having upwardly and outwardly slanting bottom portions, said bottom portions terminating at their outer edges in an upturned marginal flange deepest at its forward portion, and gradually merging into the bottom portion of said wings towards its rear end.

1,534,639. DRIVING ATTACHMENT FOR MOTOR VEHICLES. JOHN I. ENGLEMAN, Kearney, Nebr., and HERBERT J. ENGLEMAN, Arminto, Wyo. Filed Aug. 5, 1921. Serial No. 489,979. 13 Claims. (Cl. 180—9.1.)



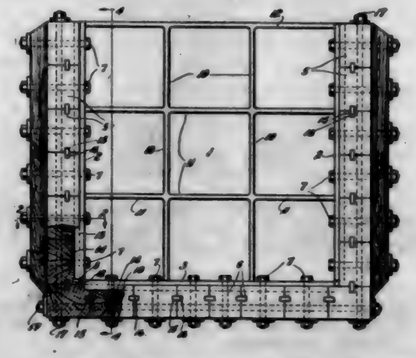
1. In combination, a driving shaft, a second shaft suspended below and adapted for movement about said driving shaft, drive means between said shafts, a traction tread associated with said second shaft, and means for moving said second shaft about said driving shaft to vary the ground engaging position of said traction tread, said drive means remaining effective to transmit the driving effort to said tread through the various grounds engaging positions thereof.

1,534,640. ELECTRIC OUTLET FIXTURE. WILFRED B. GODDARD, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed Nov. 25, 1921. Serial No. 517,444. 4 Claims. (Cl. 240—78.)



1. A pendant electric outlet fixture consisting of a longitudinally split shell, the shell sections being movable to provide access to the interior of the shell, and an outlet connection combined with the shell, the shell sections being normally gravitally positioned to conceal the connection.

1,534,641. LIGHTING FIXTURE. WILFRED B. GODDARD, San Francisco, Calif., assignor to Thomas Day Company, San Francisco, Calif., a Corporation of California. Filed June 5, 1922. Serial No. 565,882. 2 Claims. (Cl. 240—122.)

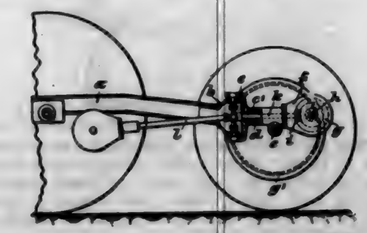


1. In an electric lighting fixture, a hickey, an apertured partition wall in said hickey, an electric pull switch mounted on said wall and an actuating element for said switch extending downward through said wall and hickey.

1,534,642. FISHING-ROD HOLDER. ORVILLE JOHN HOAGLAND, Peru, Ind. Filed Sept. 6, 1923. Serial No. 661,227. 1 Claim. (Cl. 248—37.)

A fishing rod holder comprising a supporting rod, a rod clamp consisting of pivotally connected jaws, one of the jaws being pivotally connected to the supporting rod, an arm fixed to the said jaw of the clamp and having an end portion extending beyond the end of the clamp and having a rod rest, a bolt connected with said arm and passing through the other clamp jaw and a spring coiled around said bolt and interposed between the last mentioned clamp jaw and the arm.

1,534,643. PICKLING-TANK CONTRUCTION. ROBERT C. HOPKINS, Alliance, Ohio. Filed June 10, 1924. Serial No. 719,121. 3 Claims. (Cl. 217—4.)

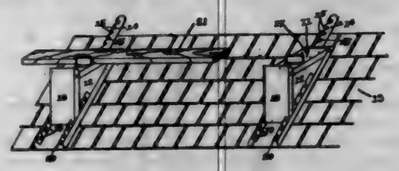


1. An acid tank including metal end walls provided with angular flanges at their side and bottom edges, the flanges being separated from each other at their ends, and wooden side and bottom walls connected to said flanges.

1,534,644. STORE FURNITURE. HASTING P. HOWARD, Memphis, Tenn., assignor of one-half to Albert S. Cook, Jr., Memphis, Tenn.; Nora L. Howard administratrix of said Hasting P. Howard, deceased. Original application filed Nov. 30, 1921, Serial No. 518,904. Divided and this application filed Apr. 17, 1922. Serial No. 553,696. 1 Claim. (Cl. 211—8.)

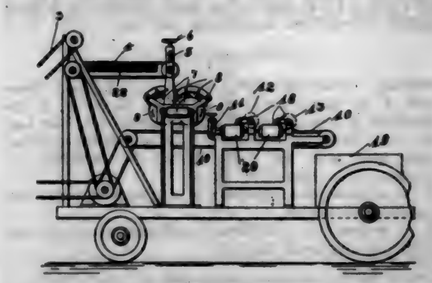
Furniture for a store room having a general entrance, comprising a transverse partition across the room forming a lobby near said general entrance, a plurality of spaced ingress and egress openings in said partition, an emergency gate in said partition leading to said lobby, a main settlement counter between two of said openings, cabinets arranged in a plurality of rows from said transverse partition and said counter in the direction of the rear wall of the store room, the rear ends of said rows stopping short of said wall a uniform distance to provide a stock department, said rows forming aisles between them all opening into said stock department, a transverse passage being arranged between said settlement counter and the ends of adjacent rows; one of said rows being spaced from the adjacent side wall of the store room to provide a corridor, the front end of the corridor communicating with another of said openings, an auxiliary settlement counter at the rear end of the corridor, a cage around said auxiliary settlement counter, a gate connecting said stock department with said corridor, and a guard adjacent said auxiliary settlement counter adapted to compel customers to pass close to the said auxiliary settlement counter before entering the corridor through said gate.

1,534,645. MOTOR-DRIVEN VEHICLE. FRITZ HUBER, Mannheim, Germany, assignor to Heinrich Lanz, Mannheim, Baden, Germany, a Co-partnership. Filed Apr. 16, 1924. Serial No. 706,803. 3 Claims. (Cl. 180—73.)



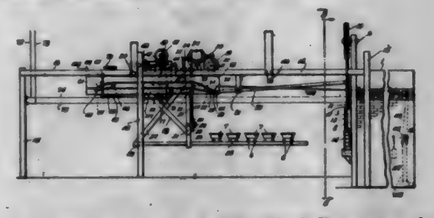
1. A chassis for a motor vehicle comprising a main frame, adapted to carry the motor, which at one end is mounted upon one axle of the vehicle and at its other end is pivoted centrally, to swing about a vertical axis, to a central longitudinal member which is swiveled within a sleeve fixed directly upon the second axle of the vehicle and carrying rigidly attached to its outer end a casing for the differential.

1,534,646. SUITCASE. ARTHUR KAHLOW, Mayville, Wis., assignor to Peerless Traveling Goods Co., Mayville, Wis. Filed Aug. 9, 1924. Serial No. 731,116. 3 Claims. (Cl. 190—49.)



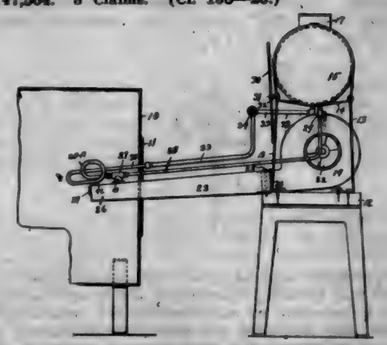
1. A suit case comprising a pair of box like members having meeting edges, a reinforcing metal frame extending completely around each of said edges, hinges connecting said sections, one of said frames being channeled, a leaf of each of said hinges being received within the channel.

1,534,647. ROOFING BRACKET. JACOB F. KEMMERLING, Cleveland Heights, Ohio. Filed Oct. 10, 1923. Serial No. 667,628. 12 Claims. (Cl. 304—20.)



12. In combination with a roofing bracket having a plank supporting member arranged to receive a plurality of hooks, a shoulder for engaging the edge of such plank and comprising: a frame having hooks adapted to be received by said member when said frame is in one position and to be locked to said member when said frame is in another position; and means adapted to hold said frame in such other position.

1,534,648. ORE-REDUCING PROCESS. ERNST KNAUER, Los Angeles, Calif. Filed Dec. 9, 1920. Serial No. 429,526. 2 Claims. (Cl. 75—17.)



1. An ore-reducing process consisting in first subjecting wet ore to drying, then striking off an even layer of ore, then subjecting this dry and evenly conveyed material to open flames for burning combustible matter and at the same time fanning across the path of the burning and conveyed material so as to eliminate waste from such combustible matter, then separating matter from the ore magnetically.

1,534,649. CHARGING FORK FOR ENAMELING FURNACES. FRANCIS M. KOCH, Canton, Ohio, assignor to The Republic Stamping & Enameling Company, Canton, Ohio, a Corporation of Ohio. Filed Jan. 10, 1924. Serial No. 685,434. 16 Claims. (Cl. 214—26.)

1. A charging fork for furnaces including means for moving the fork into the furnace, cooperating mechanism set in operation by said inward movement of the fork for automatically moving the fork vertically within the furnace, and cooperating mechanism set in operation by said vertical movement of the fork for automatically withdrawing the fork from the furnace.

1,534,650. REFUSE-OIL BURNER. JACOB H. LARSON, Gresham, Oreg. Filed Nov. 3, 1924. Serial No. 747,504. 3 Claims. (Cl. 158—28.)

1. A refuse oil burner having, in combination, an inclined burner tip; a fan arranged to force air through said tip; a flat shell within the upper portion of the dis-

charge end of said tip; an oil container over said tip; a pipe leading from said container forming a coil over the discharge end of said tip and opening into said flat shell; and a lip formed in the under portion of said tip adapted to deflect air underneath said tip.

1,534,651. COMPOSITION. WILLIAM G. LINDSAY, Newark, N. J., assignor to The Celluloid Company, a Corporation of New Jersey. Original application filed Aug. 9, 1922, Serial No. 580,699. Divided and this application filed Mar. 22, 1923. Serial No. 626,760. 11 Claims. (Cl. 106—40.)

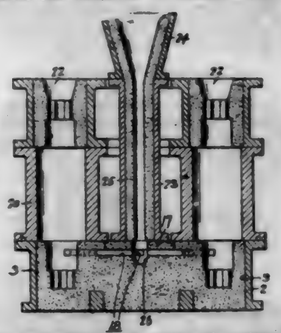
1. A composition comprising a cellulosic material and an aluminum fluoride.

8. A composition comprising a cellulose derivative and ammonium aluminum fluoride.

1,534,652. PAPER FLAG. WILLIAM A. LORENZ, Hartford, Conn., assignor to The Otaka Fabric Company, Hartford, Conn., a Corporation of Connecticut. Filed July 16, 1921. Serial No. 485,347. 6 Claims. (Cl. 116—173.)

2. A paper flag having at its mounting end a pasted tube, and a staff inserted in said tube, said staff made of a tube of paper, said tube tapering from its lower end to its upper end, said staff tube tapered as a result of longitudinal grooves formed therein, to enable it to fit into the socket of the flag.

1,534,653. PENCIL CLIP. HARRY J. MCMASTER, Sebring, Ohio. Filed July 29, 1921. Serial No. 488,353. 1 Claim. (Cl. 24—11.)



A pencil clip adapted to be secured upon a shirt front or the like, including a half round spring wire bent upon itself intermediate its ends, forming two parallel spring fingers with juxtaposed flat faces between which a portion of the shirt front is adapted to be pinched, the free ends of the fingers being outwardly curved, an eye being formed in the wire at the point where the same is bent upon itself, said wire being again bent upon itself at a point near the eye to increase the tension upon the spring fingers, the eye being in contact with one finger and a pencil clamp fixed upon the other finger.

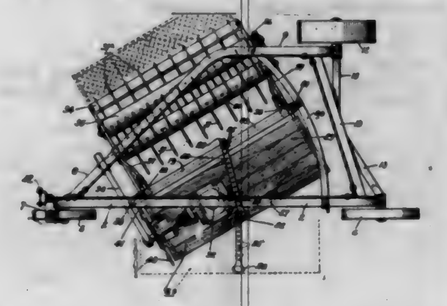
1,534,654. FILLING FOR BOXING GLOVES. LOUIS N. NETZ and GEORGE NETZ, Milwaukee, Wis., assignors to Netz Glove & Mitten Co., Milwaukee, Wis. Filed Apr. 16, 1923. Serial No. 632,377. 1 Claim. (Cl. 2—18.)

A filling for boxing gloves comprising a body portion formed of molded sponge rubber having a substantially impervious outer skin, and having a recess formed in one of its sides, and a thumb piece formed of molded sponge rubber having a shank adapted to fit within and be positioned by said recess.

1,534,655. MOLD. WILLIAM H. NICHOLS, Wilkinsburg, Pa. Continuation of application Serial No. 486,813, filed Jan. 10, 1921. This application filed Mar. 12, 1924. Serial No. 699,044. 3 Claims. (Cl. 22—134.)

1. A mold comprising a plurality of cavities molded in sand, a common pouring gate, and runners connecting said pouring gate with said cavities, the ends of said runners adjacent to said cavities being wholly embedded in the sand of said mold, and the remaining portions of said runners having their tops closed by means of blocks formed separately from said mold.

1,534,656. BATTERY CELL. ROBERT STUART OWENS, Brooklyn, N. Y. Filed May 16, 1924. Serial No. 713,642. 11 Claims. (Cl. 136—88.)

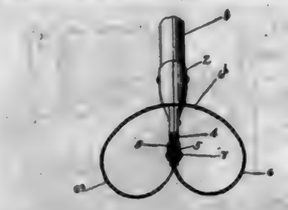


1. In a dry battery cell, a metallic electrode with its upper portion formed of a mass of metal having maximum thickness relatively to the lower portion, another electrode adjacent said metallic electrode, and a dry battery-filling material packed around said electrodes and against said upper portion.

1,534,657. ROTARY TOOTHBRUSH. CHARLES S. PATTERSON, Lancaster, Calif. Filed Apr. 27, 1923. Serial No. 634,091. 4 Claims. (Cl. 15—23.)

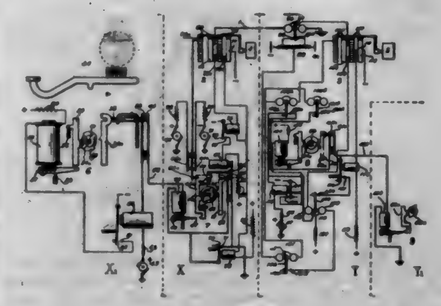
1. A rotary tooth brush comprising rotary drive mechanism, a driving connection operatably connected to said drive mechanism, an axially yieldable spring forming a rotary operating connection between said drive mechanism and said driving connection and tending to move said driving connection axially away from said drive mechanism, a bearing fixed relative to said drive mechanism axially beyond said driving connection, and a rotatable brush adapted to be journaled in said bearing at one end and having means adapted to detachably engage said driving connection at its other end.

1,534,658. MACHINE FOR REMOVING QUACK GRASS. HERMAN E. PEARSON, Waysata, Minn. Filed Apr. 16, 1923. Serial No. 632,421. 10 Claims. (Cl. 55—69.)



1. A machine of the class described comprising a frame having forward and rear wheels to travel in the furrow, and a wheel to run on the land, a frame mounted to swing horizontally and diagonally with respect to said machine frame, and a revolving reel supported in said swinging frame and having pins therein to dig into the loose soil thrown up by the plow and collect the grass roots therein.

2. A machine of the class described comprising a frame having forward and rear wheels to travel in the furrow, and a wheel to run on the land, a frame mounted to swing horizontally and diagonally with respect to said machine frame, a reel supported in said swinging frame and having pins therein to dig into the loose soil thrown up by the plow and collect the grass roots therein, said reel being mounted to tilt vertically to raise and lower its grass picking fingers.

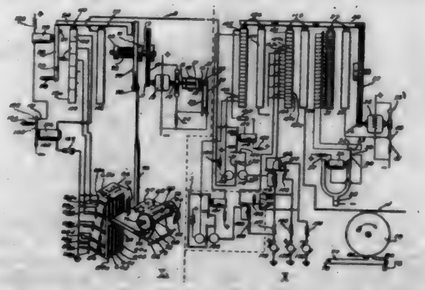


15. A machine of the class described, comprising a wheeled support adapted to travel along a furrow, rotary means carried by said support, said means having spaced fingers located to dig into the loose soil at the side of the furrow to separate grass roots therefrom, means to rotate said rotary means, and means to collect said grass roots.

1,534,659. AGRICULTURAL IMPLEMENT. ED L. PEET and WALTER G. HANSCOM, Minneapolis, and JOHN CULLIMORE SMITH, St. Paul, Minn. Filed Mar. 24, 1922. Serial No. 546,450. 2 Claims. (Cl. 97—63.)

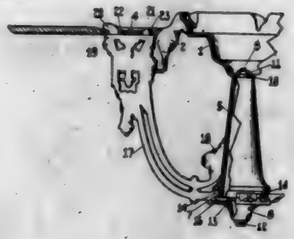
2. A device of the class described comprising a shank, a metallic band of flat spring material having its ends mounted in said shank, and loops formed by said ends on each side of said shank, said loops having cutting edges for entering the soil and pull on said shank causing said cutting edges to assume an oblique shearing position.

1,534,660. SYSTEM OF TELEGRAPHIC DISTRIBUTION. LOUIS M. POTTS, Baltimore, Md., assignor, by mesne assignments, to American Telephone and Telegraph Company, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1920. Serial No. 367,421. 8 Claims. (Cl. 178—71.)



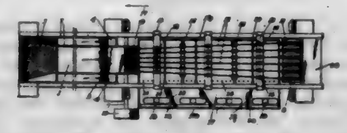
1. In a telegraph system, a sunflower device, means to operate said sunflower device uniformly, a series of relays, electrical connection between the coils of said relays and said sunflower device, a transmitting device started into operation at the beginning of each signal and automatically stopped at the end of each signal, said transmitting device including a series of transmitting contacts, said contacts being individually connected to the contacts of corresponding ones of said relays so that said relays control the character of the impulses transmitted by said transmitting contacts, a relay connected in a wire common to the circuit of all of said relays and responsive simultaneously with said relays upon the application of a current of a predetermined polarity for controlling the starting of said transmitting device.

1,534,661. SYSTEM OF TELEGRAPHIC DISTRIBUTION. LOUIS M. POTTS, Baltimore, Md., assignor, by mesne assignments, to American Telephone and Telegraph Company, New York, N. Y., a Corporation of New York. Filed Apr. 7, 1920. Serial No. 371,946. 10 Claims. (Cl. 178—71.)



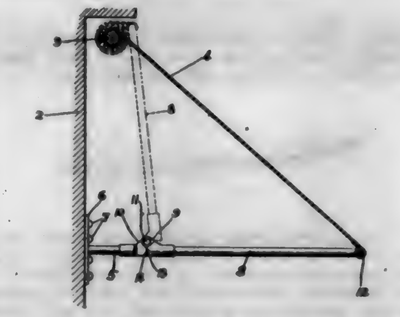
1. In a telegraphic system, a main line, and a branch line, the method of operation which consists in transmitting on said main line a series of impulses representing a plurality of characters, dividing the impulses of the several characters into groups, separating each

impulse of the groups by the same number of impulses of other groups, transmitting on the branch line a group of code combinations of message impulses in accordance with the impulses on the main line, each



impulse of the group immediately succeeding the preceding impulse of the same group without an appreciable time interval between the end of one impulse and the beginning of the next succeeding impulse.

1,534,662. LIGHTING FIXTURE. JOHN K. RIDDLE, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Oct. 28, 1924. Serial No. 746,291. 4 Claims. (Cl. 243—78.)



1. A lighting fixture comprising a body formed of a top plate, a central portion and a lower body portion, there being a circumferential groove adjacent the lower end of said body, a plurality of arms, the lower ends of which are mounted in said groove, there being a plurality of notches in the lower wall of said groove, shoulders formed on the lower ends of said arms which engage said wall adjacent said notches, an upwardly extending portion on said arms which contacts with the outer wall of the central body portion, lugs on the tops of said arms, one of which is hook-shaped, there being openings in said plate which register with said lugs and a through bolt to hold said plate, the central body portion, and the lower body portion tightly together, whereby said arms are locked tightly in place.

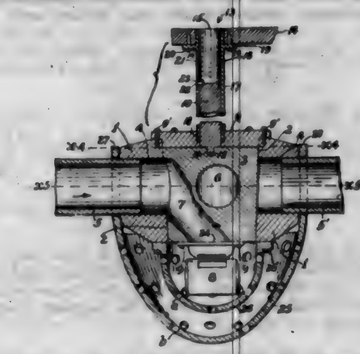
1,534,663. GRADER. LOUIS B. SAMMIS, Wallace, and FRANK R. HOOD, Burson, Calif. Filed May 26, 1924. Serial No. 715,842. 6 Claims. (Cl. 130—32.)

1. A grader including sheaves arranged in longitudinal sets, the sheaves of one set being spaced transversely a different distance from those of the other set, and a single endless driven cable passed about all the sheaves.

1,534,664. AWNING. HENRY J. SAUNDERS, Minneapolis, Minn. Filed Oct. 8, 1923. Serial No. 667,302. 2 Claims. (Cl. 156—44.)

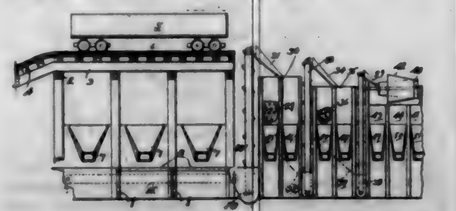
2. An awning having studs provided with means for securing them to a building wall in a substantially horizontal position when the awning is lowered and arms forming horizontal extensions to said studs when the awning is let down, said studs and arms having off-set lugs formed thereon and bolts passing therethrough for pivotally connecting said arms with said studs, said arms and studs having shoulders with flat opposing faces formed below said lugs, the shoulders of said arms contacting with those of said studs when said arms are lowered to a substantially horizontal position and forming stops to support the awning and prevent pull or strain on the fabric from the weight of the frame and awning when it is lowered.

1,534,665. SAFETY RAZOR. EDWARD S. SAVAGE, Rochester, N. Y. Filed Oct. 14, 1922. Serial No. 594,591. 8 Claims. (Cl. 30—12.)



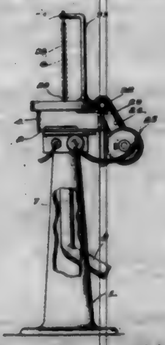
1. A safety razor comprising a handle, a guard rigid with the handle, blade holding means, and clamping member for clamping the blade in the blade holding means against the guard, and a common means for effecting a movement of the clamping member and the blade out of engagement with the guard and also out of engagement with each other.

1,534,666. ANTITHEFT ALARM FOR AUTOMOBILES. GEORGE SCHWEIKHARD, Los Angeles, Calif. Filed Dec. 12, 1919. Serial No. 344,474. 9 Claims. (Cl. 116—38.)



7. An automobile anti-theft device including in combination with an engine, an exhaust pipe for conducting the exhaust from said engine, an alarm device comprising a body adapted to receive sections of said pipe, a valve plug in said body, an alarm sounding device mounted on said plug, said body having an inner guard fastened thereto for protection of said alarm, an outer guard encircling said inner guard and the sections of said pipe; said guards being perforated to allow the sound to escape; means controlled by lock and key from

the interior of the automobile for operating the valve; said valve being provided with two bores so arranged as to conduct the exhaust of said engine through either

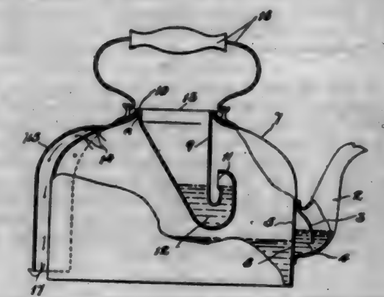


of said bores into a desired channel for the purpose of alternatively sounding or not sounding said alarm when the engine is running.

1,534,667. COAL-BUNKER SYSTEM. EDWIN CLINTON SHARPE, Piedmont, Calif. Filed June 25, 1923. Serial No. 647,582. 4 Claims. (Cl. 83—56.)

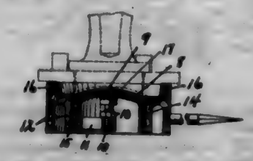
1. A coal bunker system, comprising a bin, a bin having screens to separate the material into three sizes, a breaker to which the coarsest material is passed, said bin retaining the intermediate material, chutes for loading wagons or filling sacks from the intermediate size material retained in said bin, a conveyor to take the broken material from the breaker back to the bin and another conveyor to take the finest material to a place of storage.

1,534,668. CREASING MACHINE. LOWELL W. SHIELDS, Rochester, N. Y., assignor to Hickok Manufacturing Company, Inc., Rochester, N. Y., a Corporation of New York. Filed Oct. 19, 1923. Serial No. 669,596. 12 Claims. (Cl. 69—8.)



1. A loop creasing machine comprising a guide about which the loop extends and a shaping die rigidly connected to the guide so that the loops to be shaped can move from the guide to and about the die, and movable creasing devices operating upon the loops on the shaping die.

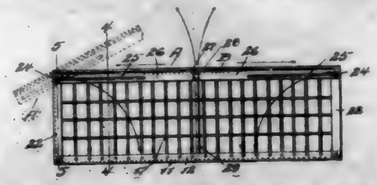
1,534,669. PIANO-KEYBOARD CARD SYSTEM. ANICE YOUNG SMITH, Minneapolis, Minn. Filed Sept. 11, 1922. Serial No. 587,290. 2 Claims. (Cl. 84—481.)



1. A keyboard card system for use in teaching the arrangement of the keys of a piano, comprising octave markers capable of being bent and of a length to have their ends inserted between keys to divide the keyboard into octaves; octave name cards having octave designations and key letter designations marked thereon, said cards being of a length to cover keys representing an octave and the key letter designations thereof being spaced to correspond to the key spaces of the octave; and individual key cards corresponding to individual keys and having key letters and staff notes marked thereon.

1,534,670. TEAKETTLE. MALCOLM SMITH, Seba Beach, Alberta, Calif. Filed Aug. 21, 1924. Serial No. 733,266. 2 Claims. (Cl. 53—9.)

1. In combination a vessel having a filling aperture and steam ports, and an outlet port; a spout associated with said outlet port; a water trap located in said spout and adapted to prevent the passage of steam through said spout; a water trap removably associated with the filling aperture of said vessel and adapted to permit water to pass therethrough into said vessel and to prevent the escape of steam through said filling aperture, and means to receive steam through said ports and adapted to discharge it.

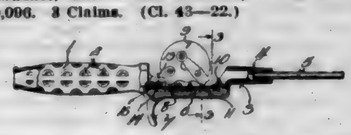


1,534,671. METHOD OF REDUCING FINISHED SURFACES UPON GLASS. HAROLD J. STEAD, Geneva, N. Y. Filed Aug. 31, 1922. Serial No. 585,406. 8 Claims. (Cl. 49—79.)

3. The method of producing a bifocal lens blank comprising heating a glass material to a moldable temperature, bringing into contact with said heated glass ma-

terial a highly polished metallic mold section under sufficient pressure to produce at the central portion of the resultant blank an optical surface suitable for visual purposes without grinding, and depressed below the surrounding surface of the blank, and then grinding and polishing the surrounding surface of the blank.

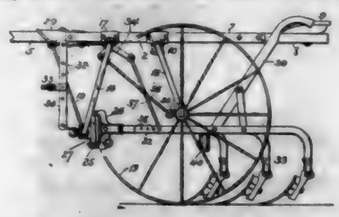
1,534,672. COLLAPSIBLE SHIPPING CRATE. ARTHUR J. STEWART, St. Louis, Mo. Filed Oct. 29, 1923. Serial No. 671,823. 3 Claims. (Cl. 220—6.)



1. As a new article of manufacture, a collapsible shipping crate comprising a bottom, side-frames hinged to said bottom; end-frames also hinged to said bottom forming supports for said side-frames; and two cover-sections having hinged-and-sliding engagement with the tops of said end-frames and having depending side-flanges arranged to engage with the bottom when in collapsed position.

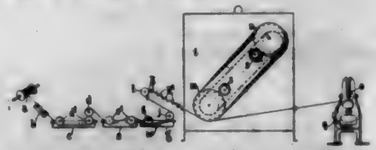
1,534,673. ELECTRICAL HEATING ELEMENT. WILLIAM W. WEIR, Alameda, Calif. Filed Jan. 10, 1923. Serial No. 611,870. 5 Claims. (Cl. 219—37.)

1. In an electric heating unit, the combination of an insulating plate having a spiral groove, both walls of which are inclined to the plane of the surface of the plate so that one wall of the groove overhangs the groove and a helically wound heating coil of bare wire in the groove, the groove being formed so that each convolution of the coil contacts with each wall of the groove at one point only, the two points of contact being spaced apart so that the convolutions do not contact with the bottom of the groove.



1,534,674. FISHING-ROD HANDLE. WILLIAM B. ZASS, Milwaukee, Wis. Filed Nov. 15, 1924. Serial No. 750,096. 3 Claims. (Cl. 43—22.)

1. A fishing rod handle comprising an integral body portion having a hand grip at its rear end and a rod receiving sleeve at its forward end and a depressed reel receiving intermediate portion, said intermediate portion having means for engaging the forward end of a reel base and having a pair of slotted side flanges adjacent its rear end, and a fastener carried in the slots and adapted to be slid forwardly over the rear end of the reel base.

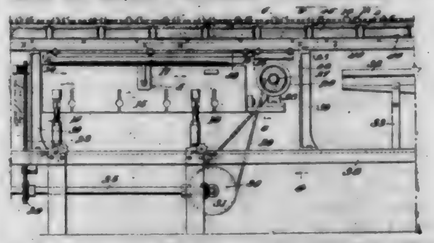


1,534,675. RIDING CULTIVATOR. RUDOLPH J. ALTGELT, South Bend, Ind., assignor to Oliver Chilled Plow Works, South Bend, Ind. Filed May 13, 1922. Serial No. 560,702. 4 Claims. (Cl. 97—148.)

2. In a cultivator, the combination of a main frame provided near one end with a seat, crank axle members loosely connected with an intermediate portion of said main frame, carrying wheels, a front arch connected with the main frame, means for connecting said main frame and front arch rigidly with a pole, gang frames, coupling devices connecting said gang frames with the

front arch, bell-cranks mounted on said front arch, a connection between one arm of each bell crank and one of the gang frames, and a connection between the other arm of each bell-crank and the cranked portion of one of the axle members.

1,534,676. MANUFACTURE OF TAPE, CORD, YARN, ROPE, FABRIC, OR OTHER MATERIAL PRODUCED FROM FIBERS. GEORGE EDWARD ANDREW, Northwood, England, assignor to F. P. Limited, Jersey, Channel Islands. Filed July 5, 1923. Serial No. 649,692. 8 Claims. (Cl. 91—68.)

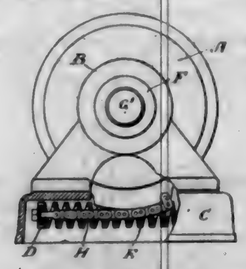


1. A method of forming material from fibers which comprises passing the fibers through an anti-coagulant for latex and then through vulcanized rubber latex prior to further treatment for the formation of the material.

3. A method of forming material from fibers which comprises passing the fibers through hot water, then through an anti-coagulant for latex and finally through vulcanised rubber latex prior to further treatment for the formation of the material.

7. A method of forming material from fibers which comprises spreading the fibers to form a strip of a thickness approximating to the thickness of a single fiber passing said fiber strip through an anti-coagulant for latex and then through vulcanized rubber latex prior to further treatment to form the finished material.

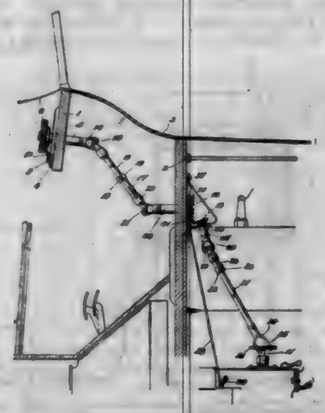
1,534,677. CAN-BODY-SOLDERING MACHINE. FRANK A. ASSMANN, Jr., and ALFRED L. KRONQUEST, Chicago, Ill., assignors to Continental Can Company, Syracuse, N. Y., a Corporation of New York. Filed Jan. 14, 1922. Serial No. 529,147. 23 Claims. (Cl. 113—60.)



1. The combination of a magnetic support along which can bodies may be moved, means located above the can bodies for sliding the can bodies along said support, a solder bath located beneath the can bodies, and means

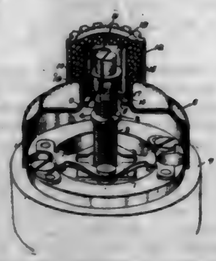
whereby the solder is applied to the side seams of the can bodies as they move along the support, said can bodies being freely carried by the magnetic support during a portion of their travel along the same and prior to passing over the solder bath whereby an imperfect can body can be stripped from the support by a downward pull thereon.

1,534,678. PIGMENT AND PROCESS OF MAKING SAME. STANLEY J. BEEBE, Union, N. Y. Filed Apr. 12, 1924. Serial No. 706,177. 5 Claims. (Cl. 134—60.)



1. A pigmental substance consisting of the pulverized residue of destructive distillation of paper.

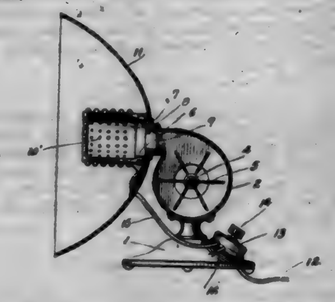
1,534,679. CONCENTRIC GEAR UNIT. FRANCIS JOHN BOSTOCK and SWINFEN BRAMLEY-MOORE, Huddersfield, England. Filed Mar. 29, 1923. Serial No. 628,424. 5 Claims. (Cl. 74—56.)



5. A concentric type of gear unit, comprising driving and driven shafts arranged in the same axial alignment, gearing connecting the said shafts, a framework supporting said shafts and said gearing, trunnions on said framework, fixed bearings in which said trunnions are mounted, a bed plate carrying said bearings, springs attached to said bed plate, and connections between said springs and the framework whereby the springs operate to yieldingly resist rotation of the framework.

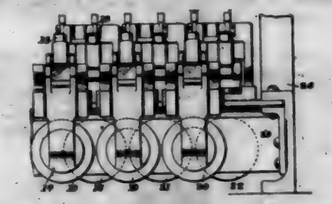
1,534,680. CARBURETOR-ADJUSTING MECHANISM. GEORGE P. BUMP, La Crosse, Wis. Filed Jan. 24, 1924. Serial No. 688,237. 2 Claims. (Cl. 137—139.)

1. In a carburetor-adjusting mechanism, the combination of a knob, operative connections between the knob and the valve of the carburetor including shaft sections and intermeshing gears on the adjacent ends of the shaft sections, a lever loosely mounted upon one shaft section adjacent the gear, an operative connection between said lever and the choker valve of the carburetor, means for supporting said lever in normal position, and means carried by one of the gears to engage the lever after partial rotation of the gear and raise the lever through further rotation of the gear.



1,534,681. ROTARY-SWITCH HANDLE. GUSTAV BUTZKE, Alplaus Road, N. Y., assignor to General Electric Company, a Corporation of New York. Filed June 4, 1921. Serial No. 475,035. 7 Claims. (Cl. 200—172.)

1. A switch handle comprising a hub member having provisions for rotary attachment to a switch shaft, a radially movable pawl fixed upon said hub member, a chambered body member enclosing and movable longitudinally and rotarily about said hub member and pawl, longitudinal ratchet members on the chamber wall adapted to be engaged by said pawl normally to prevent rotation of the body member in one direction on the hub member, and means for locking said hub and body members together upon the latter member being moved longitudinally of the former member.



7. A switch handle comprising a hub member having provisions for attachment to a switch, a radially movable snap switch pawl fixed upon said hub member, a swivelled body member having an axial chamber therein with a ratchet member on the wall thereof adapted to be engaged by said snap pawl, and provisions for removing the body member from the switch which comprise a guide plate having an irregular central opening the walls of which engage the hub member when said body is moved axially outward.

1,534,682. ELECTRIC HEATER. SAMUEL M. CARMEAN and JAMES H. CARMEAN, Kansas City, Mo. Filed Apr. 11, 1924. Serial No. 705,772. 1 Claim. (Cl. 219—42.)

A heating element comprising a cylindrical hollow member having one end closed and the other provided with an open threaded collar, the wall of the casing having perforations arranged in circular rows about the periphery of the casing and a resistance wire wound around the casing between the rows of perforations.

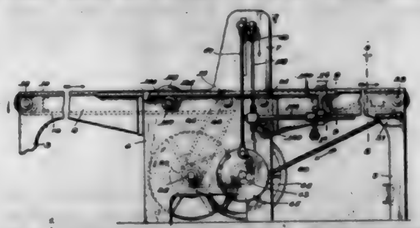
1,534,683. MOUNTING FOR SWITCH-OPERATING MEANS. FRANK E. CASE and ARTHUR T. CROCKER, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed Nov. 14, 1921. Serial No. 514,955. 8 Claims. (Cl. 175—298.)

3. Operating means for a row of substantially uniformly spaced separately operated switch members, comprising a separate electromagnet for operating each of said switch members, a common magnetic support for the said electromagnets having a rib to which corresponding ends of the cores of the electromagnets are secured in rows on opposite sides thereof with intervening spaces between the electromagnets of less than the width of an electromagnet and with the electromagnets of one row in staggered relation with the electromagnets of the row on the opposite side of the said rib, and a separate armature for each of said electromagnets cooperating with the unsecured end of the core of the electromagnet and connected to a corresponding switch member of the said row.

1,534,684. PENDANT. LEWIS S. CHILSON, Attleboro, Mass., assignor to J. M. Fisher Company, Attleboro, Mass., a Corporation of Rhode Island. Filed Aug. 3, 1922. Serial No. 579,441. 1 Claim. (Cl. 41—22.)

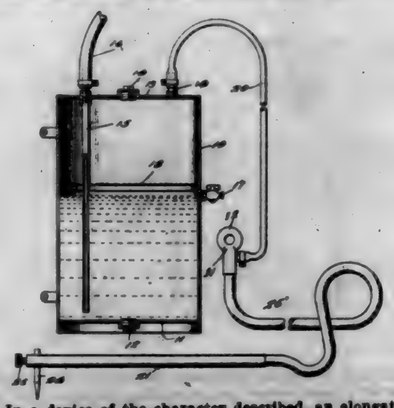
An ornament of the character described comprising a background member formed of mother-of-pearl, a protecting lens, means for securing said lens and background together, feathers, or the like secured to the surface of said background member beneath said lens, said feathers being arranged in simulation of a bird or the like and said background having a natural iridescence imparting a depth, or distantial effect simulating the appearance of the sky.

1,534,685. PROCESS FOR SHAPING GLASS TUBES, MORE PARTICULARLY TUBES WITH RAREFIED GAS, INTENDED FOR LIGHTING OR LUMINOUS ADVERTISING. GEORGES CLAUDE and JEAN MARIE EDOUARD DE BEAUFORT, Boulogne-sur-Seine, France. Filed Dec. 21, 1923. Serial No. 682,045. 2 Claims. (Cl. 49—84.)



2. A process for shaping glass articles, comprising the successive steps of winding insulated wire around the article to be shaped; passing an electric current through said winding to soften the glass; shaping the softened article while the winding is in place thereon; shutting off the current; and removing the winding from the shaped article after the latter has cooled.

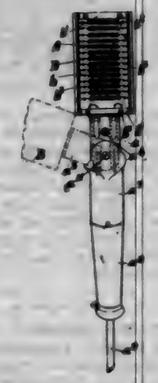
1,534,686. FLAP FOR CLINCHER TIRES. JOHN P. COLGAN, Waycross, Ga. Filed July 18, 1922. Serial No. 574,668. 6 Claims. (Cl. 152—20.)



1. An endless tire flap comprising a flat ribbon of inelastic material having its ends joined by a piece of elastic material.

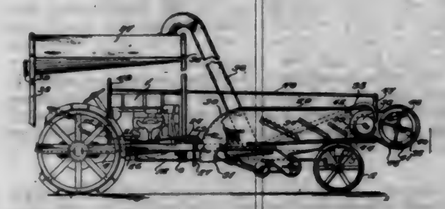
1,534,687. MACHINE FOR CUTTING VENEER. WILLIAM H. COLLINS, Painesville, Ohio. Filed July 31, 1922. Serial No. 578,775. 4 Claims. (Cl. 164—48.)

1. In a machine of the type described for operating upon a web or sheet of material, the combination of forward and rear sets of conveyor bands operating at opposite ends of a feed table, means for connecting both sets to a power shaft and for connecting the rear set thereto independently, a cutter reciprocable between the inner ends of said conveyor sets, and means operatively connected to said cutter for disconnecting both sets from the power shaft during its cutting stroke and for restoring the connection of the rear set to the power shaft at the termination of its return stroke.



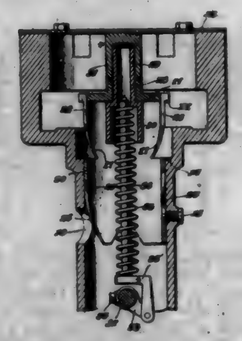
1,534,688. ELECTRIC WELDING DEVICE. WILLIAM BRUCE COLLINS, Raleigh, N. C. Filed Aug. 29, 1923. Serial No. 659,992. 5 Claims. (Cl. 219—8.)

1. In a device of the character described, an elongated electrode holder having a longitudinally extending bore terminating adjacent one end of the holder, an electrode



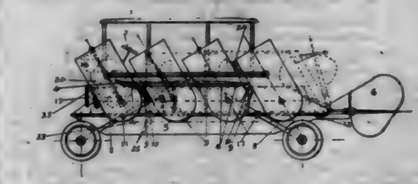
extended through the last named end of the holder and disposed transversely to said holder and said holder having angularly disposed passages communicating with the last named end of the bore thereof and adapted to direct compressed air from said bore against the one side of the electrode for the purpose described.

1,534,689. ELECTRIC HEATING DEVICE FOR BURNING AND DRYING PURPOSES. WILLIAM COOPER, Huddersfield, England. Filed Dec. 14, 1922. Serial No. 606,852. 7 Claims. (Cl. 219—19.)



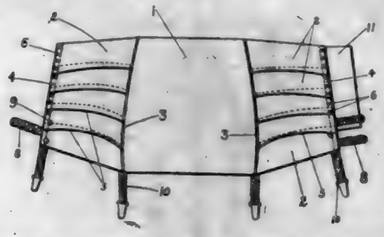
1. An electrically heated hand tool, comprising a handle, a socket holder of insulating material carried by the handle, a removable resistance holder, a pair of slidable pin and socket connections for securing the two holders together, an insulated resistance element secured in the resistance holder, and means for passing an electric current through the resistance element and the said pair of connections.

1,534,690. ATTACHMENT FOR TRACTORS. ROSS E. CURTIS, Lincoln, Kans. Filed Nov. 17, 1922. Serial No. 601,561. 4 Claims. (Cl. 56—21.)



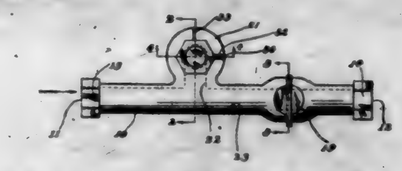
1. The combination with a tractor having a side pulley, of an extension frame secured about the rear axle of the tractor and extending at the sides of and beyond the tractor, the front end of the tractor being supported on said frame, means at the front end of the frame for attaching the front axle and steering wheels of the tractor, a harvesting mechanism secured on said frame, a straw discharge spout at the rear end of the frame extending downwardly in advance of and in spaced relation to the tractor, and terminating below the frame, said spout extending the full width of the frame, and means mounted on the frame between the harvesting mechanism and the tractor for operatively connecting the harvesting mechanism with the side pulley of the tractor.

1,534,691. SPEED GOVERNOR FOR TRACTORS. SCOTT R. DARBY, Medford, Oreg. Filed Nov. 1, 1923. Serial No. 598,453. 8 Claims. (Cl. 137—152.)



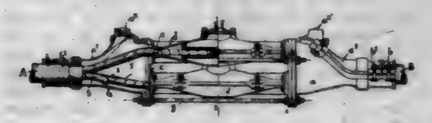
3. The combination with an engine intake conduit, of a hollow suction operated valve slidably fitting in said conduit and provided with a port in the wall thereof, the valve being open at one end, a rod extending into the valve at its open end and slidably associated with the valve, a spring surrounding said rod resisting movement of the valve to close said port, and means carried by the valve slidably receiving said rod and adjustable for regulating the mean tension of said spring.

1,534,692. HYDRO-AUTO-HELICOPTER. WILLIAM DANIEL DAVIS, Little Rock, Ark. Filed June 14, 1924. Serial No. 720,068. 1 Claim. (Cl. 244—2.)



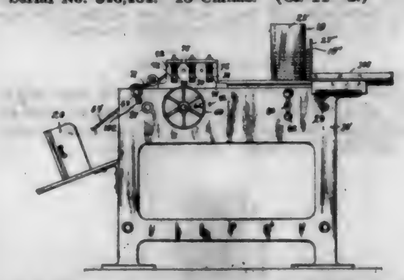
A combination hydro-auto-helicopter, comprising a body, with cab and sloping boat bottom; a plurality of vacuum propellers adjustably attached to the body; said vacuum propellers comprising a cylinder; said cylinder provided with a spiral propeller blade which is connected by means of bevel gearing to be driven by an engine; said propeller cylinders connected below to the body by a swivel where the drive shaft enters the cylinder; a bar at the top of the cylinder connected to a control stick, so top of propeller may stand perpendicular, or be moved forward or backward; two or more adjustable wings on each side of the body mounted by a joint and arm adjustable; to stand perpendicular when ascending or horizontal when flying forward, or be folded back against the side of vessel when running on land or water or for housing; a folding tail and rudder with hinge on top and latch below, so as to fold up on top of body when used on water or land or for housing; four wheels under the body connected with steering gear; said wheels mounted on axles, said axles attached to side beam axle support at lower end; said beam connected to the body, and provided with springs and air pump shock absorbers above; a pontoon on each side below the cylinders; a side shield with door, and a flange between the cylinders that closes the space automatically when descending perpendicularly; one adjustable spiral blade propeller attached to front end of fuselage and one to back end, driven by pulley and belt connected to an engine, for turning machine to right or left or parking same sidewise.

1,534,693. CORSET. YOLE BRUSCO DE MAGNANI, Buenos Aires, Argentina. Filed Apr. 3, 1924. Serial No. 704,044. 1 Claim. (Cl. 2—43.)



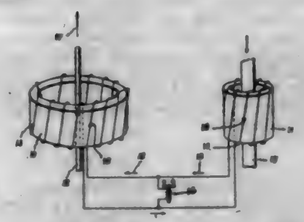
A corset comprising a back portion; a plurality of overlapping strips secured at one end to each side of said back portion; a securing strip fastened to each of the other ends of said overlapping strips; a wing member secured to one of said securing strips; a plurality of elastic strips fastened to the securing strips for fastening the lower ends of the securing strips together; and tightening means projecting over said wing portion for fastening the securing strips together, said elastic strips and the tightening means being adapted to secure the corset in place around the body of the wearer.

1,534,694. COMBINED WASTE COCK AND CUT-OFF FOR WATER PIPES. BALLARD M. DESKINS, Waverly, Ohio, and KENNIS F. DESKINS, Logan, W. Va. Filed May 14, 1924. Serial No. 713,266. 6 Claims. (Cl. 277—19.)



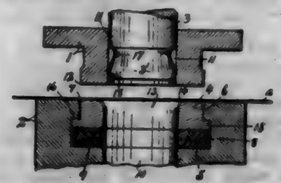
1. In a union for a pipe line, a cut-off cock in said union, and a projection on said union provided with a socket for a waste cock, the bore of the union having a branch connection with said socket whereby upon said waste cock being turned into open position and the cut-off cock into closed position, water will flow through said branch and out through said waste cock instead of along the pipe line beyond said cut-off cock.

1,534,695. ELECTRICAL JUNCTION BOX. FLORIMOND DOUCHET, Paris, France, assignor to Forges & Ateliers de Constructions Electriques de Jeumont, Societe Anonyme, Paris, France. Filed Sept. 2, 1924. Serial No. 735,389. 8 Claims. (Cl. 247—1.)



1. A junction box for multiple-core electrical cables, comprising a plurality of elementary boxes in parallel relation, means for connecting the ends of corresponding cores within said elementary boxes, a pair of shells secured at opposite extremities of said elementary boxes, and means for securing the respective cables to the outer ends of said shells, the individual cores diverging within said shells into alignment with the respective elementary boxes.

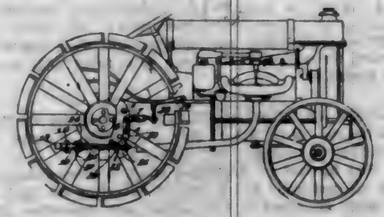
1,534,696. BOOK-COVER BACK-SHAPING APPARATUS. HENRY C. ELDREDGE, St. Bernard, Ohio, and CALEB H. LADD, Newport, Ky. Filed Mar. 24, 1922. Serial No. 546,484. 18 Claims. (Cl. 11—2.)



1. A book-cover shaping apparatus comprising guide rails over which the book covers are to be successively fed, a member over which book-cover backs are to be shaped, feed shafts transversely of said guide rails provided with feed rolls to engage the book-covers and feed said book covers along said guide rails and over said back shaping members, and rollers to engage the book-covers back upon opposite sides of said shaping members to force the book-covers back into contact with the sides of said back shaping member.

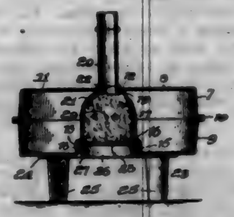
1,534,697. PROTECTIVE SYSTEM. ALAN STEWART FITZGERALD, London, England, assignor to General Electric Company, a Corporation of New York. Filed Aug. 13, 1924. Serial No. 731,867. 8 Claims. (Cl. 175—294.)

1. A protective arrangement for an alternating electric current circuit wherein two current transformers have their primary windings connected in said circuit and their secondary windings connected in series, characterized by the fact that one of said transformers is provided with an additional secondary winding arranged so that the combined effect thereon of said series connected secondary windings is neutralized by the primary winding of said one transformer when circuit conditions are normal.



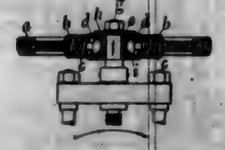
1,534,698. METHOD OF AND APPARATUS FOR MAKING PAPER-BOX CAPS. FRED GANSERT and HERMAN GANSERT, Jr., Syracuse, N. Y. Filed Nov. 8, 1922. Serial No. 598,952. 6 Claims. (Cl. 112—40.)

1. An apparatus for making paper box caps comprising coaxial axially movable cupping dies, and a resilient supporting ring for one of the dies compressible axially



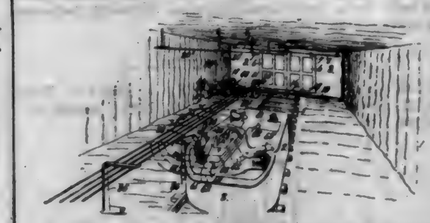
thereby and contractible inwardly by said compression to press the marginal flange of the cap inwardly during the cupping process.

1,534,699. CLUTCH RELEASE. JOSEPH IVAN GARDNER, Lakeside, Ariz. Filed Mar. 18, 1924. Serial No. 700,065. 1 Claim. (Cl. 180—14.)



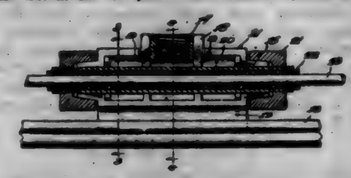
In a tractor, the combination of a clutch pedal, a lever having pivotal connections with the tractor, a draw bar pivotally connected with the lever, a bell crank lever pivoted on the tractor body with one arm provided with a perforation, a link connected with the clutch pedal passing through the perforation in the arm of the bell crank lever, means on the free end of the link adapted to engage the arm of the bell crank lever for moving it in one direction while permitting the bell crank lever to be moved without operating the clutch pedal, a rod connecting the other arm of the bell crank lever with the first mentioned lever, and a spring interposed between the bell crank lever and the first mentioned lever for resisting actuation of the bell crank lever until the load has been increased beyond a predetermined degree.

1,534,700. DECANTING APPARATUS. SIGMUND L. GOLDMAN, Chicago, Ill. Filed Oct. 17, 1921. Serial No. 508,131. 11 Claims. (Cl. 210—97.)



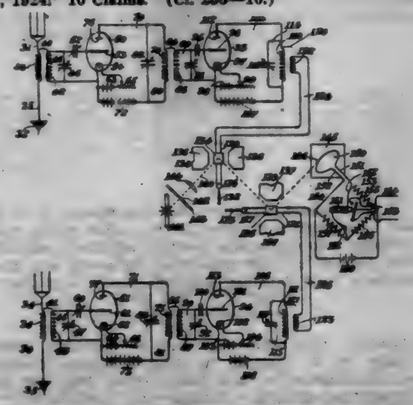
4. A suction float comprising a hollow member affording a passage for the flow of liquid therethrough, a portion of said passage below its upper end being of enlarged cross section, and an annular flange at said enlarged portion of the passage extending inwardly and laterally relative to the latter.

1,534,701. VALVE. TOM FREDERICK GRAY, Manchester, England. Filed Apr. 10, 1924. Serial No. 705,623. 3 Claims. (Cl. 251—45.)



2. In valves, the provision within the hand wheel of spring containing pockets, plunger like elements engaged by said springs, and recesses in the valve spindle into which said plungers project, as set forth.

1,534,702. APPARATUS FOR OPERATING MINE DOORS, SWITCHES, OR THE LIKE. EDWARD H. GRIM, Dott, W. Va. Filed June 20, 1923. Serial No. 646,731. 11 Claims. (Cl. 246—125.)



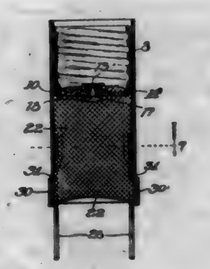
1. In mine door and switch operating systems, the combination with the element to be opened or closed, of an electric motor for opening and closing the same, electric circuit controlling means on a mine car for effecting the action of said motor as the car approaches the element to be opened or closed, and signalling instrumentalities including signals on the car and signal operating devices associated with the element to be opened or closed, for indicating to the operator on the car the position of said element.

1,534,703. WIRE HANGER. ALBERT J. GURNEY, Canton, Ohio, assignor to The American Mine Door Co., Canton, Ohio, a Corporation of Ohio. Filed June 14, 1924. Serial No. 720,074. 23 Claims. (Cl. 191—43.)

1. A hanger of the character described including coacting jaws to engage a wire, and rotatable independently adjustable means slidably coacting with the jaws securing the jaws together.

1,534,704. RECEIVING SYSTEM FOR RADIANT ENERGY. JOHN HAYS HAMMOND, Jr., Gloucester, Mass. Filed Sept. 9, 1918, Serial No. 253,247. Renewed Nov. 3, 1924. 10 Claims. (Cl. 250—10.)

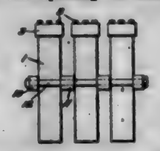
1. A receiving system for radiant energy comprising a plurality of receiving circuits tuned to different high frequencies respectively, a plurality of closed oscillatory circuits controlled by said receiving circuits respectively,



and means including a projected beam of light and a selenium cell having a configuration corresponding to the outline traced by the beam of light for controlling a signal, said means being arranged to operate said signal only for a predetermined phase difference between the received high frequencies.

1,534,705. SASH-GLAZING DEVICE. MILETUS B. HARRIS, Richmond, Va. Filed Sept. 19, 1922. Serial No. 589,109. 6 Claims. (Cl. 20—56.4.)

1. In a sash glazing device, a sash having a glass receiving rabbet, the bottom of the rabbet at the top, bottom and side rails of the sash having a groove, top, bottom and side glass retaining strips engaging with said groove, the adjacent ends of the upper and side glass retaining strips being mitered, the lower ends of the side retaining strips and the ends of the lower glass retaining strip being squared, so that the lower retaining strip will hold the side retaining strips in position, each strip having an inturned yieldable flange bearing against the glass, one end of the inwardly turned flange of the lower retaining strip having a lip to engage inwardly of one of the side retaining strips to guide the lower strip into position.

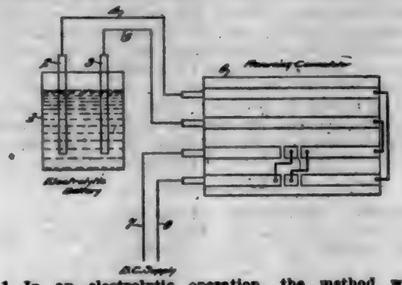


1,534,706. ELECTRIC-SOCKET STRUCTURE. MAX HERSKOVITZ, Chicago, Ill., assignor to Peerless Light Company, Chicago, Ill., a Corporation of Maine. Filed Apr. 28, 1920. Serial No. 377,148. 7 Claims. (Cl. 173—342.)

3. In a socket structure, the combination of a shell and a supporting member having arms which extend upwardly into overlapping position relative to said shell, with tongues on said arms bent outwardly and thence upwardly into clamping engagement with said shell.

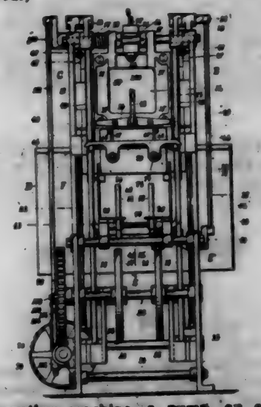
1,534,707. OIL SWITCH. JOHN D. HILLIARD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Mar. 10, 1923. Serial No. 624,253. 1 Claim. (Cl. 220—55.)

A container for an oil switch comprising an oil tank, a cover having a depending flange fitting thereover, a band surrounding said tank and welded thereto, a second band surrounding said first band and extending above the same to form a channel, a gasket seated in said channel, a bolt welded to the inner face of said tank, said cover having an opening to receive said bolt, a



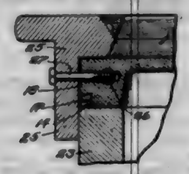
gasket on said cover surrounding said bolt and a nut threaded in said bolt to clamp said cover against said first gasket.

1,534,708. GLAZING CAST IRON. WILLIAM E. HOKE, Baltimore, Md. Filed Mar. 30, 1921. Serial No. 457,104. 2 Claims. (Cl. 148—4.)



1. The method of producing hard, wear-resisting surfaces on cast-iron, which comprises acting on said surface with an abrasive tool under such operative conditions that the metal is heated to an abnormal degree.

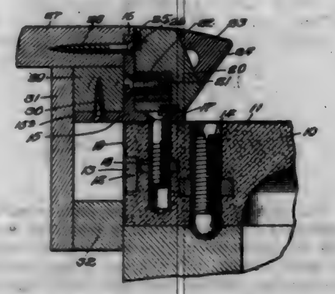
1,534,709. METHOD OF CONDUCTING ELECTROLYTIC OPERATIONS. FRANCIS A. HOLT, Elmhurst, N. Y. Filed May 17, 1924. Serial No. 714,079. 5 Claims. (Cl. 204—11.)



1. In an electrolytic operation, the method which comprises passing a direct electrolyzing current through the electrolytic bath at about the optimum rate until polarization begins to be detrimental, reversing the current only until the polarizing effect is substantially removed, and continuing this cycle of operations until electrolysis has taken place to the desired extent.

1,534,710. CASTING MACHINE. CHARLES E. HOPKINS, Plainfield, N. J.; The Plainfield Trust Company administrator of said Charles E. Hopkins, deceased. Filed Mar. 2, 1922. Serial No. 540,481. 48 Claims. (Cl. 22—71.)

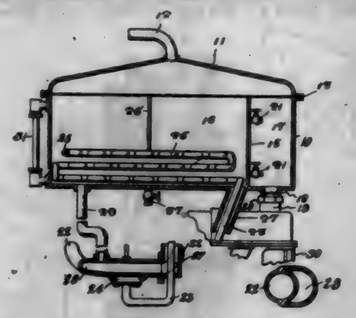
1. In a casting machine, a pump, an operating connection, an actuating member for moving said operating connection a part of its stroke, a trip on said connection to be engaged by said actuating member to move the connection the remainder of its stroke, and an electro-magnet controlling the trip and positioning it for engagement with said actuating member only when the magnet is energised.



1,534,711. BILLIARD TABLE. EDMUND F. HOSKIN, Chicago, Ill., assignor to William A. Spinks & Co., Chicago, Ill., a Corporation of Illinois. Filed Sept. 8, 1924. Serial No. 736,596. 10 Claims. (Cl. 273—6.)

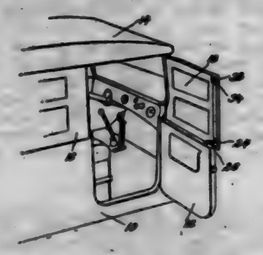
1. A billiard table bed made of molded material having a thickened border portion.

10. A billiard table bed formed of molded material having a thickened border portion, a recess in the outer side face of said thickened border portion, a plurality of nuts embedded in said thickened border portion adjacent said recess during the casting or molding of the bed, a cloth retaining strip lying in said recess, and a plurality of screws extending through said cloth retaining strip and entering said nuts above mentioned.



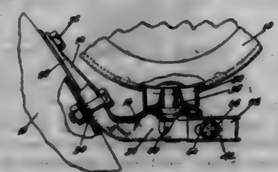
1,534,712. BILLIARD TABLE. EDMUND F. HOSKIN, Chicago, Ill., assignor to Wm. A. Spinks & Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 8, 1924. Serial No. 748,690. 9 Claims. (Cl. 273—8.)

1. In a table of the character described; a T-iron fastened to the bed of the table at its edge with a horizontal base plate and an upwardly projecting flange; a cushion strip carried by said T-iron on the inside of the vertical flange and on top of the base plate; and a rail carried by said T-iron on the outside of the vertical flange.



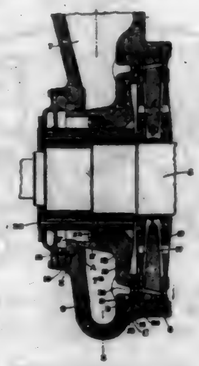
1,534,713. TOBACCO STEAMING AND DRYING APPARATUS. ORLANDO O. HUMPHREY, East Leavenworth, Mo. Filed Feb. 8, 1923. Serial No. 618,869. 5 Claims. (Cl. 126—20.)

1. The combination with an internal combustion engine having a cooling system including a fan, of a casing having an outlet port, a heating coil within the casing, means connecting the heating coil with exhaust ports of the engine, whereby the exhaust will pass



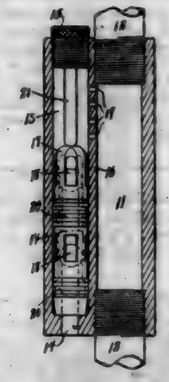
through the coil to heat air in the casing and means for conducting draft from the fan to the casing to force the heated air out through the outlet port.

1,534,714. CURTAIN SUPPORT. BENJAMIN JEROME, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Mar. 5, 1923. Serial No. 622,997. 2 Claims. (Cl. 296—139.)



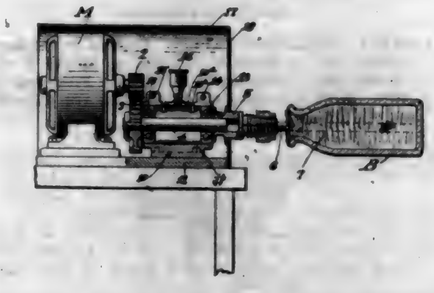
1. A vehicle door curtain comprising, in combination, a flexible curtain portion hemmed along its vertical and top edges, a facing strip secured along the vertical edge by the hemming seam and by a parallel seam to form a vertical pocket, a reinforcing piece sewed on at the top by said parallel seams, a vertical curtain rod in the pocket, and a fastening passing through the curtain and the rod and the reinforcing piece and clinched against the reinforcing piece.

1,534,715. HEADLAMP SUPPORT. BENJAMIN JEROME, Pontiac, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Dec. 26, 1923. Serial No. 682,696. 6 Claims. (Cl. 240—57.)



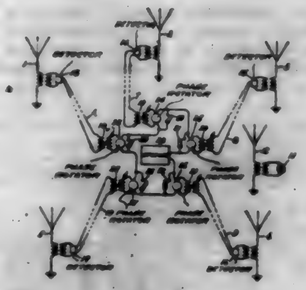
1. An automobile having, in combination, a pair of fenders, a bracket connected to each fender and having a convex upper surface, a cross-tie adjustably connecting the brackets, a lamp having a concave lower socket resting on the bracket, and means to clamp each lamp to its bracket.

1,534,716. ELASTIC-FLUID TURBINE. OSCAR JUNGGREN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed July 20, 1923. Serial No. 652,853. 1 Claim. (Cl. 253—39.)



The combination in an elastic-fluid turbine, of a rotor having a shaft, a surrounding split casing, an end wall formed integral with the casing, said end wall having an opening through which the shaft projects, a solid ring structure having an axially-extending hub which surrounds the shaft in spaced relation thereto, said ring structure serving to anchor the end wall to the surrounding casing, and defining with the end wall an elastic-fluid chamber, a packing structure attached to and carried by the hub in the spaces between it and the shaft, whereby said packing structure moves radially with the ring structure when the ring structure expands and contracts, and nozzle means carried by said ring structure.

1,534,717. WELL-FLOWING DEVICE. GLEN KAHLE, Dallas, Tex. Filed Apr. 12, 1924. Serial No. 706,093. 3 Claims. (Cl. 103—5.)



1. A well flowing device comprising a body having a pumping passage-way therethrough and sections of well tubing communicating with said passage-way, said body having a cylindrical chamber spaced from said passage-way and provided with an inlet for gas, valves mounted in said chamber, said body having a plurality of gas passages from said chamber to said passage-way of smaller capacity than the capacity of said inlet port, and means for preventing said valves rising up and choking said small passages.

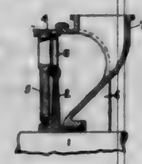
1,534,718. BOTTLE-WASHING MACHINE. LOUIS F. KATONA, Los Angeles, Calif., assignor of one-half to Frank C. Wolf, Los Angeles, Calif. Filed Nov. 2, 1923. Serial No. 672,290. 2 Claims. (Cl. 308—189.)

1. A bottle washing machine having an anti-friction bearing composed of a housing, a ball bearing at the end of the housing, a longitudinal split in the housing adjacent the ball bearing, a transverse split at the inner end of the longitudinal split, means to clamp the housing at the longitudinal split and thereby firmly hold the ball bearing, and a brush driving shaft in the said ball bearing.

1,534,719. RADIO RECEIVING SYSTEM. EDWARD W. KELLOGG, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 21, 1921. Serial No. 463,265. 9 Claims. (Cl. 250—8.)

1. The method of operating a radio receiving system comprising a plurality of widely separated antennæ connected by transmission lines to a central receiving station, which consists in radiating a high frequency wave of a frequency differing from that of the signaling waves to be received by an amount sufficient to produce audible beats with the signaling wave, detecting at each antenna the resultant beat current received thereon, transmitting the resultant audio frequency current to the receiving station, selectively impressing upon the receiving apparatus the audio frequency currents thus transmitted, and selecting for the desired reception of signals the currents having the most favorable stray ratio.

1,534,720. RADIO RECEIVING SYSTEM. EDWARD W. KELLOGG and CHESTER W. RICE, Schenectady, N. Y., assignors to General Electric Company, a Corporation of New York. Filed May 18, 1921. Serial No. 470,712. 18 Claims. (Cl. 250—20.)



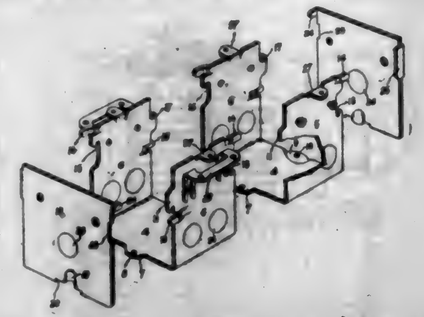
1. A receiving system for radio signals comprising a long horizontal receiving antenna, a transmission line

running parallel to said antenna for conveying signaling currents from a selected point in said antenna to a

distant receiving station, and means for preventing undesired inductive effects between the antenna and the transmission line.

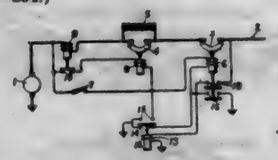
1,534,721. CONSTRUCTION OF ELASTIC-FLUID TURBINES TO PREVENT BREAKAGE OF BLADES DUE TO VIBRATIONS. OSKAR LASCHE, deceased, late of Westend, Germany, by Fritz Lasche, administrator, Westend, Germany, assignor to Allgemeine Elektricitäts-Gesellschaft, Berlin, Germany. Filed April 28, 1924. Serial No. 709,859. 4 Claims. (Cl. 253—39.)

1. An elastic fluid turbine having diaphragms provided with nozzles which direct elastic fluid to the turbine buckets, characterized by the fact that the spacing of the nozzle partitions changes around the periphery of the diaphragm.



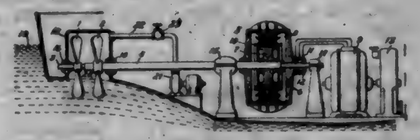
1,534,722. COMBINED SPINNER AND FLY. LAURENCE L. LEIBERMAN and HENRY T. JACOBS, Meadville, Pa. Filed Aug. 31, 1922. Serial No. 585,372. 8 Claims. (Cl. 43—46.)

1. A combined spinner and fly comprising a central portion, a pair of arms formed integrally therewith, one of said arms being longer than the other, said arms being of different pitch, and a stem inclined to the plane of said central portion extending through the same.



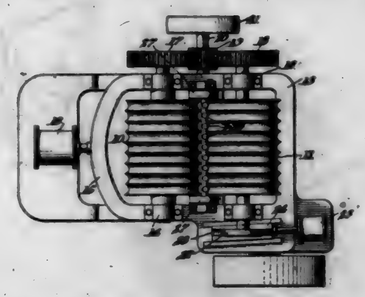
1,534,723. SECTIONAL SWITCH BOX. EDWARD H. LEWIS, Bridgeport, Conn., assignor to General Electric Company, a Corporation of New York. Filed Aug. 1, 1924. Serial No. 729,632. 4 Claims. (Cl. 247—16.)

1. A sectional switch box comprising body members and end plates, said body members having side walls provided with engaging hooks and recesses in their edges which lie in the planes of the side walls, and bottom walls provided with overlapping projections having openings for fastening means, and said end plates having



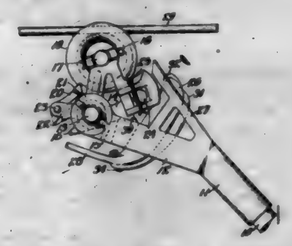
notches for engagement with the hooks of the body members and recesses adapted to receive fastening means inserted in the openings in said projections.

1,534,724. AUTOMATIC SWITCHING SYSTEM. GORDON R. MCDONALD, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed Apr. 8, 1924. Serial No. 705,108. 6 Claims. (Cl. 175—294.)



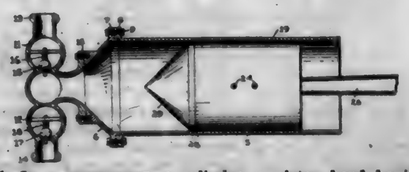
5. In combination, a source of current, a load circuit, a resistor, an electromagnetically operated switch arranged to connect said source to said circuit with said resistor in series therewith, a circuit for said switch, means operative to complete said circuit whereby said switch may be closed, an overload relay responsive to the current supplied to said load circuit by said source, a second electromagnetically operated switch arranged to short circuit said resistor, a circuit for said short-circuiting switch controlled by said overload relay, a relay arranged to be connected across said load circuit so as to be responsive to the voltage thereof when said first mentioned switch is closed, and contacts in the circuit of said short-circuiting switch controlled by said voltage relay.

1,534,725. SHIP PROPULSION. CAMPBELL MACMILLAN, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 28, 1923. Serial No. 641,847. 5 Claims. (Cl. 115—42.)



1. A system of ship propulsion wherein oppositely rotating vane-wheels are utilized in producing the force required to drive the ship, characterized by the fact that means are provided for producing an artificial water-level by which partial and substantially uniform immersion of the vanes is secured under all conditions of operation.

1,534,726. BALL-ROLLING MACHINE. FRANK EARL MARCY, Los Angeles, Calif. Filed Nov. 22, 1922. Serial No. 602,647. 6 Claims. (Cl. 80—23.)

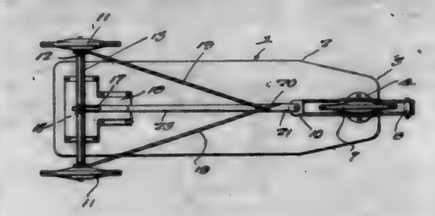


1. In a ball-rolling apparatus, the combination with co-acting grooved ball-forming rolls and means for moving one of the rolls toward and away from the other roll, of means disposed between the rolls below the center plane thereof for effecting a forming action upon the balls, said means comprising upwardly directed posts in alignment with the grooves of the rolls, having top surfaces sloping from one side to the other in the direction of rotation of the rolls.

1,534,727. SLEET CUTTER FOR TROLLEY WIRES. GILES S. MOORE, Indianapolis, Ind., assignor to Trolley Shoe-Wheel Company, Indianapolis, Ind., a Corporation of Indiana. Filed Jan. 4, 1924. Serial No. 684,376. 4 Claims. (Cl. 191—59.1.)

1. In a trolley, a sliding shoe normally positioned for engagement with the wire in one direction of movement, a roller engageable with the wire on reverse movement of the car, and sleet cutting means adapted to be positioned on the trolley for engagement with the wire in place of said shoe on forward movement of the car, substantially as set forth.

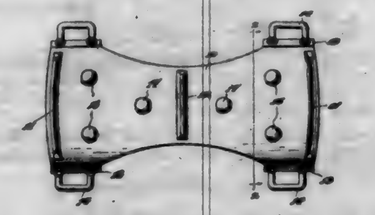
1,534,728. COMPRESSOR. WILLIAM E. NOAD, Jackson, Mich. Filed Jan. 17, 1924. Serial No. 686,862. 4 Claims. (Cl. 230—27.)



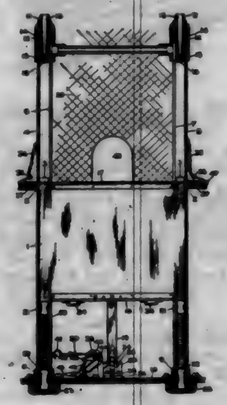
1. In a compressor, a cylinder, a piston head having a conical inner wall secured thereto, a member constituting an extension of the cylinder and a valve casing connected to said member, said piston having its end contoured to the configuration of the inner wall of the cylinder head, substantially as described.

1,534,729. PROCESS FOR THE MANUFACTURE OF COLLOIDAL SUBSTANCES IN THE FORM OF SMALL BALLS OR GRAINS. ALBERT OBERSOHN, Berlin-Charlottenburg, WILHELM WACHTEL, Berlin, DANIEL SAKOM, Wiesbaden, and PAUL ASKENASY, Karlsruhe, Germany. Filed Mar. 13, 1924. Serial No. 699,127. 10 Claims. (Cl. 252—6.)

1. A process for reducing a colloidal substance to granular form comprising forming said substance into drops, fixing the form of said drops by preliminary chilling, and solidifying the granules thus formed by passage through an agent physically reactive with said substance.



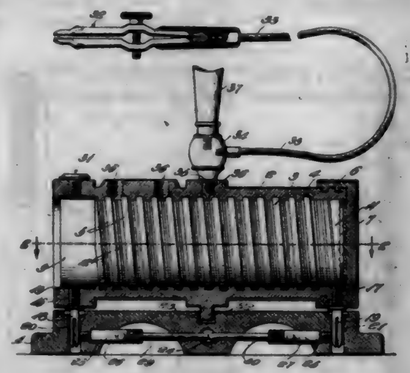
1,534,730. COASTER WAGON. JAMES O'BRIEN, Hutchinson, Kans. Filed Sept. 2, 1924. Serial No. 735,350. 3 Claims. (Cl. 280—87.5.)



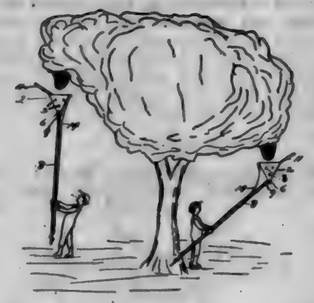
3. A toy vehicle of the class described, comprising a body having its forward end fashioned to facilitate foot propulsion, an inverted yoke having a flattened bight portion pivotally connected to the under side of the body adjacent the front end thereof, an elongated frame integral with the lower ends of the arms of said yokes, a ground engaging and steering wheel disposed within said frame and provided with journals rotatably received in bearing openings in the side portions of the frame, the rear portion of said frame being equipped with a flattened extension, a hollow casing secured to the under side of the body adjacent the rear end thereof, said casing being provided with an elongated longitudinally extending slot, an inverted U-shaped bolster having a flat intermediate portion movably contacting the under side of said casing, said flattened portion having an aperture in alignment with said slot, a bolt extending through said aperture and having its ends disposed slidably and rotatably within the casing, the shank thereof passing through said slot, an axle extending through the downturned ends of said bolster, rear wheels secured to the outer ends of the axle, a pair of forwardly diverging radius rods connected at their rear ends to the axle, and pivotally connected at their forward ends to the aforesaid flattened extension, and a brace having its rear end in association with said casing, and its forward end connected with said extension.

1,534,731. TRACTION SHOE FOR VEHICLE WHEELS. JOSEPH PALLISCHECK, Muscatine, Iowa. Filed Aug. 25, 1924. Serial No. 734,016. 1 Claim. (Cl. 152—14.)

In a traction shoe for vehicle wheels, the combination of an oblong longitudinally and transversely curved plate reduced medially and provided at its ends with depending ears projecting from the side edges of the plate, substantially U-shaped loops having spaced sides fixed at their ends to said ears, longitudinally curved upstanding traction ribs formed on the plate near its ends and extending transversely of the plate substantially in alinement with corresponding sides of said loops, a straight integral transverse upstanding traction rib formed on the plate substantially midway between the former ribs and reinforcing the reduced central portion of the plate, pairs of transversely spaced upstanding knobs formed on the end portions of the plate between said ribs and substantially alining with the opposite corresponding sides of said loops, and like knobs formed on the plate immediately adjacent opposite sides of said last mentioned ribs and lying in a plane passing midway between said pairs of knobs.



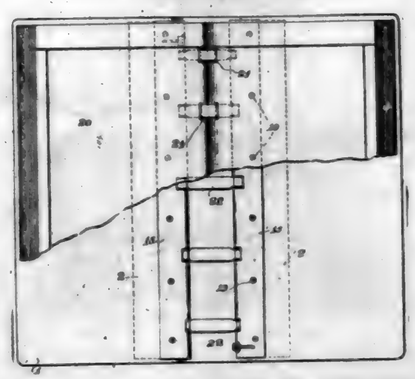
1,534,732. DEVICE FOR GUARDING TELLERS AND OTHER CUSTODIANS. WILLIAM HENRY PALMER, Montreal, Quebec, Canada. Filed Feb. 12, 1923. Serial No. 618,732. 2 Claims. (Cl. 20—1.01.)



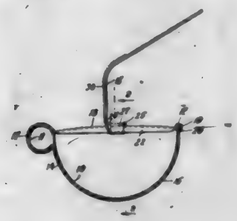
1. A teller's guard including a pair of spaced tubular guides having opposite slots, a shield movable vertically and having its side portion slidable in the guides, springs housed in the guides and located below the shield for urging the same upwardly, hammers also slidable in the guide and mounted upon and carried by the shield, gun barrels mounted on the upper ends of the guides and forming stops for the shield and adapted to receive blank cartridges to be exploded by the said hammers and means for setting and tripping the shield.

1,534,733. ELECTRIC HEATER. MANUEL HUMBERTO PEREZ, San Pedro Sula, Honduras. Filed Oct. 8, 1923. Serial No. 667,343. 10 Claims. (Cl. 219—38.)

1. An electric heater comprising a casing, a core threaded into the casing and forming a heating chamber, a resistance unit wound about the core between the threads thereof, circuit connections leading to said resistance unit, and a conductor connected with one terminal of the coil, said casing having sockets therein in line with certain convolutions of the unit.



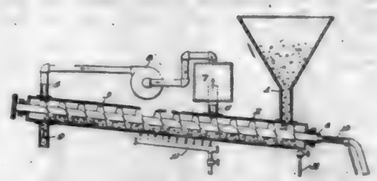
1,534,734. INSECT AND NEST DESTROYER. JOHN C. PORTER, Woodstown, N. J. Filed Nov. 23, 1923. Serial No. 676,505. 3 Claims. (Cl. 43—125.)



3. An insect and nest destroyer comprising, in combination, a pole, a ferrule attached to and enclosing one end of said pole, a funnel shaped holder having portions of its walls partially cut out and bent inward to provide retaining prongs and produce air vents, a shank provided with a slot for the reception of the ferrule, means to pivot said shank to the ferrule, said slot permitting the holder to be positioned at an angle to the pole, a pull member attached to the upper end of the holder and having a portion paralleling the pole whereby the holder may be moved into different positions, said pull member having spaced notches therein, a staple carried by the pole through which the pull member passes and with which the notches register to retain the holder in different adjusted positions, a cover hinged to the upper end of the holder, means for limiting the opening movement of said cover and an absorbent material within the holder for saturation with an inflammable substance, said absorbent material being held against accidental displacement by the retaining prongs.

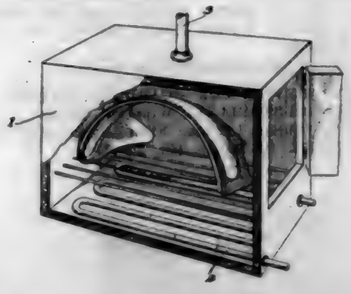
1,534,735. LOOSE-LEAF BINDER. GEORGE PRIMBS, Sr., Pocatello, Idaho, assignor to Geo. Primbs & Sons, Inc., Pocatello, Idaho, a Corporation of Idaho. Filed Jan. 29, 1924. Serial No. 689,229. 8 Claims. (Cl. 129—41.)

1. A loose leaf binder, including a cover, locking means secured to said cover compising a plurality of individually spring actuated latches, a plurality of strap members having lugs thereon, said lugs being adapted to engage said latches to hold the leaves in said binder.



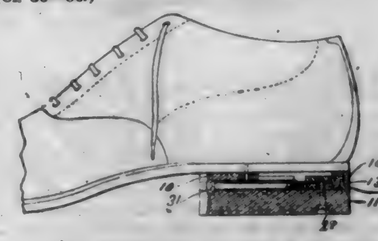
1,534,736. GUTTER HANGER. MAX RACHLIN, New York, N. Y. Filed Dec. 9, 1924. Serial No. 754,741. 2 Claims. (Cl. 108—29.)

1. A gutter hanger including a channel bar extending transversely of the gutter, a roof strap having its lower end bent at right angles and resting on said bar, a clip having a transverse cross-section corresponding substantially to that of said bar straddling said roof strap and said bar and thereby holding said roof strap in position on said bar, and means upon the inner end of said strap in engagement with said clip for preventing relative movement between said roof strap and said clip, said clip preventing movement of said strap on said bar both transversely and longitudinally.



1534,737. PROCESS OF AND APPARATUS FOR HEATING MATERIALS. CHARLES J. REED, San Mateo, Calif. Original application filed Sept. 9, 1918, Serial No. 253,343. Divided and this application filed Dec. 19, 1922. Serial No. 607,922. 5 Claims. (Cl. 263—25.)

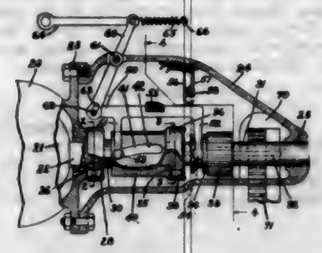
1. In the heat-treatment of solid material, the process which consists in causing the solid material to move progressively from a lower to a higher level from a colder to a hotter zone, and from the hotter zone into a second colder zone, against a stream of chemically active mobile material, thereby extracting heat from



the solid while it is passing from the hotter zone and imparting heat to the solid while it is approaching the hotter zone.

1,534,738. METHOD OF DRYING VARNISH. CHARLES H. ROE, Tarrytown, N. Y., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed March 31, 1920. Serial No. 370,278. 5 Claims. (Cl. 34—24.)

3. The method of drying a liquid coating composition containing a volatile ingredient and a drying oil applied as a film to an article to be coated which consists in heating the article within a chamber in which a limited amount of oxygen is present, to thereby evaporate the volatile constituent from said film, as a first step or phase; and then oxidizing the drying oil constituent of said film in a chamber wherein an abundant supply of oxygen is present as a second step or phase separate and distinct from said first mentioned phase.

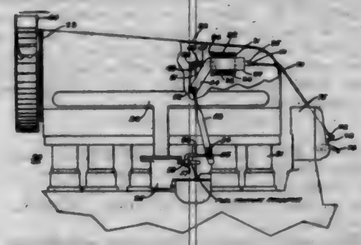


1,534,739. HEEL. BENJAMIN SANDOR, Cleveland, Ohio. Filed Nov. 19, 1923. Serial No. 675,466. 2 Claims. (Cl. 36—36.)

1. A device for connecting the lifts of a heel, comprising in combination, a member rigidly attached to the upper lift and comprising a hollowed-out plate and an arm carried by said plate and extending rearwardly and centrally of the hollowed out portion of said plate, a second member having the periphery thereof shaped to enter the opening within the first mentioned plate,

and having a transversely extending slot adapted to receive a portion of said arm, the second named member, having a longitudinally extending passageway terminating adjacent said slot, and the first named member having a passageway leading from the forward face thereof in registration with the passageway in the second named member, and means extending through said passageways and engaging said arm for locking said members together.

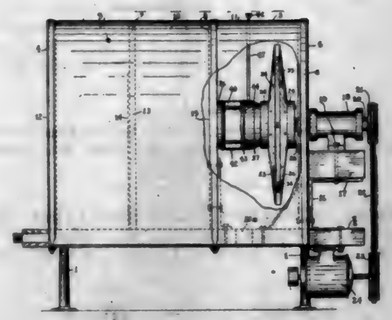
1,534,740. GEAR-SHIFTING MECHANISM. ELMER H. SCHWARZ, Fort Lee, N. J., assignor to The Dayton Engineering Laboratories Company, Dayton, Ohio, a Corporation of Ohio. Filed Feb. 23, 1921. Serial No. 446,998. 9 Claims. (Cl. 74—7.)



1. In a mechanism for connecting a rotatable device with a gear, the combination with a pinion slidably connected with said device; of manually operable means independent of the rotatable device for shifting said pinion and for producing rotation thereof previous to engagement with said gear, and then for meshing the pinion with the gear without effecting rotation of said pinion.

1,534,741. FODDER FROM FISH OR TRAIN OIL AND EMULSIONS THEREOF AND METHOD OF PREPARING THE SAME. JAKOB SCHWARZKOPF, Elmshorn, Germany. Filed Oct. 28, 1924. Serial No. 746,401. 4 Claims. (Cl. 99—11.)

3. A method of rendering fish and train oils more suitable for feeding purposes and more digestible, consisting in heating the fish or train oil and causing the latter to be absorbed by bran, meal, broken oil cake, peat and the like.



4. A stock food comprising fish oil absorbed in bran, meal or the like.

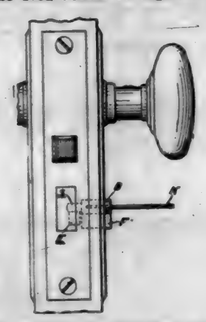
1,534,742. CARBURETOR CONTROL. CHARLES R. SHORT and ABRAHAM M. BABITCH, Dayton, Ohio, assignors to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed May 22, 1923. Serial No. 640,794. 2 Claims. (Cl. 123—119.)

1. Apparatus for controlling engine fuel comprising the combination with a fuel mixture regulator; of engine temperature responsive means including a thermostat and linkage between the thermostat and the regulator for operating the regulator; and means controlled automatically by the starting of the engine for moving said thermostat bodily in order to modify the action of the temperature responsive means.

1,534,743. FAN OR BLOWER. JOHN SLAVIN, Rochester, N. Y. Filed Feb. 23, 1924. Serial No. 694,464. 9 Claims. (Cl. 230—11.)

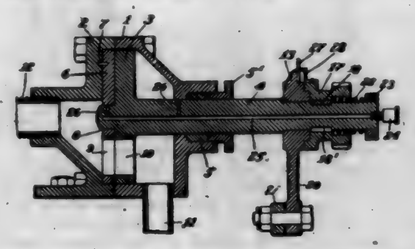
6. The combination with a rotary fan for creating suction, of a part carried by the fan provided with an inlet opening, a conduit embodying two rings, one of which abuts the fan part about the inlet opening, rods supporting said last mentioned ring from the other ring and permitting said last mentioned ring to be moved toward and from said other ring, spring means holding the movable ring with yielding pressure against the fan part about the inlet opening, and means connecting said rings to cover the space between them and permitting the movable ring to move relatively to the other ring.

1,534,744. SPARK PLUG. DOMINICK SPRADA, Buffalo, N. Y. Filed May 24, 1923. Serial No. 641,084. 6 Claims. (Cl. 123—169.)



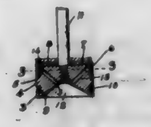
1. A spark plug comprising a casing, an insulation core within said casing having an axial electrode provided at its inner end with a glazed spherical insulator, and an electrode extending through said spherical insulator and in sparking relation to said axial electrode and to said casing.

1,534,745. KEYHOLE PLUG. JERRY STAPLETON, Los Angeles, Calif., assignor of one-half to David A. Fleming, Los Angeles, Calif. Filed Dec. 29, 1921. Serial No. 525,055. 2 Claims. (Cl. 70—8.)



1. A keyhole plug comprising a barrel, a flange formed on the barrel, a shank rotatably sustained in the barrel, a locking extension formed on the shank, pins in the barrel for limiting the rotational movement of said shank in either direction, a spring pressed locking block having a recess therein which is normally disalined with respect to one of said pins to prevent rotation of the

shank within the barrel, wards within the barrel, and a key insertable within the shank and barrel for forcing the block to cause said recess to register with said pin

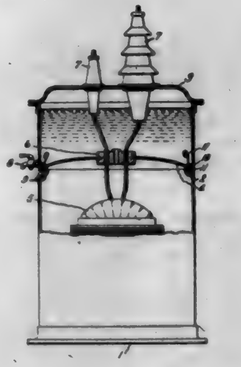


and having clefts therein adapted for registration with said wards whereby rotation of said shank can be effected.

1,534,746. AUTOMATIC VALVE MECHANISM. ROBERT D. TACKABERRY, Lewiston, Me. Filed Mar. 28, 1922. Serial No. 547,555. 5 Claims. (Cl. 137—146.)

1. An automatic valve mechanism, comprising relatively movable valve and seat members having ports adapted to register, a rotatable timer, and operative connections from said timer to said valve effective to transmit the rotary motion of said timer to the valve as oscillatory motion and comprising a fast and a loose clutch element adapted to engage with each other, and a crank connection between said loose clutch element and said timer.

1,534,747. PUMP PISTON. ERNEST TIMMONS, Cicero, Ind., assignor of one-half to E. E. Cornthwaite, Cicero, Ind. Filed Nov. 9, 1922. Serial No. 599,880. 1 Claim. (Cl. 74—109.)

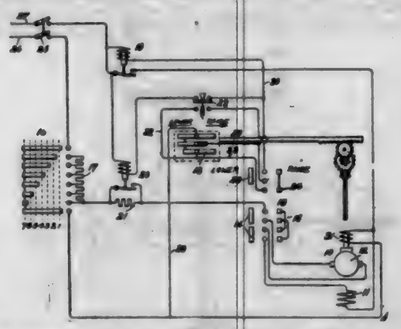


A piston in the form of a cylindrical block having an axial threaded opening, a conical recess at its under side, an annular peripheral recess extending to its upper end with a deeper annular groove adjacent the upper end of the recess, an annular peripheral recess adjacent to the lower end of the block, and passages connecting the conical recess with said groove, in combination with a threaded rod engaging said axial opening, a cup-shaped packing on the upper end of the block with an aperture for said rod, said cup having a flange extending to the bottom of said first-named peripheral recess, means for holding said cup-shaped packing in place, and a packing ring in said second recess, substantially as set forth.

1,534,748. OVEN, SAUCEPAN, AND THE LIKE. MICHELE TOCCHIO, London, England. Filed Dec. 21, 1923. Serial No. 682,083. 8 Claims. (Cl. 126—275.)

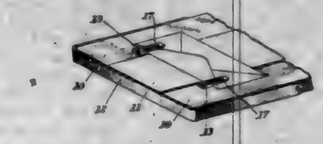
1. A cooker comprising a casing, a door therefor, a disc at the base thereof, bars at the top of the casing and secured thereto, certain of said bars having depending ends formed with shelf-supporting brackets, said casing and bars adapted to support cooking utensils.

1,534,749. ELECTRICAL APPARATUS CASING. MATTHEW O. TROY, Pittsfield, Mass., assignor to General Electric Company, a Corporation of New York. Filed May 27, 1922. Serial No. 564,182. 2 Claims. (Cl. 175—361.)



1. An electrical apparatus casing having an upper compartment and a lower compartment separated by a partition, the partition having an insulating portion with an opening to provide communication between said compartments, an insulating liquid filling the lower compartment and extending through said opening to a level in the upper compartment above the upper end of the opening, electrical apparatus immersed in the liquid in the lower compartment, and leads extending from said apparatus through the insulating portion of the partition to outlets above the partition, a second portion of the partition being below the upper end of the opening in its insulating portion to collect substances settling in the liquid above the partition and prevent their passage through said opening into the lower compartment.

1,534,750. MOTOR-CONTROL SYSTEM. HARVEY H. VERNON, Schenectady, N. Y., assignor to General Electric Company, a Corporation of New York. Filed May 5, 1924. Serial No. 711,009. 7 Claims. (Cl. 172—179.)

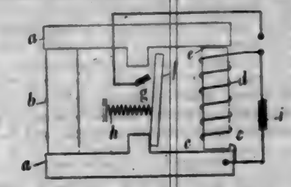


1. In a motor control system, the combination with an electric motor and a current limiting resistance therefor, of switch mechanism for short circuiting the said resistance and connecting the motor to a source

of supply, limit switch mechanism for stopping the motor after a predetermined rotation thereof, and manually actuated means for connecting the motor with

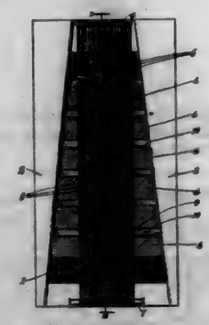
said resistance in circuit therewith to said source to continue rotation thereof beyond the limit determined by said limit switch mechanism.

1,534,751. REGISTER BLOCK. FORD WALLICK, Peru, Ind. Filed June 29, 1922. Serial No. 571,763. 9 Claims. (Cl. 101—145.)



1. The combination with a platen member, of a register block, means for securing the same to the platen, said block having a rigid finger spaced from the platen, and means associated with the finger and platen for holding a sheet after being placed against the block.

1,534,752. PRODUCTION OF GLYCOL ESTERS. PHILIP B. WATSON, Flushing, N. Y., assignor to Carbide and Carbon Chemicals Corporation, a Corporation of New York. Filed May 21, 1920. Serial No. 383,311. 3 Claims. (Cl. 260—106.)



1. The process of making glycol esters which comprises boiling a glycol with a carboxyl acid having a boiling point materially above the boiling point of water under partial reflux conditions, the vapor exit being maintained around 100° C. whereby the water formed in the reaction can escape while the glycol, acid and ester are retained.

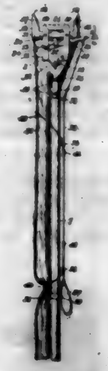
1,534,753. ELECTRIC SWITCH OR CIRCUIT BREAKER. ERNEST ANSLEY WATSON, Coventry, England, assignor to The C. L. I. Manufacturing Company Limited, Birmingham, England. Filed July 25, 1922. Serial No. 577,451. 2 Claims. (Cl. 200—93.)

1. In electric switches or circuit breakers, the combination of a permanent magnet, a pair of pole pieces having one pair of ends in conjunction with the magnet, a magnetizable core in conjunction with the other pair of ends of the pole pieces and separated therefrom by air gaps, a winding on said core, an armature arranged to coact with the pole pieces at a position intermediate to the permanent magnet and the core carrying the winding, the armature when pressed into contact with the pole pieces being adapted to close an electric circuit and held by opposing fluxes produced by the permanent magnet and a current flowing in the winding, and means for automatically moving the armature away from the pole pieces and opening the circuit when due to a reversal of current in the winding the flux in the armature is sufficiently diminished, substantially as described.

1,534,754. VEHICLE-LANDING APPARATUS. PLINY K. WESTCOTT, Brooklyn, N. Y., assignor to Mary A. Kenney, Brooklyn, N. Y. Filed Aug. 8, 1923. Serial No. 656,314. 6 Claims. (Cl. 244—2.)

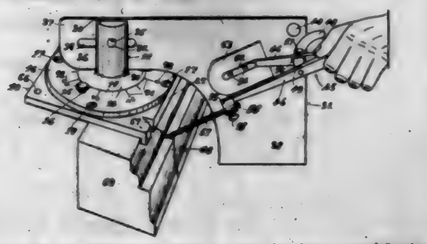
1. A vehicle landing apparatus comprising a runway having a surface adapted to engage a vehicle passing therealong, and a series of slightly spaced parallel guide members supported in position above said runway and extending along the same, said members being adapted to engage downwardly projecting parts on a vehicle to maintain the latter substantially in alignment with the runway.

1,534,755. FASTENER FOR INK RIBBONS. HENRY ABBOTT, East Orange, N. J., assignor to The Calculagraph Company, a Corporation of New Jersey. Filed June 22, 1922. Serial No. 570,276. 2 Claims. (Cl. 242—74.)



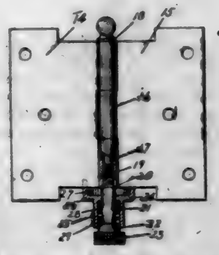
1. A ribbon fastener for spools comprising a body having a shoulder that is adapted to co-operate with a shoulder on a spool by a motion perpendicular to the axis of the spool, means for securing said body to the spool, and means relatively close to said shoulder for securing the ribbon to said body and on the same side of said shoulder as said body.

1,534,756. FRUIT PICKER. JOSIAH S. ANDREWS, Buffalo, N. Y. Filed June 1, 1921. Serial No. 474,118. 5 Claims. (Cl. 56—334.)



1. A fruit picker comprising a rod, a frame secured to the upper end of said rod and having two frame members spaced apart above said rod, oppositely-curved cutters having arms extending from opposite ends piv-

otally secured at points distant from their extremities to said frame members, an actuating lever pivotally connected to one of said frame members, a link con-

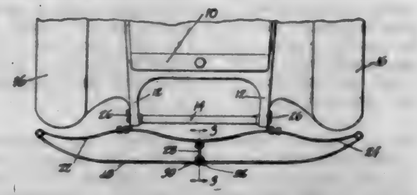


necting one arm of each of said cutters with said actuating lever, and means for actuating said lever from a low point on said rod.

1,534,757. UNIVERSAL SQUARE. LOUIS APRILE, Cincinnati, Ohio. Filed Aug. 5, 1921. Serial No. 490,120. 9 Claims. (Cl. 33—43.)

1. In a universal square, a base having a positioning straight edge provided with clearance openings or notches therein, a guiding blade, means mounting said blade, marking means adapted to be guided by said blade and having a marking point adapted to scribe a line to the edge of the work in said clearance openings or notches, substantially as set forth and for the purposes specified.

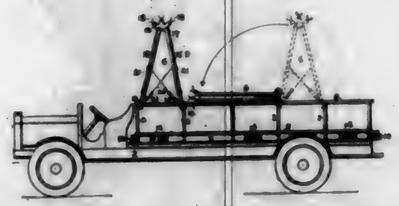
1,534,758. CASEMENT-WINDOW ADJUSTER. BERT E. BARTHOLOMEW, Pasadena, Calif., assignor of one-half to Louis Sands, Cleveland, Ohio. Filed Aug. 11, 1923. Serial No. 656,931. 12 Claims. (Cl. 16—144.)



1. A means for locking one of the leaves of a hinge in adjusted position including a resilient fastening member having notches which engage the contiguous edge of the swinging hinge leaf.

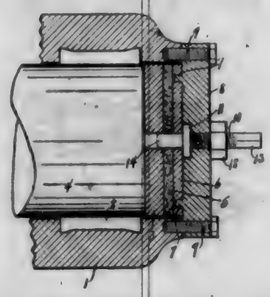
1,534,759. PEDESTAL FOR STANDS. ROY L. BEETSLEY, St. Paul, Minn. Filed Oct. 9, 1923. Serial No. 667,481. 1 Claim. (Cl. 45—117.)

In a music stand the combination with suitable spread legs of a tubular column held by said legs, a post slidable within said column and adapted to be held at any desired elevation, means for removably securing said legs to the column adjacent its lower end, said means comprising a plurality of vertically arranged spring leaves, secured to the inner walls of the column, each spring secured with its lower end to the column and its upper end normally inclined inwardly toward the center of the column, an inverted key-hole shaped slot in said inclined part of the spring, said column having a horizontally registering slot, a headed pin in each leg adapted to be inserted in said slot and in the widest part of the slot in the spring and to frictionally engage said slotted part and spring it outwardly when said column is moved downwardly upon the pin, substantially as described.



1,534,760. VEHICLE BUMPER. LLOYD BLACKMORE, Highland Park, Mich., assignor to General Motors Corporation, Detroit, Mich., a Corporation of Delaware. Filed Nov. 30, 1923. Serial No. 677,740. 5 Claims. (Cl. 293—55.)

1. A vehicle having a chassis frame and a bumper, the bumper comprising, in combination, a pair of vertically-spaced parallel transverse spring impact bars, a spring supporting bar having its opposite ends arranged between and connected to the corresponding ends of the impact bars, means for attaching the supporting bar to the chassis frame, and a spacing device secured to the center of the supporting bar and extending a substantial distance forward and slidably engaging the impact bars.



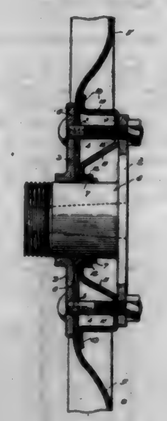
1,534,761. FIRE APPARATUS. JACOB B. BLAW, Atlantic City, N. J. Filed Sept. 23, 1924. Serial No. 739,277. 10 Claims. (Cl. 169—25.)

1. In a fire apparatus, a truck wherein there are provided a plurality of transverse bars, combined with a pair of frames hinged at the top relatively to each other and in connection with a nozzle holding crown, said frames having at each of their lower ends a plurality of clamping means widely separated for making attachments with the transverse bars and whereby they are

hingedly connected so that by unclamping one of the frames the tower may be collapsed and folded down upon the truck, and a plurality of hose nozzle carrying clamps each independently adjustable upon the nozzle holding crown.

1,534,762. ADJUSTABLE END THRUST FOR ELEVATOR SHAFTS. HEYWOOD H. BOSTICK, Fort Worth, Tex., assignor to Globe Elevator Appliance Company, Fort Worth, Tex., a Corporation of Delaware. Filed Apr. 19, 1924. Serial No. 707,615. 3 Claims. (Cl. 308—163.)

1. The combination with an elevator shaft and bearings therefor, of an end thrust for said shaft consisting of a disk provided with a central perforation, a fibre disk provided with a perforation and bearing against said disk, a non-rotatable perforated steel disk bearing against said fibre disk, a perforated cap attached to said bearings, a pressure bolt projected through said cap and disks and provided with a collar rigid therewith to bear against said steel disk, and means for adjusting said bolt for moving said disks to take up wear.

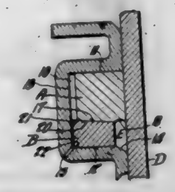


1,534,763. SEAMLESS STOCKING AND METHOD OF MAKING THE SAME. GEORGE P. BOSWORTH, Central Falls, R. I., assignor to Hemphill Company, Central Falls, R. I., a Corporation of Massachusetts. Filed Oct. 14, 1922. Serial No. 594,519. 4 Claims. (Cl. 66—4.)

1. A seamless stocking having a heel formed of fashioned partial courses and also having at the rear thereof a relatively narrow reinforcing stripe extending substantially throughout that portion of the stocking exposed in wear, said stocking also having a tapered gore of extra partial courses of varying length just above the heel and there constituting a tapered high

splice and also constituting a continuation of said reinforcing stripe and of substantially the width of said stripe at the apex of said high splice gore.

1,534,764. DISK-WHEEL HUB CONSTRUCTION. HAROLD J. BRADT, Rochester, Mich. Filed July 27, 1923. Serial No. 654,123. 6 Claims. (Cl. 301—63.)

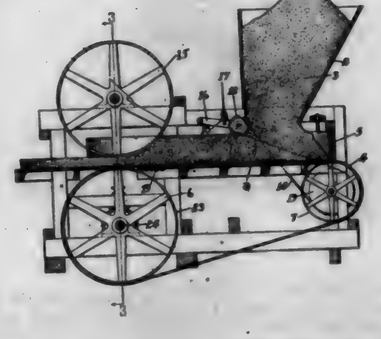


3. In a disk wheel, a hub construction including a hub having a fixed flange, a detachable flange, a disk engaging said detachable flange, a hollow filler member between said disk and said fixed flange, and means extending through said flanges, disk and filler member for holding said elements together, said disk having a pressed out portion engaging in said filler member to correctly position said disk relative to said filler member.

1,534,765. PISTON STRUCTURE. OTTIS R. BRINEY, Pontiac, Mich. Filed Sept. 25, 1922. Serial No. 590,294. 1 Claim. (Cl. 74—109.)

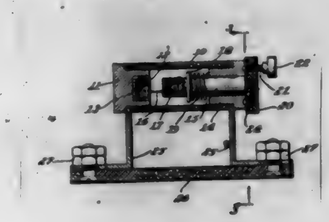
In combination, a piston provided with a groove having side walls, a pair of piston rings in said groove and one side of each ring bearing against one of said walls, a spring acting laterally against said rings, and a retainer over said spring between said rings.

1,534,766. SEALING MEANS FOR PISTONS AND THE LIKE. OTTIS R. BRINEY, Pontiac, Mich. Filed Jan. 15, 1923. Serial No. 612,828. 4 Claims. (Cl. 74—109.)



1. A sealing means of the character described comprising, a ring provided with a bevel side face, an annular and radially split filler having a bevel side face bearing against said bevel side face of said ring and provided with inherent radial spring tendency and being smaller in external and internal diameter than said rings to provide a face on said ring overhanging the outside of said filler and a face on said filler overhanging the inside of said ring, and said overhanging faces relieved to prevent seating between said ring and said filler.

1,534,767. SASH WEIGHT. JOAH BROGDEN, Melrose Park, Pa., assignor to David Lupton's Sons Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Dec. 12, 1923. Serial No. 680,074. 7 Claims. (Cl. 16—218.)



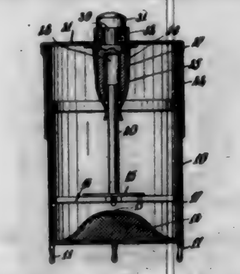
1. In a sash weight the combination of a main weight member, a pair of pulleys, having their axes in a common horizontal plane, accommodated in a lateral slot of said member, and auxiliary interlocking weight members adapted to be superposed upon the main weight member and having registering end notches affording collectively clearances for passage of the sash cord or chain enroute to and from the pulleys.

1,534,768. BRICK MACHINE. DAVIS BROWN, Bucyrus, Ohio. Filed Nov. 22, 1923. Serial No. 676,262. 5 Claims. (Cl. 25—21.)

1. In a brick machine, a plurality of wheels for shaping the sides of a clay column, means for actuating the wheels and belts for feeding the clay to certain of the wheels, one of said wheels having a portion extending within the edges of two of the belts for compressing the clay.

1,534,769. OSCILLATION DETECTOR. ROLAND BROWNLEE, Medford, Mass. Filed Jan. 19, 1924. Serial No. 687,203. 4 Claims. (Cl. 250—31.)

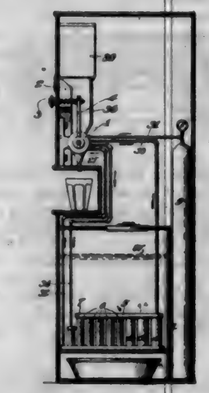
1. An oscillation detector comprising in combination a crystal, a support for the same, a contact member cooperating with said crystal, a support for said contact member, and means automatically breaking the contact between said member and said crystal when the point of contact between said member and said crystal is varied.



1,534,770. COMPOSITION OF MATERIAL. HARRY C. CLAFLIN and ADELBERT SCHADE, Nitro, W. Va. Filed May 7, 1921. Serial No. 467,543. 5 Claims. (Cl. 75—1.)

1. A bearing metal consisting of lead, magnesium and sodium, the proportion of magnesium being from two to six per cent of the whole and the proportion of sodium being from one to three per cent of the whole.

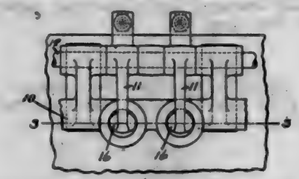
1,534,771. FLYTRAP. AUGUST CYRKOROS, Coraopolis, Pa. Filed May 17, 1924. Serial No. 713,888. 2 Claims. (Cl. 43—107.)



1. A fly trap comprising a receptacle having an opening in its bottom, a cover for said receptacle, a bait

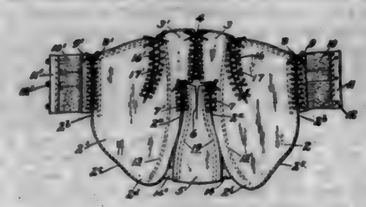
holding element in the form of a spider, a rod fixed to said spider and extending upward therefrom, and means carried by said cover for frictionally gripping said rod,

said means comprising a tubular member depending from the cover and formed on its lower end with resilient inwardly curved tongues.



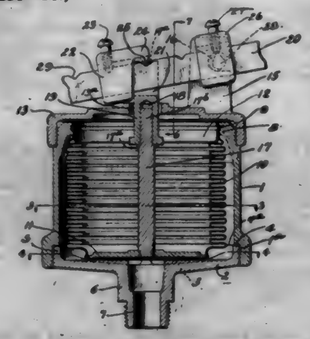
1,534,772. CARBONATOR AND DRAFT ARM FOR SODA WATER. WILLIAM C. DE ARMOND and WILLIAM RAY H. WATT, Philadelphia, Pa. Filed July 25, 1924. Serial No. 728,066. 8 Claims. (Cl. 225—21.)

1. In a device of the character described, an absorption chamber, a volume chamber, a control valve, a gas supply pipe connected to said valve, a gas conveying pipe leading from said valve to said absorption chamber, a passageway interconnecting said absorption chamber with said volume chamber, a check valve interposed between said absorption chamber and volume chamber to permit the passage from the former to the latter only, a gas pressure pipe interconnecting said valve and said volume chamber, and a discharge pipe communicating with said volume chamber of said valve.



1,534,773. VALVE MECHANISM FOR INTERNAL-COMBUSTION ENGINES. WILLIAM B. EARNSHAW, Dayton, Ohio, assignor to General Motors Research Corporation, Dayton, Ohio, a Corporation of Delaware. Filed Mar. 3, 1921. Serial No. 449,441. 1 Claim. (Cl. 123—90.)

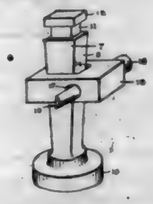
In valve operating mechanism of the class described and in combination with an engine cylinder having an intake and an exhaust valve in the head thereof and movable parallel with the axis of the cylinder, a supporting member carried by said cylinder and arranged above the head thereof; a plunger carrying bar carried by said supporting member and arranged above said valves, and having bearings arranged in line with the paths of movement of said valves; reciprocating plungers operable in said bearings and the lower ends of which



are adapted to engage and depress the valves aforesaid; a rocker arm shaft supported by said supporting member; and oscillating rocker arms supported by said shaft and the ends of which lie over and are adapted to depress said plungers.

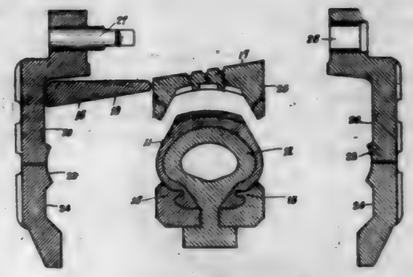
1,534,774. ABDOMINAL AND SACROILIAC SUPPORT. SIMON C. EDMISTON, Los Angeles, Calif. Filed Dec. 22, 1922. Serial No. 608,473. 2 Claims. (Cl. 2—25.)

1. An abdominal support comprising two main lateral wings having their upper parts connected by intermediate back panel sections, the panel sections being laced to the main wings and laced together, and the lower parts of the main wings being spaced apart by a lower central web, the upper part of the central web being laced to the contiguous parts of the main wings and the lower part of the central web being connected to the lower parts of the contiguous main wings by elastic straps, elastic straps laced to the outer edges of the upper parts of the main wings, and fasteners for connecting the elastic straps together.



1,534,775. DAMPER REGULATOR. LEWIS W. EGGLESTON, Buffalo, N. Y., assignor to American Radiator Company, Chicago, Ill., a Corporation of New Jersey. Filed Feb. 4, 1921. Serial No. 442,535. 8 Claims. (Cl. 236—26.)

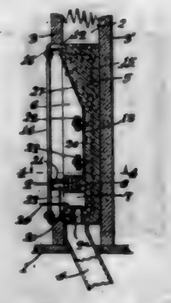
1. In a regulator, the combination of an operating lever, a pressure operated member subjected to fluctuations in pressure for operating said lever, a stem extending from said pressure member and having bifurcated



arms at its top and arranged on either side of said lever, a slotted saddle adjustably mounted on said lever and having on its top a longitudinally extending arm located above said lever, a knife edge bearing connection between said arm and bifurcated end of the stem, and a fulcrum support for said lever.

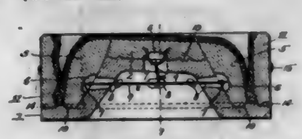
1,534,776. BOLTING-UP PIN. DIRK EISINGA, Seattle, Wash. Filed Aug. 31, 1918. Serial No. 252,147. 6 Claims. (Cl. 85—8.)

3. A bolting-up pin embodying a shank with one face tapering to a head integrally formed at one end of said shank and means upon the opposite end portion of said shank whereby said pin may be gripped, a nut having a vertical hole therethrough whereby said nut is adapted to fit upon the shank of a bolting-up pin, said hole being partially intersected by a horizontal hole extending obliquely across said nut, and a round wedging pin which is adapted to fit said horizontal hole and is provided with a flat face the plane of said face being at an angle to the longitudinal axis of the said wedging pin whereby said nut may be made fast at any point intermediate the length of said shank.



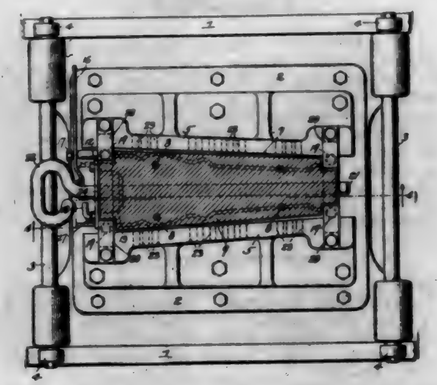
1,534,777. PROCESS OF MOLDING PNEUMATIC CASINGS. ARTHUR A. FRANK, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Aug. 19, 1921. Serial No. 493,515. 36 Claims. (Cl. 18—56.)

36. The process of molding a casing which comprises building the casing upon a core with the aid of core pads, removing said pads, engaging the beads with bead rings, forcing the bead rings in against the core to first tension and then stretch the casing in the direction of the cross-sectional periphery, and then full-molding the sidewall and tread portions by mold sections and sectional tread plates, respectively.



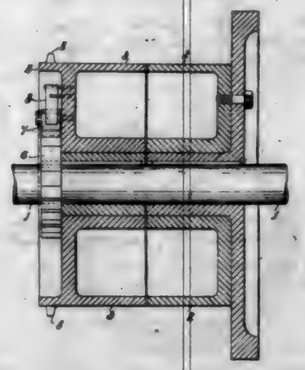
1,534,778. ELECTRIC HEATER. WILLIAM A. GOODMAN, Los Angeles, Calif. Filed Dec. 27, 1923. Serial No. 682,859. 11 Claims. (Cl. 219—34.)

1. An electric heater comprising an upright body of insulating material, a recess formed in the side of said body, a partition formed in said recess adapted to define an air feed recess and a radiating recess, an electric heating element disposed in said radiating recess above



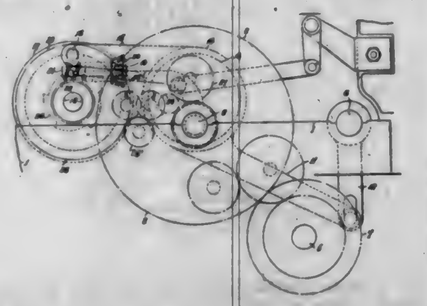
said partition, and passages formed in said partition permitting air to pass through said partition from said air feed recess to said radiating recess.

1,534,779. BATHTUB MOLD. ABEL HANSEN, Metuchen, N. J. Filed Apr. 5, 1924. Serial No. 704,463. 2 Claims. (Cl. 18—42.)



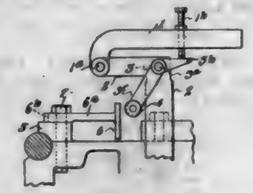
1. A mold for forming clay objects, comprising a core member constituted of a base having openings therethrough, and mold-forming sections applied thereto, with means for securing the sections to the base and to each other.

1,534,780. APPARATUS FOR MAKING PORCELAIN LEGS. ABEL HANSEN, Metuchen, N. J. Filed Apr. 22, 1924. Serial No. 708,180. 6 Claims. (Cl. 25—27.)



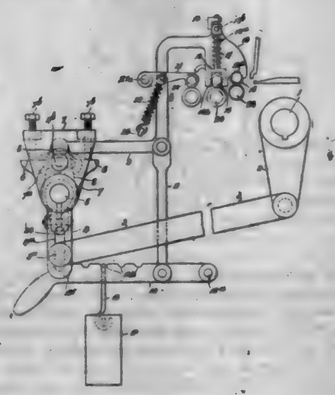
1. In a mold for forming porcelain legs in combination, a lower and an upper half, side guides in which said halves have vertical play, and end plates slidable on the side guides and having central orifices for holding a core rod.

1,534,781. COMBING MACHINE. JAMES HORRIDGE, Bolton, England, assignor to John Hetherington and Sons Limited, Manchester, Lancaster, England. Filed June 6, 1922. Serial No. 566,433. 1 Claim. (Cl. 74—21.)



A motion transmitting device, comprising, in combination, a shaft, a pulley fast to said shaft for transmitting motion thereto, a ratchet secured to said shaft for rotation therewith, a pulley loosely mounted on said shaft between said ratchet and fast pulley, said fast and loose pulleys being of the same diameter thereby to permit shifting of a belt from one to the other, said loose pulley having a pawl for engaging said ratchet whereby motion is transmitted by the fast pulley to said loose pulley by means of said shaft and ratchet, and means carried by said loose pulley for transmitting motion therefrom.

1,534,782. MACHINE FOR COMBING COTTON, WOOL, AND THE LIKE. JAMES HORRIDGE, Bolton, England, assignor to John Hetherington and Sons Limited, Manchester, England. Filed May 5, 1923. Serial No. 636,817. 3 Claims. (Cl. 19—120.)



2. In a combing machine having front detaching rollers, the combination of a rotatable shaft disposed in parallelism with said rollers, a disk mounted for rotation on said shaft, means for imparting an oscillatory movement to said disk, cooperating means carried by said disk and shaft for imparting to the shaft an alternate forward and backward rotation in response to the oscillations of the disk, the backward motion of the shaft being through a distance approximately half the distance through which it is moved on the forward motion, and gearing between said shaft and detaching rollers for transmitting the motion of the shaft to said rollers.

1,534,783. COMBING MACHINE. JAMES HORRIDGE, Bolton, England, assignor to John Hetherington and Sons Limited, Manchester, Lancaster, England. Filed Feb. 12, 1924. Serial No. 692,444. 8 Claims. (Cl. 19—116.)

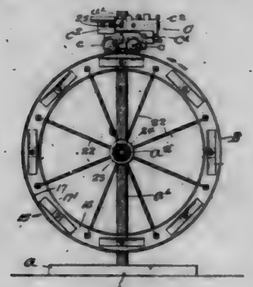
1. In a combing machine, the combination of a reciprocable nipper leg, a top comb arm pivotally secured to said leg, means carried by said nipper leg and movable thereon for swinging said comb arm on its pivot, and operating means in a plane parallel to that in which the nipper leg reciprocates for moving said comb-arm-swinging means thereby to lift the arm.

1,534,784. MACHINE FOR COMBING COTTON, WOOL, AND THE LIKE. JAMES HORRIDGE, Bolton, England, assignor to John Hetherington and Sons Limited, Vulcan Works, Ancoats, Manchester, England. Filed Feb. 12, 1924. Serial No. 692,445. 5 Claims. (Cl. 19—121.)

1. In a combing machine having a series of top detaching rollers, the combination of a floating lever exerting pressure on said detaching rollers and adapted to impart an oscillatory movement to said rollers, and means for imparting a floating movement to said lever.

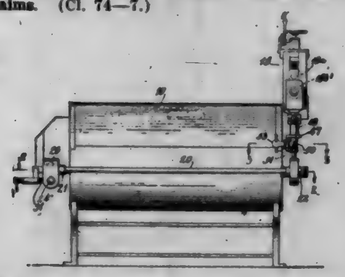
1,534,785. MECHANISM FOR PRODUCING OPEN-WORK ON KNITTING MACHINES. WILBUR L. HOUSEMAN, Wilmington, Del., assignor to Standard-Trump Brothers Machine Company, Wilmington, Del., a Corporation of Delaware. Filed May 1, 1924. Serial No. 710,212. 7 Claims. (Cl. 66—26.)

1. In a knitting machine, the combination with a needle cylinder and a radially movable sinker having at its forward end yarn-engaging elements at different levels, of means to bodily move the forward end of the sinker



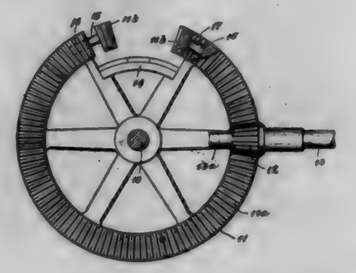
vertically into a relatively high position to cause the higher and lower yarn-engaging elements to successively act upon the yarn to effect the formation of relatively long loops, and into a relatively low position to allow the higher yarn-engaging element to effect the formation of relatively short loops.

1,534,786. SAFETY ATTACHMENT FOR RAZORS. SERRRO JARO, San Antonio, Tex. Filed Nov. 6, 1924. Serial No. 748,041. 4 Claims. (Cl. 30—12.)



1. A safety attachment for razors, comprising a channeled member adapted to be mounted on the blade of the razor, a guard plate extending across one leg of said member and having an aperture therein, a screw hinged to the rear edge of said guard plate, a nut through which said screw is threaded, said nut being mounted on said member to permit of rotation thereof but prevent axial movement thereof, and means for pressing the front edge of said guard plate against the blade of the razor.

1,534,787. TOY. GUY F. JONTZ, Clinton, Iowa. Filed Jan. 16, 1925. Serial No. 2,743. 10 Claims. (Cl. 104—77.)



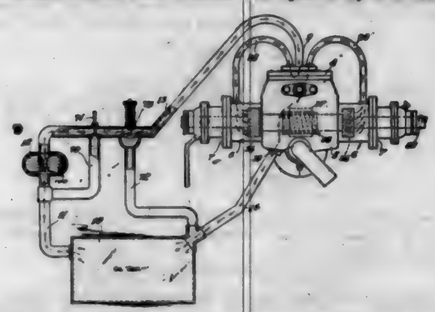
1. In an endless track toy, a track structure comprising two annular track members, each formed with marginal annular flanges that serve as rails for a motor driven vehicle, said track members being spaced apart and set back to back and secured together, whereby the opposite flanges of the two track members form internal and external annular tracks, upon which said vehicle may travel.

1,534,788. WASHING MACHINE. LOUIS JUDELSON, New York, N. Y. Filed Nov. 2, 1922. Serial No. 598,557. 4 Claims. (Cl. 74—7.)

1. In a washing machine having a power wringer attached thereto, a power shaft for transmitting power to said washing machine, a counter shaft for transmitting power to said wringer, a coupling shaft for coupling said first mentioned shafts to each other, a coupling collar adapted to slide over the power shaft and said coupling shaft, and co-operating means on said power and countershafts and said collar for positively connecting said shafts to each other.

1,534,789. GEAR. LOUIS JUDELSON, New York, N. Y. Filed Apr. 24, 1924. Serial No. 708,608. 8 Claims. (Cl. 74—14.)

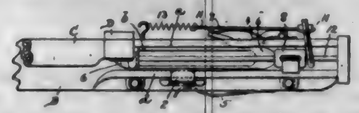
2. In a rotary reciprocating gearing, a mangle gear rack having a continuous series of teeth on its lateral surfaces adapted to co-operate with a pinion, comprising a body member and replaceable end portions.



1,534,790. HYDROELECTRIC BARBER CHAIR. WALTER F. KOEHN, St. Louis, Mo. Filed Dec. 24, 1923. Serial No. 682,457. 28 Claims. (Cl. 155—27.)

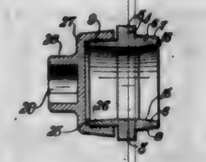
1. A chair provided with a seat, a back, an hydroelectric means for moving the seat vertically and for moving the back relatively to the seat, a locking device for holding the back in adjusted position, a governing element for controlling said hydro-electric means, and means for rendering said locking device inoperative automatically when said governing element is actuated to effect a change in the position of the back.

1,534,791. HYDRAULIC STEERING GEAR. HANS KUNDIG, New York, N. Y. Filed Nov. 22, 1921. Serial No. 517,000. 14 Claims. (Cl. 60—52.)



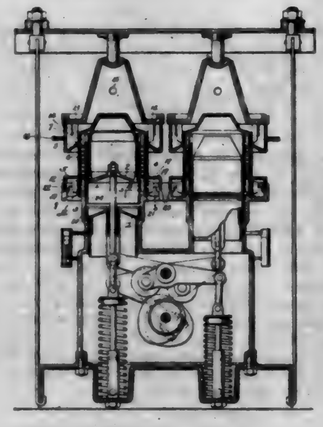
1. In a hydraulic steering gear, means for maintaining a continuous circulation of the fluid medium, means

operable under the influence of the fluid medium to actuate the steering shaft, and means controlling the circulation of said fluid medium and operatively connected



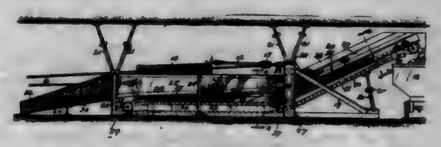
with said actuating means to automatically govern the duration of effective influence of the fluid medium upon the latter.

1,534,792. SHUTTLE-CHECKING MECHANISM FOR LOOMS. JOSHUA ARTHUR BARBER LOMAX, Bolton, WILLIAM TURNER and JOHN TURNER, Chorley, and JAMES BOOTH BENTLEY, Clayton-le-Woods, near Chorley, England. Filed May 2, 1922. Serial No. 557,853. 5 Claims. (Cl. 139—185.)



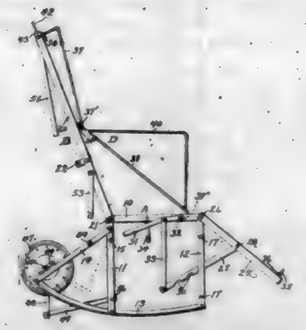
1. In shuttle checking mechanism for looms, a shuttle box, a swell mounted upon the front wall of the shuttle box near the entrance thereto, a spring for acting upon said swell, another swell mounted on the rear wall of the shuttle box, and further from the entrance to the box than said first mentioned swell, and a spring for actuating said rear swell, the portion of said box opposed to said last mentioned swell being substantially stationary to maintain a fixed home for the end of the shuttle approaching the outer end of the box.

1,534,793. WASHOUT PLUG. SAMUEL J. LUPTON, Winnipeg, Manitoba, Canada, assignor to The Bird-Archer Company, a Corporation of New York. Filed Apr. 13, 1921. Serial No. 461,121. 2 Claims. (Cl. 220—39.)



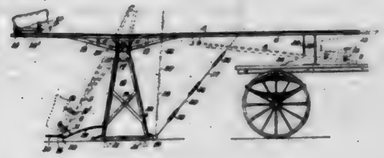
1. A wash-out plug for the casing of a boiler or the like comprising a hollow body member including a portion threaded exteriorly to be seated within a threaded opening of the casing, said portion being provided with a centrally disposed, outwardly flaring opening of substantially smooth contour for receiving and movably supporting a cleaning-out tool, said body member further including an annular portion extending exteriorly of the opening of the casing, the outer face of said annular portion being provided with a threading beginning at a location at a spaced distance from the outer end of said annular portion and extending toward said first-named portion, the outer face of said annular portion from its outer edge to the location of beginning of said threading being substantially smooth, and a closure cap for said annular portion provided with a threading beginning at its outer end and extending on its inner face to a certain location, the remainder of said inner face being substantially smooth.

1,534,794. HEAT EXCHANGER. IVAR LUNDGAARD, Hartford, Conn., assignor to The Automatic Refrigerating Company, Hartford, Conn., a Corporation of New Jersey. Filed Mar. 30, 1922. Serial No. 548,219. 3 Claims. (Cl. 257—261.)



3. A heat exchanger comprising in combination a cylindrical wall enclosing an annular chamber forming a portion of the path for a mediating fluid, a second annular chamber surrounding said first cylindrical wall and adapted to contain a fluid with which heat is exchanged, a series of flanged metallic leaves disposed in contact with each other completely around said first named annular chamber and in heat conductive relation at their edges with the wall separating the two annular chambers and a plurality of metallic leaves in said second annular chamber in heat conductive relation at their edges with said wall.

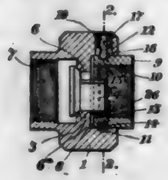
1,534,795. COAL-BUCKET-DUMPING MACHINE. NORMAN H. MCCLEVEY, Petersburg, Ind. Filed July 26, 1924. Serial No. 728,314. 5 Claims. (Cl. 214—93.)



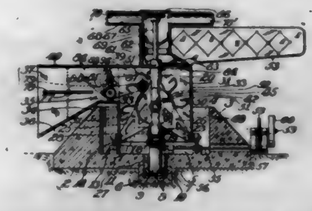
1. In a coal gathering and loading device, a bottomless bucket in which the coal is gathered and transported by sliding the bucket over a surface, a raised floor having a pit over which the bucket is slidingly moved and its contents discharged by gravity into the pit, an inclined surface from the floor of the mine to the raised floor having raised sides that converge toward the raised floor and an endless apron conveyor at the bottom of the pit receiving and transferring the coal and discharging it at its return end.

1,534,796. ADJUSTABLE CHAIR. WILLIAM A. MCCOLLOUGH, Webster City, Iowa. Filed Sept. 10, 1923. Serial No. 661,877. 5 Claims. (Cl. 155—41.)

1. An adjustable and convertible chair, comprising a seat frame, rockers on and extending rearwardly from said seat frame; a back member pivotally connected with said seat frame, means for adjustably holding said back member in inclined relation to said seat frame, a foot support pivotally connected to the forward portion of said seat frame, means for adjustably holding said foot support in inclined relation to said seat frame, wheels pivotally mounted on the rear portion of said seat frame and normally out of contact with the supporting surface, a yoke pivoted on said seat frame adjacent said wheels, the lower end of said yoke adapted for contact with the supporting surface at times, and means to hold said yoke in adjusted position.



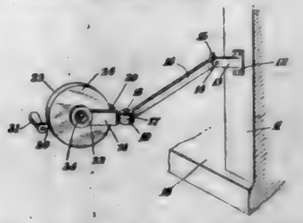
1,534,797. APPARATUS FOR LOADING MERCHANDISE INTO VEHICLES. JOHN MCLEOD, Stawell, Victoria, Australia. Filed Oct. 8, 1923. Serial No. 667,127. 4 Claims. (Cl. 214—41.)



1. A loading apparatus comprising a tower, a cantilever track frame pivotally supported at an intermediate point on said tower to form a relatively short loading end and a relatively long delivery end, a trolley mounted on said track frame and adapted to travel to and fro thereon by gravitation, means for lowering the long end of said track frame, whereby said trolley with its load is initially levered upwardly to a point higher than the waggon being loaded, and then travels by gravitation from the loading end to the delivery end of said track frame, a latch on said tower to engage the loading end of the pivoted track frame, when lowered, and means to automatically release said latch by the weight of the load deposited on the trolley.

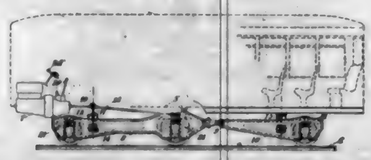
1,534,798. COUPLING FOR PNEUMATIC HOSE PIPES. WILLIAM MCMILLAN, Belfast, Ireland. Filed June 10, 1924. Serial No. 719,049. 12 Claims. (Cl. 284—18.)

1. A coupling for air pipes comprising, in combination, a body, a member fitted therein, a flexible member disposed between said body and member fitted therein, for permitting relative turnable movement thereof while preventing relative axial movement, and means for securing the ends of said flexible member against relative movement and for permitting said flexible member to be removed from between the body and member fitted therein.



1,534,799. WIND-POWER ENGINE. HIRAM MAINE, Indianapolis, Ind. Filed Oct. 24, 1923. Serial No. 670,420. 19 Claims. (Cl. 170—15.)

4. A wind-power engine having a casing provided with a main air-inlet and a supplemental air-inlet, and a plurality of conduits leading to the supplemental air-inlet and provided with large mouth-pieces that are swiveled on the inlet ends of the conduits respectively, each mouth-piece having a tail vane thereon, a tail vane fixed to the casing, and a wind-wheel rotatable in the casing opposite to the air inlets.

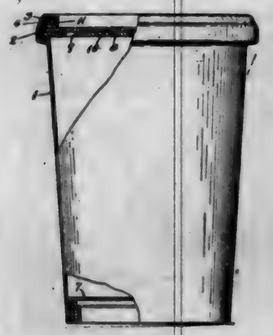


6. A wind-power engine including a massive base having a pit therein and a conical external face, a frame rotatably supported in the pit with a vertical axis of rotation and having a casing thereon extending upward beyond the top of the pit, the upper portion of the casing having an inlet mouth structure on its front above the top of the pit, the structure extending out beyond the base, a tail vane fixed to the back portion of the frame and the casing, and two wind-wheels having a single axial shaft rotatably supported horizontally by the frame on a plane approximately at the top of the base.

1,534,800. CLOTHESLINE PULLEY. WLADYSLAW MALUSZ, Harrison, N. J. Filed Mar. 11, 1924. Serial No. 698,425. 1 Claim. (Cl. 68—3.)

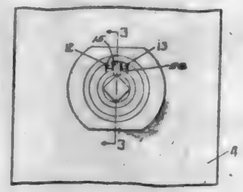
A line pulley comprising an adjustably mounted clevis, a spindle rotatable therein, said spindle having a lateral slot in one end, manual means for rotating said spindle, a pulley mounted on the spindle between the arms of said clevis, one of said arms having an internal annular recess, a spring loosely disposed in the recess, the ends of said spring being bent to extend into the said slot, and a stud fixed in the side of said pulley, the head of said stud extending into the said slot between and spaced from the spring ends.

1,534,801. RAIL-CAR MOTIVE MEANS. JULIAN MAERBAU, Elmhurst, N. Y. Filed Mar. 6, 1923. Serial No. 623,113. 7 Claims. (Cl. 115—62.)



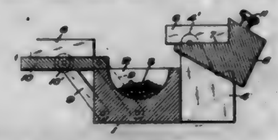
1. In a rail car, a truck having a pivotal connection with the body of the car, a motor mounted in the body of the car and having a transmission shaft extending longitudinally of the car for driving engagement with an axle journaled in the truck, and a universal joint in the transmission shaft mounted above and in alinement with the axis of said pivotal connection.

1,534,802. LOWER ARTIFICIAL DENTURE. FRED EWART MILNER, Blackpool, England. Filed Oct. 2, 1923. Serial No. 666,067. 4 Claims. (Cl. 32—4.)



1. A lower artificial denture, comprising an artificial gum, and a wire frame secured therein, said wire frame co-operating with the muscles and tissues of the tongue to retain the denture in the mouth.

1,534,803. PAPER CONTAINER. ARLINGTON MOORE, Boston, Mass. Filed Mar. 23, 1921. Serial No. 454,770. 4 Claims. (Cl. 229—7.)



4. A receptacle comprising a round body having an internal groove near one end thereof, and two end members having their peripheral edges held in said groove, one of said members being rotatable in the groove, the configuration of said members being such that rotation of the rotatable member opens and closes the receptacle.

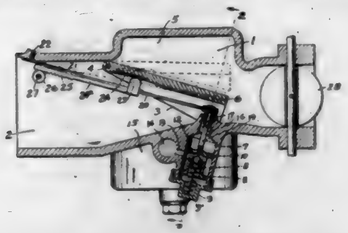
1,534,804. CLUTCH DEVICE. HUBERT A. MYERS, Toledo, Ohio, assignor to The W. G. Nagel Electric Company, Toledo, Ohio, a Corporation of Ohio. Filed Nov. 1, 1923. Serial No. 672,044. 1 Claim. (Cl. 192—16.)

In a clutch device, a pair of members, one contained within the other, and one rotatable relative to the other, a spring located between the members for normally frictionally engaging one of the members, one of the members having a recess, and the spring having its ends located in the recess for positively engaging the said last named member, a third member located within the inner of said members and having a flange part located in said recess for engaging the ends of the springs and through either end of the spring engaging the member having the recess for releasing the frictional engagement through the spring and rotating the last named memebr in either direction.

1,534,805. CHINESE TILE GAME DEVICE. FRANK L. ORDWAY, Salem, Mass., assignor to Parker Bros., Inc., Salem, Mass., a Corporation of Maine. Filed Feb. 5, 1924. Serial No. 690,733. 4 Claims. (Cl. 273—150.)

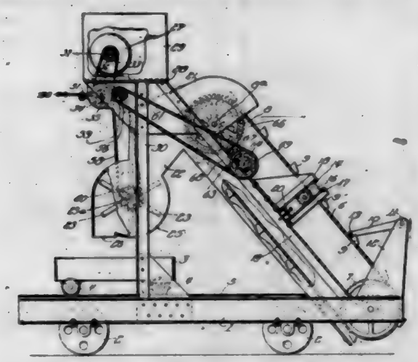
3. A device for use with Chinese tile games comprising, in combination, a container for counters, a playing rack for holding tiles pivoted upon extended sides of said container, a cover for said container and connections providing for movement of said cover in a generally horizontal plane relative to said container.

1,534,806. PROCESS OF CARBONATING A LIQUID. HENRY C. PARKER, Chicago, Ill. Filed Dec. 28, 1922. Serial No. 609,509. 8 Claims. (Cl. 99—11.)



1. The process of carbonating a beverage wherein there is added to the beverage an acid carbonate and a polybasic acid in such particular proportion as to produce a hydrogen ion concentration substantially identical with that of the original liquid.

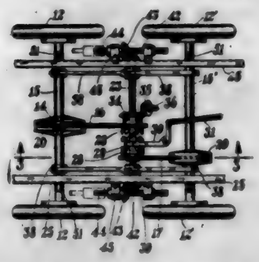
1,534,807. CIGARETTE ROLLER AND MAKER. SAMUEL R. PRUYN, Chicago, Ill. Filed June 12, 1923. Serial No. 644,972. 5 Claims. (Cl. 131—5.)



1. A device for making cigarettes, comprising means on which to roll paper into cigarette shape, and tubular means for receiving and holding said rolled paper for conveniently filling the same, said tubular means being arranged for conveniently moistening and fastening down the outer edge of said paper while in said tubular means.

1,534,808. CARBURETOR. HAROLD G. RENNER, Detroit, Mich. Filed Mar. 18, 1922. Serial No. 544,768. 5 Claims. (Cl. 261—41.)

1. A carburetor comprising a mixing chamber, a valve controlling a primary fuel supply to said chamber, said valve having a passage for a secondary fuel supply, a secondary valve normally seating upon the primary control valve to close said passage, means urging said secondary valve to its seat, tending to maintain said passage closed during the opening movement of the primary valve, and means retarding the movement of the secondary valve in the direction of opening of the primary valve.

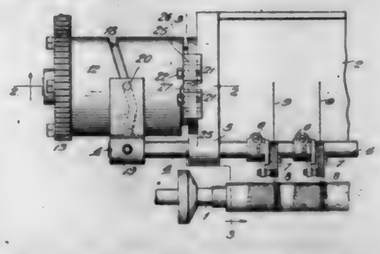


1,534,809. IMPACT MOLDING MACHINE. ELMER A. RICH, Jr., Chicago, Ill., assignor to The American Foundry Equipment Company, New York, N. Y., a Corporation of Ohio. Filed Mar. 5, 1920. Serial No. 363,432. 6 Claims. (Cl. 22—36.)

1. A machine of the class specified comprising a traveling elevator, a chute at the top of the same extending downwardly from the upper end of said elevator, a centrifugal fan located at the lower end of the chute, and a motor having power transmitting connection with said elevator and fan for driving the same, said power transmitting connection comprising a sprocket drive running to the fan, and speed changing gears between said sprocket drive and said motor.

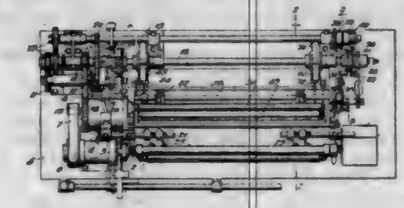
1,534,810. EIGHT-WHEEL VEHICLE. LIBORIO E. RIVAS, Santa Rita, N. Mex. Filed Oct. 17, 1923. Serial No. 669,025. 1 Claim. (Cl. 180—22.)

An automobile provided with two pairs of rear wheels, drive means for selectively driving either pair of wheels, said drive means including a transverse shaft, a contractible element adapted to be detachably connected at opposite ends with the wheels and the automobile frame, and means whereby said element may be contracted by rotation of said shaft, said contractible element comprising a head formed with a transverse aperture, a screw swiveled in said head and depending therefrom, a split collar having a threaded socket in which said screw engages, a worm gear fixed on said screw, a worm pinion



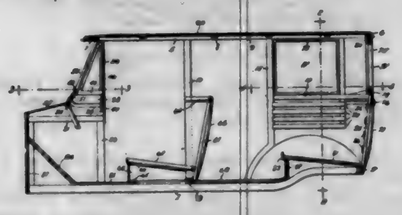
meshing with said worm gear, a stub shaft on which said worm pinion is fixed, and a coupler member on said stub shaft.

1,534,811. ADDING MACHINE. LOUIS ROTHMAN, Brooklyn, N. Y. Filed Mar. 9, 1923. Serial No. 623,976. 2 Claims. (Cl. 235—60.)



2. In an adding machine, a casing, a row of keys, a number-carrying wheel, and an operating device for said wheel, said operating device comprising a movable member associated with the row of keys and adapted to have its movement limited by selective individual engagement with the inner ends of the keys when the said keys are depressed, said movable member being normally out of engagement with the said wheel, and means whereby said movable member is moved into engagement with the said wheel by depression of any one of said keys, said means comprising a plate slidable in the casing, and hooked latches pivoted on the inner ends of the said keys and adapted to be engaged by said plate.

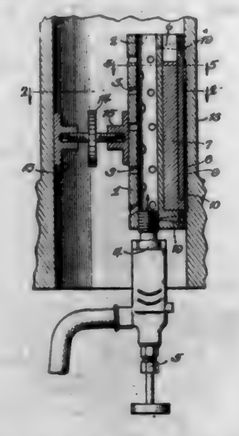
1,534,812. WINDING MACHINE. ARCHIBALD D. SCOTT, deceased, late of Jersey City, N. J., by Mary V. Scott, executrix, Jersey City, N. J., assignor to Varley Duplex Magnet Company, a Corporation of New Jersey. Filed Oct. 3, 1923. Serial No. 666,269. 10 Claims. (Cl. 242—26.)



1. In a machine for winding strand material, the combination of a winding spindle, a strand guide having a movement with respect to the spindle to form superposed layers of winding upon the spindle and means for equally and momentarily altering the normal rapidity of said movement at each reversal in direction thereof.

1,534,813. WINDING MACHINE. ARCHIBALD D. SCOTT, deceased, late of Jersey City, N. J., by Mary V. Scott, executrix, Jersey City, N. J., assignor to Varley Duplex Magnet Company, a Corporation of New Jersey. Filed Oct. 3, 1923. Serial No. 666,270. 15 Claims. (Cl. 242—10.)

1. In a machine for winding strand and sheet material, a winding spindle, means for continuously winding thereon a windable body, means for measuring and feeding lengths of said sheet material, means for severing the measured lengths, transfer means for receiving the severed lengths of material and then inserting the same between the layers of the wound body on said spindle during their formation, and means normally out of the path of the severing means and operable at the beginning of each measuring operation for positively guiding the sheet material from the measuring means to the transfer means.

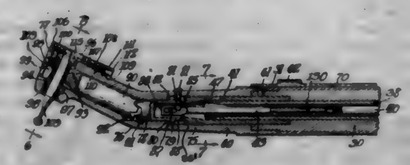


1,534,814. VEHICLE-BODY CONSTRUCTION. WILLIAM J. SEELINGER, Cleveland, Ohio, assignor to The Ohio Body & Blower Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 2, 1921. Serial No. 474,423. 9 Claims. (Cl. 296—28.)

1. In a vehicle body construction, the combination of a frame comprising a base, a top, door posts connecting the base and top, horizontal frame members, extending rearwardly from the door posts and across the back, vertical frame members depending from the top and crossing the horizontal frame members and extending to a point adjacent the base, said vertical and horizontal frame members cooperating with the door posts and top to produce window openings, strips extending between and connected to the door posts and the lower portions of the vertical frame members to provide a base for upholstery; and an integral shell applied to the frame and extending from base to top, across the back and along each side and having its front edges connected to the door posts, said shell having window openings registering with those of the frame.

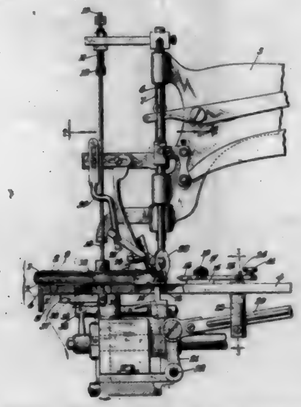
1,534,815. ENGINE CYLINDER REPAIR METHOD AND APPARATUS. GEORGE P. SETTER, Chicago, Ill., assignor of one-half to Alfred Ott, Chicago, Ill. Filed Dec. 15, 1922. Serial No. 607,087. 13 Claims. (Cl. 22—206.)

1. The method of filling grooves or cavities in the inner surface of an internal combustion engine cylinder, comprising the maintaining of the cylinder in vertically disposed position, the melting of the metal and the flowing thereof to the lower end of the groove in



the cylinder, causing the molten metal to rise in said groove, under confinement therein, and allowing the metal to cool to form a permanent filling for said groove.

1,534,816. DENTAL TOOL HOLDER. WILLIAM L. THIEDEMANN, Muskegon, Mich., assignor to Thiedemann-Hardy Company, Muskegon, Mich., a Copartnership comprising William L. Thiedemann and Hazlett M. Hardy. Filed Dec. 15, 1921. Serial No. 522,486. 8 Claims. (Cl. 32—11.)



1. In a dental handpiece, a tool holder provided with a socket to receive a tool, and means for locking said tool within said socket comprising a latch plate provided with an open ended slot to admit and interlock with said tool, and fasteners on said holder adapted to engage said plate on opposite sides of said slot when said plate is in locked position.

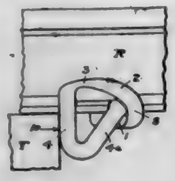
1,534,817. DENTAL TOOL. WILLIAM L. THIEDEMANN and HAZLETT M. HARDY, Muskegon, Mich., assignors to Thiedemann-Hardy Company, Muskegon, Mich., a Copartnership comprising William L. Thiedemann and Hazlett M. Hardy. Filed May 7, 1923. Serial No. 637,899. 35 Claims. (Cl. 32—11.)

1. In a dental operating piece, the combination with a sheath, of a tool holder slidable over the outer end of said sheath and adapted to be connected thereto by a bayonet joint formed on said holder and said sheath.

1,534,818. SEWING MACHINE. JOSEPH B. VALENTINE, Whitestone, N. Y., assignor to Valmont Manufacturing Co., Inc., a Corporation of New York. Filed Aug. 14, 1923. Serial No. 657,292. 5 Claims. (Cl. 12—2.)

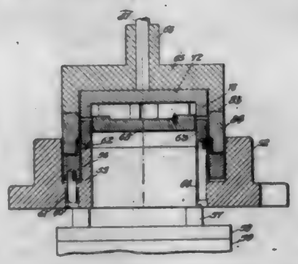
1. A sewing machine having a table thereon, mechanism for stitching together adjacent pieces of piled fabric, a looper actuating member, a pile displacing member movably mounted adjacent said stitching mechanism and means for connecting said pile displacing member to said actuating member to drive the pile displacing member therefrom.

1,534,819. PROCESS FOR OBTAINING VANADIUM COMPOUNDS OR VANADIUM FROM PIG IRON CONTAINING VANADIUM. RUTGER HENRIK VON SETH, Stockholm, Sweden. Filed Jan. 25, 1924. Serial No. 688,608. 3 Claims. (Cl. 75—45.)



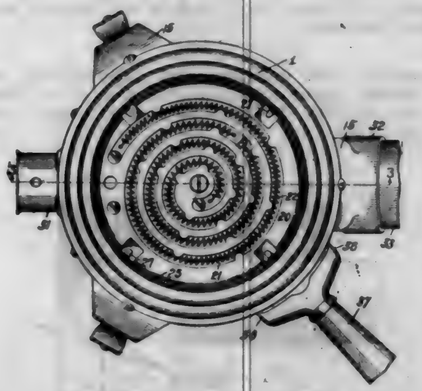
1. In a process for fining pig iron, rich in vanadium, the method of obtaining a slag rich in vanadium which comprises interrupting the fining of the pig iron at a moment before the iron is decarburized and when the vanadium has substantially passed into the slag, separating the slag from the iron and afterwards completely fining the iron, whereby there is obtained a high vanadium slag which may be used for the production of vanadium or vanadium compounds.

1,534,820. UMBRELLA. JOSEPH WALMSLEY, St. Louis, Mo. Filed Apr. 28, 1921. Serial No. 465,099. 1 Claim. (Cl. 135—46.)



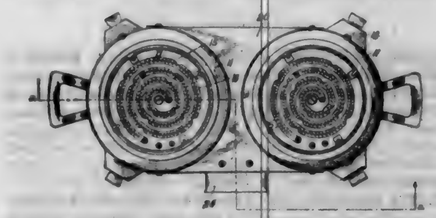
In an umbrella rod structure, an upper rod section, a handle rod section, an intermediate section, a hinge joint connecting one end of the intermediate section with the upper section, a hinge joint connecting the other end of said intermediate section with the lower handle section, each of said hinge joints consisting of a joint member fixed to both the upper and lower sections, said joint members each being provided with a stop flange and a narrow tongue having a curved outer end provided with a plurality of peripheral sockets, a joint member fixed to each end of the intermediate section, said joint members each being provided with a stop flange and a bifurcated head having a curved outer end, a pin for hingedly uniting each pair of joint members, a pair of opposed oppositely directed slidable members disposed within the intermediate section, a pin fixed to and passing through the intermediate section midway its ends, a coiled spring disposed between said pin and each slidable member, a pin and slot connection to manipulate said slidable members, a locking tongue extending from each slidable member and said locking tongues passing through openings in the joint members of the intermediate section and their outer ends receivable in the peripheral sockets of the joint members of the upper and lower sections.

1,534,821. ANTICREEPER FOR RAILWAY RAILS. WILLIAM S. WESTON, Dallas, Tex. Filed Jan. 31, 1924. Serial No. 689,603. 13 Claims. (Cl. 238—330.)



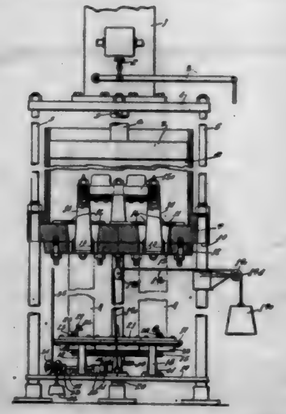
1. A spring-clamp anti-creeper for railway rails hav having forward and rear seats for engaging one of the rail base flanges and an intermediate seat for engaging the other rail base flange, said forward seat being a jaw seat and the connections between said seats requiring, on installation upon the rail base, increase in the distance between the intermediate and jaw seats and the rotary movement of the jaw seat with respect to the other two seats in a transverse vertical plane and in a direction tending to decrease the distance between the jaw and intermediate seats.

1,534,822. DIES. JOSEPH WILLIAM WINTER, Penfield, Pa. Filed Feb. 27, 1922. Serial No. 539,683. 12 Claims. (Cl. 113—49.)



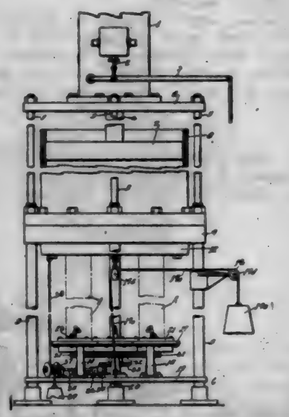
1. In die mechanism, the combination with axially opposed annular members (examplified at 56 and 84) arranged for relative telescopic movement and for axial movement together, and arranged to coaxially clamp between them the cylindrical perimeter of a cup shaped body having two cylindrical zones of different diameters and a central plane circular web transverse to the axis of said zones; of an annular female shear die member adapted to fit within the smaller of said zones and supoprt the margin of said web, and having on internal shear edge; a punch holder, in coaxial relation with said clamping members and rigidly connected with one of them; a knockout plate arranged for relative reciprocation in that holder, having an annular rim opposed to the margin of said web and to said female shear member supporting said margin; means arranged to relatively reciprocate said knockout plate in said holder, including an axial knockout stud; a male shear plate, in coaxial relation with said female shear member, and having an external shear edge, adapted to cooperate with said female shear member; whereby a circular piece is stamped from the center of said web, leaving an annular portion of said web extending inwardly from said zones, transversely to the axis of said body; and means arranged to relatively axially move said two opposed annular clamping members, with said tubular body and relatively to said annular female shear member; whereby the marginal portion of said web is drawn over said female shear member and expanded outwardly, to cylindrical form, in continuation of said smaller cylindrical zone.

1,534,823. ELECTRIC TABLE STOVE. HENRY A. ZIOLA, Toledo, Ohio, assignor to The Swartsbaugh Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 23, 1924. Serial No. 708,342. 14 Claims. (Cl. 219—37.)



1. In an appliance of the class described, a rim member, depending legs on the inner side of said member, a support for said legs, means for detachably securing the legs to said support, and means extending thru said support for removably connecting a heating unit thereto.

1,534,824. ELECTRIC TABLE STOVE. HENRY A. ZIOLA, Toledo, Ohio, assignor to The Swartsbaugh Manufacturing Company, Toledo, Ohio, a Corporation of Ohio. Filed Apr. 23, 1924. Serial No. 708,343. 12 Claims. (Cl. 219—37.)



1. In a device of the class described, a bottom plate, a pair of transversely spaced heating units, means for spacing said units vertically from said plate, and a reinforcing element extending longitudinally across the upper surface of the bottom plate.

1,534,825. CONDUIT-MAKING MACHINE. JOHN J. ALLISON, Smethport, Pa. Filed Mar. 31, 1923. Serial No. 629,064. 17 Claims. (Cl. 25—17.)

1. In a conduit making machine, the combination of a mud chamber; a die through which the material is extruded in tubular form; a yielding platform receiving the formed material as extruded; and means trimming the end of the formed tube resting on the platform.

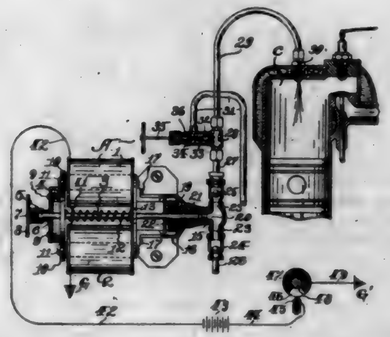
1,534,826. CONDUIT-MAKING MACHINE. JOHN J. ALLISON, Smethport, Pa. Filed Mar. 31, 1923. Serial No. 629,065. 5 Claims. (Cl. 25—17.)

1. In a conduit making machine, the combination of a mud chamber; dies with die passages leading therefrom; an adjusting plate for the die passages said plates being arranged within the passages and varying the opening of the passages; and means for operating from without the chamber adjusting the plate.

1,534,827. SHOE-CLEANING-STICK CONTAINER, APPLICATOR, AND DISTRIBUTOR. ANTHONY L. ACITO, Brooklyn, N. Y. Filed Mar. 21, 1924. Serial No. 700,768. 3 Claims. (Cl. 15—108.)

2. A shoe cleaning stick container and applicator comprising an opended cylindrical container, an inwardly extending flange formed on one end of the container, an interior projection formed on the container wall adja-

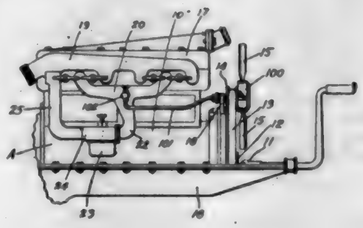
cent an end thereof, a compact stick slidable in said container, the compact stick having a groove cooperating with the projection to prevent rotation of the stick,



a cap carried by the stick and having a similar groove formed out of alignment with the groove on the stick, and an applicator member adapted to close either end of the container.

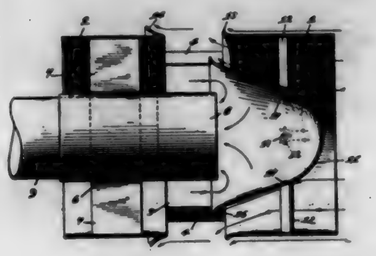
1,534,828. BRIQUETTE OF PHOSPHATE-ROCK MATERIAL AND METHOD OF MAKING THE SAME. JAMES A. BARR, Mount Pleasant, Tenn., assignor to The International Agricultural Corporation, New York, N. Y., a Corporation of New York. Filed Mar. 18, 1924. Serial No. 700,189. 7 Claims. (Cl. 23—105.)

1. A briquette of phospate rock material, the particles of which are held together by acid calcium phospate formed in situ and containing an excess P_2O_5 content over the original material.



7. The method which consists in mixing phosphate rock material with crude phosphoric acid of phosphate rock-sulphuric acid manufacture, briquetting the mixture before the reaction of said acid upon the material is completed, and drying the briquettes so formed.

1,534,829. ELECTRICALLY-OPERATED FUEL INJECTOR. ALBERT R. BEHNKE, St. Paul, Minn. Filed Apr. 9, 1919. Serial No. 288,871. 9 Claims. (Cl. 103—53.)



1. An injector, comprising, an electro-magnet, an armature adapted to be reciprocated by said magnet, pump means connected to said armature and resilient means for adjusting said pump means to vary the pumping capacity of said injector.

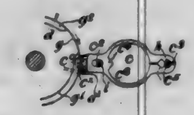
1,534,830. AUTOMATIC FAN VALVE. ALBERT R. BEHNKE, St. Paul, Minn. Filed Nov. 25, 1922. Serial No. 603,375. 10 Claims. (Cl. 123—124.)

1. In combination with a fan pulley of a motor vehicle, a casing attached to one of the flanges thereof, fan plates secured to the casing, a valve mechanism within the casing and a governor for operating said valve mechanism.

1,534,831. AIR CLEANER FOR CARBURETOR INTAKES. CHARLES T. BERG, San Jose, Calif. Filed Dec. 17, 1924. Serial No. 756,601. 12 Claims. (Cl. 183—110.)

1. A cleaning device for carburetor air intakes comprising a shell mounted in connection with the air intake and adapted to be mounted within the path of an air current set up by the fan of an internal combustion motor, said shell consisting of a pair of annular rings secured in axial alignment in slightly spaced relation; and a deflector mounted within the shell to divert the air current away from the carburetor intake through the space between the rings whereby solid particles carried by the air will be swept outwardly from the shell and away from the intake.

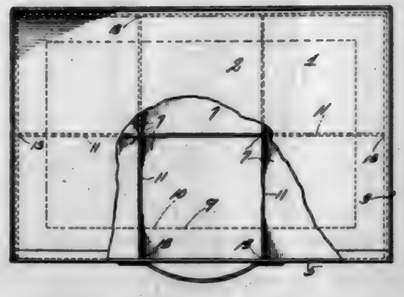
1,534,832. PROCESS FOR PRODUCING A REMEDY FOR SYPHILIS. SALO BERGEL, Berlin-Wilmersdorf, Germany, assignor of two-thirds to Chemische Fabrik Grünau Landshoff & Meyer, Aktiengesellschaft, Grunau, near Berlin, Germany, and C. A. F. Kahlbaum, Chemische Fabrik, Gesellschaft mit beschränkter Haftung, Aldershof, near Berlin, Germany. Filed Apr. 1, 1922. Serial No. 548,856. 2 Claims. (Cl. 167—7.



1. The herein described process for producing a remedy for syphilis which consists in repeatedly injecting lipoids into parts of the body most capable of resistance of an animal susceptible to syphilis, then repeatedly injecting at certain intervals into said parts of the animal's body spirochaetes containing syphilitic material and suspended in lecithin, and at the same time repeatedly injecting agents capable of dissolving spirochaetes and embraced in the group containing gall, sodium taurocholate, saponin-containing substances and sarsaparilla, the concentration and quantities of the doses of the spirochaetes being gradually increased and of the dissolving agents being gradually decreased, then collecting (a) the exudants of said parts of the animal's body caused by inflammation, (b) extracts from the lymphatic glands, the spleen and the omentum and (c) the blood serum, and finally separating the lecithin from this collected liquid by filtration.

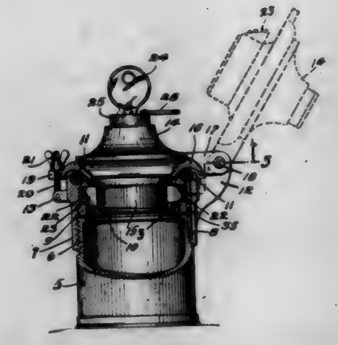
1,534,833. LIQUID AND AIR SEPARATOR. HARRY D. BINKS, Oak Park, Ill., assignor to Binks Spray Equipment Co., Chicago, Ill., a Corporation of Illinois. Filed Nov. 10, 1924. Serial No. 748,875. 17 Claims. (Cl. 183—102).

1. A liquid and gas separator comprising means for projecting the mixture of liquid and gas in a hollow conical spray, and liquid catching means including a baffle member of a substantially conical formation coaxial with the said spray and disposed in the path of the spray, the said member having a gas outlet axial thereof.



1,534,834. CALCULATING MACHINE. CHARLES FELICIEN BLACHER, Barnet, England, assignor to Guy's Calculating Machines Limited, London, England. Filed May 24, 1924. Serial No. 715,500. 7 Claims. (Cl. 235—138.)

1. In a calculating machine of the pin wheel and cam disc type, a longitudinally movable transfer slider which is provided integrally with means for locking and localising said movable slider in either of its extreme positions.

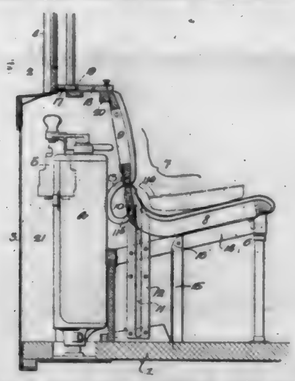


1,534,835. BREAD RAISER. LENA BOSIE, Highgate Springs, Vt. Filed Feb. 14, 1922. Serial No. 536,574. 1 Claim. (Cl. 126—281.)

A combined dough kneading board and dough raising device comprising a relatively flat rectangular shaped casing, a horizontally disposed flange carried by the lower side of the casing and forming the bottom thereof and an enlarged opening in the bottom, said casing having its inner side open, a hot water receiving pan disposed within the casing and removable through the open side of the casing, said pan being provided with a plurality of partitions, thereby forming a plurality of water

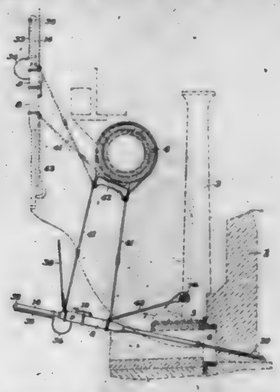
receiving chambers, and an upwardly extending U-shaped flange carried by the casing and extending upwardly from the ends and front side of the casing.

1,534,836. KEY-LOCKED CAP FOR TANKS. MARTIN H. BREDE, Minneapolis, Minn., and OLIVE L. LONGFRE, Vale, S. Dak. Filed Nov. 15, 1922. Serial No. 601,050. 4 Claims. (Cl. 220—32.)



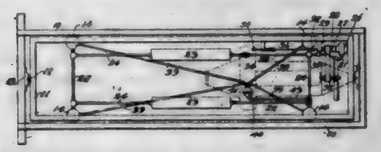
1. The combination with a filler tube or neck having a lock ledge, of a displaceable cap for said tube, a yielding gasket interposed between said tube and cap, clamping means for drawing said cap down upon said gasket and compressing the same, and a lock independent of said clamping means, mounted in said cap and including a lock bolt arranged to be projected under the lock ledge when the cap is drawn down by the clamping means and the gasket compressed.

1,534,837. CAR SEAT. JAMES A. BROOKS, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Apr. 26, 1924. Serial No. 709,174. 8 Claims. (Cl. 105—342.)



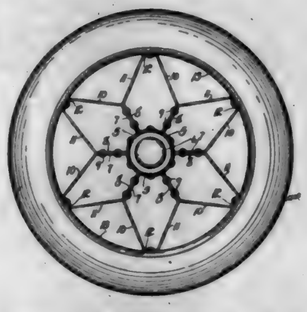
8. The combination in a car having a closed back and a compartment at the back; a controller in the compartment; a movable seat structure in front of the controller and forming an enclosure for the compartment, said seat structure having a cushion section and a

back section mounted on the same pivots; and guides for the pivots of the seat structure, said guides having sockets at their upper end to retain the sections of the



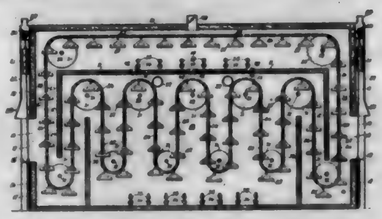
seat structure in their normal position, said seat structure being bodily removable from the guides to entirely expose the controller.

1,534,838. BLAST-FURNACE TAPPING APPARATUS. EDGAR E. BROSIUS, Pittsburgh, Pa. Filed Jan. 3, 1921. Serial No. 434,522. 9 Claims. (Cl. 266—42.)



1. Blast furnace tapping apparatus comprising a rotatable drill, and suspension means therefor comprising a plurality of links pivotally connected at each end and arranged to permit the drill to be swung into substantially horizontal tapping position or into substantially vertical inoperative position, substantially as described.

1,534,839. FLUID-PRESSURE CUSHIONING MECHANISM FOR VEHICLES. JAMES MADISON BURNAP, Denver, Colo. Filed July 11, 1923. Serial No. 650,910. 8 Claims. (Cl. 280—104.)

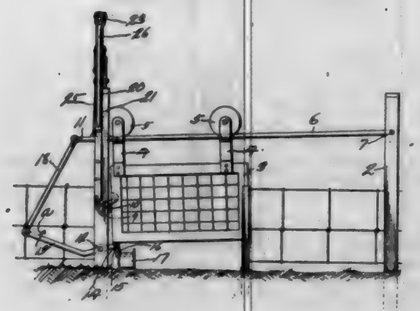


1. In a cushioning mechanism, a wheel support, a body support, a plurality of cylinders carried by one support, a plurality of plungers carried by the other support and disposed in said cylinders, a fluid pressure supply, pipe lines leading therefrom to the lower portion of the respective cylinders, manually controlled means for releasing pressure from said lines, independent pipe lines connected to the upper portion of said cylinders, and a unitary means for simultaneously controlling the pressure of said independent lines.

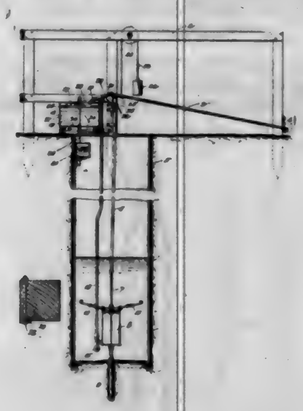
1,534,840. VEHICLE WHEEL. ROMEO O. COULOMBE, New Haven, Conn. Filed May 10, 1924. Serial No. 712,259. 2 Claims. (Cl. 152—28.)

2. A vehicle wheel comprising a hub, a series of metal spokes, each spoke comprising a hub-section riveted to the hub, radial sections extending outward from the hub-section and riveted to the adjacent radial sections, tangential sections extending outward from the radial sections and inclined toward each other and connected together by a rim-section, and a rim riveted to said rim-sections.

1,534,841. BAKER'S OVEN. EMERICK B. CRAWFORD, New Haven, Conn., assignor to The Oven Equipment & Mfg. Co., New Haven, Conn., a Corporation. Filed Mar. 16, 1922. Serial No. 544,158. 3 Claims. (Cl. 107—57.)



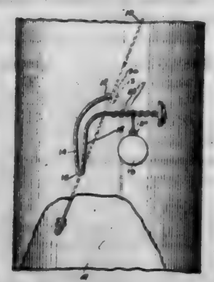
1. A baker's oven having a loading-and-unloading opening located substantially above its floor, a vertically-movable door for the said opening, provided at its upper end with a shelf, and means for raising and lowering the said door, so as to increase or decrease the area of the said opening and for holding it in any of its vertical adjustments.



2. A baker's oven, having a loading-and-unloading opening located substantially above its floor, a vertically-movable, shelf-carrying door for the said opening, means for operating the said door, whereby it is held in any desired position with respect to the said opening, and a hood applied to the end of the oven-structure and providing a housing for the said door and for the means for operating the same.

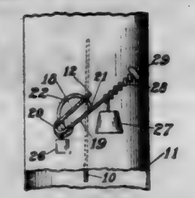
1,534,842. GATE. STEPHEN EVERS, Fresburg, Mo. Filed June 11, 1924. Serial No. 719,361. 1 Claim. (Cl. 39—67.)

The combination with a pivoted inclined rod, a longitudinally movable gate mounted on said rod and moved to closed or open position by gravity, vehicle actuated means for raising the free end of said rod, of manual means for raising the free end of said rod, said manual means comprising pivoted levers, said levers being pivotally connected to yieldable arms and extending downwardly towards each other and pivotally connected together, a flexible connection between the pivotal point of said levers and the free end of the rod, said spring arms forming means for holding the tiltable rod in raised position against the weight of the gate and the rod.



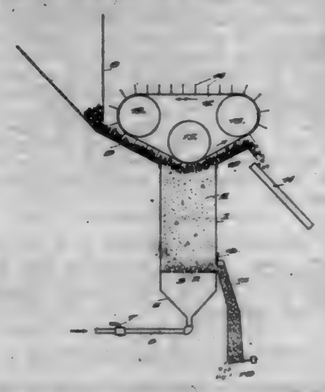
1,534,843. STOCK-WATERING DEVICE. HEINRICH FLESSNER, Highland Park, Mich. Filed Oct. 6, 1924. Serial No. 741,840. 8 Claims. (Cl. 119—76.)

1. In a device of the class described, in combination a depressible platform, a tank, water pumping apparatus operable by the depression of said platform to supply water to said tank, a float in said tank, and platform locking means rendered active by said float when raised.



1,534,844. DAMPER. JEFFERSON FOWLER, Red Creek, and CLAUDE FOWLER, Yonkers, N. Y. Filed July 11, 1921. Serial No. 483,617. 14 Claims. (Cl. 137—152.)

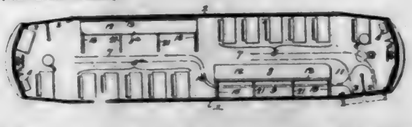
1. In a damper, in combination, a length of pipe, a valve plate, a spindle therefor, a weight arm supported by said spindle, a bight between said spindle and said weight arm, and a weight normally supported



on said weight arm for balancing the valve plate in an operative position, said weight being movable to said bight to hold the valve plate in inoperative position.

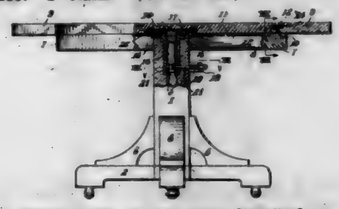
1,534,845. AUTOMATIC DAMPER. CLAUDE J. FOWLER, Yonkers, and JEFFERSON FOWLER, Red Creek, N. Y. Filed May 8, 1923. Serial No. 637,571. 14 Claims. (Cl. 137—152.)

14. In a damper, in combination, a damper plate, a spindle therefor including an arm extending therefrom, a balance weight carried by the arm, and friction means associated with the spindle for damping the swinging movements of the damper during normal operation thereof.



1,534,846. PROCESS OF SEPARATING LOOSELY-MIXED MATERIALS. THOMAS FRASER and HARRY F. YANCY, Urbana, Ill. Filed May 11, 1923. Serial No. 638,395. 10 Claims. (Cl. 83—54.)

1. The method of separating mixed materials having different specific gravities, which consists in creating a body of loose dry granular material, a fluidic condition with an effective specific gravity between the specific gravity of the materials to be separated and less than

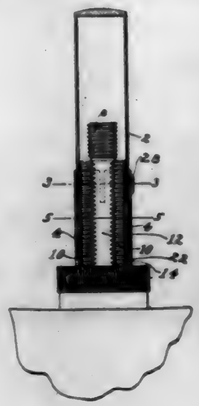


said granular material has in its natural state, supplying the mixed materials to the surface of said body, and positively removing the lighter material from the upper portion of the body.

1,534,847. PASSENGER CAR. GEORGE FREY, Philadelphia, Pa., assignor to the J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 1, 1924. Serial No. 710,346. 8 Claims. (Cl. 105—345.)

3. The combination in a passenger car, of permanent seats at each end of the car and at opposite sides thereof; movable longitudinal seat sections opposite the permanent seats; and transverse guides for the movable seat sections so that one of said movable seat sections can be moved from the sides of the car to provide a passageway.

1,534,848. DINING TABLE. WALTER GALGOCZI, Rosebush, Mich., assignor of one-third to Paul John, East Chicago, Ind. Filed May 25, 1923. Serial No. 641,439. 1 Claim. (Cl. 45—26.)



In a dining table of the type described, a pedestal having a bore, radially extending supporting bars secured to the upper end of the pedestal, a supporting ring secured to the ends of said bars, a rigid table top section in the form of a ring secured to the top space of the supporting ring, said supporting ring and table top ring having their upper inner edges rabbeted, anti-friction ball bearings mounted in the rabbetted edge of the table top ring, a wavy metallic friction ring mounted in the rabbetted edge of the supporting ring, a metallic collar inserted in the upper end of the bore of said pedestal and having an annular flange bearing against said pedestal end, anti-friction ball bearings mounted in said flange, a disk shaped table top section having its lower peripheral edge rabbetted for engaging the ball bearings carried by the table top ring section, a depending stub shaft carried by the last mentioned table top section projecting into the bore of said sleeve, and a spring pressed pin carried by said pedestal engaging said stub shaft for separably holding the disk-shaped table top section in position to bear against the anti-friction rollers and the friction ring.

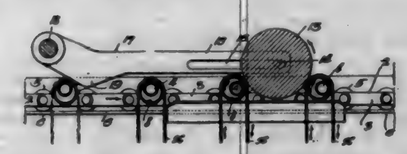
1,534,849. HEADLIGHT. CROMWELL A. B. HALVORSON, Jr., Lynn, Mass. Original application filed Apr. 7, 1920, Serial No. 371,929. Divided and this application filed Oct. 14, 1922. Serial No. 594,464. 4 Claims. (Cl. 240—48.4.)

1. A headlight lens comprising zones of vertical prisms, the central zone comprising vertical shallow cylindrical prisms, and the outer ones each comprising oppositely faced substantially semi-cylindrical convex prisms of greater refractive power than the prisms of the central zone.

1,534,850. DUST CAP FOR VALVE STEMS OF PNEUMATIC TIRES. FRANK S. HAMILTON, Boston, Mass. Filed Mar. 27, 1920. Serial No. 369,259. 3 Claims. (Cl. 152—12.)

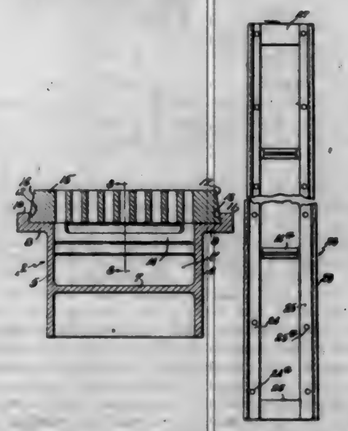
1. A covering for a stem having interrupted threads, comprising a cap having interrupted threads adapted to slide past the interruptions of the stem threads to permit longitudinal movement of the covering and adapted to engage the stem threads to prevent said longitudinal movement, and having a projection; and a sleeve on the cap, movable longitudinally with the cap along the stem but not rotatably about the stem, having a slot whose two walls engage the said projection when the cap has been rotated into engagement with the stem threads, thereby locking the cap against rotation.

1,534,851. CONTROL PACKER HEAD. CHARLES M. HEBTER and JOSEPH W. HEBTER, Butler, Pa. Filed Dec. 18, 1924. Serial No. 756,704. 9 Claims. (Cl. 166—10.)



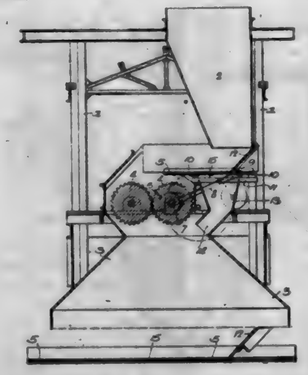
1. A packer head comprising a sleeve having an axially extending opening and a laterally extending opening, a casing adapted to telescope relatively to said sleeve, means normally holding said casing and sleeve in extended relation, and means preventing flow of fluid axially through said sleeve and casing when they are in extended relation, substantially as described.

1,534,852. SYRINGE. JOHN A. HUNTER, Cleveland, Ohio. Filed Sept. 10, 1923. Serial No. 661,893. 1 Claim. (Cl. 128—239.)



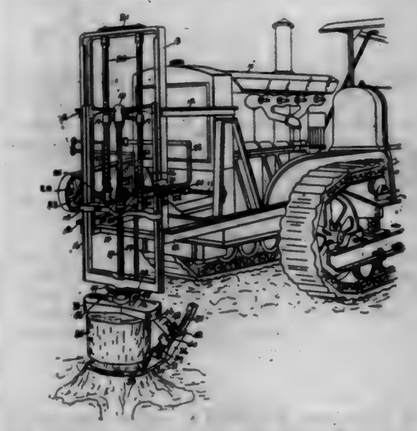
The combination of a syringe tube, a nozzle having a reduced externally threaded inner end, a fine mesh strainer arranged in the inner end of the nozzle, a pill retaining chamber receiving the threaded end of the nozzle at one end, and of the same diameter as the nozzle, a relatively coarse strainer integrally formed with the end of the chamber opposite the nozzle, and said chamber having a reduced end to frictionally engage the tube.

1,534,853. LOOP DRIER. ALPHEUS O. HUBBTHAL, Philadelphia, Pa., assignor to Proctor & Schwartz, Incorporated, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1924. Serial No. 749,095. 8 Claims. (Cl. 34—12.)



1. The combination in an apparatus for drying, or shrinking, cloth, of a casing; a carrier having a series of girts upon which the cloth is looped; a roller arranged to enter the space between two girts and to hold the cloth to the girts; means for turning the girts; and means for raising and lowering the roller.

1,534,854. SUCTION BOX AND COVER THEREFOR FOR USE IN FOURDRINIER MACHINES. ARCHELAUS LEWIS, Cumberland Mills, Me. Filed May 12, 1923. Serial No. 638,610. 17 Claims. (Cl. 92—51.)

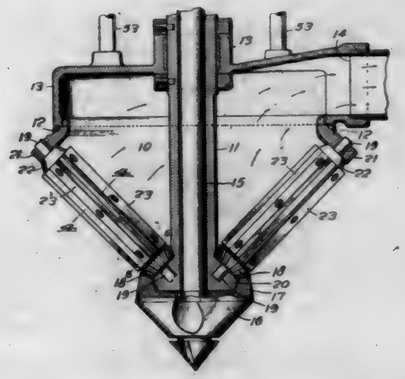


3. A suction box for use with Fourdrinier machines, said box having cover retaining element, and a slidable cover member tapering in width from one end to the other, engaging said retaining elements.

1,534,855. BY-PASS FOR FEEDING MECHANISM FOR CRUSHERS. HARRY N. LOWENTHAL, Philadelphia, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Aug. 18, 1921. Serial No. 493,294. 1 Claim. (Cl. 83—44.)

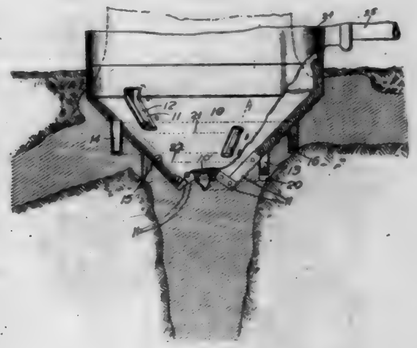
The combination of a pair of crushing rolls; a hopper above said rolls; a bin, or other receptacle, below the rolls; and a reciprocating feeding plate for feeding material from the hopper to the rolls, said feeding plate having a detachable section, which, when removed, will cause the material to by-pass the crushing rolls and flow directly into the bin, or other receptacle.

1,534,856. APPARATUS FOR SEVERING STUMPS. EDWIN A. MCKOY and GEORGE D. MOORE, New Orleans, La. Filed May 23, 1921, Serial No. 471,623. Renewed Sept. 30, 1924. 13 Claims. (Cl. 144—2.)



1. A stump cutter comprising a gyrating knife an arm secured to and adapted to advance the knife toward the axis of gyration, said arm being proportioned to follow into the cut effected by the knife.

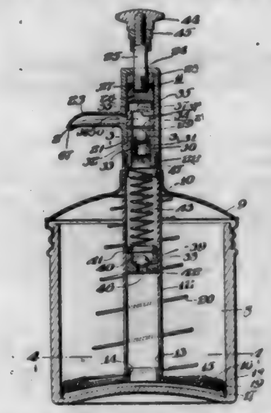
1,534,857. PLANETARY CUTTER HEAD. EDWIN A. MCKOY, New Orleans, La. Filed May 23, 1921, Serial No. 471,625. Renewed Sept. 30, 1924. 5 Claims. (Cl. 144—210.)



1. A hollow cutter head having the exterior shape of a surface of revolution, and having a slot in its wall,

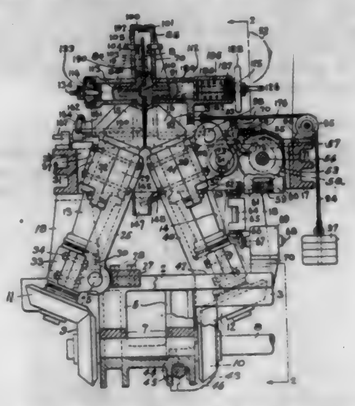
a cutter mounted within said hollow head adjacent said slot and capable of rotation about an axis at an angle to the axis of the head, said cutter extending through

said slot, and projecting beyond the surface of the head, and means for rotating said head and cutter about their respective axes.



1,534,858. SLITTING CUTTER HEAD. EDWIN A. MCKOY, New Orleans, La. Filed May 23, 1921, Serial No. 471,627. Renewed Sept. 30, 1924. 6 Claims. (Cl. 144—2.)

1. A cutter head comprising a rotating body, knives carried by the body positioned to cut spaced annuli, and a slitter axially in advance of the knives positioned to cut a groove between the annuli.

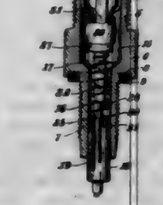


1,534,859. DISPENSING DEVICE. ARCHIBALD JOHN MARTIN, Philadelphia, Pa., assignor to Victor C. Dreisbach, Philadelphia, Pa. Filed June 6, 1922. Serial No. 566,344. 8 Claims. (Cl. 221—103.)

1. A dispensing device comprising a reservoir, a tube extending downwardly into the reservoir and open at the bottom, a spring-pressed piston slidable in the reservoir tending to force the contained material upwardly into said tube, a valve rigidly located intermediate the end of said tube, a piston slidable in said tube and

spaced from said valve, a valve carried by said piston, an outlet spout for said tube, and means to force the piston toward the first mentioned valve.

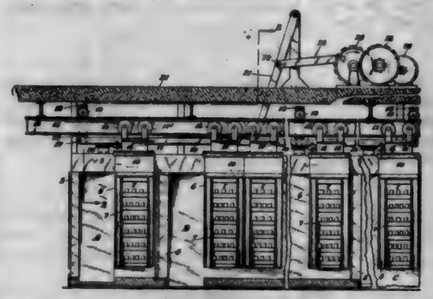
1,534,860. MILL FOR ROLLING TAPERED DISKS. ARTHUR MARTIN, Pittsburgh, Pa. Original application filed May 26, 1922, Serial No. 563,877. Divided and this application filed June 21, 1923. Serial No. 646,860. 16 Claims. (Cl. 80—16.)



16. A mill for rolling tapered disks comprising two cooperating and converging tapered rolls having their axes of rotation in a common vertical plane, shafts supporting said rolls, bearings for said shafts adjacent to said rolls, thrust bearings supporting the lower ends of said shafts, means for simultaneously driving said shafts, means for adjusting one of said rolls toward and from the other and for varying the angular position of said roll, means for mounting the other roll for pivotal movement around a horizontal axis disposed below said movable roll, whereby said movable roll may approach and recede from the first-named roll in a substantially straight line, a continuously rigid yoke surrounding the upper bearings of said roll shafts, a cam roller carried by the upper bearing of said movable roll, a cam carried by said yoke and operating through said cam roller to move said movable roll toward the other roll, means for transmitting rolling thrust through said rolls to the ends of said yoke, a housing carried by said yoke and composed of a fixed section and a slidable section, a member carried by the upper bearing of said movable roll and engaging a portion of said slidable housing section, a weight connected to said slidable section and tending to move said slidable section away from said fixed section, and also tending to move said movable roll away from said fixed roll, a burner within said housing, means for confining most of the heat from said burner to the outer portion of said housing, means for positioning blanks within said housing, a separable mandrel carried by the sections of said housing, means for carrying cooling fluid through said mandrel, and means for exhausting air from said housing, and means for detaching finished disks from said mandrel when said housing is opened.

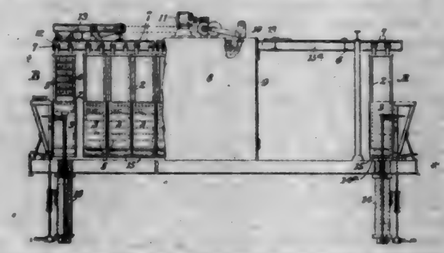
1,534,861. ABRASIVE DISK. HARRY C. MARTIN, Niagara Falls, N. Y., assignor to The Carborundum Company, Niagara Falls, N. Y., a Corporation of Pennsylvania. Original application filed Jan. 25, 1922, Serial No. 531,554. Divided and this application filed Jan. 30, 1924. Serial No. 689,431. 4 Claims. (Cl. 51—280.)

1. An abrasive disk comprising a backing of flexible material and an abrading portion built up of abrasive grains and a resinous bonding material and having a porosity of not less than 36%, substantially as described.



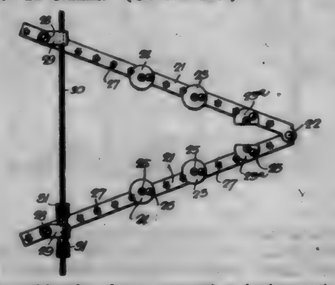
1,534,862. PNEUMATIC-TIRE VALVE. FREDERICK MYERS, New York, N. Y. Filed Aug. 14, 1923. Serial No. 657,304. 3 Claims. (Cl. 152—12.)

1. In a pneumatic tire valve, a tubular casing, a cup-shaped element forced into the bore of the tubular casing, said cup-shaped element having an opening provided with a depending annular flange of less diameter than the bore of the tubular casing for forming a valve seat, a valve stem slidable through the opening of the cup-shaped element, a cylindrical valve formed of resilient material carried by said stem, and means for forcing the valve against the edge of the flange valve seat for causing the valve to be deformed for overlapping the outer face of the flange to provide a better seal.



1,534,863. APPARATUS FOR ANNEALING GLASSWARE. GEORGE G. OLIVER, Wheeling, W. Va., and THOMAS STENHOUSE, Washington, Pa., assignors to Hazel-Atlas Glass Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Jan. 31, 1923. Serial No. 616,004. 9 Claims. (Cl. 49—47.)

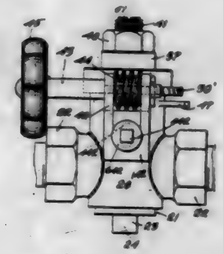
1. In apparatus for annealing glassware, an annealing lehr having inlet and discharge ends and also having an ante-chamber, an annealing chamber and a cooling chamber arranged endwise of each other, dividing means between each two of the chambers, containers for a plurality of trays of glassware, a suspension for each of the containers, an overhead trackway along which each



suspension moves, and means for moving each of the containers successively from chamber to chamber during the annealing operation.

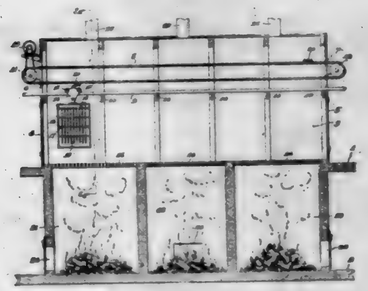
1,534,864. APPARATUS FOR TEMPERING GLASSWARE. GEORGE G. OLIVER and THOMAS STENHOUSE, Washington, Pa., assignors to The Hazel-Atlas Glass Company, Wheeling, W. Va., a Corporation of West Virginia. Filed Dec. 19, 1919, Serial No. 346,022. Renewed Mar. 17, 1924. 11 Claims. (Cl. 49—47.)

1. In apparatus for annealing glassware, a receptacle comprising an inner container and an outer container, the inner container having a closed top and bottom and a series of shelves having open sides, and an outer container having closed walls open at top and bottom, the inner container being adapted, when filled with ware, to rest in the lower portion of said outer container, the side walls of the outer container and the top and bottom of the inner container comprising a complete closure for excluding air during annealing.



1,534,865. STRAIN GAUGE. JAMES W. OWENS, Cradock, Va., assignor to Tinius Olsen Testing Machine Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 15, 1921. Serial No. 515,236. 12 Claims. (Cl. 33—125.)

1. The combination in a measuring instrument of a pair of bars hinged together and each having therein at definite distances from the point of connection of said

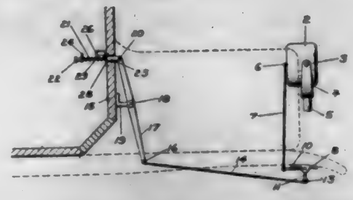


bars a set of parts carrying recesses for the reception of centering points; with means for adjusting said bars to vary the angle between them, said parts being independently adjustable.

1,534,866. VALVE. GEORGE M. PAGE, Haydenville, Mass., assignor to Victory Equipment Corporation, Haydenville, Mass., a Corporation of Massachusetts. Filed Dec. 22, 1919. Serial No. 346,467. 6 Claims. (Cl. 251—97.)

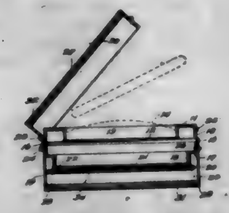
1. A valve comprising a casing, a frusto conical seat in said casing surmounted at its smaller end by a spring-chamber, and a frusto-conical plug in said seat, having an oval and a triangular opening in the walls thereof, a stem extending from the smaller end of the plug, through said spring-chamber, a spring seated in the lower end of said chamber and adjustable means attached to the stem bearing on the upper end of the spring to regulate the tension thereof, a cap mounted on said stem, a graduated dial on said casing, a pointer extending beyond the periphery of said cap for indicating the amount of rotation of said plug on said dial; outstanding arms on said casing and a worm gear mounted therebetween and on a spindle journaled in said arms, and an arcuate rack on said cap, said rack cooperating with said worm gear whereby adjustment of the openings in the plug may be obtained.

1,534,867. SMOKEHOUSE. CARL PESCHKE and HERMAN KILLIAN, Detroit, Mich. Filed Oct. 20, 1924. Serial No. 744,745. 7 Claims. (Cl. 99—2.)



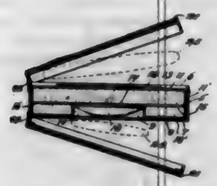
1. Smoke house apparatus comprising, an elongated smoke chamber, a conveyor traveling the length thereof, and fire boxes arranged beneath said smoke chamber, said boxes being adapted to admit smoke to said chamber in stages throughout its length whereby smoke of varied densities may be provided in said chamber.

1,534,868. EXPANSIBLE MANDREL. WILLIAM W. RONEY, Sewickley, Pa., assignor to H. H. Robertson Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 25, 1920. Serial No. 391,800. 1 Claim. (Cl. 24—72.)



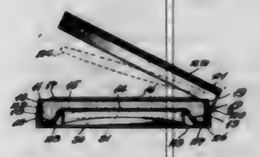
In a mandrel of the character described, in combination, a supporting shaft provided with a screw-threaded portion and with a plurality of substantially flat portions between its ends, substantially flat bars co-operating with the flat portions of said shaft and provided with inclined slots, screws extended through said slots into said shaft to cause the flat bars to slide outwardly and transversely with relation to the shaft upon said flat portions as bearing surfaces when said flat bars are moved longitudinally of the shaft, and a hand wheel provided with a threaded hub engaging the threaded portion of said shaft and having an annular recess into which the rear ends of said bars extend and co-operating with the threaded hub to be moved thereby when the hub is rotated in one direction upon the shaft.

1,534,869. SAFETY ADJUSTING MECHANISM FOR AUTOMOBILE HEADLIGHTS. JAMES G. B. ROBICK and SAMUEL RUCKMAN, Woodlawn, Pa. Filed Feb. 14, 1924. Serial No. 692,692. 6 Claims. (Cl. 240—61.)



1. A safety adjusting mechanism for automobile headlights comprising a one-piece rock shaft having terminal lever arms and an intermediate lever, lamp engaging rods pivotally connected to said arms and having lamp connecting terminals, an operating lever connected with the intermediate lever, and a spring retracted operating rod connected with the operating lever and provided with a locking device.

1,534,870. CONTAINER FOR FACE POWDER, ROUGE, OR THE LIKE. WILLIAM HERBERT ROYSTONE, New York, N. Y. Filed Oct. 21, 1922. Serial No. 595,887. 8 Claims. (Cl. 132—83.)



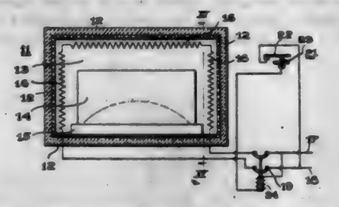
1. A receptacle to contain loose face powder, one side of which has a readily removable sifter-screen whereby the supply of powder may be replenished, said sifter screen being covered with a removable sheet of paper or the like.

1,534,871. VANITY CASE. WILLIAM HERBERT ROYSTONE, New York, N. Y. Filed Dec. 18, 1922. Serial No. 607,479. 9 Claims. (Cl. 132—83.)

1. A vanity case, having an internally flanged ring, a reducing ring carried on the flange, and a rouge compact inside the reducing ring.

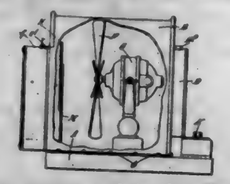
1,534,872. VANITY CASE. WILLIAM H. ROYSTONE, New York, N. Y. Filed Dec. 29, 1922. Serial No. 609,577. 8 Claims. (Cl. 132—83.)

1. In a vanity case, a powder receptacle open at the top and having a downwardly open recess in the bottom, a cover for the bottom, a reducing ring in the cover, the space provided by the inside of the reducing ring and by the recess providing accommodations for a rouge compact and a rouge puff.



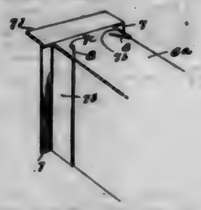
1,534,873. VANITY CASE FOR LOOSE POWDER. WILLIAM H. ROYSTONE, New York, N. Y. Filed Jan. 17, 1923. Serial No. 613,108. 10 Claims. (Cl. 132—83.)

1. A vanity case having a powder compartment open at the top, and a closure for the top, said closure being supported in spaced relation to the bottom of the compartment and having a grille, the open work of the grille being distributed about the surface of the closure to effect distribution of powder inside a raised peripheral bead which is adapted to engage a powder puff to prevent the escape of powder.



1,534,874. HEAT-SATURATION INDICATOR. WIRT S. SCOTT, Bosman, Md. Filed Aug. 11, 1923. Serial No. 656,867. 9 Claims. (Cl. 108—13.)

1. The method of determining when a mass of material has been heated to uniform predetermined temperature throughout when subjected to heat in a furnace structure which comprises the determination of the heating and cooling curves of the charged furnace between pre-

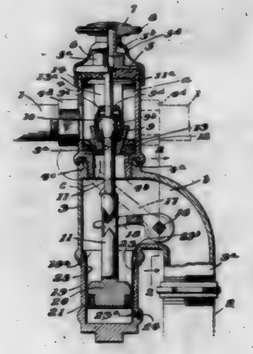


determined temperature limits and noting when these curves become substantially identical with those of the same furnace structure when empty.

1,534,875. MEANS FOR DISINFECTING AND HEATING AIR. WILLIAM ERNEST SIDAY, North Kensington, London, England. Filed Aug. 16, 1921. Serial No. 492,738. 3 Claims. (Cl. 261—30.)

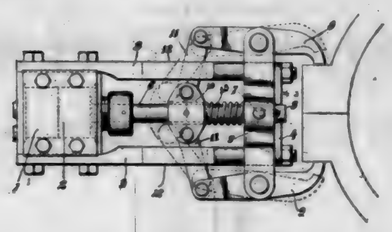
1. A portable apparatus of the class described comprising a casing having inlet and outlet openings at opposite ends, a fan mounted within said casing and adapted to force air through said outlet opening, heating means positioned in the path of air discharged through said opening, said means being supported from the casing, and a baffle plate within the casing between the fan and the discharge opening for preventing back draught through the casing.

1,534,876. NAILING BLOCK. LEO SIMMONS, Washington, D. C. Filed Oct. 5, 1922. Serial No. 592,510. 4 Claims. (Cl. 72—105.)



2. A nailing block provided with anchoring flanges arranged transversely and longitudinally with respect to the blocks to hold the block against movement longitudinally of the wall and also against movement transversely of the wall, whereby said block can be employed as a jamb block.

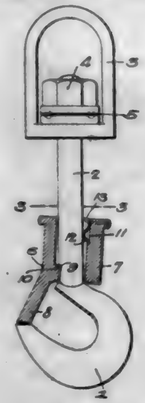
1,534,877. FLUSHING APPARATUS. LEO SIMMONS, Washington, D. C. Filed Nov. 29, 1922. Serial No. 604,113. 7 Claims. (Cl. 137—93.)



2. Flushing apparatus comprising main and relief flushing valves, a casing providing a flushing water passage, a lift stem for said valves, a piston carried by said stem for controlling the closing movement of the valves, a dash pot cup receiving said piston and carried by said casing and at its upper end open to said passage, said cup provided with a longitudinal water duct open to said passage at its upper end at the top edge of said cup and

at its lower end having a port opening into the lower end of the cup, a normally fixed member adjustable from the exterior of the casing for controlling the capacity of said port, said piston and the cup being relatively formed to permit flow of water past the piston during ascent of

the piston and to prevent water leakage except through said port and duct during descent of the piston, said piston and the upper end portion of the cup being relatively formed to permit quick inflow of water under the piston when approximately at its limit of upward movement.

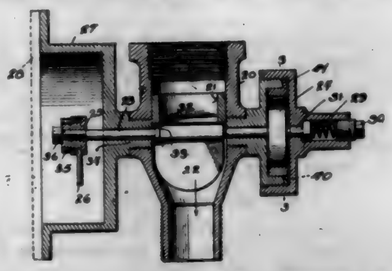


1,534,878. CLAMP FOR GLASS MOLDS. THOMAS STENHOUSE, Washington, Pa., assignor to Hazel-Atlas Glass Co., Wheeling, W. Va., a Corporation of West Virginia. Filed Sept. 17, 1923. Serial No. 663,221. 12 Claims. (Cl. 49—14.)

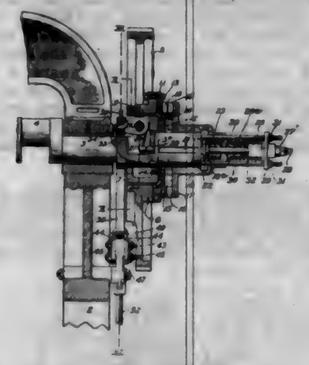
1. A clamp for molds, including a piston rod, a crosshead mounted for limited sliding movement thereon, clamping jaws pivotally mounted on the crosshead, means for moving the crosshead and jaws bodily forward to a fixed position, and means for causing the jaws to swing inwardly into clamping position after the termination of the forward bodily movement.

1,534,879. SWIVEL HOOK. MARK GILMER STEWART, Shreveport, La., assignor to The Pelican Well Tool and Supply Company, Shreveport, La., a Corporation of Louisiana. Filed Feb. 2, 1924. Serial No. 690,176. 3 Claims. (Cl. 24—241.)

1. The combination of a hook member formed with a stem and with a laterally projecting point, and a rigid slidable guard surrounding and loosely fitting the stem and held against turning thereon, the said stem having a downward exposed shoulder near its lower end on the same side as the point of the hook, and the said guard having an integrally formed finger projecting downward and outward to contact with and cover the point of the hook and also having an inward projecting upward exposed shoulder between its ends adapted to fit under and engage the shoulder on the stem when the guard is in a tilted position and to be disengaged therefrom when the guard is not in a tilted position.



1,534,880. PLANT DEFLECTOR. WILLIAM STOEBNER, EDWARD STOEBNER, EMANUEL STOEBNER, and DANIEL STOEBNER, Tripp, S. Dak. Filed July 9, 1924. Serial No. 725,604. 2 Claims. (Cl. 97—192.)

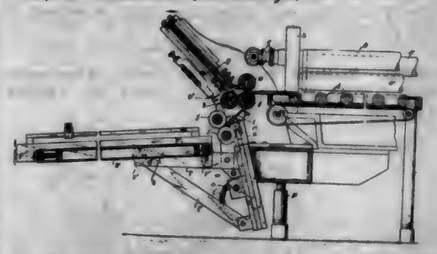


1. A plant deflector comprising spaced beams a bracket carried by the beams, pivoted arms carried by the bracket and extending forwardly and outwardly into engagement with the inner sides of the beams, said pivoted arms being provided with outwardly extending arms and springs co-operating with the outwardly extending arms and forming means for holding the pivoted arms in engagement with the beams.

1,534,881. SAFETY APPARATUS FOR CONTROLLING THE FLOW OF FLUID IN PIPES. CHARLES L. STOKOE, Wallsend-on-Tyne, England. Filed July 3, 1922. Serial No. 572,602. 5 Claims. (Cl. 116—112.)

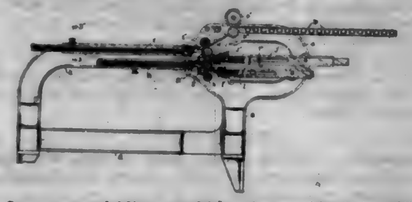
3. In apparatus of the character described, in combination, a pipe through which a fluid is adapted to pass, a valve within said pipe, normally held open by the passage of said fluid, a spindle rotatable by said valve as said valve moves to closed position, alarm control mechanism operable by said spindle, means on the spindle engageable with the pipe to prevent leakage along the spindle to said mechanism, a spring box into which said spindle projects, a compression member in said box adapted to coact with the adjacent end of said spindle and slide the same laterally to operatively position said means, and means to rotate the spindle upon diminution of fluid pressure in the pipe.

1,534,882. CLUTCH MECHANISM. HOWARD H. TALBOT, Wooster, Ohio, assignor, by mesne assignments, to Mackintosh-Hemphill Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Jan. 7, 1922. Serial No. 527,641. 9 Claims. (Cl. 192—24.)



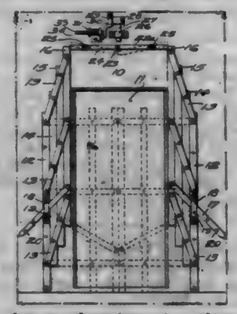
1. Clutch mechanism comprising a shaft provided with a longitudinally movable clutch member in splined engagement therewith, a loosely mounted driving gear on the shaft having co-acting clutch member, means carried by the shaft for operatively actuating the movable clutch member including a central thrust pin and a spring opposing its movement, and an exteriorly controlled bell crank lever for the thrust pin rotatably mounted with the shaft for normally holding the clutch open.

1,534,883. OIL-DISPENSING DEVICE. HERBERT BRADFORD TIMMS, Atlanta, Ga. Filed Oct. 7, 1924. Serial No. 742,216. 1 Claim. (Cl. 221—40.)



An oiling device comprising a stem, a pair of prongs projecting downwardly from the lower extremity of said stem and contacting at their free extremities to form an oil containing eye or space, the inner sides of said prongs being grooved.

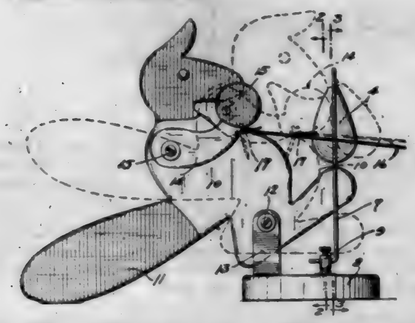
1,534,884. PAPER-FOLDING MACHINE. WALTER G. TRAUTMAN, Cleveland Heights, Ohio, assignor to The Cleveland Folding Machine Co., Cleveland, Ohio, a Corporation of Ohio. Filed May 16, 1924. Serial No. 713,718. 9 Claims. (Cl. 270—68.)



1. In mechanism of the class described, the combination with a sheet conveyor, of an associated set of folding and buckling rolls and their coacting folding plate, means for temporarily rendering inoperative said folding plate, a stacker mechanism adapted to receive the folded signatures from said folding appliance, and means for adjusting said stacker in alternative position to receive the signatures during the inoperative adjustment of the folding plate, substantially as set forth.

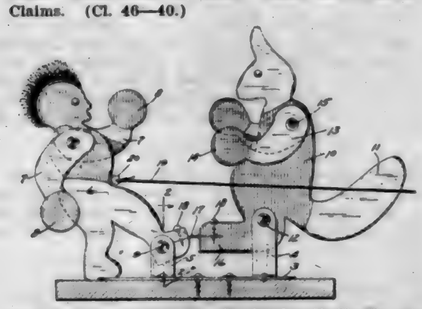
1,534,885. PAPER-FOLDING MACHINE. WALTER G. TRAUTMAN, Cleveland Heights, Ohio, assignor to The Cleveland Folding Machine Co., Cleveland, Ohio, a Corporation of Ohio. Filed May 16, 1924. Serial No. 713,719. 7 Claims. (Cl. 270—68.)

1. In a paper-folding machine, the combination with its frame provided with lateral supports of a plurality of folding plates slidably mounted respectively upon said supports, and deflector members adjustably positioned forwardly of said folding plates and adapted to be actuated into and out of operative position, substantially as set forth.



1,534,886. BURGLARPROOF DEVICE. HENRY H. ALLISON, Fairmont, Minn.; F. J. Brooker administrator of said Henry H. Allison, deceased. Filed July 30, 1921, Serial No. 488,603. Renewed Feb. 19, 1925. 3 Claims. (Cl. 70—50.)

3. In a burglar proof equipment, a closure device comprising a pair of barred gate members, each consisting of an upright member designed to be secured to a wall or



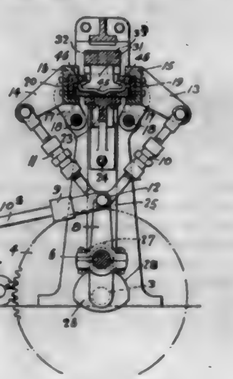
other support, a plurality of cross bars pivoted to said upright bar, a plurality of spaced upright bars pivoted to said cross bars, movable means for holding said gate in open collapsed position, means for causing releasing movement of said last means, and means for automatically latching said gates upon their movement to closed position.

1,534,887. FIGURE TOY. BURR BAKER, Minneapolis, Minn. Filed June 19, 1924. Serial No. 720,992. 2 Claims. (Cl. 46—40.)

1. A toy comprising a base, a yoke-like pedestal secured to and rising from said base, a toy punch bag loosely hung from the upper transverse portion of said pedestal, a toy figure pivoted to said base and having arms arranged to engage said punch bag, said toy figure having a forwardly projecting foot portion limiting the movement of the said figure toward the punch bag, and having a heavy outwardly projecting tail portion serving as a weight normally holding said figure retracted from the punch bag, and an operating cord attached to said toy figure.

1,534,888. FIGURE TOY. BURR BAKER, Minneapolis, Minn. Filed June 19, 1924. Serial No. 720,993. 4 Claims. (Cl. 46—40.)

1. A toy comprising a base having longitudinally spaced upstanding bearing brackets, toy figures pivoted to said brackets and having projecting foot portions, a spring link connecting the projecting foot portions of said figures and causing the same to simultaneously oscillate, and an operating cord connected to one of said figures, the center of gravity of said figures being outward of their pivotal supports, so that under the action of gravity the figures will separate.

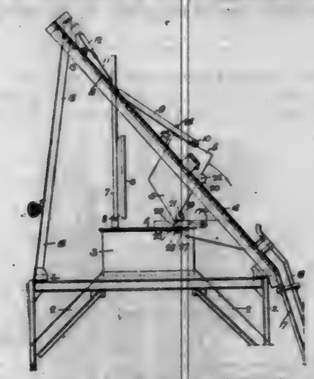


1,534,889. CHAIN FASTENER. JOSEPH B. BAMBENEK, Winona, Minn., assignor to Peerless Chain Co., Winona, Minn. Filed Oct. 15, 1923. Serial No. 668,594. 1 Claim. (Cl. 24—69.)

The combination with the end links of a chain, of a chain fastener comprising a shackle formed of sheet metal bent into flat U-shaped cross section, the flanges of said shackle at one end being pivotally attached to one of said links, and a lock lever working between the flanges of said shackle and pivoted thereto at the end opposite to which the said link is pivotally attached, the flanges of said shackle being formed between said pivotal connections with an intermediate link-receiving pocket and with pointed retaining lugs projecting inward from the end to which said lever is pivoted, and said

lever having reversely projecting hook lugs between said pivotal connections and spaced to afford a contracted entrance passage and a pocket adapted to receive the other or free chain link and to carry the same into the pocket of said shackle to a point inward of the lever pivot, the free end of the lever being curved in the same direction in which the hook lugs on said lever project, whereby when the fastener is applied to a chain said curved end will be turned into the pivotally attached lug.

1,534,890. BENDING MACHINE. FREDERICK W. BAUMANN, Pittsburgh, Pa., assignor to Oliver Iron & Steel Corporation, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 15, 1923. Serial No. 680,949. 4 Claims. (Cl. 153—33.)

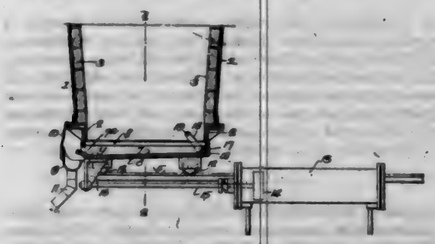


3. In a bending machine, the combination with a suitable frame, of a shaft, a vertically movable lower die, an upper die, dies adapted to bend metal around said upper die, a horizontally movable spring-actuated member carrying said upper die, and connections between said shaft and said member for withdrawing said upper die.

1,534,891. SKIP HOIST. ROBERT H. BEAUMONT, Radnor, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Jan. 15, 1923. Serial No. 612,673. 1 Claim. (Cl. 214—120.)

The combination in a skip hoist, of a frame; a hopper supported by the frame and having an opening at its upper end; a door closing the opening; a pivoted arm carrying the door; inclined rails extending over the opening in the hopper and other rails extending to the opening and at an angle to the first mentioned rails; a bucket having wheels adapted to travel on the rails, the rear wheels, when the bucket is above the hopper, traveling on the first mentioned rails and the front wheels traveling on the other rails; a bail pivoted to the

bottom of the bucket; means, on the bucket, arranged to engage the bail when the bucket is partially inverted;

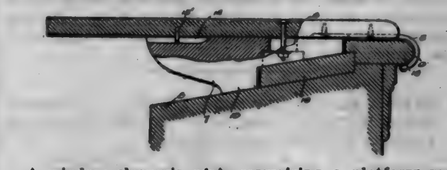


and buffers arranged in the path of the front wheels of the bucket, so that, when the bucket is inverted to discharge its load, the shock will be taken by the buffers.

1,534,892. SCREEN. ROBERT H. BEAUMONT, Philadelphia, Pa., assignor to R. H. Beaumont Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 1, 1923. Serial No. 635,953. 5 Claims. (Cl. 83—56.)

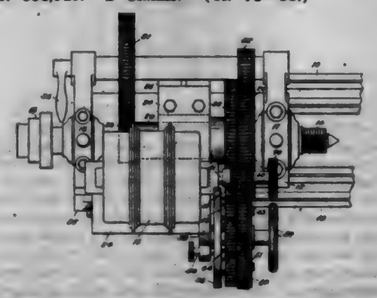
1. In combination, a screen member, a base member, means for resiliently mounting one of said members on the other comprising a bracket member rigidly secured to said screen member, a spring member having one end secured to said bracket member and extending toward said base member, said last-mentioned member having an upwardly extending flange portion, the remaining end of said spring member being secured to said flange portion, and adjusting means carried by said base member cooperating with said spring member, whereby the force of the spring member may be varied.

1,534,893. GATE FOR ASH HOPPERS. ROBERT H. BEAUMONT, Philadelphia, Pa., and HARVEY MARETTE, East Orange, N. J., assignors to Beaumont Manufacturing Company, Camden, N. J., a Corporation of New Jersey. Filed Apr. 30, 1924. Serial No. 710,195. 8 Claims. (Cl. 110—171.)



1. The combination of an ash hopper; a gate arranged to be located under the hopper; means for moving the gate into and out of position; a series of grate bars on the gate; and a fixed gutter at the front of the gate, said gate being open at the front end to allow the water that is used in quenching the ashes to pass from the gate into the gutter.

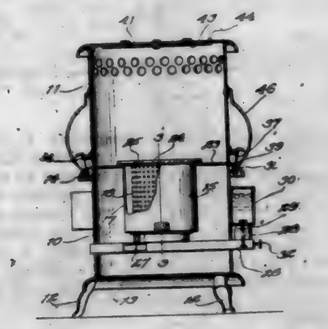
1,534,894. WHEELED MERRY-GO-ROUND. GLENN R. BEERS, Detroit, Mich. Filed May 2, 1924. Serial No. 710,633. 1 Claim. (Cl. 272—33.)



A wheeled merry-go-round comprising a pivotally mounted sweep, a support therefor, and wheels supporting the end portions of the sweep and adapted to travel in a circle on the ground or any other surface; the said sweep being provided at its ends with reduced portions carrying integral flush lateral projections extending in opposite directions therefrom and shaped to simulate kiddie car bodies, and the wheels being mounted in carriers pendent from said simulating portions, and the said lateral projections being provided with posts and handles on the posts.

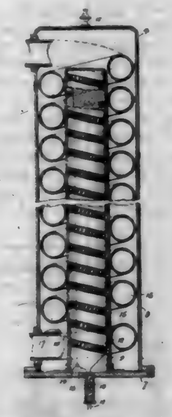
1,534,895. WINDOW-CLEANER'S SEAT. JAMES A. BLACKWOOD, Jersey City, N. J. Filed Aug. 14, 1923. Serial No. 657,392. 1 Claim. (Cl. 304—24.)

A window cleaner's seat, comprising a platform provided with hooks at its front end and on its underface intermediate of its ends with pins, two blocks on the underface of the platform, each block having the underface of its front end rabbeted and provided in the underface of the rabbeted portion with a longitudinally extending recess and a slot leading from the recess out through the top of the rabbeted portion, the rear ends of the blocks being provided in their upper faces with longitudinal grooves to receive the pins of the platform, bolts passing through the platform and the slots of the blocks into the recesses thereof and nuts on the bolts in said recesses.



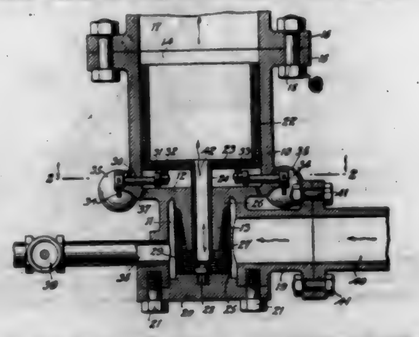
1,534,896. TURRET-TYPE TRANSMISSION. FRANK M. BLAIR, Newark, Ohio, assignor of one-half to Frederic M. Black, Newark, Ohio. Filed Apr. 18, 1922. Serial No. 554,940. 2 Claims. (Cl. 74—58.)

1. In a transmission, a drive member, a driven member, a pivotally mounted disk, a plurality of compound gears on said disk adapted to selectively engage said drive mem-



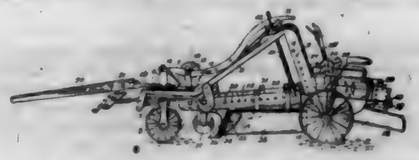
ber, a plurality of single gears each meshing with one of said compound gears, and means for moving said disk to bring a chosen single gear into mesh to drive said driven shaft.

1,534,897. STOVE. OSCAR E. BLOOMQUIST, Momence, Ill. Filed Apr. 8, 1924. Serial No. 705,094. 3 Claims. (Cl. 126—93.)



1. An oil stove comprising a casing including a lower section and an upper section, means detachably securing the sections together, a burner located within the lower section and extending through and forming part of the top of the latter, the top of said burner including spaced transverse ribs and a vertically disposed flange surrounding the ribs and means whereby oil may be supplied to the burner.

1,534,898. WATER HEATER. LUDWIG L. BLUEMLEIN, Hartsdale, N. Y. Filed May 13, 1924. Serial No. 713,010. 1 Claim. (Cl. 219—38.)

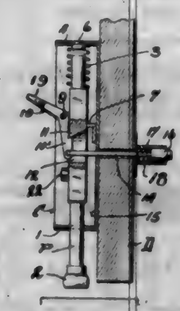


A water heater, comprising a container adapted to be filled with water, a heating coil arranged in the container, an inlet pipe extending from the lower end of said heating coil to a point exteriorly of the container, an outlet pipe extending from the upper end of said coil to a point exteriorly of the container, and heating means arranged within said coil, said heating means enclosing a tubular member closed at the upper end and rigidly secured at the lower end to the bottom of the container, the same being secured in such a manner as to be water-tight, a core snugly fitting in said tubular member and extending from top to bottom, said core having a spiral groove, a heating coil arranged in said groove, substantially air-tight means for guiding lead-in-wires to said coil, said core being provided with a longitudinal aperture for permitting one wire to extend to the top of the coil while the other extends to the bottom of the coil.

1,534,899. PRESSURE-REDUCING VALVE. JAMES E. BOGGIANO, Lake Placid Club, N. Y. Filed Apr. 19, 1924. Serial No. 707,717. 2 Claims. (Cl. 50—39.)

1. A fluid pressure reducing valve comprising a casing including upper and lower cylindrical sections, a horizontal partition wall therebetween having a central opening, said lower section having an inlet port communicating therewith, said upper section having an outlet port communicating therewith, a weighted member movable in the upper section, a central depending tubular stem extending through the partition, a closure cap removably carried by the lower end of the lower section, a stationary closure valve member carried by the closure cap and adapted to coact with the lower end of said tubular stem upon downward movement of the weighted member whereby to regulate the size of the passageway defined thereby, said closure valve member having a conical upper end whereby the lower end of the stem when completely closed thereby defines an annular shoulder against which the fluid pressure may act to lift the weighted member and the lower end of the stem from the seat and gravity actuated adjustable counterbalancing means operatively connected with the weighted member.

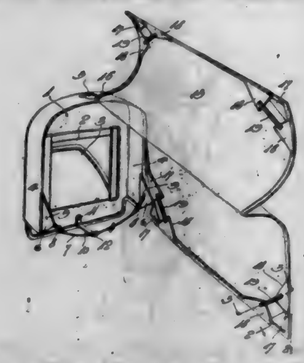
1,534,900. DITCHING AND GRADING MACHINE. CHARLES F. BOLIN, Ranchester, Wyo. Filed Jan. 30, 1923. Serial No. 615,908. 6 Claims. (Cl. 37—98.)



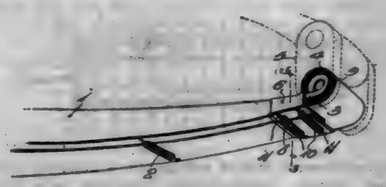
1. A ditching and grading machine which includes a frame, a plurality of ditching and grading elements, a plurality of supports for said elements, means associated with the supports and the elements for adjusting the elements on the supports in a variety of positions, said supports being pivoted to the frame, and means connected to the free ends of the supports for adjusting the angle of the supports with respect to the frame.

1,534,901. ORNAMENTAL CLOCK. ALPHONSE BONTHOUX, Duck Lake, Saskatchewan, Canada. Filed June 27, 1924. Serial No. 722,784. 9 Claims. (Cl. 58—8.)

1. An ornamental clock comprising a housing, a clock face and hands supported thereby, a floor within the housing, a bell mounted on the floor, a turntable mounted within the housing, a spring motor adapted to rotate said table, a plurality of images mounted on said table, each image including a pivoted arm and a hammer carried in said arm, and means adjacent said bell for causing said hammers to be dropped upon it as the images pass.



1,534,902. DOORCHECK. LOUIS A. BORNE, Milwaukee, Wis. Filed Oct. 25, 1924. Serial No. 745,936. 6 Claims. (Cl. 292—173.)



3. In combination with a door, a floor engaging plunger carried by one side thereof, means for urging the plunger into contact with the floor, a latch for holding the plunger in a raised or inoperative position, and means engaged with the latch and extending beyond the opposite side of the door for releasing the latch from the plunger, said means operating under impact to move the latch into inoperative position.

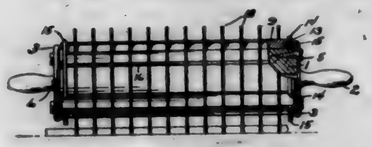
1,534,903. RADIATOR AND HOOD COVER FOR AUTOMOBILES. EMILE EDIDE BOUCHARD, Burlington, Vt. Filed Nov. 9, 1922. Serial No. 599,876. 10 Claims. (Cl. 257—132.)

1. A cover shaped to extend over an automobile hood and having pockets at its corners to receive the corners of the hood, flaps secured along one of their edges to the edges of said cover in spaced relation from the corners of said cover, said flaps extending inwardly across the back of said cover toward each other, and straps connecting said flaps.

1,534,904. VEHICLE-SPRING COVER. EMILE E. BOUCHARD, Burlington, Vt. Filed May 23, 1924. Serial No. 715,812. 3 Claims. (Cl. 267—37.)

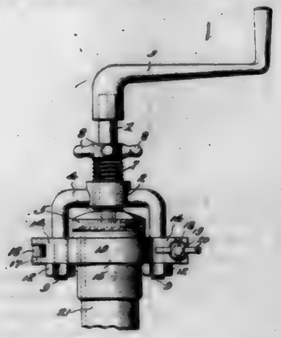
1. A spring cover sealing device comprising a flexible collar strip to surround a spring cover adjacent a knuckle of a spring covered thereby, a packing strip projecting from said collar strip to engage the outer side of the spring knuckle, and means for holding said collar strip around the spring cover.

1,534,905. LICENSE-PLATE HOLDER. CLIFFORD T. BOWEN, Wellington, and ASA C. BOWEN, Cleveland, Ohio. Filed Feb. 1, 1923. Serial No. 616,342. 2 Claims. (Cl. 40—125.)



1. A license plate holder, comprising a pair of clamping members, overturned edges on the clamping members receiving the edges of the license plate, tongues on the members at the back of the license plate, plates projecting at right angles from and integral with the tongues, said plates having aligned openings therein, a bolt or screw projected through said openings, a nut on one end of the bolt, an extension on one of said plates and extending in spaced and parallel relation to the tongue carrying the plate and between which and the tongue the said nut is located, whereby the nut is held against turning movement, and a supporting member clamped to the extension and adapted to be secured to a vehicle.

1,534,906. BOXING GLOVE. WILLIAM BRIDGEWATER, Doncaster, England. Filed Nov. 27, 1923. Serial No. 677,808. 2 Claims. (Cl. 2—18.)

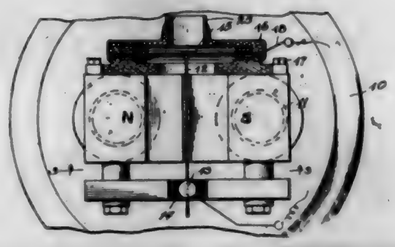


1. A boxing glove having a main stall to receive the fingers and palm of the hand, and a secondary and externally arranged stall to accommodate the thumb, the secondary stall being secured throughout its length to the main stall.

1,534,907. COMBINATION IMPLEMENT. JOHN P. BROECKER, Milwaukee, Wis. Filed Aug. 25, 1924. Serial No. 734,100. 1 Claim. (Cl. 107—50.)

In combination with a rolling pin, a plurality of ring-shaped cutters, longitudinally extending bars passing through the cutters and having notches therein for engaging parts of the cutters, a pair of rings engaging the ends of the bars for holding the same in engagement with the cutters and discs detachably connected with the ends of the rounded pin and engaging the rings for holding the cutter assembly on the pin.

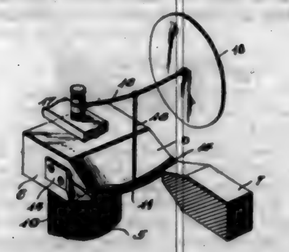
1,534,908. PIPE REAMER. DAVID H. BROWDER, Lawrenceville, Va. Filed Feb. 11, 1922. Serial No. 535,876. 2 Claims. (Cl. 77—73.5.)



1. A reamer comprising a pair of complementary clamp sections adapted to embrace one end of a tubular member to be reamed, means for locking the sections together on the tubular member, a U-shaped element having its ends passing transversely through the ends of one of the clamp sections, nuts threaded upon the ends of the U-shaped member, an adjusting member threaded through the crest of the U-shaped member and having a central bore, a shaft rotatable and slidable in the bore of the adjusting member, and a reamer element carried by the end of the shaft.

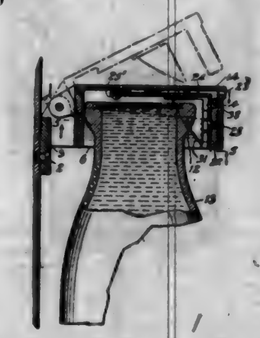
1,534,909. ELECTRICAL GAUGE. RALPH C. BROWNE, Salem, Mass. Filed Oct. 10, 1921. Serial No. 506,925. 2 Claims. (Cl. 177—351.)

1. In a measuring instrument of the character described, in combination, a casing adapted to be mounted upon a liquid receptacle, said casing having its upper face inclined at an acute angle with the horizontal and having a sight opening therein, a tube of a substantially U-shaped construction, communicating with the interior of said receptacle, said tube being mounted in said casing and disposed for a portion of its length at an angle substantially parallel to the upper face of said casing, a quantity of mercury in the bend of said tube responsive to pressure variations caused by the change of liquid level in said receptacle, said tube being positioned in the line of the opening of said casing to thereby permit the displacement of the mercury to be viewed through said sight opening and electrical means partly in said tube and dependent upon the displacement mercury in said tube to indicate at a distance the liquid level in said receptacle.



1,534,910. TELEPHONE RECEIVER. RALPH C. BROWNE, Salem, Mass. Filed Sept. 9, 1922. Serial No. 587,124. 14 Claims. (Cl. 179—114.)

3. A telephone receiver comprising pole pieces having a magnetic field therebetween, and a conductor extending through said field, one end of said conductor being positively clamped, the opposite end of said conductor being mechanically connected to said diaphragm, whereby vibration of said conductor is transmitted to the diaphragm at one end thereof.

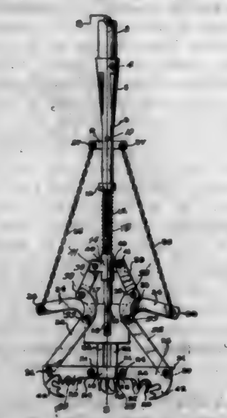


1,534,911. TELEPHONE RECEIVER. RALPH C. BROWNE, Salem, Mass. Filed Mar. 12, 1923. Serial No. 624,510. 14 Claims. (Cl. 179—108.)

1. A telephone receiver comprising two oppositely disposed pole pieces adapted to create a magnetic field therebetween, a single conductor within said field, a diaphragm, and means connecting said diaphragm with

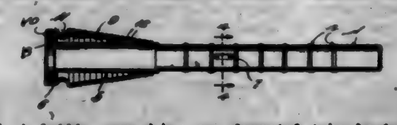
said conductor comprising a member centrally connected with the diaphragm and a member extending between said first member and said conductor.

1,534,912. MILK-BOTTLE SUPPORT AND LOCK. CHARLES BRUDERLEIN, New York, N. Y. Filed Mar. 20, 1924. Serial No. 700,642. 6 Claims. (Cl. 232—41.)



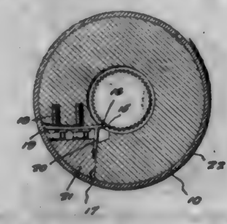
1. A milk bottle support and lock, comprising a substantially U-shaped support adapted to receive the neck of a milk bottle, a cover for said support hingedly connected therewith and locking means for locking the cover in a closed position, said locking means including a pair of catches, spring means for moving said catches to an unlocked position, and a cam adapted to be operated by a bottle arranged on said support for moving said catches against the action of said spring.

1,534,913. SERUM EXTRACTOR. EUGENE C. BUCK and CHARLES CHRISTIANSEN, Howard, S. Dak. Filed Nov. 10, 1923. Serial No. 674,006. 2 Claims. (Cl. 226—128.)



1. A fluid dispensing nozzle comprising a head having a bore formed into a valve seat and being flared, a sleeve carried by the head in continuation of the bore, a stem situated in the sleeve having a valve at one end and a cap loose upon the other end, the valve end of the stem extending into said bore to cause unseating of the valve upon introduction into and contact with said flared end of an instrument to be filled, a collar adjustably fitted into the end of the sleeve, and a spring on the stem pressing the cap against the collar and the valve against the seat.

1,534,914. GRAPPLE FOR SPEARING FISH. ANDREW CACCIAGATTI, Port Jervis, N. Y. Filed July 29, 1924. Serial No. 728,945. 7 Claims. (Cl. 43—5.)



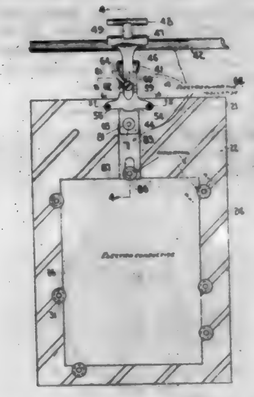
3. In a fish grapple, the combination with a frame provided with an extension having a handle, of a slide movable on the extension, grappling members operatively mounted on the frame, levers pivoted to the frame and provided with curved portions adjacent their pivots, links connecting the extremities of the curved portions and the slide, and actuating links operatively pivoted on the frame and having curved parts camming upon the first links whereby, upon operating the actuating links in directions toward the handle, the grappling members may open.

1,534,915. UNIVERSAL METAL BOBBIN. LOUIS ALEXANDER CADORET, Pawtucket, R. I. Filed May 19, 1924. Serial No. 714,457. 6 Claims. (Cl. 242—121.)

1. A bobbin comprising an elongated tube having a transverse flange at one end, a driving washer contacting with the outer side of said flange, and a hollow head secured around one end portion of the tube and surrounding said washer, said head having a portion engaging the outer side of the washer to secure the latter against the aforesaid flange.

1,534,916. COUPLING. EARL EDGAR CAMPBELL, Gillette, Wyo., assignor of one-half to Harper Lamar Jarvis, Gillette, Wyo. Filed Mar. 3, 1923. Serial No. 622,604. 1 Claim. (Cl. 279—100.)

A coupling of the character described comprising male and female members, respectively, the female member having a tapered threaded socket in one end thereof, said socket having a substantially cylindrical bottom

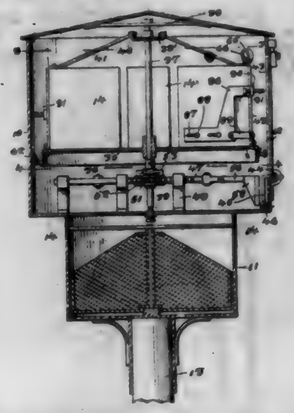


beyond and in registration with the tapered socket, the male member including an externally threaded tapered end adapted to be received and threaded within the socket in the female member, a substantially cylindrical portion provided on the end of the tapered portion of the male member and adapted to be received within the cylindrical portion in the female member, the male cylindrical portion having axially disposed ratchet teeth thereon, the female member having a V-shaped opening in the side thereof communicating with the cylindrical portion, an apertured L-shaped plate secured within the opening in the female member and resting upon two sides thereof, a dog carried by and extending from the inner end of the long arm of the plate and engaging the ratchet teeth on the cylindrical portion of the male member, a mixtilinear-shaped closure plug having a cut out portion in one side thereof to receive the short arm of the L-shaped plate and having its outer portion flush with the outer periphery of the female member, an annular grove provided in the female member in juxtaposition with the opening therein, and a split sleeve received within the groove to hold the closure plug within the opening in the female member.

1,534,917. ARMBAND, GARTER, AND THE LIKE. ERNEST CLARKE, Redditch, England. Filed Oct. 12, 1921. Serial No. 507,279. 2 Claims. (Cl. 241—5.)

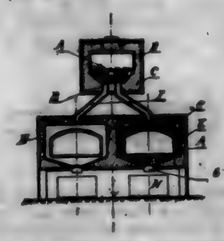
1. A supporter of the class described comprising a coiled metallic spring member of annular form, and a tubular covering fabric member of annular form and of limited expansibility in which the metallic annular spring member is loosely enclosed, said members being disconnected from each other and being therefore adapted for free relative longitudinal movement, and the metallic annular spring member being limited in its expansion by the limit of expansibility of the tubular annular covering member.

1,534,918. MOLD SUPPORT. LESLIE W. CLAYBOURN, Menasha, Wis. Filed Oct. 9, 1922. Serial No. 593,258. 39 Claims. (Cl. 204—5.)



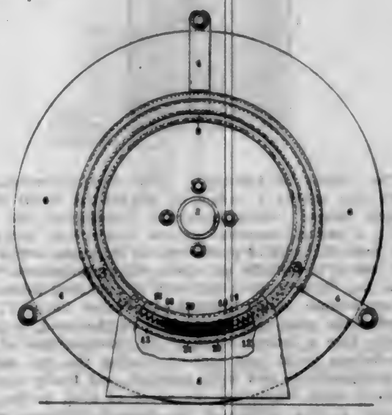
1. A mold support of the character described, comprising a plate having a surface which is electrically non-conducting and provided with recesses, and mold clamping means having attachment with the walls of said recesses.

1,534,919. SHOE TREAD. LEON B. CONANT, Cambridge, Mass., assignor to George W. Conant, Bridgewater, Mass. Filed Nov. 17, 1920, Serial No. 424,582. Renewed Aug. 29, 1924. 1 Claim. (Cl 36—35.)



A shoe tread composed of two parts, the upper being of fibrous material, and the lower of rubber composition, the upper part consisting of a plurality of substantially duplicate perforate layers containing projections integral with the rubber lower part, said perforations and the projections therein being staggered.

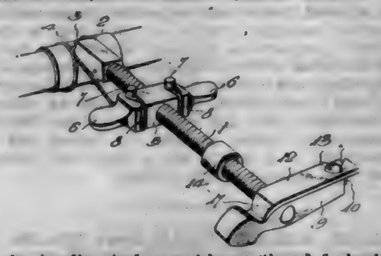
1,534,920. MAIL BOX. CHARLES N. COX, Oroville, Calif. Filed June 7, 1924. Serial No. 718,602. 9 Claims. (Cl. 232—24.)



1. A mail box having a door, a rotatable member arranged therein, a plurality of auxiliary boxes carried by said member, means for rotating said member and initially actuated upon the opening of said door, and means for checking the rotation of said member to bring any of said auxiliary boxes directly behind the door opening.

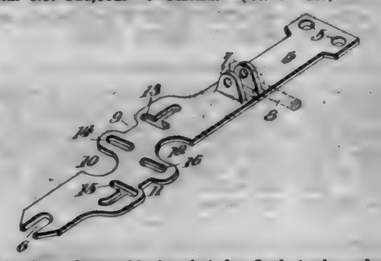
1,534,921. HEATING SYSTEM. SEVERINO CHRISTIANI, Milan, Italy. Filed July 31, 1922. Serial No. 578,824. 2 Claims. (Cl. 263—1.)

1. In a heating system, the combination of a chamber adapted to receive a mass of granular refractory material and provided with a casing of heat-insulating material; and a chamber to receive articles to be heated, the last-named chamber having a compartment entirely surrounding it but devoid of communication with it, a heat-insulating casing enclosing said compartment, means for heating the first-named chamber, and a pipe leading from the interior of said first-named chamber directly into the compartment surrounding the last-named chamber to deliver the refractory material in a heated state into said compartment to heat the contents of said last-named chamber.



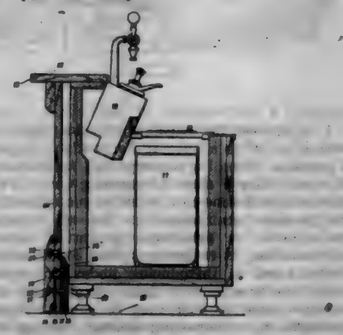
1,534,922. MUD GUARD FOR MOTOR VEHICLES. EDOUARD FERNAND DAUTEIL, St.-Denis, France. Filed Dec. 21, 1923. Serial No. 682,041. 4 Claims. (Cl. 280—157.)

2. A mud guard for wheels of motor and other vehicles comprising in combination: supports secured on the axle,—arms secured on these supports,—a collar rigid with these arms and concentric with the axis of the wheel,—a chambered crown mounted on the said collar and capable of rotating on the latter,—a protecting band carried by the said crown,—members adapted to connect in the transverse direction the fixed collar and the movable crown and to prevent the latter and the protecting band it carries from accidentally coming off the said collar,—and means for bringing back the protecting band to normal position after displacement,—said means comprising abutments in the chamber of the crown, an abutment on the collar between the abutments of the crown, a coil spring in the chamber of the crown, and buffers at the ends of the spring and bearing on the said abutments.



4. A mud guard for the wheel of motor and other vehicles comprising in combination: supports secured on the axle,—arms secured on these supports,—a collar rigid with these arms and concentric with the axis of the wheel,—a crown mounted on the said collar and capable of rotating on the latter,—a protecting band carried by the said crown,—members adapted to connect in the transverse direction the fixed collar and the movable crown and to prevent the latter and the protecting band it carries from accidentally coming off the said collar,—a circular chamber formed in the movable crown,—abutments secured in the latter,—an abutment rigid with the fixed collar and arranged between the abutments of the movable crown,—a coil spring arranged in the circular chamber,—buffers at the ends of this spring and taking a bearing on the opposed faces of the abutments of the movable crown and fixed collar,—metallic buffers in the protecting band and projecting on the outer face of the latter,—ribs on the said buffers, these ribs projecting on the inner face of the said protecting band and being adapted to come in engagement with the rim when this band is pressed between the rim and the carbstone of a pavement.

1,534,923. COMBINATION TOOL. WILLIAM M. DAVIDSON, Eastview, Ky., assignor of one-half to Marshall Lee Johnson, Eastview, Ky. Filed Jan. 17, 1924. Serial No. 686,842. 1 Claim. (Cl. 81—9.3.)



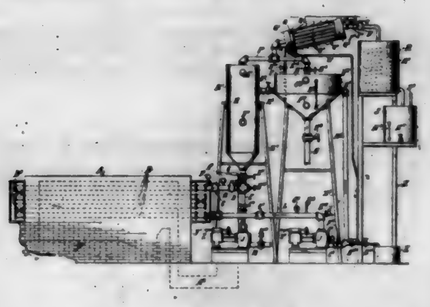
A wire banding tool comprising a threaded shank, a head swiveled on one end of said shank and having in its front end a transverse groove to receive the connecting portion of a U-shaped piece of wire, and a wire-stretching block threaded on said shank and having a pair of wire-anchoring studs at one side, the opposite side and the rear side of said block having transverse V-shaped wire-holding grooves in which the end portions of the wire are disposed before engaging them with said studs.

1,534,924. BRACKET FOR FLUSH TANKS. EDWARD L. DELANY, Brooklyn, N. Y. Filed Mar. 17, 1922. Serial No. 544,001. 6 Claims. (Cl. 4—68.)

1. An interchangeable bracket for flush tanks, adapted for attachment to the upper edge of the tank adjacent either end and adapted to support a float valve, and a flush valve operating lever.

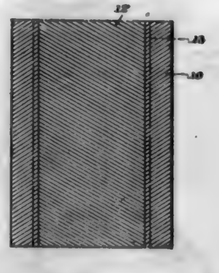
1,534,925. WATERPROOF SHOE FOR USE IN COUNTER CONSTRUCTION. JOSEPH K. DEMETER, New York, N. Y. Filed Mar. 16, 1923. Serial No. 625,682. 7 Claims. (Cl. 211—11.)

1. A counter construction including spaced face and inner plates, a supporting block disposed in the space between said plates and of less height than the same,



a waterproofing member interposed between said block and inner plate and extending above the upper end of said block, a second waterproofing member having a main portion interposed between said face plate and the adjacent face of said supporting block and having laterally extending portions one of which is disposed between a support and the lower edge of said face plate and the other of which engages the upper edge of said supporting block and the first-named waterproofing member, said other portion combining with the inner face of said face plate and a portion of the first-named waterproofing member to form the bottom and sides, respectively, of a groove, and a front wall having its lower edge disposed in said groove.

1,534,926. NEEDLE. JOHN E. DOBLE, Milo, Me. Filed July 16, 1923. Serial No. 651,864. 4 Claims. (Cl. 117—6.)



1. A needle comprising a shank threaded at one end, a pair of gripping jaws pivotally secured to the opposite end of the shank, a clamping sleeve movable longitudinally of the shank and engaging the gripping jaws to hold the latter in position, means threadedly engaging the shank and bearing upon the clamping sleeve, whereby the latter may be adjusted and a penetrating member at one end of the shank engaging means.

1,534,927. METHOD FOR TREATING HYDROCARBON OILS. CARBON P. DUBBS, Wilmette, Ill., assignor to The Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Continuation of application Serial No. 206,206, filed Dec. 21, 1917. This application filed Oct. 20, 1922. Serial No. 595,743. 15 Claims. (Cl. 196—48.)

1. A process for cracking oil, comprising subjecting a stream of oil in a tube to a cracking temperature under a pressure exceeding atmospheric, in discharging the oil into an enlarged zone, in stepping down the pressure on the oil in said zone to a pressure substantially lower than the pressure maintained on the oil stream but above atmospheric, in subjecting generated vapors to reflux condensation, in returning reflux condensate to said enlarged zone, in introducing under an applied pressure reflux condensate and light unvaporized oil from the enlarged zone to said tube to pass in a stream therethrough, in withdrawing during the operation of the system heavy carbon containing residuum from the enlarged zone, and in supplying charging stock to the system during operation.

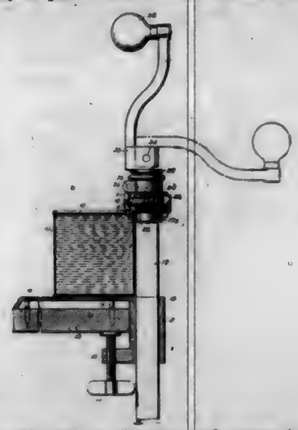
1,534,928. METHOD OF COATING AND ALLOYING METALS. JAMES J. DUGAN, Wilmington, Del. Filed Oct. 2, 1920. Serial No. 414,197. 1 Claim. (Cl. 22—203.)

The method of forming a metal ingot comprising a steel core having a casing of non-ferrous metal weld-united thereto, which comprises introducing into the mold, a casing composed of the non-ferrous metal in the form of a solid of predetermined thickness, and while this casing is initially at substantially atmospheric temperature, filling said casing with molten steel heated to a temperature of not substantially below 2800° F., by pouring the steel into said casing in the mold, to completely fuse a desired depth of the inner surface of the non-ferrous metal, and thereby causing the two metals to interpenetrate and weld together, and finally cooling product while regulating the speed of such cooling, to produce a weld portion of the desired thickness, while preventing iron from alloying with the external portions of the non-ferrous metal.

1,534,929. MANUFACTURE OF CHEWING GUM. HENRY V. DUNHAM, Mount Vernon, N. Y. Filed July 11, 1922. Serial No. 574,293. 4 Claims. (Cl. 99—16.)

1. A chewing gum containing hydrogenated oil of a melting point not substantially below 52° C., and rubber.

1,534,930. TREATMENT OF INDIA RUBBER FOR USE IN CHEWING GUM. HENRY V. DUNHAM, Mount Vernon, N. Y. Filed Dec. 29, 1922. Serial No. 609,750. 3 Claims. (Cl. 99—16.)



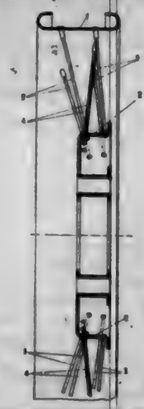
3. A process of making a chewing-gum ingredient from unvulcanized rubber which comprises heating the rubber with a saponifiable oleaginous material to a temperature above 100° C., and below 200° C., for several hours, thereafter saponifying at least a substantial part of such oil, fat or wax and washing the product.

1,534,931. PROCESS OF MAKING CHEWING-GUM BASE. HENRY V. DUNHAM, Mount Vernon, N. Y. Filed Jan. 16, 1923. Serial No. 613,044. 2 Claims. (Cl. 99—16.)

1. A process for preserving the masticatory properties of rubber gums high in resins by heating with about 5 to 10% of an oleaginous material, which is a product of life processes and not deleterious to health, at a temperature of about 115 to 130° C.

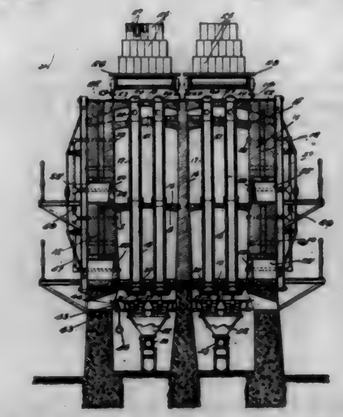
1,534,932. CAN-OPENING DEVICE. HENRY J. EDLUND, Burlington, Vt. Filed Dec. 19, 1922. Serial No. 607,849. 8 Claims. (Cl. 30—3.)

1. In a device of the character described, a support, a friction rotary member mounted on the support, a vertically movable blade positioned adjacent the periphery of the rotary member, means for moving the blade downwardly to puncture the head of a can at a distance



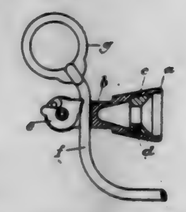
from the side wall of the can, and means to urge the blade toward said side wall and thereby force the can into engagement with the rotary member.

1,534,933. SINGLE-TOOTH WHEEL FOR COUNTING APPARATUS. HARRY EWALD and OTTO WERNECKE, Braunschweig, Germany, assignors to Grimme, Natalis & Co., Aktiengesellschaft, Braunschweig, Germany, a Corporation of Germany. Filed Oct. 29, 1924. Serial No. 746,597. 2 Claims. (Cl. 74—41.)



1. A single tooth wheel for counting mechanisms such as calculating machines, comprising a sleeve formed at corresponding parts of its end faces with notches, and a U-shaped member passed with its base portion through the bore of the sleeve and with its shank portions fitting in said notches, one of said shanks projecting beyond the outer circumference of the sleeve.

1,534,934. WIRE-SPOKE WHEEL. EDOARDO FERRARINO, Turin, Italy. Filed July 7, 1924. Serial No. 724,718. 4 Claims. (Cl. 301—56.)

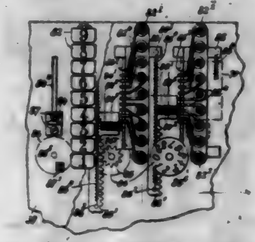


2. A wire spoke wheel comprising a rim member, a hub member having a smaller extension than said rim member in the wheel axis direction, and three rows of spokes interconnecting said hub and rim members, the distance in the wheel axis direction between the lines where said spokes are anchored on the rim being larger than the distance in the similar direction between the lines where said spokes are anchored on the hub.

1,534,935. VERTICAL-RETORT SMELTING FURNACE. FERDINAND FISCHTL, Cherryvale, Kans., and WILLIAM KAPPELLMANN, St. Francois, Mo. Filed Feb. 18, 1924. Serial No. 693,663. 5 Claims. (Cl. 263—38.)

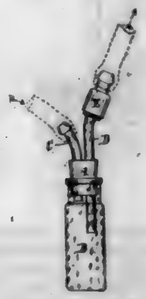
1. In a smelting furnace, vertical retorts of sectional formation, one section being disposed above and forming a continuation of the other section and means for supporting said sections, said means including a horizontally disposed arch having openings therein of larger diameter than the outside diameter of the retorts and spacing elements between the retorts and walls of the openings to provide passages.

1,534,936. CONFINING AND RESTRAINING DEVICE. EUGÈNE EDMOND FISCHBACH, Hanoi, Tonkin, Indo-China. Filed Aug. 10, 1922. Serial No. 581,034. 8 Claims. (Cl. 70—24.)



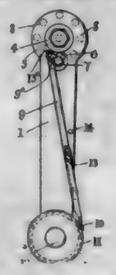
3. A manacle, comprising in combination a member having a punch-shaped portion, catch-springs carried by said punch-shaped portion, a fixed ring on the latter surrounding the intermediate portions of said springs, a member having a funnel-shaped portion to receive said punch-shaped portion, suitable lugs provided within said funnel-shaped portion and engageable by said catch-springs whereby the punch-shaped portion may be securely retained within said funnel-shaped portion, suitable apertures in said funnel-shaped portion, and a suitable device adapted to be inserted through said apertures to disengage the catch-springs if desired, an extension on each member, a flexible connection extending transversely through each extension, and means carried by each extension for preventing said flexible connection from moving in one direction, substantially as set forth.

1,534,937. LUMINOUS DEVICE. HAMILTON FOLEY, Pittsburgh, Pa., assignor to Radium Dial Company, Pittsburgh, Pa. Filed Jan. 24, 1920. Serial No. 353,788. 5 Claims. (Cl. 240—1.)



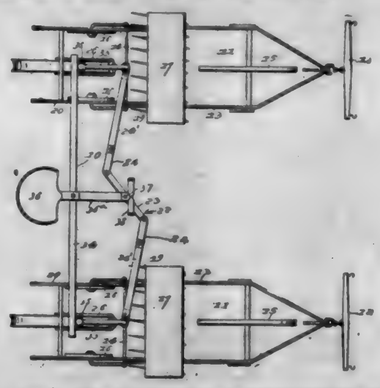
1. A luminous device comprising a tube having a lens integral with one end and an integral closure at the other end, said tube containing self-luminous material behind the lens.

1,534,938. KEYBOARD OF CALCULATING MACHINES. LOUIS FOURNIER and GÉRARD MANG, Paris, France; said Fournier assignor to said Mang. Original application filed Sept. 2, 1919, Serial No. 321,045. Divided and this application filed Nov. 25, 1921. Serial No. 517,614. 1 Claim. (Cl. 235—75.)



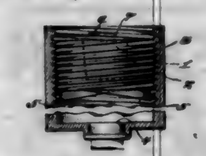
A key-board for mechanically operated calculating machines comprising a number of keys adapted to be depressed, a spur on each key extending over the key of the next lower numerical value and adapted to engage therewith when depressed, horns fitted on said keys and obstructing the passage of a sliding pinion when in the raised position and allowing it to pass when depressed.

1,534,939. MILK-SAMPLE-OBTAINING MEANS FOR USE IN VACUUM MILKING MACHINERY. JAMES WILFRED FUGE, Featherston, New Zealand, assignor to The Fuge New Way Milking Machine and Tester Company Limited, Featherston, New Zealand. Filed Oct. 20, 1923. Serial No. 669,852. 1 Claim. (Cl. 31—58.)



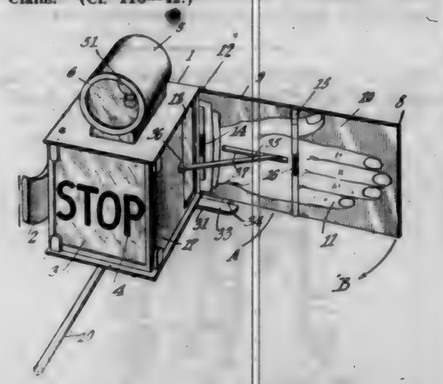
In a vacuum operated liquid measuring and dispensing installation, the combination of a transparent bottle for holding a sample of the liquid; a plug stopper hermetically sealing the mouth thereof and having two parallel vertical openings formed through it; a pair of tubes extending through said openings, one tube being fixed and emerging just beneath the stopper, and the other tube being movable endwise to vary the distance between its lower end and the bottom of the bottle; a pipe section, through which the liquid is supplied, connected to the outer end of the fixed tube to discharge the liquid into the bottle; and a second pipe section connected to the outer end of the movable tube and leading therefrom to a source of vacuum to withdraw the liquid from the bottle, whereby the adjusted position of the said lower end of the movable tube with relation to the bottle bottom will determine the point at which the vacuum is automatically interrupted and the quantity of liquid left in the bottle.

1,534,940. STARTING HANDLE FOR INTERNAL-COMBUSTION ENGINES. WILFRED GANNON London, England, assignor to WILFRED RICHARD TIDMARSH, London, England. Filed July 21, 1924. Serial No. 727,312. 1 Claim. (Cl. 123—185.)



A starting handle for internal combustion engines, comprising a crank adapted to be freely mounted at one end on a crank shaft, a disc fixed to the crank shaft at one side of the crank and having a circular row of depressions in one side opposite the crank, a threaded pin mounted in the crank and adapted to seat at its inner end in said depressions one at a time, a radial arm carried on the other end of the pin, a connecting rod pivoted to the outer end of the radial arm and extending toward the other end of the crank, a handle rotatably mounted on the other end of the crank, a ratchet wheel carried by the handle, a ratchet mounted on the outer end of said rod to engage the ratchet wheel, and a spring conected betwen said rod and the crank for normally urging the rod to move in a direction to lock said pin in the adjacent depression in said disc, the backward turning of said handle being adapted to interlock the ratchet wheel and ratchet and draw said rod against the spring to release the pin.

1,534,941. GRAIN-DRILL ATTACHMENT. WILLIAM W. GINN, Imperial, Nebr. Filed Feb. 10, 1922. Serial No. 535,560. 1 Claim. (Cl. 111—54.)

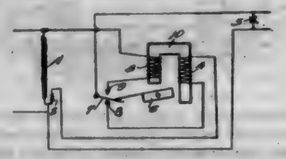


A drill coupling structure comprising uprights mounted upon the drills, supporting wheels castered to the uprights, crank arms pivoted at the upper ends of the uprights, a transverse bar pivotally connected with the crank arms, a seat standard mounted at the intermediate portion of the transverse bar, a link pivoted to the seat standard and outer links pivoted at their inner ends to the ends of the first mentioned link and pivoted at their outer ends to the uprights and crank arms.

1,534,942. GREASE-CUP PLUG. EDMUND F. GOBATTI, Pueblo, Colo. Filed Dec. 21, 1923. Serial No. 683,776. 1 Claim. (Cl. 184—48.)

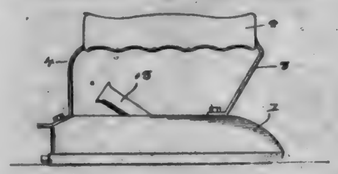
The combination with a grease cup having internal threads and a central outlet opening in its bottom, of an exteriorly threaded plug within the cup and engaging the internal threads thereof, the flat bottom face of the plug having cam sector elements, which have adjacent shoulders, the sector elements being of a length along said shoulders shorter than the diameter of the plug, whereby the shoulders edgewise overlap through the center and across the diameter of said bottom face, said sector elements having their outer margins adjacent to and concentric with the threaded periphery of the plug and provided with uncurved bottom faces, the entire surfaces of which, from the diametrically opposite corners of the sectors at the remote ends of the shoulders, are inclined in directions parallel with the shoulders and toward and terminating into the bottom face of the plug, whereby as the plug reaches the bottom of the cup, the grease will smear toward and through said outlet opening.

1,534,943. VEHICLE SIGNAL. JOHN GONZALES, Tampa, Fla. Filed Feb. 13, 1924. Serial No. 692,566. 1 Claim. (Cl. 116—42.)



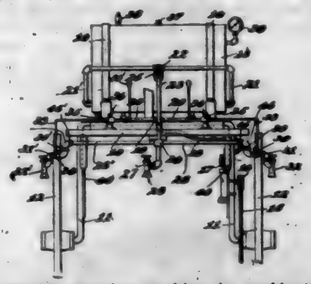
In a device of the class described, a casing having a signal which is visible when the casing is illuminated, a combined shield and sign including hingedly connected inner and outer members, the inner member being hinged to the casing and being adapted to extend along one side of the casing when the shield and sign is closed, and the outer member being adapted to cover the signal when the shield and sign is closed, spring means for swinging the shield and sign to a closed position with respect to the casing, and means for swinging the shield and sign to an open outstanding position with respect to the casing, the means for swinging the shield and sign to an open position embodying a radius arm mounted to swing on the casing, a lever connected with the radius arm and cooperating with the inner member of the shield and sign, the lever being fulcrumed on the casing, and a connection between the outer member of the shield and sign and the casing, the connection constituting means for swinging the outer member of the shield and sign to open position when the inner member of the shield and sign is swung to an open position.

1,534,944. SNAP. FREDERICK G. HAAGE, Clifton, N. J. Filed May 15, 1924. Serial No. 713,535. 2 Claims. (Cl. 24—77.)



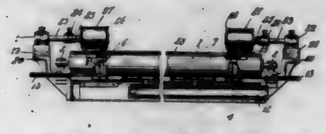
1. A snap for belts, bands and the like, comprising a base having a bar for receiving a strap, a pair of spaced resilient hook members, each of said hook members having a notch, and a co-acting movable part formed with openings through which said strap may be threaded, said part being of a width to fit snugly within said resilient hooks, said part also being formed with projections adapted to project into said notches whereby independent longitudinal movement cannot take place.

1,534,945. ELECTRIC RELAY. FOLKE BJOR LORENS HAIN, Malmo, Sweden. Filed Aug. 9, 1922. Serial No. 580,792. 2 Claims. (Cl. 175—320).



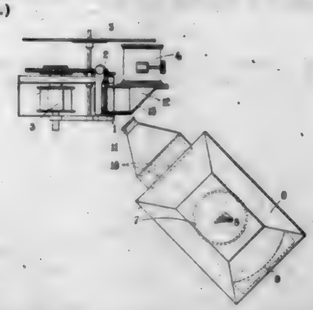
1. A system for electric circuit control comprising a relay provided with two windings, a main circuit and an auxiliary circuit, contact making means adapted to interpose the said windings alternatively between one pole of the supply circuit to be controlled and the one pole of the main line and the one pole of the auxiliary circuit respectively, connections between the other pole of the main line and of the auxiliary circuit respectively and the other pole of the supply circuit, and means for interrupting the said connections.

1,534,946. IRON. ROY F. HALL, Harrisburg, Ill. Filed July 31, 1922, Serial No. 578,746. Renewed Dec. 12, 1924. 1 Claim. (Cl. 219—25.)



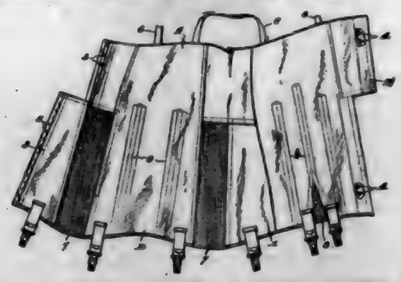
An iron of the class described comprising a body, a pair of heating elements in the body spaced apart, means for electrically connecting together the front ends of the elements, a terminal connected with the rear end of each element, a strip connected with the central part of one element and a terminal connected with said strip.

1,534,947. MACHINE FOR DESTROYING BOLL WEEVILS. LUDLOW B. HALLMAN, Dothan, Ala. Filed Oct. 8, 1923. Serial No. 667,390. 1 Claim. (Cl. 299—40.)



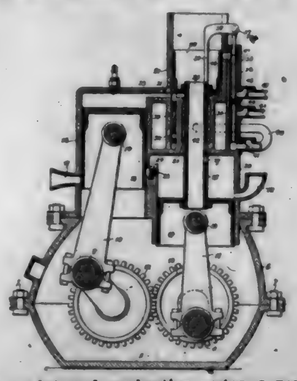
In a portable spraying machine, in combination, a vehicle frame, a liquid reservoir secured to the frame, a seat on said frame, a distributor pipe connected to the reservoir, branch pipes at the ends of said distributor pipe, a pair of swiveled connections between each branch pipe and the distributor pipe, levers connected to the branch pipes for swinging said branch pipes in horizontal and vertical directions, said levers having upwardly bent portions extending to points adjacent the seat.

1,534,948. FOURDRINIER TYPE OF PAPER-MAKING MACHINE. JAMES E. MCLAUGHLIN and JOSEPH OVIDE HAMEL, Grand'mere, Quebec, Canada. Filed Sept. 6, 1919, Serial No. 322,149. Renewed Sept. 27, 1924. 5 Claims. (Cl. 92—51.)



1. The combination with a Fourdrinier type of paper making machines having rollers and pulp screen, of a suction box, water sealing heads arranged adjacent the ends of said rollers, means for causing the screen to adhere to the top of the sealing heads for the extraction of water from the pulp and said heads adapted for hermetically sealing the spaces between said rollers.

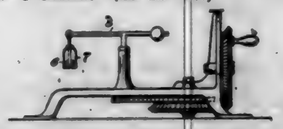
1,534,949. CINEMATOGRAPHIC APPARATUS. MARTIN ALBERT JOHN HARPER, London, England. Filed Aug. 10, 1921. Serial No. 491,087. 3 Claims. (Cl. 88—24.)



1. In a cinematographic apparatus of the character described, the combination with means for feeding an opaque film and a projecting lens, of an optical system embodying therein a lamp having a plurality of spaced filaments, a condenser, a bi-convex lens positioned at about the focal point of the condenser and between said condenser and the feeding means for the film the relative position of said bi-convex lens and said feeding means being such as to bring a film upon said means where it will not be at the image point of said lens, and a spherical reflector positioned with relation to said lamp on the side thereof opposite to said condenser and so adjusted as to reflect the image of the filaments of the lamp through the spaces between or about said filaments, whereby a uniform patch of light free from the image of said filaments is directed against the opaque film.

1,534,950. COMBINATION CORSET AND BRASSIÈRE. MAE HERNANDEZ, Brooklyn, N. Y. Filed Mar. 5, 1924. Serial No. 697,080. 1 Claim. (Cl. 2—30.)

A wrap around combination corset and brassière embodied in a one piece garment, the brassière being inextensible, and the line of juncture of the meeting ends thereof being at the axillary line and out of alinement with the meeting ends of the corset portion, said line of juncture extending from the top edge along the side edge to the waist line; then along the waist line, thence along the front portion to the lower end of the garment, said front portion being inelastic, a triangular gusset of elastic fabric inserted in the center of the lower front portion of the corset portion, and pendent stocking supporters attached to said inelastic portion adjacent the opposite side edges of the said triangular insert.



1,534,951. INTERNAL-COMBUSTION MOTOR. FERDINAND HIEMER, Plainfield, N. J. Filed Mar. 5, 1924. Serial No. 697,093. 5 Claims. (Cl. 123—69.)

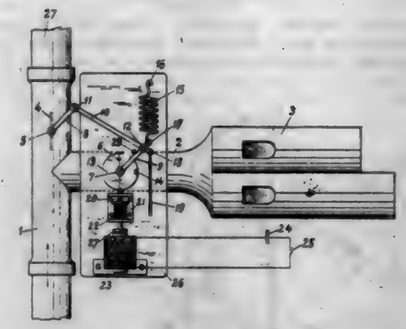
2. In an internal combustion motor, a power cylinder, an air-compressing cylinder adjacent thereto and having communication therewith, a combustible-fuel-compressing cylinder adjacent the power cylinder and having communication therewith, a piston in each of said cylinders, means for driving the pistons in the compressed-air-cylinder and the compressed-fuel-cylinder simultaneously,

and means carried by the piston in the compressed fuel-cylinder for cutting off communication between the compressed fuel-cylinder and the power cylinder upon movement of the piston in the compressed-fuel-cylinder in one direction, said means comprising a member extending from said piston and having a plurality of ports therein adapted to alternately register with a passage leading to the power cylinder.

1,534,952. CASTING OF DENTURES IN METAL. HERBERT LESLIE HOBDAY and FREDERICK WM. NUNN, Melbourne, Victoria, Australia, assignors to Nunnday Proprietary Limited, Melbourne, Australia, an Australian Company. Filed July 24, 1923. Serial No. 653,531. 3 Claims. (Cl. 22—97.)

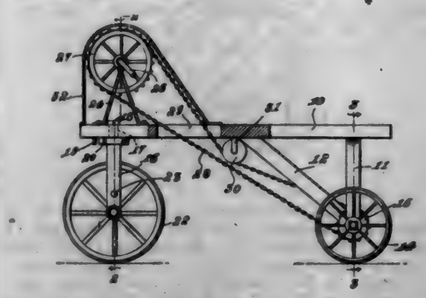
1. In the manufacture of metal dentures, a mould investment, a reducing cup for the metal arranged on and incorporated with the moulding investment, said cup having partial overhanging roof on one side and a flange depending from the inner edge of said roof, and also having means for conveying the molten metal from the cup to the mould.

1,533,953. ELECTRIC PAINT AND VARNISH SCRAPER. CHARLES J. HOHMAN, Rockaway Park, N. Y. Filed Oct. 31, 1923. Serial No. 672,012. 5 Claims. (Cl. 219—29.)



1. A paint and varnish scraper comprising a blade carrying a handle, and an electric heater pivotally supported from the blade in advance thereof and movable into a selected position.

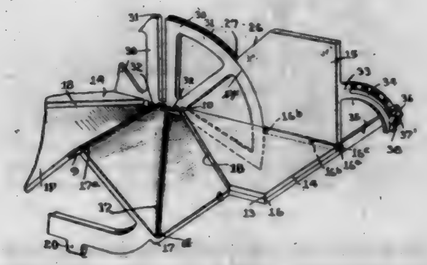
1,534,954. GAFF HOOK. EMIL T. HOLTS, Shell Lake, Wis. Filed Oct. 4, 1923. Serial No. 666,583. 3 Claims. (Cl. 43—5.)



1. A device of the class described, comprising a main shank, a rod movable longitudinally thereof, a plurality of jaws, resilient devices for pivotally mounting the jaws and permitting them to swing toward and away from each other, and a combined spear and trigger connected with the rod and jaws and moving said jaws about their pivotal points, the ends of the jaw and spear being in opposed relation and approximately in alinement with the rod, when the jaws are closed.

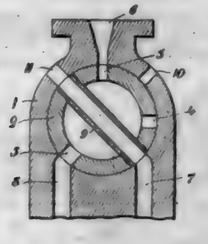
1,534,955. ALARM DEVICE FOR AUTOMOBILES. HENRY HORAK and KAREL HOLOUBEK, New York, N. Y. Filed Dec. 5, 1921. Serial No. 519,956. 1 Claim. (Cl. 277—1.)

In a device of the class described, the combination with a gas exhaust pipe having a disk-shaped gate pivoted therein and a branch from said pipe having a similar gate pivoted therein, of a rocker arm connected with each gate for opening and closing the same, a lever operatively connected to each of said rocker arms, a spiral spring adapted to normally maintain the gate in the exhaust pipe in open position and the gate in the branch pipe in closed position, a disc secured to the shaft mounting the gate in the branch pipe, said disc formed with a notch therein, said disc and said gate in the branch pipe being disposed at right angles to each other, a plunger adapted to normally press against the periphery of said disc, flexible means for rocking said rocker arms against the action of said spiral spring to open the gate in said branch pipe and close the gate in said exhaust pipe, and simultaneously bring the notch in said disc into engagement with said plunger whereby said gates are held in adjusted position and electro-magnetic means for disengaging said plunger from the notch in said disc.



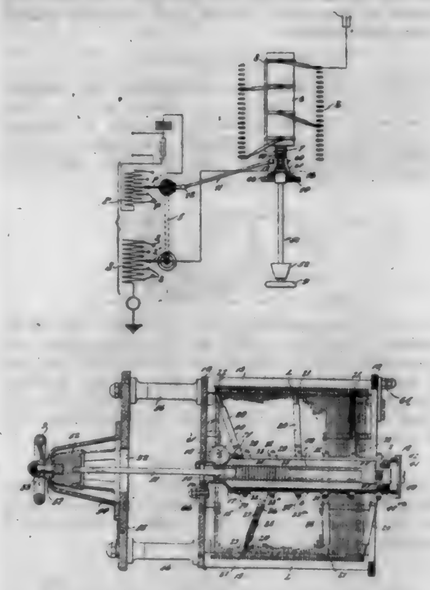
1,534,956. TOY VEHICLE. JOHN R. HUGHES, Hoboken, N. J. Filed July 23, 1924. Serial No. 727,787. 1 Claim. (Cl. 208—32.)

A device of the character described comprising a platform, a plurality of brackets depending from the rear ends thereof, an axle journaled through said brackets, ground engaging wheels on said axle, one wheel being fast and the other loose, a sprocket on the axle, a dirigible front wheel, brackets rising from the forward



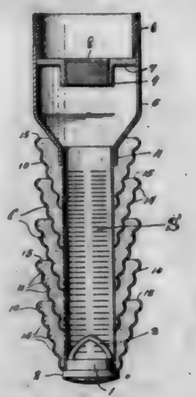
ends of the platform, a shaft journaled through the last named brackets and having hand cranks thereon, a sprocket on the shaft, a chain trained about both sprockets, the platform being formed with an opening for the accommodation of the chain, a guide roller depending from the platform and engaging the upper stretch of the chain, and a housing secured upon the top of the forward portion of the platform and enclosing the sprocket at the forward end and also enclosing that portion of the chain extending above the platform.

1,534,957. MITER MACHINE. ELMER D. HURLEY, Sweetwater, Tex. Filed May 29, 1924. Serial No. 716,749. 4 Claims. (Cl. 143—88.)



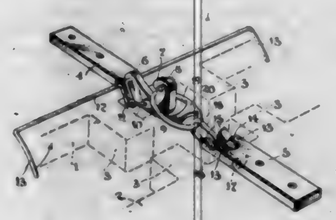
1. A miter machine including a frame, a work support comprising a main base and a sub-base adjustably mounted on the frame and one on the other respectively for adjusting the work universally to provide the work with miters constructed on one or more angles, and saw guides for guiding a saw blade, the sub-base being provided with V-shaped depressions one on each side of the fulcrum of the sub-base to afford means to make room for the cutting edge of a saw blade to permit the saw teeth to pass entirely through the work to be mitred.

1,534,958. MULTIPLE-PATH DEVICE. GUSTAF HJALMAR HUSS, Stockholm, Sweden, assignor to Bergsunds Mekaniska Verkstads Aktiebolag, Stockholm, Sweden. Filed Nov. 10, 1921. Serial No. 514,884. 1 Claim. (Cl. 251—104.)



A multiple-way device having a cock adapted to be rotated within a casing, the said cock consisting of a hollow sleeve forming the inlet passage of the cock and adapted to be brought into communication with separate passages in the casing of the cock, through openings provided in the wall of the said sleeve, while the outlet passage of the cock is formed by a pipe extending preferably diametrically through the hollow of the cock, the two open ends of the said pipe being also adapted alternately to be brought into communication with separate passages in the casing of the cock when the cock is rotated.

1,534,959. ELECTRICAL COIL APPARATUS. LESTER L. ISRAEL, now by judicial change of name Lester L. Jones, Oradell, N. J., assignor to Emil J. Simon, New York, N. Y. Filed Aug. 5, 1919, Serial No. 315,886. Renewed Apr. 13, 1922. 11 Claims. (Cl. 201—48.)

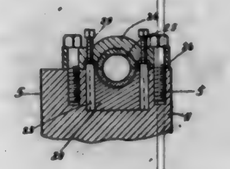


1. Electrical-coil adjustment apparatus, comprising a coil, a plurality of movable contacts engaging the coil at different points, a controlling device for adjusting said contacts, and means for electrically connecting the controlling device with the contacts selectively.

1,534,960. WELL STRAINER. ELI JONES, Lexington, Tenn. Filed Nov. 26, 1924. Serial No. 752,425. 9 Claims. (Cl. 166—5.)

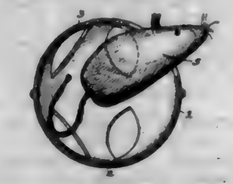
1. In combination with a tubular slitted well strainer, cups mounted on the strainer and surrounding the slitted portion thereof, an upper cup extending within the adjacent lower cup, said cups being adapted to hold a filtering medium, the wall of each of the cups being perforated.

1,534,961. AUTOMATIC CAR COUPLER. JOHN WILL JONES, Clifford, Ill. Filed Oct. 15, 1923. Serial No. 668,728. 2 Claims. (Cl. 213—178.)



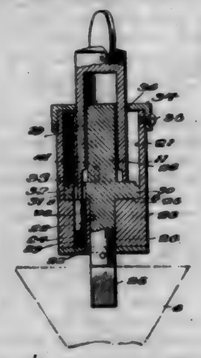
1. In a car coupling, a supporting member having an upwardly opening seat, and adapted to be attached to a car body, a main link initially resting at the lower end in said seat and adapted to bear at the other end against the car body, a coupling link engaging said main link and adapted to be connected to said car body, said main link adapted to be displaced by the concussion with another car and engage over a hook on said other car.

1,534,962. BRIQUETTE OF CHARCOAL AND PIT-COAL. ERMINIO JOSUÈ, Ancona, Italy, assignor to himself and Lorenzo Violini, Falconara Marittima, Italy. Filed Sept, 24, 1924. Serial No. 739,710. 1 Claim. (Cl. 14—16.)



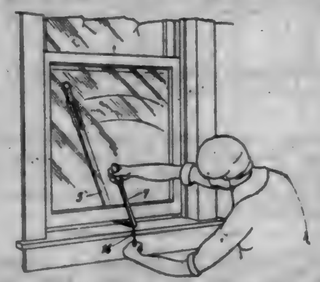
A pressed briquette to light rapidly the fire of furnaces, forges, stoves, ovens, fire-boxes and so on consisting of charcoal 50 parts, pitcoal 50 parts, potassium chlorate 20 parts, gum arabic 35 parts, pitch 15 parts, the two qualities of coal being first reduced into impalpable powder then mixed with a waterlike solution of potassium chlorate and gum arabic in the proportions indicated the mass being mixed with the pitch liquified, the paste thus obtained being reduced into powder again, moulded, compressed under a pressure of several atmospheres and dried again.

1,534,963. RENEWABLE BEARING. CARROLL B. JUDD, Zanesville, Ohio. Filed May 17, 1924. Serial No. 714,115. 1 claim. (Cl. 64—16.)



In combination with a support having keyways, of a two part removable bearing, one part being fitted into the support and having keyways opening into the keyways of the support, keys partly fitted in each of the adjacent keyways, a cap constituting the other part of the bearing and adapted to repose upon the support, said keys having corresponding extremities projecting beyond the support for the purpose specified, the underside of said cap having pockets to receive the projecting extremities of said keys, and adjusting elements carried by the cap and adapted to pass through said pockets to engage and hold said keys in position for use.

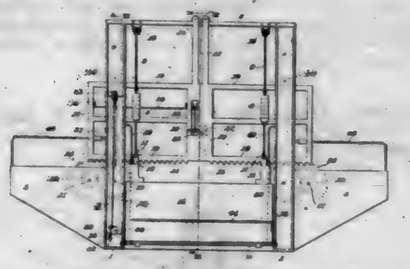
1,534,964. ANIMAL TOY. SIDNEY B. KAMINSKILER, New York, N. Y. Filed Jan. 18, 1923. Serial No. 613,458. 2 Claims. (Cl. 46—40.)



1. A toy, comprising a spherical hollow ball, a catnip-scented figure of a mouse unconnected with and freely movable within the ball, and said ball having openings therein sufficiently large to permit a portion of the figure to project therethrough.

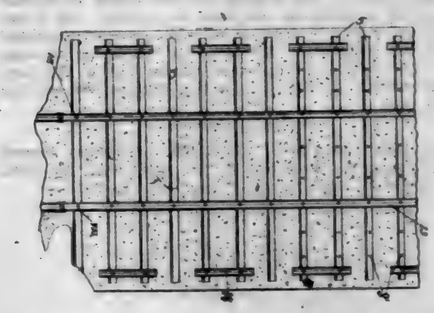
1,534,965. LOCK FOR VALVES. HENRY C. KEELER, Retsil, Wash. Filed Apr. 27, 1920. Serial No. 376,950. 10 Claims. (Cl. 70—47.)

1. A lock of the character described, comprising a casing, a rotary controlling member therein and extending through the lower end of the casing, a flange carried by said member and having a series of openings therethrough, spring pressed tumblers carried by the casing and entering the openings from below, and a key having projections entering the openings from the upper side and forcing the tumblers from within the openings in the rotating member and said key having interlocking connection with the rotating member for rotating the same.



1,534,966. WINDOW CLEANER. THOMAS JOSEPH KILPEATHER, Brooklyn, N. Y. Filed Feb. 29, 1924. Serial No. 696,023. 1 Claim. (Cl. 15—251.)

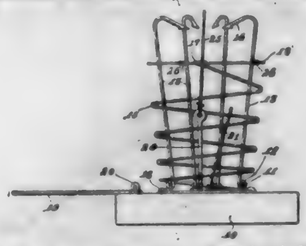
A window cleaning device of the class described comprising a vertical standard, an operating arm connected to the lower end of the standard and at right angles thereto, a block slidable on the standard, a hinged



wiping element carried by the block, said block having opposed inner grooves, pulley wheels at the top and bottom of the standard, a cord connected at one end to the block and trained over said pulley wheels and through the grooves, the opposite end of the cord extending below the operating arm whereby the block may be raised or lowered during the swinging movement of the operating arm.

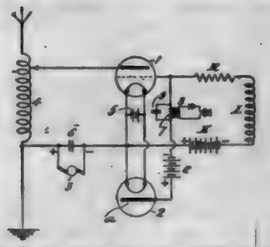
1,534,967. AUTOMATIC GATE. HARRY KUSYK and FRED MANDZUK, Smoky Lake, Alberta, Canada, assignors of one-half to Petro Stacharuk, Smoky Lake, Alberta, Canada. Filed Dec. 28, 1923. Serial No. 683,118. 1 Claim. (Cl. 39—18.)

In an automatic gate, a frame structure, horizontally sliding gates supported on the frame structure, a vertically shiftable bar disposed beneath the gates, platforms respectively hinged at their inner ends to opposite sides of the bar, means for holding the gates in closed abutting relations with the bar in an elevated position, operative connections between the bar and gates causing opening movement of the gates when the raised ends of the platforms are lowered, the operative connections between the bars and gates including a vertical rack bar carried by each end of the bar, rack teeth upon the lower edge of each gate and meshing gears interposed between the rack bars and rack teeth.



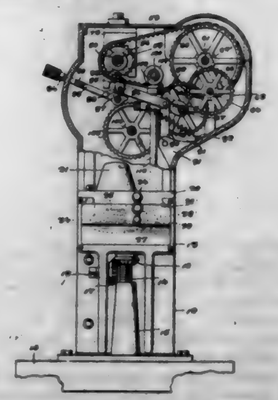
1,534,968. CEMENT REENFORCEMENT. RAYMOND LARSON, De Kalb, Ill. Filed Aug. 28, 1922. Serial No. 584,853. 1 Claim. (Cl. 72—110.)

A concrete reenforcement comprising U-shaped channel irons, long sections of V-shaped angle irons secured near the center of said U-shaped channel irons, and short V-shaped members secured near the outer end of said U-shaped channel irons.



1,534,969. FISHHOOK. STEPHEN A. LAWRENCE, Okmulgee, Okla. Filed Nov. 7, 1923. Serial No. 673,354. 3 Claims. (Cl. 43—34.)

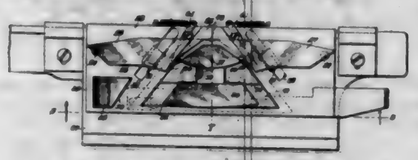
1. A fish catcher comprising a base, a suspension element connected therewith, a plurality of arms pivoted upon the base in radial arrangement and terminating in hooks, a spring secured upon the base outwardly of the arms, a ring at the top of the spring likewise disposed outwardly of the arms, a rod engageable over said



ring when the spring is compressed, and a bait carrying trigger pivoted on the base and having a projection engaging over said rod.

1,534,970. PRODUCTION OF ELECTRICAL OSCILLATIONS BY MEANS OF THERMIONIC VALVES. NORMAN LEA, London, England. Filed May 10, 1921. Serial No. 468,460. 1 Claim. (Cl. 179—171.)

Wireless modulation system comprising a self-oscillating three-electrode valve and a two-electrode valve connected across the grid and filament thereof, means for applying a fixed negative potential to the anode of the said two-electrode valve, means for applying modulating potentials to the said anode, a resistance connected in series with the two-electrode valve and means for producing high frequency potentials across said resistance opposing those normally applied to the grid of the three-electrode valve to produce self-oscillation.

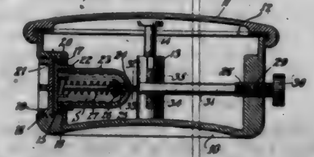


1,534,971. MACHINE FOR ROUNDING GEAR TEETH. THOMAS WILLIAM LEE, Batavia, Ohio. Filed Mar. 27, 1922. Serial No. 547,070. 22 Claims. (Cl. 90—15.)

1. In a machine of the class described, a continuously rotating arbor for mounting a gear wheel, a shaping tool, means for mounting and rotating the tool, and

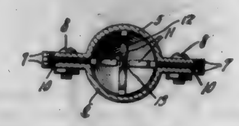
means for imparting movement to the tool in a direction perpendicular to its main axis and permitting return movement by gravity.

1,534,972. NEEDLE-OPERATING MECHANISM FOR KNITTING MACHINES. ADOLPH LEVITON and WILLIAM KAPLAN, Brooklyn, N. Y. Filed Jan. 21, 1925. Serial No. 3,848. 3 Claims. (Cl. 66—28.)



1. In a flat knitting machine of the character described, a set of needles, a set of jacks co-operable with the needles, a single lock assembly adjustable for both plain and fancy stitching and including a needle lock having an upper section always operable on the operating needles when knitting and also having shiftable lower sections positionable to constitute a part of the needle lock when plain stitching is being effected and shiftable to an inoperative position and out of the path of the needles to provide a clearance to permit certain of the needles to idle when fancy stitching is effected, a shiftable jack lock shiftable to an operative position when fancy stitching is effected and shiftable to an inoperative position when plain stitching is being effected, and Jacquard mechanism for elevating the selected jacks sufficiently to permit the selected jacks to engage the jack lock when the jack lock is in an operative position.

1,534,973. NEEDLE-OPERATING MECHANISM. ADOLPH LEVITON and WILLIAM KAPLAN, Brooklyn, N. Y. Filed Mar. 13, 1925. Serial No. 15,372. 4 Claims. (Cl. 66—28.)



1. In a needle operating mechanism for flat knitting machines, a set of needles, a needle lock including an up-throw cam having a lower section having a top or upper part and a retractible bottom part, the bottom part completing the needle lock to effect plain stitching, the bottom part being retracted to provide the clearance for the idle needles when fancy stitching is effected, a set of jacks cooperable with the needle, and Jacquard mechanism for elevating the jacks to such an extent as to cause the needles to be operated upon by the top part of the lower section and by the upper section of the needle lock when fancy knitting is effected.

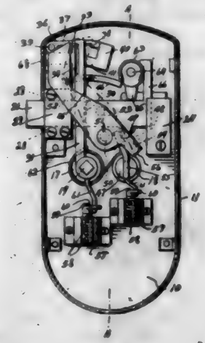
1,534,974. MASSAGE DEVICE. JOHN OLOF LINDEN, Chicago, Ill. Filed Nov. 20, 1923. Serial No. 675,894. 2 Claims. (Cl. 128—62.)

2. A massage device comprising a hollow body having an open end, a gasketed cover fitted thereover, said receptacle having diametrically disposed openings in the side walls, a container partially insertable in one of the openings, means for sealing the container in place in said opening, an expansible substance in said container adapted upon release into the receptacle to change the temperature of said receptacle, an element extending through the other opening and axially movable therethrough, said element being operable from the exterior for releasing the contents of the container into the interior of the receptacle.

1,534,975. CUE-TIP SCRAPER. VICTOR E. LINDFORS, Butte, Mont. Filed Apr. 18, 1921. Serial No. 462,305. 2 Claims. (Cl. 145—27.)

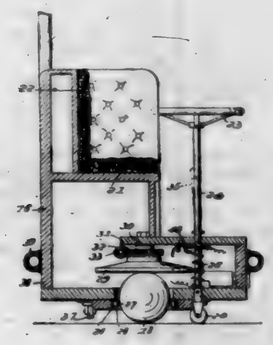
1. In a device of the character described, an elongated tubular body portion comprising longitudinal separable sections, each of the sections having flanges formed with openings, the flanges adapted to be brought into engagement with each other, to accommodate bolts extending through the openings, a member having cutting edges formed on opposite sides thereof, said member having lateral extensions disposed between the flanges of the body portion to removably secure the member within the body portion, and said body portion adapted to be positioned over the end of a cue to trim the tip thereof.

1,534,976. CHAIN COUPLING. CHARLES A. LONGMAN, Logan, Iowa. Filed Oct. 27, 1924. Serial No. 746,154. 2 Claims. (Cl. 24—241.)



1. A chain coupling comprising a body of U-shape in cross-section having a head and a recess in said head, a member pivotally connected in and to the heel portion of the body and adapted to have its outer portion permanently connected to one end of a chain and having a finger on its inner portion at one of its edges, and a lever member pivotally connected in the head portion of the body and having a reduced free end portion arranged to rest within and against said finger, and also having a T-shaped recess in its inner edge and a lateral flange on its outer edge.

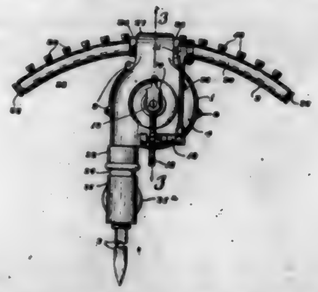
1,534,977. COIN-OPERATED DOORLOCK. ARTHUR W. McCORD and SHERMAN W. FRAZIER, Washington, D. C. Filed Mar. 26, 1921. Serial No. 455,803. 7 Claims. (Cl. 194—65.)



1. A coin operated lock, a normally projected bolt, a knob spindle oscillatable in one direction to cause the retraction of the bolt but oscillatable in the reverse direction independent of the bolt, means normally preventing the retraction of the bolt and the rotation of the knob spindle but shiftable to permit the retraction of the bolt upon the shifting of the knob spindle upon the deposit of a coin and including a coin guide having a coin slot, a second knob spindle projecting in an opposite direction from and independent of the first knob spindle and rotatable in one direction to retract the bolt, a coin slot shield movable over the coin slot upon an oscillation of the first named knob spindle to

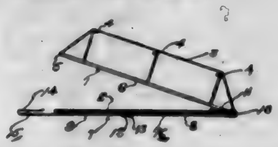
retract the bolt, means holding the shield in this position while the coin operated means, the guide, the spindle, and the bolt return to their initial position,

and means on the second named knob spindle engaging the shield and shifting it to its initial inoperative position upon an actuation of the second named knob spindle to retract the bolt.



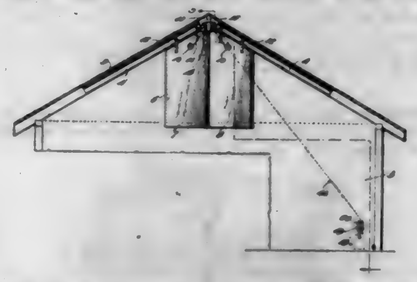
1,534,978. AMUSEMENT APPARATUS. SAMUEL A. DE WALTOFF and LEMOY H. MCDANIEL, Hartford, Conn., assignors to Shimmie Auto Co., Inc., a Corporation of Connecticut. Filed Nov. 24, 1920. Serial No. 426,231. 9 Claims. (Cl. 180—2.)

1. A vehicle provided with a single globular traction element disposed at a point to support the bulk of the weight of the vehicle, said element being power driven and having an uncontrolled axis of rotation.



1,534,979. LAWN SPRINKLER. JOSEPH WHITE MCGEE, Mantua, N. J., assignor to Malcolm C. Ludlam, Woodbury, N. J. Filed Jan. 3, 1922. Serial No. 526,782. 1 Claim. (Cl. 299—69.)

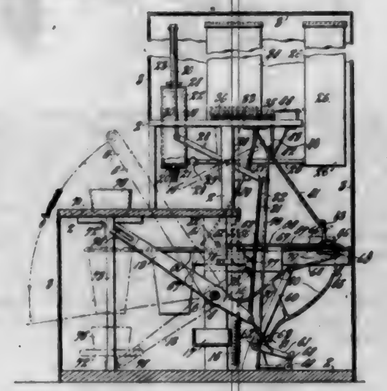
A lawn sprinkler of the character described comprising a casing, a water wheel carried by said casing and rotatable about a horizontal axis, an arcuate nozzle rockably carried by said casing and adapted to receive water discharged from said water wheel, said nozzle mounted for rocking movement about an axis transversely of the axis of the water wheel, a T-coupling connected to said casing and having a horizontal water inlet therein, a sharpened supporting pin depending



from said T-coupling for supporting said lawn sprinkler in an upright position, and means operable by rotation of said water wheel for rocking said nozzle.

1,534,980. FLY-PAPER HOLDER. EDWARD MCGOUGH, Columbus, Ohio. Filed Sept. 29, 1924. Serial No. 740,640. 1 Claim. (Cl. 43—115.)

In a fly-paper holder, the combination with a frame including side bars, of clamps consisting of rods having their inner ends slidably connected for longitudinal adjustment, the outer ends of said rods being provided, respectively, with coils and loops, the former being permanently and pivotally connected to the side bars and the latter being slidably and detachably engaged with said bars to permit disengagement thereof from the said bars, said loops and coils having associated therewith resilient fingers for yieldably engaging a sheet of fly-paper to hold the same within the confines of the frame, said frame being adapted to swing independently of the clamps when the loops are disengaged from the bars, as and for the purpose set forth.

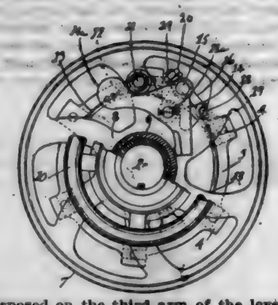


1,534,981. DOOR-CONTROLLING DEVICE. MERLE MELVIN MCKINNEY, Lawrence, Kans. Filed Mar. 24, 1924. Serial No. 701,499. 1 Claim. (Cl. 268—8.)

The combination with a building structure having sloping roof sides leading to a ridge beam at the roof peak, and having a doorway in one of the sides thereof intersecting the roof peak, of guide pulleys carried by the ridge beam, trackways mounted on the sloping roof

sides, oppositely movable door sections provided with carriages to travel on said trackways, said door sections being movable by gravity to open position, a supporting pulley on the ridge beam, a guide pulley on each door section, a rope or cable fixed at one end to the ridge beam passing around the guide pulley on one of the door sections and over the guide pulleys on the ridge beam, and thence around the guide pulley on the other door section and the supporting pulley on the ridge beam, and a windlass to which the free end of said rope or cable is connected.

1,534,982. SOFT-DRINK-VENDING MACHINE. JAMES H. MCLELLAN, Vancouver, British Columbia, Canada. Filed June 20, 1923. Serial No. 648,532. 10 Claims. (Cl. 226—19.)

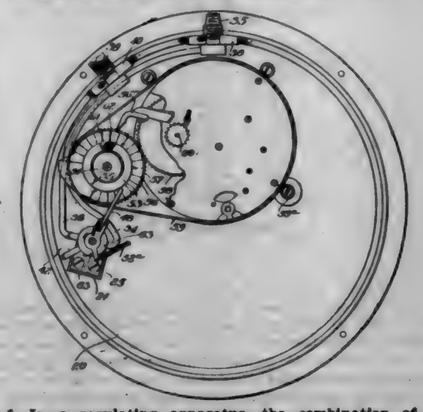


1. A soft drink vending machine, comprising the combination with a suitable casing of a liquid supply reservoir, a cup containing magazine, and means operative from without the casing for withdrawing a cup from the magazine, for delivering a measured quantity of liquid from the reservoir into the cup, and for delivering the filled cup through a closable opening to without the casing.

10. In a liquid vending machine, a casing having a delivery aperture, means normally closing said delivery aperture, a measuring cylinder with piston for receiving charges of liquid to be dispensed, a paper cup magazine, an operating lever, mechanism operated by said lever when moved in one direction for simultaneously operating said piston to express a charge of liquid into a previously positioned cup beneath the same, uncover said delivery apperture of the casing and upon further movement in said one direction move the filled cup from beneath the measuring cylinder into position beneath the delivery aperture, and mechanism for restoring said lever to its initial position and simultaneously elevating the filled cup through said delivery aperture and moving said piston to recharge the cylinder and place another cup in position beneath the cylinder substantially as specified.

1,534,983. FRICTION-CLUTCH PULLEY. VINCENT E. MCMULLEN and WAYLAND E. WOODRUFF, Evansville, Ind., assignors to The Hercules Gas Engine Company, Evansville, Ind., a Corporation of Indiana. Filed Aug. 13, 1921. Serial No. 491,890. 1 Claim. (Cl. 192—80.)

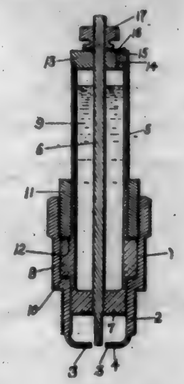
In a friction clutch in combination with a fly wheel on a rotatable shaft, a spider mounted on said fly wheel, hub portions on the spider, a pulley loosely mounted on one hub portion, and an open friction band retained on one end by the pulley, said band adapted to engage the other hub portion, a three armed triangle shaped lever pivotally mounted on the pulley, one arm of said lever retaining a bolt, said bolt retaining the other end of the friction band, lock nuts for the bolt for adjusting the band, and a sleeve slidable on said pulley to engage another arm of the lever to tighten the band, and a



weight disposed on the third arm of the lever for loosening said band coincident with the withdrawal of the slidable sleeve from engagement.

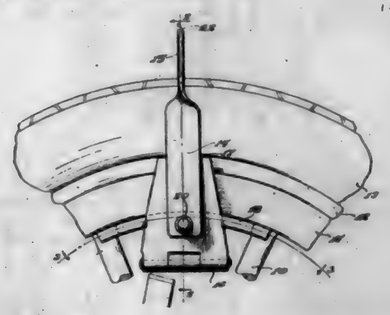
1,534,984. SELF-CLOSING VALVE. WILLIAM W. MACDONALD, Chicopee, Mass., assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Mar. 17, 1924. Serial No. 699,820. 9 Claims. (Cl. 278—65.)

6. In combination with a foot ball bladder or air containing member having an opening, a washer secured on the outer side of the bladder, a larger washer secured to the one first mentioned, a washer secured to the inner side of the bladder, a sheet of elastic material secured to the said inner washer at opposite points, and free from attachment at other points, a washer secured to the inner side of said sheet material, said sheet forming a valve which under pressure of the air within the bladder will distend into the opening of the bladder and the washers lying on the outer side of said sheet, substantially as described.



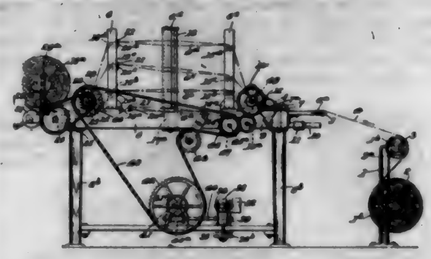
1,534,985. TIME-CONTROLLED VALVE-OPERATING MEANS. EDWARD S. MARSH, Rochester, N. Y., assignor to Taylor Instrument Companies, Rochester, N. Y., a Corporation of New York. Filed July 12, 1920. Serial No. 395,619. 8 Claims. (Cl. 161—7.)

1. In a regulating apparatus, the combination of a regulating element, a part connected with the element and movable to move the same, said part having also a



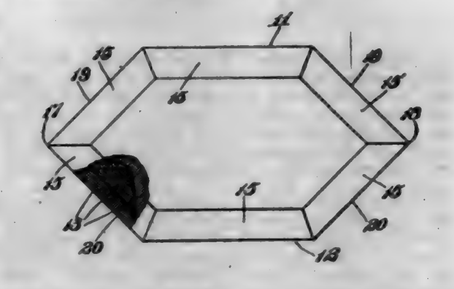
second movement independent of movement of the element, means for effecting said first movement of said part, a cam for engagement with said part to normally restrain said first movement having a portion formed to release said part for movement of the element and also a portion inclined to the direction of movement of the cam to effect said second movement of said part to release said part from the cam, and a time mechanism for driving the cam.

1,534,986. SPARK PLUG. GIUSEPPE NATOLI, New York, N. Y. Filed Mar. 1, 1924. Serial No. 696,287. 2 Claims. (Cl. 123—169.)



1. A spark plug comprising a shell; a core in said shell having a long receptacle therein; a retaining nut for securing said core in said shell; an electrode secured in said core and extending vertically through said receptacle; a closure for said core having a vent therein; a valve for said vent; and means in said receptacle for cooling said electrode, said valve allowing the escape of the cooling medium under excessive heating.

1,534,987. WHEEL ATTACHMENT FOR MOTOR VEHICLES. JIM N. A. O'REAR, Attalla, Ala., assignor of one-third to Lilius Bratton Rainey, Gadsden, Ala. Filed Jan. 11, 1924. Serial No. 685,620. 6 Claims. (Cl. 301—44.)



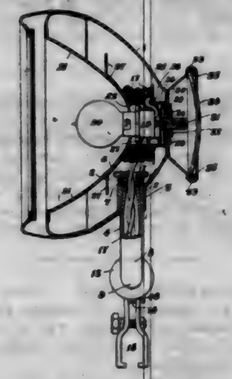
2. A wheel attachment of the class described comprising a pair of hinged shanks terminating with flattened blades at their free ends, means for clamping the shanks to the wheel, said means including opposing gripping ledges on said shanks adapted to engage with the wheel rim, and circumferentially extending arms having abutments adapted to engage with the inner periphery of the wheel felly.

1,534,988. FLAP CUTTING AND BUILDING MACHINE. JOSEPH E. PERRAULT, Watertown, Mass., assignor to Hood Rubber Company, Watertown, Mass., a Corporation of Massachusetts. Filed June 26, 1922. Serial No. 570,813. 8 Claims. (Cl. 154—35.)

1. In apparatus of the class described, slitting means for slitting a traveling sheet into strips, spaced guides disposed at different elevations in planes parallel to the plane of the sheet for receiving the strips from said slitting means, spaced guides disposed in planes at right angles to said first named guides and arranged to receive the strips therefrom and bring them into alignment, and means for assembling said aligned strips in superposed relation.

1,534,989. TIRE BOOT. RAY LELAND PEUGH, Oklahoma City, Okla. Filed Nov. 20, 1924. Serial No. 751,170. 6 Claims. (Cl. 152—24.)

5. An internal tire boot comprising a body formed from a plurality of layers of cord material, said layers having the cords thereof extending alternately in directions at right angles to one another, the body being transversely and longitudinally curved to conform to the transverse and longitudinal curvature of the tire with which it is to coact and having each end edge thereof in two diagonal sections converging to a point, that side of the body adapted to confront the inner wall of the tire being skived to produce tapering edges and being completely covered with an adhesive whereby to attach it to the tire.

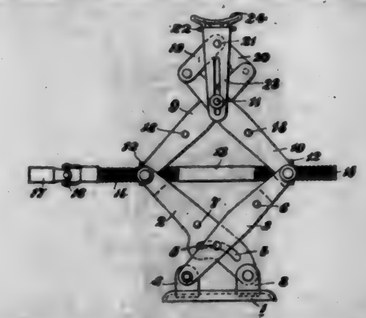


1,534,990. SHEET-METAL PIPE SECTION. LESLIE E. PATTCHARD, Niles, Ohio. Filed Oct. 9, 1924. Serial No. 742,653. 1 Claim. (Cl. 126—309.)

A pipe section comprising a transversely curved metal sheet bent at one edge to provide a relatively narrow and deep channel adapted to receive the other edge of the sheet, the side-connecting portion of the channel having a longitudinal slot, leaving a portion of one side of said channel free for lateral yielding between the ends of the slot; said other edge of the sheet being provided with a projecting tongue for passage through said slot, said tongue having a laterally stamped longitudinal rib spaced inwardly from its longitudinal edges, the inner end of said rib forming an abrupt shoulder to abut the inner edge of said laterally yieldable portion of said one channel side when the tongue is within the slot, said rib and

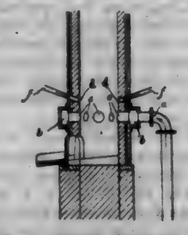
tongue diverging from the outer end of said tongue to said shoulder to form a wedge for laterally springing the intermediate part of said yieldable channel side portion when said tongue is forced through said slot.

1,534,991. VEHICLE LAMP. ALFRED REEVES, Birmingham, England, assignor of one-half to George Herbert Cuming Butler, Birmingham, England. Filed July 5, 1922. Serial No. 572,827. 2 Claims. (Cl. 240—7.)



1. A lamp casing having an opening in its rear side, a drum in said casing having a central sleeve extending through and arranged for rotation in said opening, a bulb socket in said sleeve having a bolt extending rearwardly therefrom, a spring active to move said bulb socket forwardly, a rotatable disk arranged externally on the rear side of the casing, secured to said sleeve and having an opening through which said bolt extends, and a nut threaded on said bolt and bearing against said disk and coacting with said spring to hold said socket.

1,534,992. LIFTING JACK. ALFRED REEVES, Birmingham, England, assignor of one-half to George Herbert Cuming Butler, Birmingham, England. Filed Aug. 9, 1922. Serial No. 580,713. 1 Claim. (Cl. 254—122.)

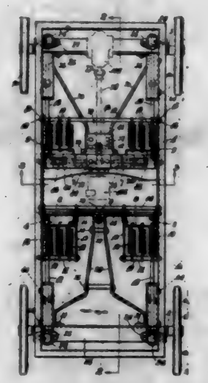


In a lifting jack, a base element, lazy tongs having links pivotally mounted at their lower ends on said base element, a series of links of progressively diminishing length, the lower pair of which are pivotally connected to the upper ends of the first named links, a horizontal operating rod having oppositely threaded portions engaging the pivot portions of the major links, a platform on

the upper portion of the lazy tongs having downwardly extending arms pivotally connected thereto, one of said arms having a vertical slot and the lazy tongs having a

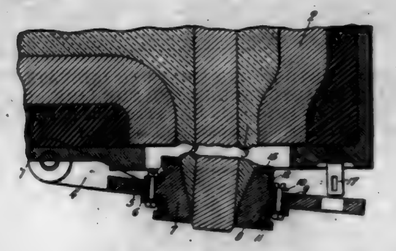
connecting pivot pin which operates in said slot, and a bearing plate rotatably mounted on the platform and having a vertical pivot axis.

1,534,993. PROCESS AND APPARATUS FOR OPERATING FURNACES. ADOLF REINSHAGEN, Niederau, near Duren, Germany. Filed Aug. 9, 1922. Serial No. 580,730. 3 Claims. (Cl. 266—29.)



1. The method of working furnaces, which consists in introducing water in liquid state separately from the air blast and insuring that the water reach the smelting zone of the furnace only in such liquid state, and submitting it to the action of the blast only upon its entry into the furnace.

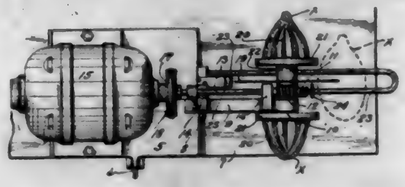
1,534,994. METHOD AND MEANS TO INDICATE THE THEFT OF AUTOMOBILES AND THE LIKE. OLIVER L. SCROGGINS, Pittsburgh, Pa. Filed June 5, 1924. Serial No. 717,988. 2 Claims. (Cl. 40—22.)



1. In a device adapted to indicate the theft of a vehicle, the combination of a pair of license-plates mounted rearwardly of said vehicle and bearing identical license-numbers; common supports for the said license-plates; one of said plates being permanently secured to said supports and the other plate being hingedly connected to said stationary license-plate in a manner to permit a part of the reverse side of said hinged plate to extend above said stationary plate when in folded position; a padlock to secure said hinged plate in folded position; means to support said padlock in horizontal position and adapted to prevent the rattling thereof, and a warning notice positioned on the reverse side of said hinged plate extending above said stationary license-plate.

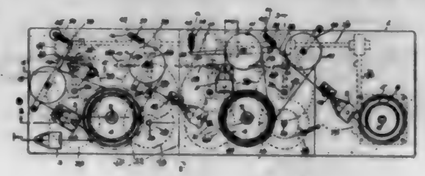
1,534,995. SPRING SUSPENSION SYSTEM FOR VEHICLES. CONRAD THURSTONE, Pittsburgh, Pa. Filed Feb. 15, 1923. Serial No. 619,208. 4 Claims. (Cl. 267—15.)

1. In a vehicle, the combination of bell-crank levers having long and short arms; resilient means for normally holding said long arms in a substantially horizontal position; axles supported on the free ends of said long arms; transversely disposed resilient means for absorbing the lateral swaying movements of the superstructure of said vehicle, and fluid means for regulating the rocking movements of said bell-crank levers.



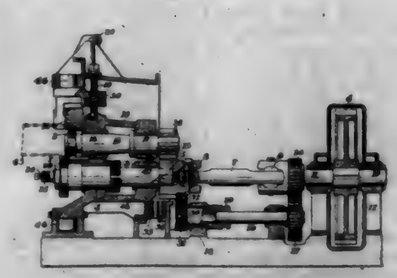
1,534,996. INTERCHANGEABLE SPOUT-APERTURE BUSHING AND METHOD OF APPLYING THE SAME. OLIVER M. TUCKER and WILLIAM A. REEVES, Columbus, Ohio. Original application filed Sept. 23, 1918, Serial No. 255,349. Divided and this application filed Nov. 11, 1924. Serial No. 749,317. 8 Claims. (Cl. 49—14.)

1. The method of applying and removing bushings for spout apertures which comprises interposing a sealing element between the bushing and the spout aperture when applying the bushing; and in removal, inserting a readily breakable core into the bushing and the glass thereabove, and breaking off both the bushing and the core after the glass adjacent the bushing is cold.



1,534,997. FRUIT CUTTER AND JUICE EXTRACTOR. CARL J. ULRICH, Mankato, Minn. Filed Sept. 24, 1923. Serial No. 664,445. 4 Claims. (Cl. 146—3.)

1. The combination with a base having a standard provided with a horizontal arm projecting away from the base, of a motor on the base, a horizontal shaft journaled on and transversely of the arm, connections for

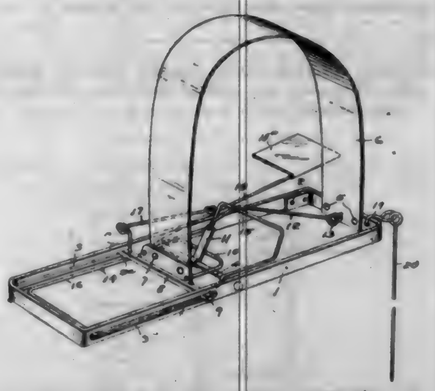


driving the shaft from the motor, and a tool on the shaft arranged for action on fruit held thereagainst.

1,534,998. WIRE-DRAWING MECHANISM. CALVIN W. VAUGHN, Cuyahoga Falls, Ohio, assignor to The Vaughn Machinery Company, Cuyahoga Falls, Ohio, a Corporation of Ohio. Filed June 20, 1921. Serial No. 478,852. 10 Claims. (Cl. 205—14.)

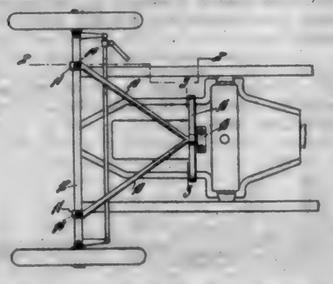
1. In mechanism of the character described, the combination with a plurality of dies, of a corresponding number of drawing drums therefor, superposed in pairs, concentrically journaled shafts carrying said drums, respectively, and independent driving means for said shafts, said means being automatically adjustable to rotate said drums at rates proportioned to the speed at which the wire is drawn through the preceding die.

1,534,999. SHEARING DEVICE. HARRY C. WATSON, Pittsburgh, Pa., assignor to Keystone Machine & Engineering Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Dec. 17, 1921. Serial No. 523,168. 7 Claims. (Cl. 164—60.)



1. A pipe cutting machine including an arcuately adjustable shear head having rotary power driven shears thereon, means for effecting the arcuate adjustment of said head and for retaining it in adjusted position, whereby said shears may effect an angular or directly transverse cutting of a pipe irrespective of the axial position of the pipe with respect thereto.

1,535,000. RUSTLESS BUCKLE. CHARLES M. WEBB, Waterbury, Conn., assignor to Waterbury Buckle Co., Waterbury, Conn., a Corporation. Filed Nov. 5, 1923. Serial No. 672,710. 1 Claim. (Cl. 24—184.)

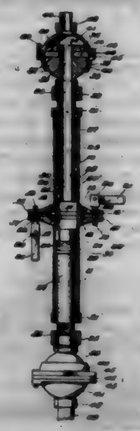


A rustless buckle having a one-piece wire-frame bent to form a continuous lower bar, two web-gripping loops extending toward each other under the said lower bar in the vertical plane thereof and separated therefrom by a narrow web-receiving opening, two upstanding side-bars merging into the lower reaches of the said loops, and two pintle-ends bent inward from the upper ends of the said side-bars; of a buckle-lever pivotally mounted upon the said pintle-ends in position to have its gripping-edge deflect the running portion of the webbing substantially over the said lower bar, the said opening being closed to grip the fixed end of the webbing.

1,535,001. ANIMAL TRAP. JOHN WEISENBURGER and JAMES H. HUSTON, Rosebud, S. Dak. Filed Jan. 31, 1924. Serial No. 689,715. 4 Claims. (Cl. 43—85.)

1. An animal trap including a frame provided with parallel guides at one end of the frame, which end constitutes a stationary jaw, a pivot pin disposed substantially centrally of the frame, a relatively heavy bowed leaf spring having a free end and a fixed end attached to the opposite end of the frame, a movable jaw carried by the free end of the spring and adapted to cooperate with the stationary jaw to trap an animal between the two jaws, a trigger mechanism operatively and releasably connected with the movable jaw, and an animal-operated actuator for releasing an element of said trigger mechanism which results in the release of the movable jaw.

1,535,002. RADIUS ROD. HAROLD M. WESTHOLM, Independence, La. Filed Mar. 3, 1924. Serial No. 696,626. 2 Claims. (Cl. 267—66.)

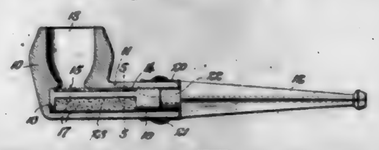


1. A radius rod for motor operated vehicles including divergently disposed branches adapted to be connected to the axle of the vehicle, a ball carried by the other end of the radius rod, a socket designed to accommodate the ball and provide a connection between the rod and the crank case, and a yoke carried by the rod adjacent said ball and designed to embrace the crank case to which it is terminally connected.

1,535,003. MERCURY DERIVATIVE OF DIBROM-FLUORESCEIN. EDWIN C. WHITE, Baltimore, Md. Filed July 26, 1921, Serial No. 487,686. Renewed Jan. 5, 1925. 3 Claims. (Cl. 260—13.)

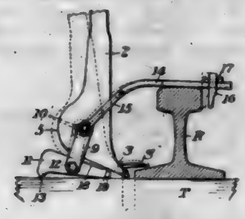
1. The herein described novel product having therapeutic properties comprising the chlorine-free monomercury derivative of di-brom-fluorescein.

3. Process of preparing a mercury derivative of di-brom-fluorescein comprising reacting with mercuric acetate on an aqueous suspension of di-brom-fluorescein.



1,535,004. TRAIN-PIPE COUPLING. WALTER C. WHITE, Pittsburgh, Pa., assignor to International Couplers Company, Pittsburgh, Pa. Filed Feb. 14, 1920. Serial No. 358,626. 11 Claims. (Cl. 285—162.)

1. A train pipe coupling including a coupling body, a pipe section slidably fitted therein, a packing which bears between said pipe section and the coupling body, a follower for the packing having a sleeve surrounding said pipe section, stop means at the outer end of said pipe section, and means adjustable upon the sleeve of said follower to coact with said stop means for advancing the follower against said packing, the sleeve of the



follower terminating short of said stop means and said adjustable means being movable to a position upon the follower sleeve for exposing the outer end portion of the pipe section whereby a wrench may be engaged with the pipe section between the follower sleeve and said stop means.

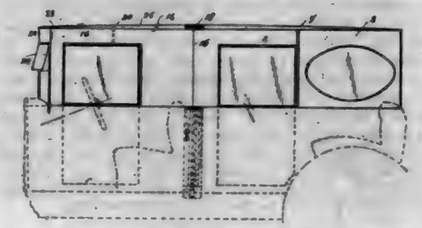
1,535,005. TOBACCO PIPE. JOHN M. WILSON, San Diego, Calif. Filed Oct. 10, 1923. Serial No. 667,714. 3 Claims. (Cl. 131—12.)

1. A tobacco pipe including a bowl provided with a tobacco chamber, a stem provided with a bore in communication with said tobacco chamber, and a cage for containing filtering and residue collecting material including a body portion disposed within said bore and provided with means for scraping the wall of said bore when the cage is rotated, and means disposed exteriorly of the stem for rotating said cage.

1,535,006. SPIKE PULLER. JOHN S. WINCHANTE, Wilkinsburg, Pa., assignor to Verona Tool Works, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed June 4, 1924. Serial No. 717,723. 9 Claims. (Cl. 254—27.)

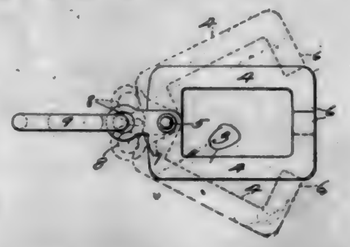
5. A spike puller, comprising a draw bar having an end portion adapted to engage under the head of a spike and having a curved bearing surface behind said end portion connected therewith by a straight under surface, and a wedge-shaped fulcrum member pivotally connected to said bar and having a flat upper surface adapted to cooperate with said curved bearing surface, said flat surface terminating at the forward end of said member in a raised bearing surface adapted to provide a fulcrum for the bar in starting the spike, substantially as described.

1,535,007. METHOD FOR REMOVING LINERS FROM CYLINDERS. WILLIAM R. WOOD, Washington, D. C. Filed Sept. 8, 1922. Serial No. 587,018. 7 Claims. (Cl. 29—1.11.)



1. A process of permanently changing the diameter of a hollow metal cylinder by applying to one peripheral surface only heat sufficient to cause upsetting of the metal while keeping the other peripheral surface relatively cool, substantially as set forth.

1,535,008. DEMOUNTABLE AUTOMOBILE TOP. GIUSEPPE GAETANO ZANETTI, Milan, Italy. Filed Apr. 4, 1921. Serial No. 458,275. 4 Claims. (Cl. 296—45.)

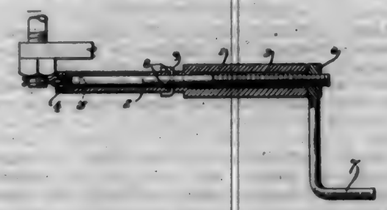


1. In combination with the body of an automobile, a built-in, collapsible, disappearing, closed car top having front and rear transverse portions, and side and roof portions; means interconnecting said portions and permitting all of said portions to be collapsed and folded together to form a single compact unit; a pocket in the central part of the automobile body; and means for mechanically depositing said unit in said pocket.

1,535,009. CONVERTIBLE TOP FOR VEHICLES. GIUSEPPE GAETANO ZANETTI, Milan, Italy. Filed Apr. 11, 1922. Serial No. 551,721. 3 Claims. (Cl. 296—108.)

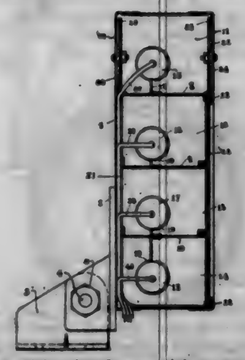
1. In a folding top comprising receivers adapted to slide into a pocket located in the central portion of a vehicle; pillars mounted in said receivers; a cover connecting the tops of the pillars; two pairs of sides hinged to each other and to said pillars; and flexible roofs fixed to the sides, said roofs and sides being adapted to fold up and slide with said pillars into said pocket.

1,535,010. CLEVIS HOOK. GEORGE ZEHARLE, Quincy, Ill. Filed Mar. 25, 1924. Serial No. 701,738. 1 Claim. (Cl. 278—96.)



The combination with a clevis, of a clevis hook therefor, said hook comprising flat reversely position U-shaped members, one of the arms of one of the said U-shaped members engaging and overlapping the corresponding arm of the other U-shaped member when the hook is in closed position, the other arms of said U-shaped members being pivotally connected at their outer ends, arms carried by said last named arms in the plane thereof which register when the hook is in closed position and provided with ring receiving apertures which register when the hook is in closed position, and a ring extending through said apertures when the hook is closed and adapted to be removed when the hook is to be opened.

1,535,011. ELECTRIC SWITCH. GEORGE J. ZEIS, Buffalo, N. Y. Filed Dec. 9, 1922. Serial No. 605,942. 2 Claims. (Cl. 200—161.)

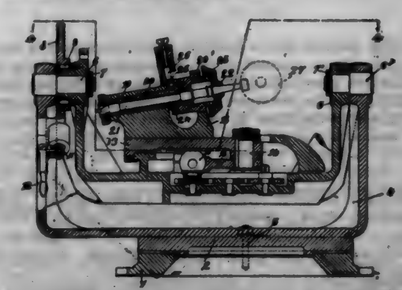


1. An electric switch comprising a casing, a pair of contacts arranged within said casing, a pivot pin extending across said casing and supported at its opposite ends on opposing walls thereof, a lever extending through said casing and pivotally mounted on said pivot pin and adapted to move between said blades, and a metal bridge pin extending transversely through said lever and adapted to engage its opposite ends with said blades.

1,535,012. COTTER-PIN EXTRACTOR. CHESMAN B. ZELLER, Wichita, Kans. Filed Oct. 8, 1923. Serial No. 667,272. 1 Claim. (Cl. 29—86.1.)

A cotter pin extractor of the class described, including a tubular body member, an extracting rod slidably mounted therein, said extracting rod provided with a hook at its lower end, the upper portion of said rod being threaded externally and the upper end thereof adapted to extend beyond the upper end of said tubular body member, a handle threaded on the upper end of said rod for actuating the same longitudinally in said tubular body member, said rod provided with a longitudinal slot in its lower portion, and a pin carried by said tubular body member and extending transversely through said longitudinal slot for permitting the longitudinal movement of said rod in said tubular body member but preventing the rotation of said rod in said tubular body member.

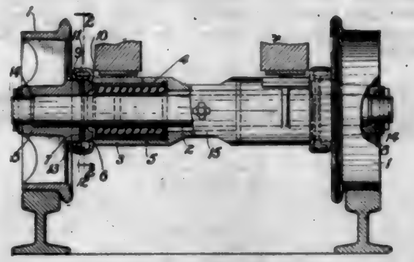
1,535,013. AUTOMOBILE SIGNAL. LUDWIG A. ZILLMANN, Milwaukee, Wis. Filed Mar. 27, 1922. Serial No. 547,101. 1 Claim. (Cl. 177—329.)



A motor vehicle signal comprising an outer casing; an inner casing mounted within said outer casing with its front and top walls in spaced relation to the corresponding walls of said outer casing, said top wall of said inner casing forming with adjacent portions of said outer casing, a parking lamp compartment the front and back walls of which are provided with oppositely disposed openings; a plurality of horizontal transverse portions within said inner casing forming other compartments below said parking lamp compartment; clear and colored glasses mounted in the respective parking lamp openings; a light transmitting plate provided with motion and direction indicating symbols carried by said inner casing in co-operative relation to said lower compartments; an electric lamp in each of said compartments; and electrical conductors leading to said lamps arranged in the space between the front walls of said casings.

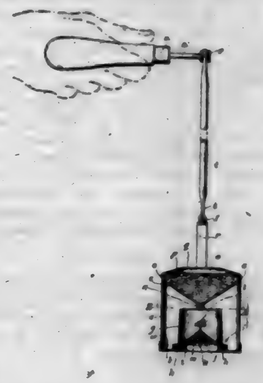
1,535,014. AUTO SIGNAL. LESLIE G. ANDREWS, Lincoln, Nebr. Filed Apr. 18, 1922. Serial No. 555,177. 1 Claim. (Cl. 40—132.)

An automobile signal of the character described comprising, a substantially rectangular open casing having top, bottom and end walls, right angled integral flanges projecting inwardly from the edges of said walls, an open frame of the same contour of said casing secured to the outer face of, and of greater width than, said flanges, transparent indicia bearing elements secured to said frame, an upper, an intermediate and a lower partitioning element within said casing, the upper and lower elements being spaced respectively from the top and bottom of the casing and coacting with said inwardly projecting flanges to provide a relatively shallow top and bottom chamber and said intermediate element dividing the space between the upper and lower elements to provide a pair of intermediate chambers, said transparent elements forming the side walls of said intermediate chambers, apertured plugs extending through the walls of said shallow chambers, incandescent lighting elements in each intermediate chamber carried by the partition adjacent each shallow chamber, and electrical conductors entering said shallow chambers through said plugs and connected to said incandescent elements.



1,535,015. MACHINE FOR CUTTING A CAM SERVING TO CONTROL THE FRONT-WHEEL BRAKES OF MOTOR VEHICLES. ERNEST MAURICE BALLOZ, Paris, France. Filed July 11, 1923. Serial No. 650,937. 4 Claims. (Cl. 90—58.)

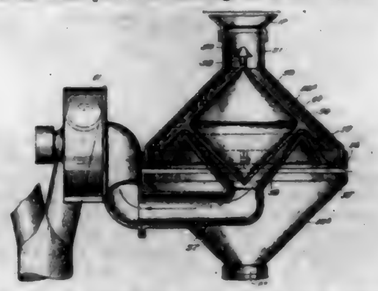
1. A cam cutting machine of the character described comprising a cam supporting sleeve, means for supporting said sleeve whereby it may be movable about four axes, one of these axes being that of the cam, two cutters ar-



ranged in such a manner as to cut simultaneously upon the cam, and retaining means for permitting the cam to be cut in one position determined with respect to the other three axes.

1,535,016. JOURNAL BOX. FRANK S. BARKS, St. Louis, Mo., assignor to Lincoln Steel and Forge Company, St. Louis, Mo., a Corporation of Missouri. Filed July 9, 1923. Serial No. 650,219. 14 Claims. (Cl. 308—180.)

1. In combination, a journal box, a wheel, a bearing element having an annular wheel thrust-receiving surface, a thrust-washer between said surface and said wheel and rotatable by said wheel to a limited extent only.

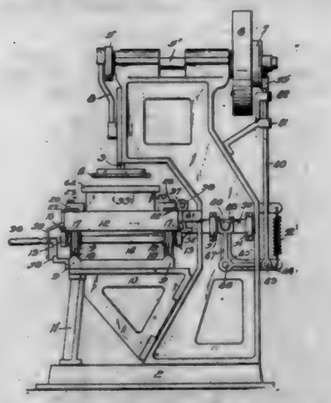


1,535,017. METHOD FOR INVESTING DESTRUCTIBLE PATTERNS FOR INLAY FILLINGS. JEAN CLINE, Portland, Oreg. Filed Dec. 14, 1923. Serial No. 680,781. 2 Claims. (Cl. 22—9.)

1. The method of investing a destructible patter nfor an inlay filling consisting in mounting the pattern in a container, then filling the latter with an investing composition until the pattern is completely covered, and subjecting the composition to centrifugal force until the excess moisture is separated therefrom.

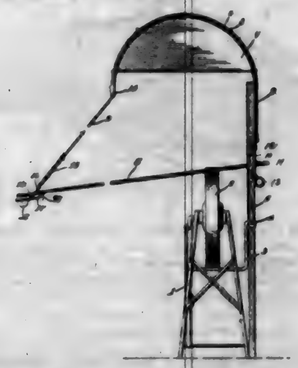
1,535,018. CHAFF REMOVER. BERNARD M. ELY, Marshall, Mich., assignor to Lambert Machine Company, Marshall, Mich., a Corporation of Michigan. Filed July 24, 1924. Serial No. 728,015. 8 Claims. (Cl. 130—17.)

1. A device of the character described comprising; a casing having a material receiving inlet; an upright conical material dispersing plate within said casing lying below said inlet; said casing having an air inlet arranged adjacent to the lower circular edge of said conical material dispersing plate; an air suction pipe entering said casing and having an enlarged mouth lying beneath the conical material dispersing plate; a frusto-conical air baffle plate surrounding the mouth of the air



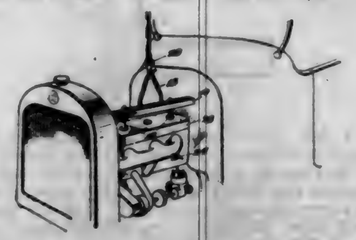
suction pipe and lying below and adjacent to the circular lower edge of the material dispersing plate; and air exhausting means attached to the outer end of the air suction pipe.

1,535,019. METALLURGICAL PROCESS. FRANK M. DORSEY, Cleveland, Ohio, assignor to General Electric Company, a Corporation of New York. Filed Sept. 18, 1920. Serial No. 411,166. 3 Claims. (Cl. 23—23.)



1. The process of preparing substantially pure tungsten oxide which consists in maintaining in a reservoir a solution of impure sodium tungstate, causing a continuous flow of said solution from said reservoir, treating the outflowing solution with a re-agent to precipitate therefrom the tungstic oxide, separating the tungstic oxide from the solution, treating the solution to eliminate the excess of the previously added re-agent, returning the solution to the reservoir and adding, from time to time, impure sodium tungstate to the solution in said reservoir to maintain it at a substantially constant specific gravity.

1,535,020. MOLDING MACHINE. PINKNEY P. FRASER, St. Louis, Mo., assignor, by mesne assignments, to Edward Schaefer and Detlef F. Schaefer, trustees for The Multiple Molding Machine Co., St. Louis, Mo., a Common Law Trust. Filed Mar. 24, 1921. Serial No. 455,000. 17 Claims. (Cl. 22—42.)

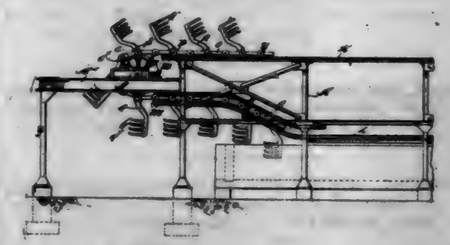


1. In combination with a molding machine having a track base and a plunger disposed above the base, of a wheel supported carriage adapted to support both a cope and a drag at the same time, said carriage being mounted for limited reciprocal movement upon said track base and the distance of said movement being the distance between the centers of the cope and the drag.

1,535,021. SICKLE-HOLDING ATTACHMENT FOR GRINDERS. LARRY FURLONG, Havre, Mont. Filed Nov. 14, 1922, Serial No. 600,925. Renewed Feb. 9, 1925. 2 Claims. (Cl. 52—222.)

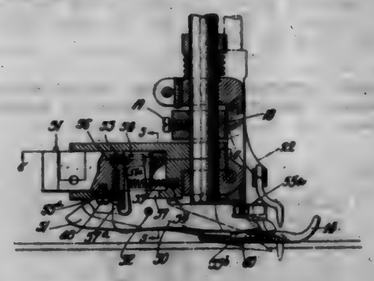
1. An attachment of the class described including a standard, a bail yieldingly and adjustably connected to the standard, a supporting plate pivotally mounted in the bail, said plate constituting means for engaging and supporting one end of a sickle bar, and means on the plate for gripping a sickle bar and holding it to the plate.

1,535,022. MOTOR-HOISTING HITCH. CLOYED M. JENKINS, Dodge City, Kans. Filed Nov. 23, 1923. Serial No. 676,659. 7 Claims. (Cl. 294—78.)



1. A hoisting hitch including a body bar, and anchoring means for connecting the bar with an engine and formed with portions to be accommodated in the spark plug openings of the engine engaged therewith.

1,535,023. SECTIONAL MOLD FOR CONCRETE STRUCTURES. CARLETON H. KELLY, Kalispell, Mont. Filed Apr. 19, 1923. Serial No. 638,174. 4 Claims. (Cl. 25—124.)

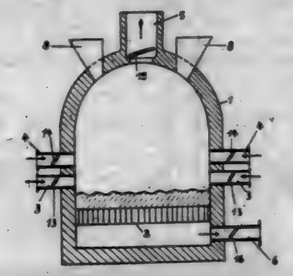


1. In a mold of the character described, an end ring made in sections and provided with holes for receiving tie-bolts, a plurality of interchangeable, reversible curved mold sections adapted for being arranged in a horizontal course, each provided with a stiffening flange, the opposite ends of which are cut away at such an angle that, when the mold-sections are set up, one of the sections may be independently removed, said stiffening element being provided with holes for receiving tie-bolts, the ends of said sections being respectively provided with perpendicular resilient ribs adapted to permit said removal.

1,535,024. PICKLING MACHINE. HARRY W. KRAMS and FRED R. KLAUS, Cleveland, Ohio, assignors to The Hydraulic Pressed Steel Company, Cleveland, Ohio, a Corporation of Ohio. Filed Aug. 4, 1920. Serial No. 401,098. 9 Claims. (Cl. 266—7.)

1. In a device of the kind described, the combination with a plurality of receptacles, of the upper and lower tracks, an endless carrier traveling upon said tracks and having a plurality of arms, each arm having a plurality of fingers and means for moving said endless carriers, said fingers being arranged to carry a plurality of articles while moving substantially horizontally and discharge said articles when said fingers are whifted to a vertical position at the end of the carrier.

1,535,025. AUTOMATIC PICOT-CUTTING ATTACHMENT. FRANK K. MARTINEK, New York, N. Y. Filed Mar. 27, 1922. Serial No. 547,069. 7 Claims. (Cl. 112—125.)

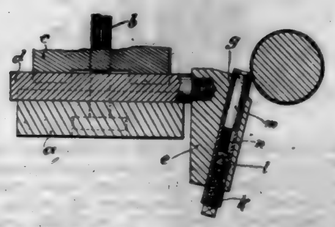


1. An automatic picot cutting attachment in combination with the presser bar and piercer bar bracket of a machine, comprising a carriage block, means for mounting the carriage block on the presser bar so that it may extend rearwardly thereof, a resiliently controlled plunger slidable within the carriage block, means for locking the plunger in its operative position, cutting blades carried by the plunger, one of said blades being engageable by the piercer bar bracket when the slidable plunger is in its locked position.

1,535,026. PROCESS FOR THE PRODUCTION OF ZINC IN REVERBERATORY FURNACES. HERMANN MEHNER, Berlin-Charlottenburg, Germany. Filed Nov. 4, 1923. Serial No. 599,130. 2 Claims. (Cl. 75—61.)

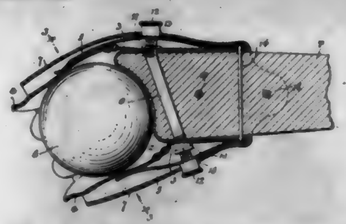
1. In the recovery of zinc from ore, the process which comprises heating a mixture of zinc ore and fuel by

burning fuel above a bed of such mixture, a controlled amount of the heated products of combustion being led



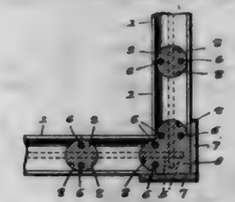
away from the mixture and the remaining heated products of combustion being passed through the mixture of ore and fuel to reduce and volatilise the zinc.

1,535,027. ADJUSTABLE REAMING DEVICE. ARTIS A. MORRISON, Williamsport, Pa. Filed July 31, 1920. Serial No. 400,345. 1 Claim. (Cl. 77—76.)



An adjustable reamer comprising a pair of oppositely located blocks having longitudinally disposed grooves in their peripheries, blades, oppositely extending aligned offset slightly flexible shanks at the ends of the blades, said shanks being located and slidable within the grooves of the blocks, sleeves threadedly engaging and surrounding the blocks over the grooves to hold the blades in position, inclined inner edges for the blades, a conical head positioned between and engaging said edges and a shank carried by the head and threadedly adjustable through one of the blocks.

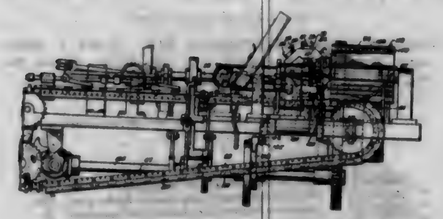
1,535,028. CUTTING TOOL. KARL MÜLLER, Kreiensen, Germany. Filed Dec. 1, 1922. Serial No. 604,406. 8 Claims. (Cl. 29—100.)



5. In a cutting tool, the combination, with a holder having a cylindrical bore, of a tubular cutting member within said bore formed at its ends with conical depressions providing circumferential cutting edges, a core within said tubular cutting member formed with a head in front of the cutting edge of said cutting member and having a screw-threaded portion of reduced diameter, a member having a screw-threaded axial bore engaging the said portion of reduced diameter, and a nut screwed into said bore provided in the said holder, the said nut being formed with a conical face providing a support for said cutting member.

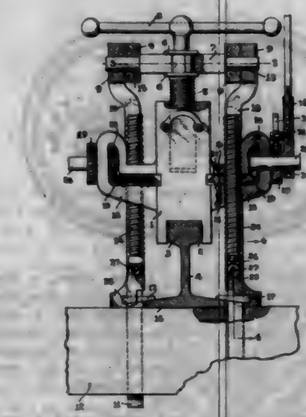
1,535,029. TOY. WILLIAM W. MURCH, Brooklyn, N. Y. Filed May 9, 1924. Serial No. 712,074. 4 Claims. (Cl. 273—66.)

1. A toy of the character described, comprising a handle, a pair of springs fixed to the handle, a pair of ball-holding leaves connected to the springs, and other springs secured to the handle and exerting inward pressure against the leaves.



1,535,030. CONCRETE BUILDING STRUCTURE. WILLIAM E. NELSON, San Antonio, Tex. Continuation of application Serial No. 296,595, filed May 12, 1919. Substitute for application Serial No. 343,507, filed Dec. 9, 1919. This application filed Nov. 1, 1920. Serial No. 421,139. 3 Claims. (Cl. 72—30.)

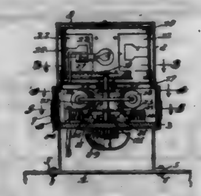
1. A wall or analogous structure comprising a plurality of substantially square entirely solid concrete units of a thickness of approximately one-half of their other dimensions and having in all of their edges relatively deep grooves of slightly less width than the thickness of said units, said units being arranged edge to edge in parallel courses and parallel columns with the side edges of the superimposed units in alinement and with the inner and outer portions of their edges in full and tight contact, the arrangement of said units being such that said grooves form a network of closely arranged laterally closed intersecting horizontal and upwardly extending passages, all of which are relatively large and the same cross sectional area, the distance between the nearest walls of the adjacent parallel passages being not more than three times the diameter of said passages, and a monolithic reinforced concrete skeleton weight sustaining and stress resisting framework entirely disposed in said passages and completely surrounded by the structure formed by said units and being composed of closely arranged intersecting beams and pillars having the same cross sectional area, one of said units being disposed between and hung upon each set of adjacent pillars and beams in said framework.



1,535,031. ASSEMBLING AND COUNTING MECHANISM. THOMAS A. NEVINS, New York, N. Y., assignor, by mesne assignments, to Hercules Match Corporation, New York, N. Y., a corporation of New York. Filed May 18, 1923. Serial No. 639,956. 7 Claims. (Cl. 226—4.)

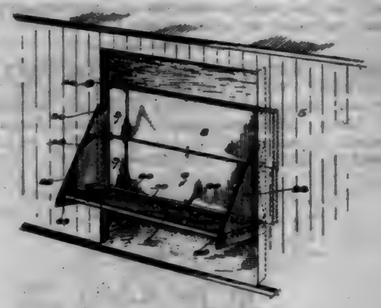
1. In a mechanism for counting and stacking finished match books, a stacking mechanism, a conveyer for delivering the finished match books to the stacking mechanism, and means adapted to be engaged by a match book in said conveyer for rendering said delivering mechanism operative and for rendering the said delivery mechanism inoperative upon its failure to receive a match book.

7. In combination with a conveyer for carrying finished match books, a stacking mechanism including a plurality of troughs, and means interposed between the conveyer and the stacking mechanism for transferring the finished match books from the conveyer to the troughs of the stacking mechanism, said means comprising a rotary frame-like member having receivers adapted to pass in proximity to the conveyer, means for discharging the match books from the conveyer to said receivers, said receivers also being adapted to move in proximity to the troughs of the stacking mechanism, and means for discharging the match books from the receivers to the troughs of the stacking mechanism, both said discharging means being operated at the same time.



1,535,032. TRACK TOOL. GEORGE F. A. OCHS, Newark, N. J. Filed Oct. 10, 1924. Serial No. 742,849. 7 Claims. (Cl. 104—17.)

1. A tool for the purpose indicated comprising a body element recessed at its lower end to provide a seat for the ball of a rail, a screw threadingly engaged with the body element at the end remote from the seat, a cross-head rotatably supported by the screw, and stirrups carried at the extremities of the cross-head and consisting of downwardly divergent arms formed with inwardly directed hooks for engagement with the bottom of a tie.



1,535,033. DIRECTION INDICATOR. GEORGE C. PEARCE, Johnson City, Tenn. Filed Oct. 25, 1922. Serial No. 596,756. 1 Claim. (Cl. 177—329.)

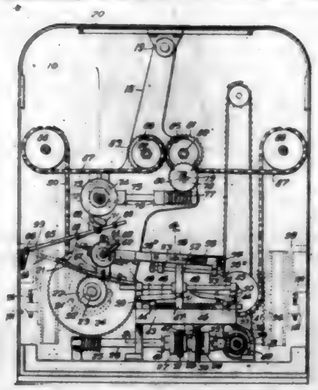
A device for the purpose indicated comprising a cylindrical casing, an angularly movable indicating element surmounting the same, a bracket straddling the casing and the indicating element and having a cross-piece pre-

vided with a bearing for the latter, the bracket having legs offset to embrace the casing, and a clamp surrounding the casing and straddling the legs.

1,535,034. DOOR FOR RAILWAY CARS. PETER E. PETERSON, Salina, Kans. Filed July 22, 1924. Serial No. 727,479. 6 Claims. (Cl. 20—27.)

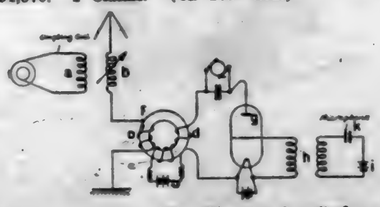
1. A grain car door comprising a pair of sections, means horizontally hinging one of the sections to the other section, and wings hingedly connected to the ends of one of the sections and extended beyond the ends of that section to provide stops to limit the swinging movement of that section, the wings being provided with means whereby the same may be detachably secured in an elevated position to secure the associated section in an open position.

1,535,035. MAGNETIC BUILDING TOY. RICHARD PHILIPP, Eisenach, Germany. Filed Apr. 30, 1923. Serial No. 635,709. 2 Claims. (Cl. 46—85.)



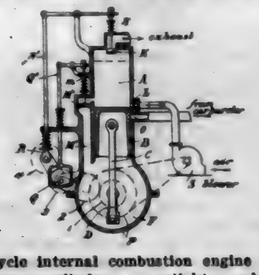
1. A building toy comprising a box, a horseshoe magnet disposed with its body on the bottom of the box and with its shanks bent upwardly and rearwardly into the top wall of the box, and a drawer for the reception of building blocks inserted into said box in the space left between the body and the poles of the magnet.

1,535,036. SPINNING MACHINE. JAMES C. POTTER, Pawtucket, R. I. Filed Dec. 5, 1921. Serial No. 520,078. 12 Claims. (Cl. 242—43.3.)



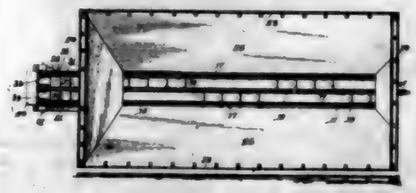
1. A builder motion for spinning machines comprising a to and fro movable member, an operative connection

between the latter and the movable spinning element support, alternately acting power means, an operative



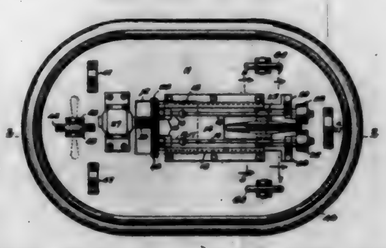
connection between the latter and said member, and means for changing the direction of action of said power means controlled by said member.

1,535,037. METHOD FOR HIGH-FREQUENCY TELEPHONY WITH OR WITHOUT A LINE. LEO PUNGS, Berlin-Charlottenburg, Germany, assignor to C. Lorenz Aktiengesellschaft, Lorenzweg, Berlin-Tempelhof, Germany. Filed Aug. 23, 1921. Serial No. 494,570. 4 Claims. (Cl. 179—171.)



1. In an apparatus of the character described, a source of high frequency currents, and means for influencing said high frequency currents, comprising a winding through which the high frequency currents may flow, a second winding, an iron core for said windings, an amplifying thermionic valve, said second winding being connected in series with the closed circuit of the valve, means for impressing signal representing currents upon the closed circuit of the valve, and means for adjusting the "no-load flux" of the core independently of the "no-load current" of the closed circuit of said valve.

1,535,038. INTERNAL-COMBUSTION ENGINE. MARCEL PRÉTOT, Ensisheim, Haut-Rhin, France. Filed Mar. 25, 1920, Serial No. 368,626. Renewed Mar. 18, 1925. 2 Claims. (Cl. 123—69.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

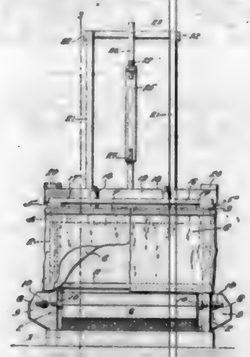


1. A two-cycle internal combustion engine comprising in combination, a cylinder, a gas-tight crank case, and a piston reciprocable therein, means for supplying fuel mixture to the crank case, means for conducting fuel mixture from the crank case to the cylinder, means for blowing scavenging air through the cylinder, and means for preventing admission of fuel from the crank case to the cylinder while scavenging.

1,535,039. COMPOST-STORAGE BIN. JOHN J. RETTLER, Appleton, Wis. Filed Jan. 24, 1924. Serial No. 688,253. 3 Claims. (Cl. 214—16.)

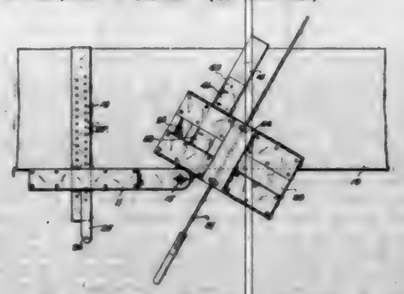
1. An apparatus of the class described, comprising a storage bin, a plurality of endless belts disposed in parallel relation and including an intermediate belt, and lateral belts spaced from opposite sides of the intermediate belt, a plurality of series of carrier slats attached to the intermediate belt and to one of the lateral belts, and a series of carrier slats attached to the intermediate belt and to the other of said lateral belts, the first mentioned series of slats being disposed opposite the spaces between the first and last mentioned series of slats.

1,535,040. AMUSEMENT APPARATUS. HENRY ELMER RIEHL, Brooklyn, N. Y. Filed May 26, 1923. Serial No. 641,720. 16 Claims. (Cl. 180—2.)



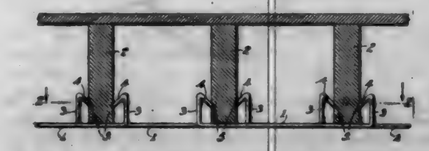
1. In a vehicle having a traction wheel, a friction disc for movement into engagement with the traction wheel, means for driving the friction disc, a steering column for the vehicle, steering mechanism operable at the steering column and means adapted to be actuated by the steering column independently of the steering mechanism for controlling the movement of the disc relatively to the traction wheel.

16. In a vehicle having two wheels, one a traction and the other a steering wheel, a friction disc for engaging the traction wheel, means for driving the friction disc, a steering column mounted on the body of the vehicle and movable relatively thereto, means connected with the steering column for controlling the steering wheel, and means adapted to be actuated by the steering column for moving the friction disc into engagement with the traction wheel.



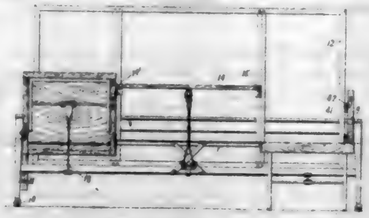
1,535,041. STAND. MAX H. RUHMANN, Vernon, British Columbia, Canada. Filed May 5, 1923, Serial No. 637,026. Renewed Nov. 17, 1924. 4 Claims. (Cl. 88—24.)

1. An apparatus for the purpose described, comprising a stand including a closed base having on its top a translucent objective screen and lamps in the base for directing rays of light against the screen, a natural light obscuring element around the stand above the base having lamps therein for directing rays of light against the



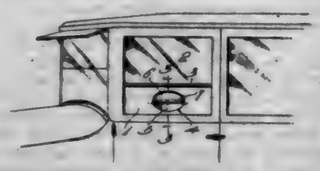
screen, and supporting means for a vertically disposed inverted camera movable longitudinally and transversely over the stand.

1,535,042. HANDSAW GUIDE. THOMAS DUDLEY SADLER, New Orleans, La. Filed Jan. 16, 1924. Serial No. 686,657. 3 Claims. (Cl. 143—88.)



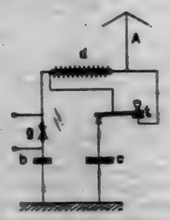
1. An instrument as specified comprising a handle having a straight edge adapted to be placed against one edge of a piece of work, a pair of blades adjustably mounted on the handle, clamping means carried by one blade to engage the work for holding the handle and the blades in adjusted position thereon, said other blade having straight parallel edges and being adapted for adjustment on the handle across the work into various angles for use as a straight and a bevel edge, a saw guide removably and adjustably mounted on said other blade for supporting and guiding a saw across the work at the desired angle, said saw guide being adapted to be slid from said blade for freeing the straight edge thereof.

1,535,043. BRIDGE PIECE. STEPHEN SCANLON, New York, N. Y. Filed May 6, 1924. Serial No. 711,391. 2 Claims. (Cl. 20—9.)



1. A bridge piece of the character described, comprising a strip of metal, tongues projected at right angles to the ends of said strip, inwardly projected jaws at the ends of the tongues, said jaws located at an acute angle relative to the tongues, and teeth at the extremities of said jaws.

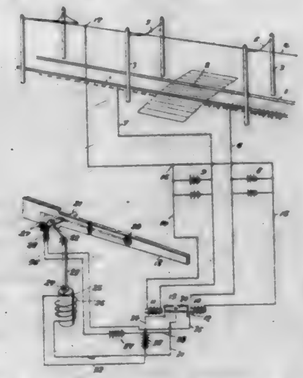
1,535,044. CONVERTIBLE CLUB FURNITURE. CHARLES SCHARL, New York, N. Y. Filed June 13, 1922. Serial No. 568,050. 3 Claims. (Cl. 155—45.)



1. In a convertible furniture, the combination of a base frame with a bed frame, said bed frame being rotatably applied to said base frame, of a holding frame slideably applied into said base frame and of means to inter-connect said bed frame to said holding frame in such a manner that said holding frame will slide upwardly when said bed frame is moved into a vertical position and will slide downwardly when said bed frame is brought into a horizontal position.

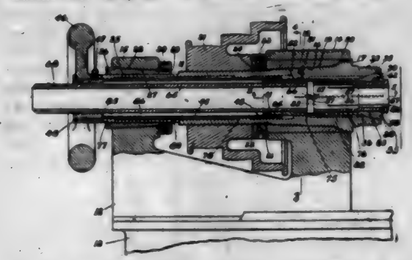
1,535,045. SIGNALING EQUIPMENT FOR AUTOMOBILES. ALPHONSE JONAS SCHEIDECKER, Baton Rouge, La. Filed Apr. 22, 1924. Serial No. 708,270. 3 Claims. (Cl. 296—44.)

1. An automobile having an opening in one side through which the driver's hand may be passed for signaling, and an elastic closure for said opening having a self-closing slit through which to pass the hand.



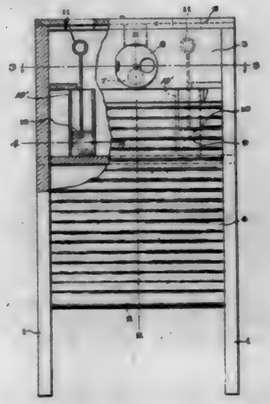
1,535,046. KEY CONNECTION FOR THE WIRELESS TRANSMISSION OF MESSAGES. OTTO SCHELLER, Berlin-Lichterfelde-West, and ROBERT HEILOG, Berlin, Germany, assignors to C. Lorenz Aktiengesellschaft, Lorenzweg, Berlin-Tempelhof, Germany. Filed Aug. 31, 1921. Serial No. 497,281½. 1 Claim. (Cl. 250—19.) (Granted under the provisions of the act of Mar. 3, 1921, 41 Stat. L., 1313.)

A wireless signal transmission apparatus comprising an antenna, a high frequency generator connected therewith, a condenser adapted to be connected in parallel with the generator, a choke coil normally in series with the generator and antenna, and a key with connections



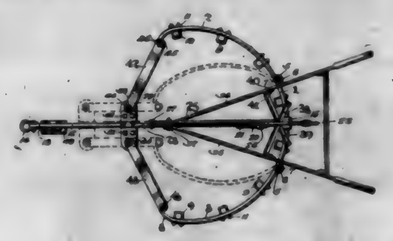
therefor whereby with the key closed the choke coil will be brought into shunt relation to the antenna generator circuit and with the key open the condenser will be connected in parallel to the generator.

1,535,047. CROSSING GATE. GEORGE F. SCHIRMACHER, Waukesha, Wis. Filed June 6, 1924. Serial No. 718,364. 2 Claims. (Cl. 246—128.)



1. In combination, a railway having its rails insulated from each other at the center of a crossing, a weight influenced pivotally supported gate at the crossing, a trolley wire arranged over the railway and a train having a trolley wheel to engage the trolley wire, of normally closed electric circuits, wired directly to the rails at the sides of the crossing and to the trolley wire, relays in said circuits having spring influenced armatures, contacts in the path of engagement with the armatures when the latter are de-energized, and the said relays designed to have their circuits de-energized when a train approaches the crossing, a solenoid, an electric circuit therefor connected also with the armatures and with the contacts, a pivot arm on the core of the solenoid, and the pivotal element for the gate having a crank to which the arm is connected.

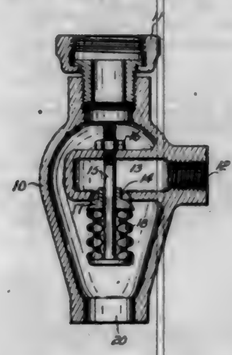
1,535,048. CHUCKING MECHANISM. WILLIAM F. SCHUMER, Cincinnati, Ohio. Filed Apr. 16, 1923. Serial No. 632,261. 4 Claims. (Cl. 279—53.)



1. In chucking mechanism, the combination of a shell provided with an inner taper end face, an outer collet in said shell, said outer collet having an outer taper end face coacting with said inner taper end face, a sleeve in said shell telescopically connected with said outer collet, the inner ends of said outer collet and said sleeve having threaded connection therebetween for relative endwise adjustment therebetween, means between said sleeve and said shell limiting endwise movement of said sleeve into said shell, turning means at the outer end of said sleeve outside said shell, an inner collet in said outer collet, means solely between said outer collet and said inner collet connecting said collets, and an ejector-part extending lengthwise in said outer collet and in said sleeve arranged to eject said inner collet by endwise movement of said ejector-part in said outer collet and said sleeve while maintaining said outer collet in said chucking mechanism about said ejector-part.

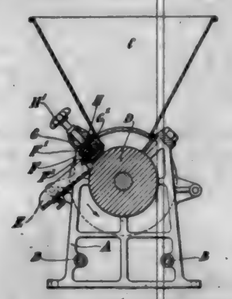
1,535,049. WASHBOARD. LUTHER SHEARS, Arbovale, W. Va. Filed Feb. 16, 1923. Serial No. 619,495. 1 Claim. (Cl. 68—29.)

A self-soaping washboard having a rubbing surface and a front board secured between its stiles above the rubbing surface, said front board having an opening therethrough, a pivoted disk on the front board having an aperture therethrough designed to register with the opening when the disk is turned to one position, a soap compartment arranged between the stiles of the washboard to the rear of the upper portion of the rubbing surface and to the rear of the front board, a slidable door disposed over the front board and the soap compartment for closing the latter, blocks providing valves guided in the soap compartment, an upstanding handle for each valve, and the rubbing surface of the board having apertures which are closed by the valves when the latter are in their lowered positions.



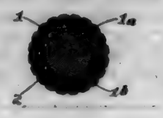
1,535,050. HARROW. MANUEL J. SILVA, Island of Hawaii, Territory of Hawaii. Filed Nov. 10, 1923. Serial No. 675,214. 4 Claims. (Cl. 55—31.)

1. A harrow comprising a body portion formed of an intermediate arcuate bar and a pair of substantially semi-elliptical outer bars, means for pivotally connecting the rear ends of the outer bars to the ends of the intermediate bar, a beam projecting forwardly of the outer bars and having its rear end connected to the intermediate bar, a shifting element slidably mounted



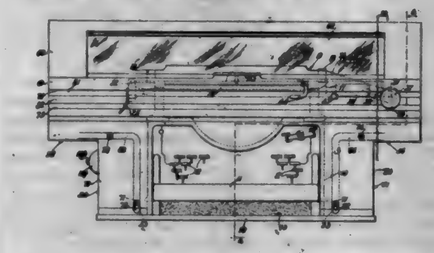
on said beam, oppositely disposed links connecting the forward termini of the outer bars to said element, means supported from the beam and pivotally connected to said element for shifting it, thereby providing for the contraction and expansion of said body, and teeth depending from said bars.

1,535,051. STEAM-WATER MIXER. CHETWOOD SMITH, Worcester, and CHARLES T. HAWLEY, Holden, Mass., assignors to Stack Heater Company, Boston, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1922. Serial No. 549,792. 5 Claims. (Cl. 236—12.)



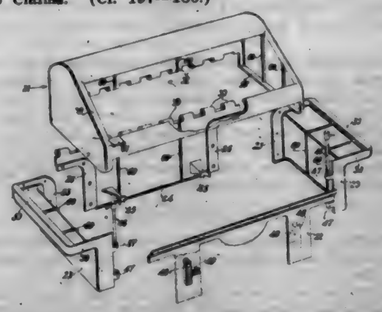
1. A steam-water mixer comprising a casing having a steam inlet, a steam inlet member projecting within said casing and having a downward opening, a combined conical check valve and steam spreader mounted below said opening and normally spaced therefrom, said combined valve and spreader being freely movable upward to close said steam inlet opening upon the occurrence of excessive relative water pressure.

1,535,052. MILL FOR GRINDING PAINTS, ENAMELS, INKS, AND OTHER VISCOUS MATERIALS. SIDNEY SMITH, Midhurst, England. Filed Nov. 17, 1922. Serial No. 601,606. 1 Claim. (Cl. 83—14.)



A mill for grinding paints, enamels, inks, and other viscous materials, comprising a frame, a hopper mounted thereon; a roller underlying the hopper and closing the delivery end thereof except at one edge thereof, and a grinding block carried by the hopper and extending downwardly toward and adjustable relative to the surface of the roller, said grinding block bearing on the roller immediately adjacent the delivery exit from the hopper to the roller to immediately act on any material leaving the hopper on the surface of the roller.

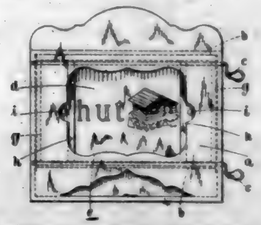
1,535,053. GOLF BALL. ALAN SPENDY, London, England, assignor to A. G. Spalding & Bros., New York, N. Y., a Corporation of New Jersey. Filed Jan. 24, 1925. Serial No. 4,544. 10 Claims. (Cl. 273—62.)



1. A golf ball comprising a center having vulcanized thereon a cover or shell comprising gutta and a colloidal substance.

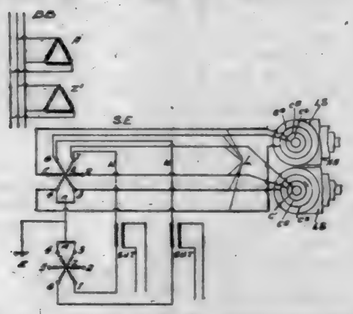
1,535,054. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 20, 1921. Serial No. 471,173. 35 Claims. (Cl. 197—186.)

1. The combination with a typewriting machine comprising a traveling carriage having a platen-frame mounted therein, and a platen journaled in said platen-frame, of a sound-deadening casing for the machine, said casing comprising a lower body part and an upper cover part hinged at the rear to said body part, there being a slot at the front between said body part and said cover part, and means connected to said platen and projecting forwardly through said slot whereby said platen may be rotated from the front of the casing, said means operating in said slot when said carriage travels to the right or left, and being provided with a finger-wheel outside of said casing for rotating said platen in both directions.



1,535,055. TYPEWRITING MACHINE. BURNHAM C. STICKNEY, Elizabeth, N. J., assignor to Underwood Typewriter Company, New York, N. Y., a Corporation of Delaware. Filed May 27, 1921. Serial No. 473,018. 18 Claims. (Cl. 197—186.)

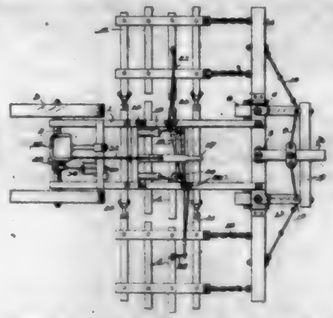
1. A knock-down sound-deadening casing for typewriting machines, having upper overhanging side portions to accommodate the travel of the carriage, said casing comprising a body part having front, back and side walls, and a cover part hingedly and releasably connected to



said body part to permit the cover to be detached from the body part, said walls being releasably connected to permit separation thereof in disassembling the body part, said side walls having upright portions adjacent the sides of the machine frame and horizontal floor portions for said overhanging side portions, and having flanges along the front and rear edges of both the upright and horizontal portions for reinforcement and to provide parts to which the front and back walls may be readily secured.

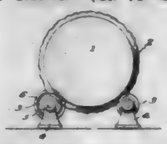
1,535,050. EDUCATIONAL APPLIANCE. WOLF STOLOFF, London, England. Filed Oct. 22, 1923. Serial No. 670,085. 2 Claims. (Cl. 35—9.)

1. An educational appliance comprising a frame having guideways, a shutter made of pleated fabric coated with a stiffening material and having the stiffness broken down along the lines of the folds, said shutter having a pair of opposite edges movable in said guideways and having one of its other edges secured to said frame, and a bar to which the edge of the shutter opposite to that secured to the frame is secured.



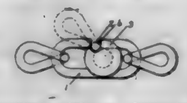
1,535,057. ELECTRICAL-POWER-TRANSMISSION SYSTEM. ALFRED MILLS TAYLOR, Erdington, Birmingham, England. Filed June 11, 1921. Serial No. 476,642. 13 Claims. (Cl. 171—97.)

1. A transmission system for polyphase alternating currents having a star connected source, including a pair of cables having concentric cores, a connection for earthing the polyphase system at one of its phase extremities, and connections between the source and the cores of said cables with the innermost cores of the cables connected to these phase extremities the potentials of which are farthest removed from earth.



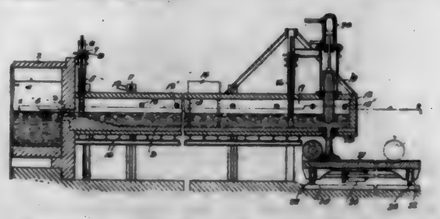
1,535,058. HARROW CART. JOHN W. TAYLOR, Blue Rapids, Kans. Filed Feb. 2, 1923. Serial No. 616,542. 1 Claim. (Cl. 55—88.)

A harrow cart comprising a wheeled frame, wings hinged to the frame, one at each side thereof, a flexible brace for connecting each wing to a part of the frame, a sectional harrow, chains for connecting the middle section with a part of the frame and the outer sections with the wings, triangular shaped arms pivotally connected with the frame, a link connecting the outer end of each arm with an outer section of the harrow, a rock shaft on the frame, sectors thereon, chains connecting the sectors with the upper ends of the arms, guiding



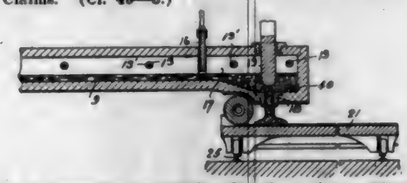
pulleys for the chains and means for rocking the shaft to raise and lower the harrow sections.

1,535,059. PROCESS FOR MAKING LIQUID ZINC FROM BLUE POWDER. FILIP THARALDSEN, Bestum, near Christiania, Norway. Filed June 7, 1923. Serial No. 644,066. 2 Claims. (Cl. 75—153.)



1. The process of making liquid zinc from blue powder which comprises subjecting the powder to a revolving action of a rotary heated drum, and imparting a series of shocks to the drum during rotation thereby causing a settling of the non-oxydised metal of the powder.

1,535,060. CONNECTING LINK. ALLEN A. TIERILL, Pittsburgh, Pa. Filed Oct. 14, 1920. Serial No. 416,860. 3 Claims. (Cl. 24—238.)



1. The combination with an elongated link having an opening in one of its long sides forming an entrance and exit passage, of a lock member formed as an integral whole, rotatably confined within the link and freely movable lengthwise thereof across said opening and provided with transversely aligned notches arranged to co-operate with said opening for controlling passage therethrough.

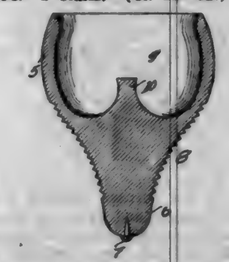
1,535,061. PROCESS OF MAKING PLATE GLASS. FRANK E. TROUTMAN and CHARLES H. CHRISTIE, Butler, Pa. Filed May 7, 1919. Serial No. 295,485. 1 Claim. (Cl. 49—87.)

The method of casting molten glass that comprises flowing the glass through an outlet upon a casting table, advancing a casting table beneath said glass outlet, and regulating the amount of glass received on said table by controlling the speed at which said table advances.

1,535,062. APPARATUS FOR MAKING PLATE GLASS. FRANK E. TROUTMAN and CHARLES H. CHRISTIE, Butler, Pa. Filed May 7, 1919. Serial No. 295,486. 6 Claims. (Cl. 49—8.)

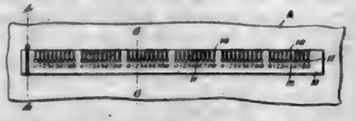
6. In apparatus for making flat glass, the combination of a melting furnace, a shallow runway of materially greater length than width communicating with said furnace, means independent of said furnace for controlling the temperature of the glass at the outer end of said runway, a receptacle adapted to receive glass from the outer end of said runway and having a discharge opening in its bottom, a casting table adapted to move beneath said opening, and means for forming the glass on said table into a sheet.

1,535,063. METHOD OF LAYING PLATE GLASS. FRANK E. TROUTMAN and CHARLES H. CHRISTIE, Butler, Pa. Filed Jan. 20, 1923. Serial No. 613,948. 11 Claims. (Cl. 294—65.)



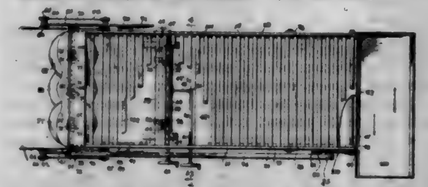
1. The method of laying flat glass on a grinding or polishing table that comprises lifting a plurality of pieces of glass by means of suction applied to the upper surface of the glass and fixedly limiting the relative upward movement of the upper surfaces of the said pieces so as to bring all of the said upper surfaces to the same level.

1,535,064. APPARATUS FOR LAYING PLATE GLASS. FRANK E. TROUTMAN and CHARLES H. CHRISTIE, Butler, Pa. Filed Jan. 20, 1923. Serial No. 613,949. 12 Claims. (Cl. 294—65.)



1. Apparatus for laying flat glass upon grinding or polishing tables, comprising a suction device adapted to engage and support the glass to be laid, and rigid seating means for permitting the surface of the glass engaged by said suction device to be alined in a definite plane.

1,535,065. TOP. JOHN A. B. TWEEDT and CHARLES A. NELSON, Oakland, Calif. Filed June 2, 1922. Serial No. 565,294. 1 Claim. (Cl. 45—32.)

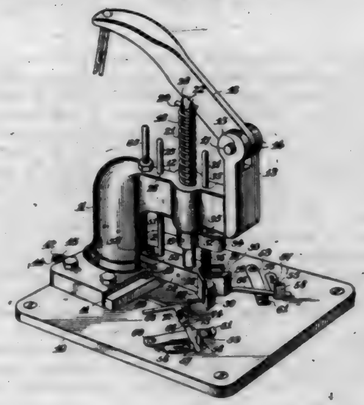


In a top, an upper portion, a central portion having downwardly and inwardly inclined sides, a lower portion of smaller dimension that said upper and central portions, a hollow chamber formed in said upper portion, an upstanding portion formed within said chamber and having its upper extremity terminating at a point below the upper extremity of said upper portion, a wear resisting tip secured upon said lower portion and corrugations formed on the downwardly extending sides of said top.

1,535,066. DEVICE FOR SECRET WRITING. MARIE A. VAHJEN, Guttenberg, N. J. Filed Apr. 4, 1923. Serial No. 629,927. 1 Claim. (Cl. 35—13.)

A secret writing device comprising a bar having a plurality of openings arranged in curves, a designating character associated with each of said openings, an index line leading from each of said openings to one edge of the bar, a pin carried by one end of the bar and adapted to be received within a recess in the article to be marked for maintaining the bar in position to receive a marking instrument through any one of the openings therethrough to make an identifying mark upon said article to be marked, and a second pin right-angularly disposed with respect to the first pin and adapted to be received in the same opening in lieu of the first-mentioned pin to position the bar in such a manner that the index lines of the openings through which the marks were made will coincide with the said marks to facilitate the reading thereof.

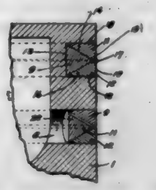
1,535,067. MOTOR-DRIVEN GRUBBING MACHINE. ADOLARD VILLEMAIRE, Ruskin, Fla. Filed July 27, 1923. Serial No. 654,278. 12 Claims. (Cl. 55—62.)



1. A machine for the purpose set forth comprising a body portion, propelling means therefor, a series of horizontally disposed overlapping spaced saw elements depending below the forward end of the body portion, a vertically disposed saw element arranged forwardly of and at the outer side of each outer element of said series of horizontally disposed saw elements, a conveyor extending rearwardly from said saw elements, an operative drive for said horizontally disposed saw elements, an operative drive for said conveyor, an operative drive connection between said horizontally disposed saw elements and said vertically disposed saw elements, and an inclined chute leading from said conveyor.

4. A machine for the purpose set forth comprising a body portion, propelling means therefor, a series of horizontally disposed overlapping spaced saw elements depending below the forward end of the body portion, a vertically disposed saw element arranged forwardly of and at the outer side of each outer element of said series of horizontally disposed saw elements, a conveyor extending rearwardly from said saw elements, an operative drive for said horizontally disposed saw elements, an operative drive for said conveyor, an operative drive connection between said horizontally disposed saw elements and said vertically disposed saw elements, an inclined chute leading from said conveyor, means for vertically adjusting said body portion causing thereby the adjustment of said series of horizontally disposed saw elements, and means for adjusting said vertically disposed saw elements.

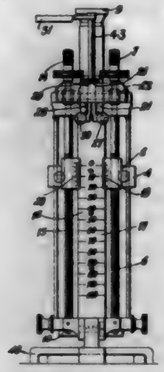
10. A machine for the purpose set forth comprising a body portion, means arranged at the rear thereof for propelling said body portion, horizontally and vertically disposed saw elements arranged at the forward end of said body portion, an endless slatted conveyor supported



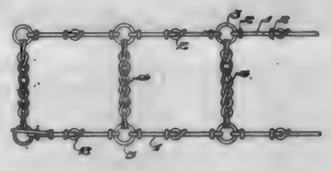
by said body portion and extending rearwardly from said saw elements, means for driving said conveyor and saw elements from said propelling means, means to provide for the adjustment of said horizontally disposed saw elements, and a deflector arranged at the forward end of said body portion, depending therefrom and positioned over said horizontally disposed saw elements, said deflector arranged between said vertically disposed saw elements.

1,535,068. METAL-BINDING MACHINE. MURRAY A. WACHS, Brooklyn, N. Y. Filed July 11, 1924. Serial No. 725,464. 10 Claims. (Cl. 153—1.)

1. A machine for attaching substantially U-shaped binding elements or clips having a pair of walls joined by a bight portion to the edges of a piece of material, comprising a base for supporting the piece of material and the elements to be attached thereto, means for holding the material against relative movement on the base, means for advancing said element to dispose and hold the bight portion flush with the outer edge of the material, and means movable toward the base for subsequently exerting a pressure against the element or clip to bind the same to the material.



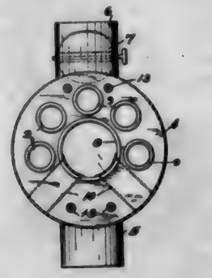
1,535,069. PISTON RING. EARL O. WEATHERWAX, San Francisco, Calif. Filed Mar. 1, 1923. Serial No. 622,168. 2 Claims. (Cl. 74—109.)



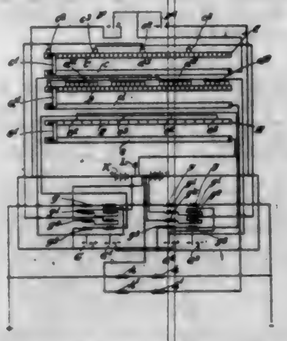
1. In combination, a piston having an annular groove therein communicating with the inside of the piston, and a piston ring adapted to engage the groove comprising a plurality of ring elements formed with grooves in their contacting faces allowing a liquid to pass between the same to the inside of the piston.

1,535,070. COLORIMETER. ROBERT E. KLETT, Ridgefield Park, N. J., assignor to Klett Manufacturing Company, Inc., New York, N. Y., a Corporation of New York. Filed Jan. 6, 1921. Serial No. 435,318. 20 Claims. (Cl. 88—14.)

5. A colorimeter comprising color observing means, color intensity indicators located above the central portion of the colorimeter, and means for reading both of the indicators from above the colorimeter with substantially the same focus of the operator's eye during continued readings.

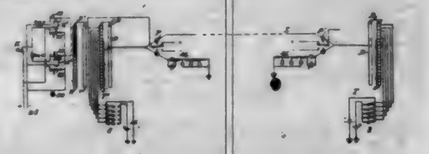


1,535,071. AUTOMOBILE TIRE CHAIN. DAVID ALLEN WARD, Primrose, Nebr. Filed Aug. 11, 1922. Serial No. 581,172. 1 Claim. (Cl. 132—14.)



In a traction element of the class described, a pair of side chains consisting of links having rotatable uniformly spaced rings therebetween, each link being looped at its ends to engage on one end a loop on a similar link and on the other end a rotatable ring, and a plurality of cross chains connected with said rotatable rings.

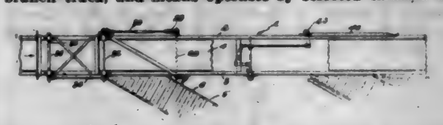
1,535,072. HEATING DRUM OR RADIATOR. FRANK JAMES FLANAGAN, Fredericton, New Brunswick, Canada, assignor of one-half to Joseph A. Cain, Fredericton, Canada. Filed Sept. 18, 1922. Serial No. 588,819. 3 Claims. (Cl. 257—171.)



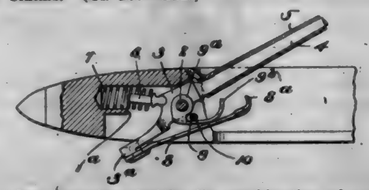
1. In a device for the purpose specified, a cylindrical drum having an inlet pipe and an outlet pipe arranged diametrically opposite in the drum, air passage tubes extending through the drum, and a deflector carried by the drum at one end of the air passage tubes to direct the air passing through the air passage tubes.

1,535,073. SYNCHRONOUS TELEGRAPH SYSTEM. JOHN VICTOR FOLL, London, England, assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Jan. 26, 1923. Serial No. 615,166. 3 Claims. (Cl. 178—53.)

1. In a synchronous telegraph system, a transmitting equipment comprising a rotary distributer, positive and negative poled receiving relays, two pairs of oppositely poled transmitting relays connected alternately to the the segmented rings of the distributer, each pair being connected thereto at a plurality of equally spaced intervals, whereby said pairs of relays are connected alternately to the receiving relays and are cleared between successive impulses, and means effective through said distributer equipment for repeating the received signal impulses by connecting the corresponding poles of a current source with a line or cable.



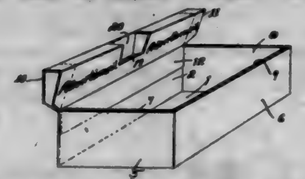
1,535,074. TROUBLE INDICATOR FOR TELEGRAPH SYSTEMS. WALTER A. HOUGHTALING, Dunellen, N. J., assignor to The Western Union Telegraph Company, New York, N. Y., a Corporation of New York. Filed Jan. 27, 1923. Serial No. 615,383. 5 Claims. (Cl. 178—53.)



1. In a system of synchronous telegraphy, having a sending and a receiving station and a single line connected in duplex arrangement between said stations, the combination with the usual duplex line relays, of distributer equipments at such stations operating in synchronism and normally maintaining a predetermined order of current polarities in said line, and a trouble indicator comprising a signal device, a relay controlling the operation of said signal device and means effective under a non-synchronized condition of said distributers for actuating said relay, said means comprising opposite polarities adapted to be connected respectively to said signal relay under the control of the armature of said line relay.

1,535,075. CONVEYER SYSTEM. THOMAS S. KNAP, Syracuse, N. Y., assignor to The Lamson Company, Syracuse, N. Y., a Corporation of Massachusetts. Filed Dec. 6, 1923. Serial No. 678,866. 27 Claims. (Cl. 198—21.)

1. A conveyer system comprising a track for carriers, a plurality of branch tracks, means normally operative to divert all carriers of one class into the first branch track, means operable by carriers of a second class to render the diverting means inoperative, normally inoperative switching means associated with the other branch track, and means operable by selected carriers of the second class to render said switching means operative to divert said selected carriers into the last named branch track.



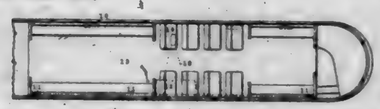
1,535,076. LOOM SHUTTLE. GEORGE A. LITCHFIELD, Southbridge, Mass., assignor to Litchfield Shuttle Company, Southbridge, Mass., a Corporation of Massachusetts. Filed Oct. 11, 1924. Serial No. 743,059. 6 Claims. (Cl. 139—211.)

1. In a weaving shuttle, the combination of a shuttle body, a cop and bobbin spindle pivotally mounted in the rear end of the shuttle to swing outwardly for the removal of cop or bobbin, a spring arm secured to the heel end of the spindle and having its forward end inwardly turned to engage and retain a bobbin, a pivoted cop-retaining member loosely mounted on the pivotal axis of the spindle and provided with an inturned cop-engaging portion at its forward end to engage and retain a cop tube on the spindle blade, said cop retaining member being disposed to be pressed into engagement with a blade-carried cop when the parts are in proper position for weaving and to itself form a stop abutting against said spring arm when the spindle is swung out for removal of cop tube or bobbin, substantially as described.

1,535,077. DISPLAY CARTON. AUGUST F. MILLER, San Francisco, Calif., assignor to Schmidt Lithograph Company, a Corporation of California. Filed Feb. 28, 1922. Serial No. 538,583. 4 Claims. (Cl. 206—44.)

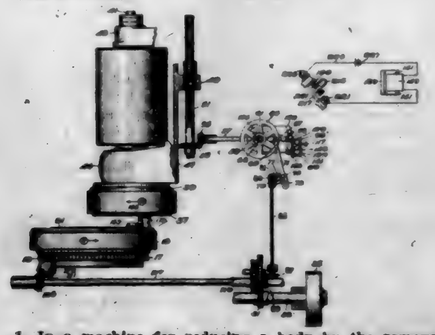
3. In a display carton, a top hinged thereto along one side, said top being scored along two lines and cut to produce an opening therethrough to form a recess for a package when one edge of the top is bent to a position close to the hinge edge of the top, said top having tabs at the ends to aid in supporting it when bent up for display purposes.

1,535,078. OIL BURNER. NORMAN FRANCIS PRATT, Jacksonville, Fla., assignor to Grover Cleveland Stembridge, Jacksonville, Fla. Filed Mar. 28, 1924. Serial No. 702,664. 2 Claims. (Cl. 158—63.)



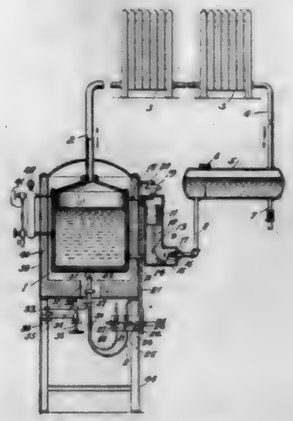
2. In a liquid fuel burner, the combination of a U-shaped preheating tube, a head to which the ends of the tube are attached, the head having passages therethrough in alinement with the arms of the said tube, means adapted to connect one of said passages with a source of fuel supply, a removable plug closing the outer end of the other said passage, a third passage

through said head between the aforesaid passages and parallel therewith, a valve stem disposed in said third passage adapted to control the discharge end thereof, and a fourth passage in said head extending obliquely



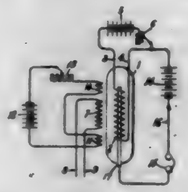
from a point adjacent the discharge end of the said third passage to the outer end of that passage which is closed by a plug, said plug when removed permitting a cleaning instrument to be inserted directly into the obliquely extending passage.

1,535,079. HEATING SYSTEM FOR ELECTRIC-RAILWAY CARS. WILLIAM JUDSON SMITH, St. Paul, Minn. Filed Aug. 25, 1922. Serial No. 584,212. 15 Claims. (Cl. 219—20.)



1. In a heating system for electric railway cars, the combination with means for distributing heated air within the car, of means for heating the air supplied to said distributing means by the energy dissipated in the motor rheostats, and positive means in said distributing means for accelerating the movement of the heated air.

1,535,080. MEANS FOR CONTROLLING FEEDING MECHANISMS. HENRY K. SPENCER, Watertown, Mass., assignor to The Blanchard Machine Company, Cambridge, Mass., a Corporation of Massachusetts. Filed July 30, 1921. Serial No. 488,747. 20 Claims. (Cl. 51—131.)



1. In a machine for reducing a body by the removal of material therefrom, the combination of a reducing tool, means to cause a relative travel of said tool and the material in the direction of the surface of said body from which the material is removed, means to cause a relative feed of said tool and the material in a direction transverse to said surface, a follower adapted to rest against said surface, and means for utilizing the frictional resistance to relative movement of said follower and said surface of said body in the first-named direction to control said feed.

1,535,081. APPARATUS FOR HEATING WATER OR OTHER LIQUIDS. JOSEPH VANORIO, College Point, N. Y., assignor of one-fifth to Joseph F. O'Brien, West New York, N. J. Filed May 24, 1919. Serial No. 299,521. 4 Claims. (Cl. 122—23.)

4. An apparatus for heating water embodying, in combination, a water-heating container composed of copper and containing water in a liquid state, and a torch propagating a gas flame with a degree of heat above the melting point of the said metal arranged in such a position in relation to said container as to direct said gas flame against the metal of said container.

1,535,082. ELECTRON-DISCHARGE DEVICE. ERNST F. W. ALEXANDERSON, Schenectady, N. Y., assignor to General Electric Company, New York, N. Y. Filed Sept. 28, 1920, Serial No. 413,337. Renewed Mar. 12, 1923. 8 Claims. (Cl. 250—27.)

1. In combination, an electron discharge device adapted to operate independently of gas ionization comprising the combination of an anode, an electron-emitting cathode arranged about said anode and magnetic means arranged to oppose the passage of electrons from said cathode to said anode.

Patents Nos. 1,535,083 to 1,536,045.

THE
OFFICIAL GAZETTE
OF THE
United States Patent Office.

Vol. 333—No. 4. TUESDAY, APRIL 28, 1925. Price—$5 per year.

The OFFICIAL GAZETTE is mailed under the direction of the Superintendent of Documents, Government Printing Office, to whom all subscriptions should be made payable and all communications respecting the Gazette should be addressed. Issued weekly. Subscriptions, $5.00 per annum; single numbers, 10 cents each.
PRINTED COPIES OF PATENTS are furnished by the Patent Office at 10 cents each. For the latter, address the Commissioner of Patents, Washington, D. C.
CIRCULARS OF GENERAL INFORMATION concerning PATENTS or concerning TRADE-MARKS, PRINTS, and LABELS will be sent without cost on request to the Commissioner of Patents, Washington, D. C.

Notice of Cancellation.

U. S. PATENT OFFICE, *Washington, Apr. 6, 1925.*

F. De Martino, his assigns or legal representatives, take notice:

A cancellation proceeding having been instituted by this Office upon the application of Frank J. Conjurske, 12 Cedar Street, Sturgeon Bay, Wis., to effect the cancellation of the trade-mark registration of F. De Martino, of 1027 Bridge Street, Altoona, Pa., No. 106,649, dated October 26, 1915, and the notice of such proceeding sent by registered mail to the said F. De Martino at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said F. De Martino, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the cancellation will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

ADJUDICATED PATENTS.

(C. C. A. Ohio.) The Johnson patent, No. 1,080,890, for hydraulic valve, claims 1 and 4 *Held* valid and infringed. *Wellman-Seaver-Morgan Co.* v. *William Cramp & Sons Ship & Engine Bldg. Co.*, 3 F. (2d) 531.

(C. C. A. Colo.) The Lehman patent, No. 1,168,945, for foldable cuff, *Held* invalid. *Lehman* v. *Ripley*, 3 F. (2d) 518.

(C. C. A. N. Y.) The Sparks patent, No. 1,237,717, for motor horn, *Held* invalid. *The Sparks-Withington Co.* v. *E. A. Laboratories*, 3 F. (2d) 539.

(C. C. A. N. Y.) The Speckerman patent, No. 1,513,232, for hair-waving device, claims 5 and 7 *Held* invalid. *E. Fredericks, Inc.*, v. *Eugene*, 3 F. (2d) 543.

(D. C. Mont.) The Greenawalt patent, No. 1,348,407, for improvement in apparatus for roasting ores, *Held* invalid and, if valid, not infringed. *Greenawalt* v. *American Smelting & Refining Co.*, 3 F. (2d) 658.

(C. C. A. N. Y.) The Sparks patent, No. 1,355,283, for motor for electric horn, claim 1 *Held* invalid. *Sparks-Withington Co.* v. *E. A. Laboratories*, 3 F. (2d) 539.

(C. C. A. N. Y.) The Frederics patent, No. 1,425,956, for hair-waving device, claims 9 and 10 *Held* invalid. *E. Fredericks, Inc.*, v. *Eugene*, 3 F. (2d) 543.

(D. C. Calif.) The Casey patent, No. 1,445,754, for road tractor, *Held* valid and infringed. *Casey* v. *Bennett*, 3 F. (2d) 640.

(D. C. Mass.) The Jennings reissue patent, No. 15,637, for vacuum heating system, *Held* valid, but not infringed. *Nash Engineering Co.* v. *W. D. Cashin & Co.*, 3 F. (2d) 680.

Interference Defined.

RULE 93. An interference is a proceeding instituted for the purpose of determining the question of priority of invention between two or more parties claiming substantially the same patentable invention. In order to ascertain whether any question of priority arises the Commissioner may call upon any junior applicant to state in writing the date when he conceived the invention under consideration. All statements filed in compliance with this rule will be returned to the parties filing them. In case the applicant makes no reply within the time specified, not less than ten days, the Commissioner will proceed upon the assumption that the said date is the date of the oath attached to the application. The fact that one of the parties has already obtained a patent will not prevent an interference, for, although the Commissioner has no power to cancel a patent, he may grant another patent for the same invention to a person who proves to be the prior inventor.

Printed Copies of Patents.

A printed copy of the complete specification and drawings of any patent published herein can be obtained for ten cents.

Condition of Applications Under Examination at Close of Business April 17, 1925.

Room No.	(Total number of applications awaiting action, excluding Trade-Mark Division, 46,920; Trade-Mark Division, 2,338. Oldest new case, Oct. 18, 1924; oldest amended, Oct. 17, 1924. The dates given are 1924 except where † indicates 1925.) Divisions, Examiners, and Subjects of Inventions.	Oldest new application and oldest action by applicant awaiting office action. New.	Amended.	No. of applications awaiting action.
116	1. LOEFFLER, F. A., Closure Operators; Fences; Gates; Harrows and Diggers; Plant Husbandry; Plows; Planting; Scattering Unloaders.	Dec. 26	†Jan. 8	697
126	2. HADEN, C. F., Bee Culture; Dairy; Preserving; Presses; Tobacco.	†Jan. 2	Dec. 20	494
331	3. RICH, WM. J., Electric Heating; Electrochemistry; Heating; Metal Founding; Metallurgical Apparatus; Metallurgy; Metal Treatment; Plastic Metal Working.	†Mar. 19	†Jan. 5	192

DECISIONS IN PATENT AND TRADE-MARK CASES.

Court of Appeals of the District of Columbia.

IN RE LILIENFELD.

No. 1,701. Decided March 2, 1925.

DECISION OF ASSISTANT COMMISSIONER FENNING.

1. SPECIFICATION — DISCLOSURE OF INVENTION — SUFFICIENCY OF.

Where, if the general suggestion made in the specification that cellulose ether might be used in a plastic composition is sufficient, there is nothing patentable over applicant's prior patent, and, if some description of the method of forming the plastic composition is necessary, that description is not found in the specification as filed, *Held* that there is no foundation for a valid patent.

2. SAME—SAME—NEW MATTER.

Where in effect the specification states that there is nothing new in the combination or in the proportions of its parts, but that the single new thing is the idea that cellulose ether may be substituted for nitrocellulose in the manufacture of plastics, and that with that idea once enunciated the person skilled in the art would readily produce the plastic, and where no method of combining materials to produce the product is indicated, *Held* that a detailed description of a method of producing celluloid substance, which applicant attempts to insert in the specifications, is new matter.

APPEAL from Patent Office. Affirmed.

Mr. F. F. Church for Lilienfeld.

Mr. T. A. Hostetler for the Commissioner of Patents.

Before MARTIN, Chief Justice, ROBB, Justice, and BARBER, Judge U. S. Court of Customs Appeals.

PER CURIAM:

Appeal from a Patent Office decision refusing to allow six claims of appellant's application for a patent.

Having carefully examined the record, in the light of appellant's argument and brief, and finding no error therein, we are content to rest our decision upon the views expressed by the tribunals of the Patent Office. The decision therefore is affirmed.

Decision of Assistant Commissioner Fenning, rendered in this case December 31, 1923, is as follows:

This is an appeal from the action of the Examiners-in-Chief rejecting the six claims in applicant's case. Claims 1 and 2 illustrate the application:

1. The herein described new plastic substance containing a cellulose alkyl ether, together with a substance capable of producing a plastic mixture therewith.
2. The herein described new plastic substance containing an alkyl ether of cellulose and a phosphoric acid ester of a phenol.

No references are cited, but it is held that applicant has not given a sufficient disclosure to warrant the granting of a patent.

Applicant in his brief here says:

The invention of the present application resides in the employment of cellulose ethers, in place of other cellulose compounds (such as nitrocellulose or cellulose acetate) previously used in plastic composition, of which the type of celluloid and celluloid substitutes is given.

The application as filed was vague and indefinite. It in substance says that the cellulose ethers may be used for producing plastic masses to be applied to a number of uses which are listed. It points out some characteristics of the cellulose ethers, indicating that some are soluble in water, while others are soluble in a large number of other solvents, a score or more of which are listed.

The specification makes the statement:

As the manufacture of the masses and bodies according to the present invention corresponds from principle with the manufacture of said masses and bodies known for cellulose and its derivatives, only the products being new and having peculiar advantageous properties as hereinbefore described, it is not necessary to describe said manufacture in detail.

No single specimen of a method of combining various materials to produce the product is indicated in the specification. Applicant here says:

As above stated, the ordinary method of making a celluloid, or celluloid substitute, is to mix together nitrocellulose (or acetyl cellulose) camphor, (or a camphor substitute) and a solvent for both of these materials, and to then kneed up the entire mixture, preferably with warming, and then to run the mixture out into sheets, which are run between heated rollers to press the same, and to drive off the volatile solvents. The phosphoric acid esters of phenols are commonly so employed with nitrocellulose (Zuhl patent No. 700,855), and it is well known that the increase in the amount of these phosphoric acid esters of phenol, increases the softness and plasticity of the product. It is submitted, that, after reading the present specification, any one, reasonably familiar with the celluloid industry will be able to substitute cellulose ethers, say water-insoluble cellulose ethyl ether, in place of the nitrocellulose, all without involving invention.

In effect this is a statement that there was nothing new in the combination or in the proportions of the combination, but that the single new thing was the idea that cellulose ether might be substituted for nitrocellulose in the manufacture of plastics and that with that idea once enunciated the person skilled in the art would readily and promptly produce the plastic.

It is noted that claim 2 calls for the specific solvent phosphoric acid ester of a phenol. The only foundation for this in the specification seems to be that this material is included among the score or more solvents mentioned. Reading the specification will not indicate that this particular solvent is of any different character or quality from the other solvents listed.

Nine months prior to filing the present application applicant filed an application which has matured into Patent No. 1,188,376. That patent is for the specific ethers of cellulose (and their process of manufacture) which are the basis of the plastic composition claimed in the present application. The specification of that patent points out that the term "cellulose alkyl ether" is the same as cellulose ether (p. 8, line 21 et seq.). It contains instructions in great detail for the manufacture of these ethers. It points out on page 4, lines 33 to 51, inclusive:

It would take too long to enumerate in this specification all the uses for which the cellulose alkyl ethers are suitable. The following use may be mentioned by way of example: as plastic masses, celluloid substitutes (alkyl ethers of cellulose, alone or mixed with other cellulose derivatives or mixed with camphor or other gelat-

inising agents, or camphor substitutes, or agents for imparting softness or plasticity) artificial filaments and spinning fibers, artificial animal hair, films, all kinds of photographic articles, lacquers, varnishes and paints, insulating goods, dressings for spinning fibers, dressings for fabrics, leather, paper and the like, printing agents and thickening agents for the same, agents for fixing pigments, adhesives, cements and glues and adhesive pastes, size for paper, &c.

That patent then proceeds to claim among other things:

48. The herein described new plastic substance containing as its essential constituent, a cellulose ether, that is a cellulose derivative in which at least one of the hydrogen atoms of the hydroxyl groups of the cellulose is replaced by an alkyl radical.

I am unable to find a patentable distinction between this claim and claim 1 here on appeal.

The examples of manufacture in Patent No. 1,188,376 all indicate that the cellulose ether is a flaky substance or powdery mass. To make it plastic, there must be added "a substance capable of producing a plastic mixture." That seems to be indicated in both claim 48 of the patent and claim 1 here in issue. Likewise claim 49 of the patent covers the same matter as claim 3 here in issue. Likewise claim 50 of the patent covers the same matter as claim 5 here in issue.

Claims 2, 4, and 6 seem to endeavor to distinguish by specifying that the substance added to the cellulose ether is a phosphoric acid ester of a phenol. As indicated above, I do not find in the original specification in the present case a sufficient foundation for these claims.

[1] It seems clear that if applicant's present argument is sound—namely, that the general suggestion made in the specification that cellulose ether might be used in a plastic composition, is sufficient to teach the art how to use that material in a plastic composition—there is nothing patentable in the present case over Patent No. 1,188,376. If some description of the method of forming the plastic composition is necessary, that description is not found in the specification as filed. Consequently there is no foundation for a valid patent.

[2] Applicant has endeavored to insert by amendment a detailed description of a method of producing celluloid substance; but the Examiner quite rightly held that that was new matter. It may have been the result of applicant's experiments made subsequently to filing the application.

The Examiners in Chief are affirmed.

U. S. Circuit Court of Appeals—First Circuit.

WARD BAKING CO. *v.* POTTER-WRIGHTINGTON, INC.

296 Fed. Rep. 296. Decided April 3, 1924.

1. TRADE-MARKS—DEALER IN FLOUR HELD TO HAVE ACQUIRED VALID TRADE-MARK IN WORDS "OLD GRIST MILL" AND PICTORIAL REPRESENTATION USED ON BREAD WRAPPERS.

Dealer in flour, adopting the words "Old Grist Mill," with a pictorial representation of such a mill, and placing these words and pictures on bread wrappers, inducing customers to demand a bread made of "Old Grist Mill Flour," and registering the words and picture as a trade-mark, *Held* to acquire a valid trade-mark in such name and such pictorial representation.

2. SAME—NATURE OF PROPERTY IN "TRADE-MARK."

There is no such thing as property in a trade-mark, except as a right pertaining to an established business or trade in connection with which the mark is employed, the right to such designation, arising out of its use, and its function being to designate goods as the product of a particular dealer and to protect his goodwill against the sale of another's product as his.

3. SAME—TRADE-MARK OF FLOUR COMPANY HELD INFRINGED BY BAKING COMPANY.

A baking company selling a wheat bread called "Homespun" in a wrapper with a picture of an old gristmill, and in its advertisements using the word "Look for the Old Grist Mill" *Held* to have infringed on trade-mark of flour company, which had acquired property right in the words "Old Grist Mill" and a pictorial representation of such a mill.

4. SAME—TEST AS TO INFRINGEMENT OF TRADE-MARKS.

In determining whether there is infringement of trade-mark the test must be whether the similarity of brands would mislead the ordinary observer, since the usual purchaser does not analyze.

5. SAME—PLAINTIFF'S POSSIBLE INFRINGEMENT OF TRADE-MARK OF ANOTHER DOES NOT ENTITLE DEFENDANT TO APPROPRIATE TRADE NAME.

The fact that plaintiff's trade-mark and trade name may infringe the prior trade-mark of another does not defeat plaintiff's right to have defendant enjoined from marketing its goods under a wrapper containing plaintiff's trade-mark and trade name; the element of unfair competition remaining.

6. SAME—FLOUR DEALER AND BAKER HELD IN COMPETITION WITH EACH OTHER.

A manufacturer and a dealer in whole wheat flour, which had sought to increase the sales of its product by extensively advertising bread made from its flour and had furnished bakers using its flour with wrappers bearing its trade-mark, is in competition with a baker selling similar bread in a wrapper which infringes the flour-dealer's trade-mark.

7. SAME—PLAINTIFF, IN SUIT FOR INFRINGEMENT OF TRADE-MARK, HELD NOT TO HAVE COME INTO COURT WITH UNCLEAN HANDS.

In a suit for infringement of trade-mark and unfair competition proof that plaintiff was selling flour as whole-wheat flour though part of the hull of the wheat had been removed therefrom, but that such flour was within the fair and generally-accepted use of the term "whole wheat flour," *Held* not to show plaintiff came into court with unclean hands.

8. SAME—USE OF PLAINTIFF'S TRADE NAME BY OTHERS AFTER ADOPTION BY PLAINTIFF DOES NOT EXCUSE USE BY DEFENDANT.

That others in different parts of the United States have used plaintiff's trade-mark amounts only to a statement that other persons have also imitated and infringed plaintiff's trade-mark and does not excuse defendant's use thereof.

APPEAL from the District Court of the United States for the District of Massachusetts; George W. Anderson, judge.

Suit in equity by Potter-Wrightington, Inc., against the Ward Baking Company to restrain unfair competition and trade-mark infringement. From a decree for plaintiff (288 Fed. 597) defendant appeals. Affirmed.

Mr. W. Brown Morton (*Mr. Wm. Quinby* on the brief) for the appellant.

Mr. Edmund A. Whitman for the appellee.

Before BINGHAM and JOHNSON, Circuit Judges, and HALE, District Judge.

HALE, *Dis. J.:*

This case is now before us on appeal from a decree of the district court that the defendant appellant has infringed the rights of the plaintiff appellee in and to the words "Old Grist Mill" and a pictorial representation of such old mill. The decree enjoins the defendant appellant from using such words and such pictorial representation in connection with the sale of bread, or other food products, and the public advertisement thereof. This is a trade-mark case; it involves some of the usual issues in such cases. In its assignments of error the defendant contend that the court erred:

First, in holding that the plaintiff had any rights in and to the words "Old Grist Mill" and a pictorial representation of such mill;

Second, in holding that the defendant had infringed the rights of the plaintiff;

Third, in enjoining the defendant from using the words "Old Grist Mill," or a pictorial representation thereof, in connection with the sale of bread and other food products, and the public advertisement thereof.

The defendant sets up several distinct defenses, which we will state and consider.

The first assignment of error raises the fundamental question of the validity of the plaintiff's trade-mark.

[1] 1. The proofs show that about 1898 the plaintiff corporation was a commission merchant, a dealer in flour, and a manufacturer of rolled wheat, rye flakes, and other wheat products; that about 1898 it put upon the market an entire-wheat flour and adopted as a mark the words "Old Grist Mill," with a pictorial representation of such a mill; that, thereafter it placed these words and this picture upon its bread wrappers; that it continuously made use of the term "Old Grist Mill"; that it induced customers to demand bread made of Old Grist Mill flour from their bakers and grocers; that it gave public representations of the merit of the bread made from Old Grist Mill flour, selling packages under that name, and directing its advertising to bringing Old Grist Mill products before the public; that it registered the words "Old Grist Mill" and the picture, as a trade-mark, in the United States Patent Office, and in the proper offices in Massachusetts and California; that it spent large sums of money and created a large volume of business in Old Grist Mill products; that it built up in the public mind a goodwill in Old Grist Mill flour; that it so associated its mark with its products that the mark came to identify the origin and ownership of the plaintiff's goods. We think it acquired a valid trade-mark in such name and such pictorial representation.

[2] Property in a trade-mark is not acquired like property in a patent or invention. There is little analogy between a patent and a trade-mark. The courts have pointed out that there is no such thing as property in a trade-mark, except as a right pertaining to an established business or trade in connection with which the mark is employed; that the right to such a designation arises out of its use; that its function is to designate goods as the product of a particular dealer and to protect his goodwill against the sale of another's product as his; that it becomes the subject of property by being used in connection with an existing business, and that by such use it shows the origin of the goods sold, not arbitrarily, but by association of the public mind with the mark. *Hanover Milling Company v. Metcalf*, 240 U. S. 403, 412, 414; 36 Sup. Ct. 357; 60 L. Ed. 713; 1916 C. D. 265; 224 O. G. 1407; *United Drug Company v. Rectanus Co.*, 248 U. S. 90, 96; 39 Sup. Ct. 48; 63 L. Ed. 434; 1918 C. D. 369; 257 O. G. 1882.

[3] 2. The second and third assignments of errors raise the question whether the defendant has infringed the rights of the plaintiff in its trade-mark, and whether it should be enjoined.

The defendant is a baking company. The proofs show that early in 1922 it manufactured and sold a whole-wheat bread called "Homespun." It offered this bread to the public in a wrapper with the words "Ward's Homespun Bread," and with a picture of an old gristmill having a water wheel on the gable end at the side of the building, and on its advertisements it had the words, "Look for the Old Grist Mill."

In the plaintiff's picture the mill is at the front end, and there is a flume leading the water to it. Both pictures represent an old gristmill. Some time afterwards the defendant put out an advertising card with the picture of a mill, with the words:

Back of the loaf is the snowy flour,
And back of the flour the mill,
And back of the mill is the wheat and the shower,
And the sun and the Father's will.

In advertising since January 1, 1922, on pictures showing the old gristmill, the defendant has adventured into more verse, as follows:

Back of the loaf is the Whole Wheat Flour,
Which is ground at the old grist mill,
And back of the mill is the wheat and the shower,
And the Sun and the Father's will.

About 1912 the defendant acquired a bakery in Newark, N. J., which appears to have been using certain quantities of the plaintiff's Old Grist Mill flour, and selling its bread in wrappers received from the plaintiff. After the purchase, this branch of the defendant appellant company, as the proofs show, continued to use plaintiff's Old Grist Mill flour, and received from the plaintiff a large quantity of its Old Grist Mill wrappers.

[4] The emblem adopted by the defendant appellant is not identical with that of the plaintiff appellee. In analyzing the two wrappers, differences may be pointed out which, if known and recognized, might avoid mistaking one for the other. But the usual purchaser does not analyze; he merely looks, perhaps hastily; and the test must be whether the similarity of brands would mislead the "ordinary observer." *Columbia Mill Company v. Alcorn*, 150 U. S. 460; 14 Sup. Ct. 151; 37 L. Ed. 1144; 65 O. G. 1916; 1893 C. D. 672; *Cantrell & Cochrane v. Hygeia Distilled Water Co., Inc.* (C. C. A.), 283 Fed. 400; *Hanover Milling Co. v. Metcalf*, 240 U. S. 403, 424; 36 Sup. Ct. 357; 60 L. Ed.

713; 224 O. G. 1407; 1916 C. D. 265. We think it would so mislead. The proofs persuade us that, when the defendant appellant adopted its design, it had knowledge of the plaintiff's trade-mark; that it has done a large business, and made large sales of bread with such emblems on its wrappers as those which we have described; that it has advertised "Look for the Old Grist Mill"; that, on being notified in February, 1922, of a claim of infringement, it refused to discontinue the words, "Old Grist Mill," and of the picture and advertisement, and has since repeatedly used such design.

Upon a careful examination of the wrappers and the proofs, we are of the opinion that the use by the defendant of the words "Old Grist Mill" and of its picture and advertisement, is deceptively similar to the use by the plaintiff, and is an infringement of the plaintiff's rights in its trade-mark. We agree with Judge Anderson, in the district court, in holding that the wrongful conduct of the defendant was deliberate and persistent; that it was a case of undertaking to appropriate the property of the plaintiff, and to mislead the public into buying its own products when the products of the plaintiff were sought.

[5] 3. The defendant sets up the defense that the plaintiff was anticipated in the use of its trade-mark by one Thornton. It appears that Frank L. Thornton, of Providence, R. I., about 1892, was carrying on a small business as a dealer in corn meal and other cereals; that he adopted a similar emblem (but not the words "Old Grist Mill"), and that he had it registered as a trade-mark and used it in his business in and near Providence. A bill was brought against this plaintiff to restrain an infringement of Thornton's rights. It was demurred to, and was finally dismissed from the docket. There is nothing in the record tending to show that the plaintiff pirated upon any rights of Thornton. There is no question of invention in a trade-mark case. It may be that it will be found that Thornton, in a limited territory, used a design somewhat similar to that of the plaintiff. Upon this point we think the district court has properly held that, even if, for some purposes and in some territory, the Thornton Company may have a right in the trade-mark superior to that of the plaintiff, the defendant is not thereby exonerated from responsibility for an attempt to appropriate to itself a goodwill created by the plaintiff during a long course of business. Whatever Thornton has done or has not done, the ultimate offense is that the defendant has passed off its goods as those of the plaintiff, and has thereby invaded the rights of the plaintiff, rights not acquired by invention or discovery or registration, but by adoption and use. *United Drug Co.* v. *Rectanus Co.*, 248 U. S. 90, 103; 39 Sup. Ct. 48; 63 L. Ed. 434, supra; 257 O. G. 1082; 1918 C. D. 369; *Tetlow* v. *Tappan* (C. C.), 85 Fed. 774; *Merriam Co.* v. *Saalfield*, 198 Fed. 369, 372; 117 C. C. A. 245.

[6] 4. The defendant says that the plaintiff is a baker; the defendant is a miller; that the two are not in competition; and the plaintiff has suffered no injury. In *Aunt Jemima Mills Co.* v. *Rigney & Co.*, 247 Fed. 407, 410; 159 C. C. A. 461, 464 (L. R. A. 1918C, 1839) a trade-mark on self-rising flour was held infringed by the use of the same trade-mark on pancake sirup. In speaking for the court of appeals for the second circuit, Judge Ward said:

> Sirup and flour are both food products, and food products commonly used together. Obviously the public, or a large part of it, seeing this trade-mark on a sirup, would conclude that it was made by the complainant. Perhaps they might not do so, if it were used for flat-irons. In this way the complainant's reputation is put in the hands of the defendants. It will enable them to get the benefit of the complainant's reputation and advertisement. These we think are property rights which should be protected in equity.

In *Carroll* v. *Ertheiler* (C. C.), 1 Fed. 688, the plaintiff manufactured tobacco; the defendant was a cigarette maker. The plaintiff adopted the word "Lone Jack" and the defendant was enjoined from selling "Lone Jack" cigarettes, the court saying that it did not believe the public or the trade would draw such a distinction as the defendant contended for. This last case was cited by Judge Coxe in the circuit court in 1909, in *American Tobacco Company* v. *Polacsek*, 170 Fed. 117. In ordering an injunction the court said:

> Can the trade-mark of a manufacturer of smoking and chewing tobacco be appropriated by the manufacturer of cigarettes? I incline to the opinion that it cannot be. A trade-mark is a guaranty that the goods to which it is attached are made by its owner. If the owner has a high character for honesty, good workmanship, and fair dealings his mark stands for all of these qualities. Those who have been accustomed to his goods see his mark and buy, knowing that they will not be defrauded. Whether a manufacturer confines himself to smoking tobacco, chewing tobacco or cigarettes, he is still in the tobacco business, just as one is in the clothing business whether he makes coats, waistcoats, or trousers, and just as one is in the whisky business whether he makes rye or bourbon. A consumer who believes in McAlpin's tobacco, seeing "Virgin Leaf" cigarettes on the market, will naturally think that they are the product of the McAlpin factory, precisely as if "D. H. McAlpin & Co." had been printed on the package.

See *Collins Co.* v. *Ames Co.* (C. C.) 18 Fed. 561; *British American Tobacco Co.* v. *British American Stores Co.*, 211 Fed. 933; 128 C. C. A. 431; Ann. Cas. 1915B, 363.

The defendant seeks a narrower interpretation of the law, and cites *Borden Ice Cream Co.* v. *Borden's Condensed Milk Company*, 201 Fed. 510; 121 C. C. A. 200, where the circuit court of appeals for the seventh circuit, in an "unfair competition" case, held that in the absence of direct competition the doctrine cannot be invoked.

We think the case at bar must be put upon a broader ground. We think the test should be whether the public is likely to be deceived. Both the plaintiff and the defendant are seeking to induce people to use a whole-wheat flour in bread; the representations of the defendant clearly tend to induce the user of flour to believe that he is getting the plaintiff's flour in his bread, when, in fact, he is getting the defendant's flour. We cannot sustain this defense.

[7] 5. The defendant says that the plaintiff comes into court with unclean hands; that it has put out a cereal product, described as an "entire wheat" product, milled after the plain fashion of the Old Grist Mill; whereas, it has removed from this product that part of the wheat which contains the medicinal properties, and yet, notwithstanding that removal, it makes medicinal claims for the product.

The defendant relies upon the Syrup of Figs case, *Worden* v. *California Fig Syrup Company*, 187 U. S. 516; 23 Sup. Ct. 161; 47 L. Ed. 282 in which case the owners of a trade-mark were refused relief for the reason that their product was made up, not of sirup of figs, but principally of senna. The court held that misrepresentation of the nature or quality of a commodity offered for human consumption constitutes such unclean hands as will prevent the owner of the trade-mark from relief against an infringer; and the defendant says that the plaintiff, in the case at bar, advertised whole-wheat flour, when admittedly the bran part of the wheat had been sifted out, and that therefore the plaintiff's claim, made long ago on its bread wrappers, of certain healthful effect resulting from eating the bread, was unwarranted and deceptive.

We find nothing in the record to show that the defendant was inaccurate in advertising its product as "entire wheat flour." The lexicographers say that "flour" is the finer particles of grain, after the "bran," or the "outer husk" or "broken coat of the seed" of grain, has been sifted out; that flour is the "flower (the best) of meal"; that "for graham flour the entire wheat kernel is used, and for entire-wheat flour all but the coarser bran." It seems clear that "flour" does not include any part of the skin or husk. We think that "entire wheat flour" may be made from the whole seed of the wheat, but without the skin, or rough husk, of the seed. It appears that the plaintiff's flour was made from the seed of the wheat, including all but the coarsest part of the husk or bran; it differed from ordinary wheat flour, from which the entire husk and "middlings" had been removed. We think the elimination of the coarser bran does not prevent the plaintiff's product from being "whole wheat flour" within the generally-accepted use of the term; that the plaintiff was truthful in advertising its product as "whole wheat flour" or "entire wheat flour," in the common use of the English language. Such representations as are shown by the proofs will not bar the plaintiff from relief. *Nelson* v. *Winchell & Co.*, 203 Mass. 75, 84; 89 N. E. 180; 23 L. R. A. (N. S.) 1150; *Coca Cola Co.* v. *Koke Company*, 254 U. S. 143, 145; 41 Sup. Ct. 113, 65 L. Ed. 189. See, also, *American Thermos Bottle Company* v. *Grant Company*, 279 Fed. 151, 156, 158, a district court case citing many authorities, affirmed 282 Fed. 426.

We cannot sustain the charge made by the defendant that the plaintiff has deceived the public, and comes into court with unclean hands.

[8] 6. The defendant has introduced evidence tending to show that others, in different parts of the United States, have used the picture of a grist-mill.

The courts have held that this amounts to a statement that other persons have also imitated and infringed the plaintiff's trade-mark. Mr. Justice Story said that this "rather aggravates than excuses the misconduct [of the defendant], unless done with the consent, or acquiescence of the plaintiffs." *Taylor* v. *Carpenter* (C. C.) 3 Story 458; Fed. Cas. No. 13,784; *Actiengesellschaft, etc.*, v. *Amberg*, 109 Fed. 151; 48 C. C. A. 264; *Saxlehner* v. *Eisner, etc., Co.*, 179 U. S. 19, 37, 39; 21 Sup. Ct. 7; 45 L. Ed. 60; 1900 C. D. 362; 93 O. G. 940.

We are of the opinion that the district court was right in holding, upon the proofs, that the plaintiff has a valid trade-mark, and in making a decree that the defendant has infringed the rights of the plaintiff in and to that trade-mark, and in making its further decree that the defendant be enjoined from such infringement.

The decree of the district court is affirmed. The plaintiff appellee recovers costs in this court.

PATENT SUITS.

Interference Notices.

U. S. PATENT OFFICE, *Washington, Apr. 6, 1925.*

Stanley Clague, his assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Fred A. Smith, 1426 West Third Street, Cleveland, Ohio, for registration of a trade-mark and trade-mark registered December 20, 1910, No. 80,410, to Stanley Clague, First National Bank Building, Chicago, Ill., and a notice of such declaration sent by registered mail to said Stanley Clague at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless said Stanley Clague, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 9, 1925.*

Mark Miller and Charles D. Miller, their assigns or legal representatives, take notice:

An interference having been declared by this Office between the applications of Stockport Milling Co., Stockport, Ohio, and Butler County Milling Company, Poplar Bluff, Mo., for registrations of trade-marks and trade-mark registered November 20, 1894, No. 25,545, to Mark Miller and Charles D. Miller, Vassar, Mich., and a notice of such declaration sent by registered mail to said Mark Miller and Charles D. Miller at the said address having been returned by the post office undeliverable, notice is hereby given that unless said Mark Miller and Charles D. Miller, their assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 9, 1925.*

The American Radio Sales and Service Company, its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of the Multiple Electric Products Company, Inc., 61 Broadway, New York, N. Y., for registration of a trade-mark and trade-mark registered July 11, 1922, No. 156,611, to The American Radio Sales and Service Company, of Mansfield, Ohio, and a notice of such declaration sent by registered mail to The American Radio Sales and Service Company at the said address having been returned by the post-office authorities as undeliverable, notice is hereby given that unless The American Radio Sales and Service Company, its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 16, 1925.*

The Brighton Chemical Co., its assigns or legal representatives, take notice:

An interference having been declared by this Office between the application of Agnes C. Graves, of 425 East Water Street, Milwaukee, Wis., for registration of a trade-mark and trade-mark registered July 28, 1908, No. 70,095, to The Brighton Chemical Co., 232 East Fourth Street, Cincinnati, Ohio, and a notice of such declaration sent by registered mail to The Brighton Chemical Co. at the said address having been returned by the post office undeliverable, notice is hereby given that unless The Brighton Chemical Co., its assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 17, 1925.*

Arnold Zweckly, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by Arnold Zweckly, 289 Fourteenth Avenue, Astoria, Long Island N. Y., and applications for patents filed by Kimball H. Stark, 1707 University Avenue, New York, N. Y.; William A. Ready, 112 Winthrop Road, Brookline, Mass.; and Walter W. Wood, R. F. D. No. 3, Canton, Ohio, and the Office having failed to secure service on the said Zweckly, notice is hereby given that unless said Zweckly, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

U. S. PATENT OFFICE, *Washington, Apr. 17, 1925.*

Arnold Zweckly, his assigns or legal representatives, take notice:

An interference having been declared by this Office between an application for patent filed by Arnold Zweckly, 289 Fourteenth Avenue, Astoria, Long Island, N. Y., and applications for patents filed by Kimball H. Stark, 1707 University Avenue, New York, N. Y., and William A. Ready, 112 Winthrop Road, Brookline, Mass., and the Office having failed to secure service on the said Zweckly, notice is hereby given that unless said Zweckly, his assigns or legal representatives, shall enter an appearance therein within 30 days from the first publication of this order the interference will be proceeded with as in case of default. This notice will be published in the OFFICIAL GAZETTE for three consecutive weeks.

KARL FENNING, *Acting Commissioner.*

TRADE-MARKS

OFFICIAL GAZETTE, APRIL 28, 1925.

[VOL. 333. No. 4.]

The following trade-marks are published in compliance with section 6 of the act of February 20, 1905, as amended March 2, 1907. Notice of opposition must be filed within thirty days of this publication.

Marks applied for "under the ten-year proviso" are registrable under the provision in clause (b) of section 5 of said act as amended February 18, 1911.

As provided by section 14 of said act, a fee of ten dollars must accompany each notice of opposition.

Ser. No. 138,831. (CLASS 26. MEASURING AND SCIENTIFIC APPLIANCES.) TIMELY FILMS, INC., New York, N. Y. Filed Oct. 27, 1920.

TOPICS OF THE DAY

Particular description of goods.—Text Motion-Picture Films and Text Slides for use by Motion-Picture Exhibitors.

Claims use since about May, 1918.

Ser. No. 170,467. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) AGAR PACKING & PROVISION COMPANY, Chicago, Ill. Filed Oct. 9, 1922.

AGAR

The cross hatch lines on the drawing designate the color red, the word "Agar" being black in color.

Particular description of goods.—Beef, Pork, Sheep, and Veal Carcasses and Parts Thereof.

Claims use since Dec. 15, 1921.

Ser. No. 170,668. (CLASS 4. ABRASIVE, DETERGENT, AND POLISHING MATERIALS.) LEON A. OLMSTED, doing business as United States Athletic Company, Chicago, Ill. Filed Oct. 12, 1922.

NUVALU

Particular description of goods.—Shaving Stick, Shaving-Powder Soap, Razor Strops, Razor Hones, and Soap.

Claims use since Sept. 15, 1922.

Ser. No. 175,475. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) DUPLAN SILK CORPORATION, New York, N. Y. Filed Feb. 3, 1923.

STELLA

Particular description of goods.—Silk Piece Goods.

Claims use since June 10, 1922.

Ser. No. 185,397. (CLASS 39. CLOTHING.) LOUIS WOLFSON, doing business as The East Coast Jobbing House, Miami, Fla. Filed Sept. 6, 1923.

WOLF BRAND

The word "Brand" is disclaimed apart from the mark as shown.

Particular description of goods.—Work Shirts, Underwear of Knitted and Textile Fabrics, and Overalls and Work Jackets for Men; Also Hosiery for Men, Women, and Children.

Claims use since about Dec. 1, 1917.

Ser. No. 186,851. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) OSAKA ORIMONO KABUSHIKI-KAISHA, Sakai, Japan. Filed Oct. 11, 1923.

The characters within the first oval at the left read "Tempo Tsuho," the word "Tempo" being the name of a Japanese era of about 100 years ago, while the word "Tsuho" means currency. The characters at the upper portion of the oval at the extreme right are read "To Hyaku," meaning equivalent to 100 mon, "Mon" being the unit of currency of the Tempo era. The mark at the lower portion of the oval at the extreme right is what is known in Japanese as "Kaki-Han," meaning a stamp or seal made by hand.

Particular description of goods.—Cotton Piece Goods.
Claims use since November, 1906.

Ser. No. 187,274. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) W. O. WHEELER, Portland, Oreg. Filed Oct. 20, 1923.

Sugar Crest

Particular description of goods.—Bakery Goods—Namely, Pies, Cakes, Doughnuts, Cookies, Macaroons, and Butterhorns.
Claims use since 1922.

Ser. No. 187,343. (CLASS 15. OILS AND GREASES.) EDWARD F. PENNY, Chicago, Ill. Filed Oct. 22, 1923.

No claim is made to the representation of the oil can and a facsimile thereon apart from the mark as shown.

Particular description of goods.—Lubricating Oil.
Claims use since Aug. 25, 1923.

Ser. No. 187,594. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) VOSS & STERN, INC., New York, N. Y. Filed Oct. 27, 1923.

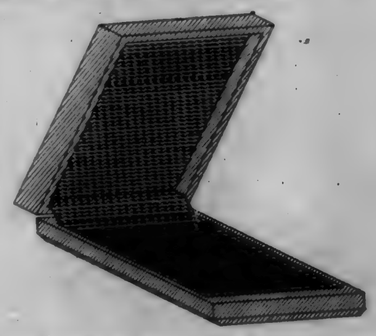
Challi-prints

No claim is made to the words "Challi-Prints" apart from the mark shown in the drawing. The inner line of the design around the mark is to be printed in red ink, and the outer line forming a distinctive design is to be printed in black ink.

Particular description of goods.—Cotton Piece Goods.
Claims use since Oct. 1, 1923.

Ser. No. 188,468. (CLASS 39. CLOTHING.) BLUE BIRD HOSIERY SHOP, New Bedford, Mass. Filed Nov. 17, 1923.

A-100



Particular description of goods.—Men's, Women's, and Children's Hosiery.
Claims use since May, 1922.

Ser. No. 188,860. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) PEERLESS PLUSH MANUFACTURING COMPANY, Paterson, N. J. Filed Nov. 24, 1923. Under ten-year proviso.

Peerless Fabrics

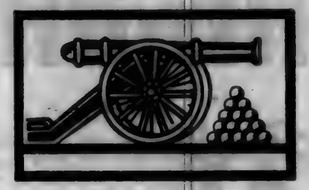
Particular description of goods.—Pile Fabrics Made of Silk and/or Mohair, and/or Worsted, and/or Cotton; Velvet, Velours, and Plushes for Furniture and Draperies and Dress Fabrics; Body Cloth and Head Lining for Automobiles Made of Mohair and/or Worsted and/or Camel's Hair, Mohair Covering for Seats in Pullman Cars.
Claims use since about 1890.

Ser. No. 188,902. (CLASS 27. HOROLOGICAL INSTRUMENTS.) THE GRUEN WATCH COMPANY, Cincinnati, Ohio. Filed Nov. 26, 1923.

The trade-mark comprises the particular color scheme employed with the containers of the goods, said containers comprising an outer brown covering, a black pad covering the bottom of the container and on which the goods are disposed, a golden covering for the inside of the lid of the container, and a golden edging extending about the black pad. No claim is made to the representation of the container per se.

Particular description of goods.—Watches.
Claims use since 1913.

Ser. No. 189,435. (CLASS 39. CLOTHING.) WHEELER'S, INCORPORATED, Chicago, Ill. Filed Dec. 8, 1923.



The picture on the drawing is fanciful.

Particular description of goods.—Men's and Women's Clothing—Namely, Suits, Overcoats, Men's Leather Shoes; Millinery—Namely, Ladies' Hats; Hosiery, Furs, Ladies' Waists, Skirts, Dresses, and Sweaters.
Claims use since October, 1915.

Ser. No. 189,964. (CLASS 39. CLOTHING.) CANNON MILLS, INC., New York, N. Y. Filed Dec. 21, 1923.

CANNON

Particular description of goods.—Hosiery.
Claims use since Aug. 28, 1922.

Ser. No. 190,300. (CLASS 39. CLOTHING.) CHAS. LEETHEM & Co., Portsmouth, England, assignor to Leethems Limited, Portsmouth, England, a British Company. Filed Dec. 31, 1923.

Twilfit

Particular description of goods.—Corsets and Belts for Wear, Ladies' Shirts and Blouses.
Claims use since Oct. 2, 1906, in respect of stays, corsets, and belts for wear, and since Mar. 29, 1912, in respect of ladies' shirts and blouses.

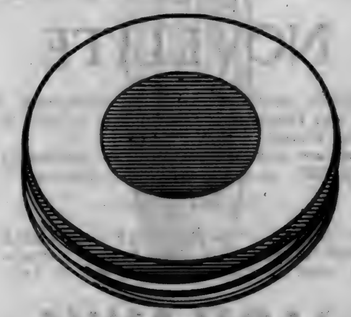
Ser. No. 190,301. (CLASS 39. CLOTHING.) CHAS. LEETHEM & Co., Portsmouth, England, assignor to Leethems Limited, Portsmouth, England, a British Company. Filed Dec. 31, 1923.

Twilfit

Particular description of goods.—Corsets and Belts for Wear, Ladies' Shirts and Blouses.
Claims use since Oct. 2, 1906, in respect of stays, corsets, and belts for wear, and since Mar. 29, 1912, in respect of ladies' shirts and blouses.

Ser. No. 191,012. (CLASS 39. CLOTHING.) M. GERLA & SON, New York, N. Y. Filed Jan. 19, 1924.

MISS JUNIOR



Particular description of goods.—Girls' and Misses' Dresses, Coats, Overcoats, Suits, Silk and Knitted Hosiery, Leather and Fabric Gloves, Hats, and Sweaters.
Claims use since Jan. 19, 1921.

Ser. No. 191,013. (CLASS 39. CLOTHING.) M. GERLA & SON, New York, N. Y. Filed Jan. 19, 1924.

JUNIOR MISS

Particular description of goods.—Girls' and Misses' Dresses, Coats, Overcoats, Suits, Silk and Knitted Hosiery, Leather and Fabric Gloves, Hats, and Sweaters.
Claims use since Jan. 19, 1921.

Ser. No. 191,247. (CLASS 50. MERCHANDISE NOT OTHERWISE CLASSIFIED.) ADAMS BROS. & Co., Chicago, Ill. Filed Jan. 25, 1924.

The drawing shows the trade-mark lined for blue on the representation of a jar cap; but no exclusive claim is made for the representation of the cap except as it may be used in connection woth the trade-mark.

Particular description of goods.—Jar Caps.
Claims use since July 27, 1922.

Claims use since January, 1911.

198,039. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) J. W. C. BELL, Jr., Nashville, Ark. Filed Aug. 9, 1924. Serial No. 201,173.

Bell

Particular description of goods.—Fresh Peaches.
Claims use since July 10, 1921.

198,040. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) HUDSON & COMPANY, Holley, N. Y. Filed Sept. 2, 1924. Serial No. 202,117.

MATTITUCK

Particular description of goods.—Canned Vegetables.
Claims use since 1909.

198,041. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) JOHN WANAMAKER PHILADELPHIA, Philadelphia, Pa. Filed Oct. 18, 1924. Serial No. 204,184.

PARFUMERIE CLAIRE

Particular description of goods.—Lotions and Toilet Creams.
Claims use since 1910.

198,042. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) IVAN P. WHEATON, Long Beach, Calif. Filed Jan. 8, 1925. Serial No. 207,839.

Wheaton

Particular description of goods.—Candy, Nut Nougat, Mints, Candy Bars, Glacéd Fruit, and Soda-Fountain Mixtures of Nuts and Candy.
Claims use since July 14, 1921.

198,043. (CLASS 22. GAMES, TOYS, AND SPORTING GOODS.) LEAVITT MFG. CO., Urbana, Ill. Filed Feb. 12, 1925. Serial No. 209,481.

GILL

Particular description of goods.—Discus, Javelins, Hurdles, and Baseball Bats.
Claims use since June 1, 1923.

198,044. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) MABEL BERWICK MASON, doing business as Edward Berwick, Jr., Monterey, Calif. Filed Feb. 14, 1925. Serial No. 209,581.

Edward Berwick Jr.

Particular description of goods.—Fresh Pears.
Claims use since about Jan. 1, 1909.

198,045. (CLASS 46. FOODS AND INGREDIENTS OF FOODS.) THE SHIELDS ICE & COLD STORAGE CO., LIMITED, North Shields, England. Filed July 18, 1923. Serial No. 183,411.

Tyne Brand

Particular description of goods.—Canned Fish, Fish Pastes, and Meat Pastes.
Claims use since June 5, 1919.

198,046. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) B. HELLER & COMPANY, Chicago, Ill. Filed Feb. 16, 1925. Serial No. 209,658.

Particular description of goods.—Insecticide for Use in Killing, Repelling, and Preventing Moths and Preventing Damage by Moths.
Claims use since April, 1922.

198,047. (CLASS 15. OILS AND GREASES.) SKELLY OIL COMPANY, Tulsa, Okla. Filed Feb. 13, 1925. Serial No. 209,551.

SKELLY

Particular description of goods.—Natural and Motor Gasoline, Kerosene, Distillate, Gas Oil, Road Oil, Fuel Oil, Engine Oil, Industrial Lubricants, Lubricating Greases, Automobile Lubricants, Penetrating Oil.
Claims use since Dec. 31, 1923.

198,048. (CLASS 9. EXPLOSIVES, FIREARMS, EQUIPMENTS, AND PROJECTILES.) ILLINOIS POWDER MFG., CO., St. Louis, Mo. Filed Feb. 13, 1925. Serial No. 209,534.

GOLD MEDAL

Particular description of goods.—Dynamite.
Claims use since March, 1908.

198,049. (CLASS 17. TOBACCO PRODUCTS.) CHARLES A. KILDOW, Bethesda, Ohio. Filed Feb. 9, 1925. Serial No. 209,298.

-Garcia-
Smokers

Particular description of goods.—Cigars.
Claims use since Aug. 1, 1920.

198,050. (CLASS 1. RAW OR PARTLY-PREPARED MATERIALS.) HALEY-NESLEY COMPANY, Sioux City, Iowa. Filed Feb. 2, 1925. Serial No. 208,979.

Haley's
SELECTED

Particular description of goods.—Field Seeds.
Claims use since March, 1922.

198,051. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) HOLDEN-LEONARD CO., New York, N. Y. Filed Jan. 24, 1925. Serial No. 208,592.

HOLDEN-LEONARD CO.

Particular description of goods.—Worsted and Woolen Textile Fabrics.
Claims use since about February, 1909.

198,052. (CLASS 34. HEATING, LIGHTING, AND VENTILATING APPARATUS, NOT INCLUDING ELECTRICAL APPARATUS.) AMERICAN GAS MACHINE COMPANY, INC., Albert Lea, Minn. Filed Jan. 12, 1925. Serial No. 207,950.

KITCHEN KOOK

Particular description of goods.—Household Oil and Gas Cookstoves.
Claims use since on or about Apr. 1, 1923.

198,053. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) ALFRED J. KRANK, St. Paul, Minn. Filed Feb. 15, 1924. Serial No. 192,331.

KRANK'S

Particular description of goods.—Hair Tonic, Toilet Water, Antiseptic for Skin Irritations, Hair Tonic and Fixative, Hairdressing, Shampoo, Dandruff Preparation, Cuticle Oil, Brilliantine, Cuticle Remover, Face Lotion, Nail White, Vanishing Cream, Shaving Cream to be Used After Shaving, Hair Fixative, Toilet Cream, Preparation for Wind and Sun Burns, Astringent, Cold Cream, Remedy for Sore Feet, Preparation for Hay Fever and Colds; Salve for Burns, Aches, Wounds, Strains, and Sprains; Massage Cream, Cleansing Cream, Solidified Brilliantine, Skin Lotion, Face Powder, a Preparation Used as a Skin Treatment and Beautifier.
Claims use since October, 1908.

Sidewall Protection

Particular description of goods.—Pneumatic-Tire Casings.
Claims use since July 1, 1922.

198,055. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE DOW CHEMICAL COMPANY, Midland, Mich. Filed Feb. 18, 1925. Serial No. 209,775.

MIDLAND BLUE R

Particular description of goods.—Vat Dyes.
Claims use for not less than one year.

198,056. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE DOW CHEMICAL COMPANY, Midland, Mich. Filed Feb. 18, 1925. Serial No. 209,776.

MIDLAND VAT BLUE 5B

Particular description of goods.—Vat Dyes.
Claims use for not less than one year.

198,057. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) A. SULKA & COMPANY, New York, N. Y. Filed Mar. 16, 1925. Serial No. 211,186.

Sulka

Particular description of goods.—Cotton, Silk, and Wool Shirtings and Handkerchiefs.
Claims use for more than one year.

198,058. (CLASS 42. KNITTED, NETTED, AND TEXTILE FABRICS.) HAAS BROTHERS FABRICS CORPORATION, New York, N. Y. Filed Mar. 11, 1925. Serial No. 210,842.

Bagdad Prints

Particular description of goods.—Piece Goods Made of Silk, Artificial Silk, Wool, Cotton, Linen, and Mixtures Thereof.
Claims use since July, 1922.

198,059. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) SERVICE LABORATORIES, INC., Chicago, Ill. Filed Feb. 27, 1925. Serial No. 210,254.

BODI-RUB

Particular description of goods.—Rubbing Alcohol.
Claims use since Dec. 2, 1921.

198,060. (CLASS 19. VEHICLES, NOT INCLUDING ENGINES.) MUDGE & COMPANY, Chicago, Ill. Filed Feb. 24, 1925. Serial No. 210,071.

"All Service"

Particular description of goods.—Railway Gasoline-Motor Cars.
Claims use since Feb. 6, 1923.

198,061. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE DOW CHEMICAL COMPANY, Midland, Mich. Filed Feb. 18, 1925. Serial No. 209,778.

MIDLAND VAT BLUE MB

Particular description of goods.—Vat Dyes.
Claims use for not less than one year.

198,062. (CLASS 6. CHEMICALS, MEDICINES, AND PHARMACEUTICAL PREPARATIONS.) THE DOW CHEMICAL COMPANY, Midland, Mich. Filed Feb. 18, 1925. Serial No. 209,777.

MIDLAND CADET BLUE

Particular description of goods.—Vat Dyes.
Claims use for not less than one year.

INTERNATIONAL TRADE-MARK REGISTRATIONS

The following International Registration has been received from the Bureau at Habana and has been placed upon the Register in accordance with the provisions of section 1 (a) of the act of March 19, 1920.

198,063. International Registration No. 1,048 of January 27, 1925. Registered in Cuba on April 5, 1917, No. 32,602. Proprietor: ORTEGA Y COMPAÑIA, S. EN C. Address: Ricla No. 7, Habana, Cuba.

EXTRA NORMA

Merchandise to which the mark is affixed.—Ladies' and Children's Shoes.

TRADE-MARK REGISTRATIONS RENEWED

26,262. CHIMNEY COWLS AND VENTILATOR CAPS FOR AIR SHAFTS AND LIKE DEVICES. Registered March 19, 1895. GLOBE VENTILATOR CO. Renewed March 19, 1925, to Globe Ventilator Company, Troy, N. Y., a Corporation of New York, assignee.

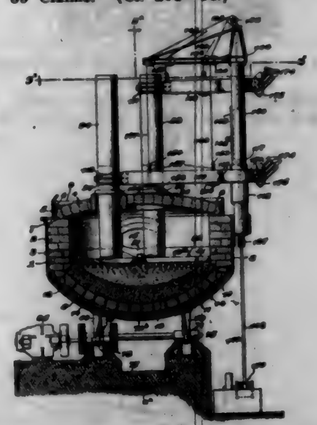
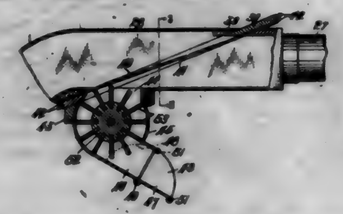
REISSUES



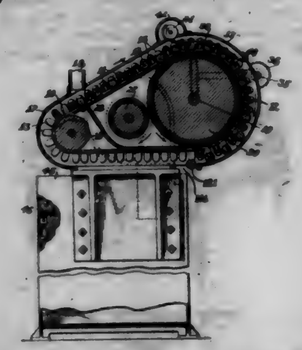
APRIL 28, 1925.

16,053. STOCKING AND PROCESS OF MAKING SAME. JOHN HADFIELD, Jr., Philadelphia, Pa. Filed May 26, 1923. Serial No. 641,729. Original No. 1,444,684, dated Feb. 6, 1923, Serial No. 368,460, filed Mar. 5, 1920. 9 Claims. (Cl. 66—4.)



1. The method of manufacturing fashioned hosiery, which comprises forming an upper part of the leg as a circular knit web including a welt and with at least the lower section thereof open along a longitudinal line, and adding to said open lower section a fashioned flat knit web constituting a lower leg portion.

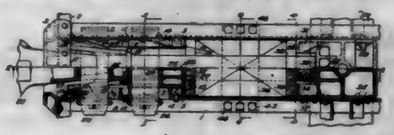
16,054. ELECTRIC FURNACE. WILLIAM E. MOORE, Beaver Falls, Pa., assignor to Pittsburgh Research Corporation, a Corporation of Delaware. Filed Sept. 13, 1921. Serial No. 500,481. Original No. 1,304,350, dated May 20, 1919, Serial No. 174,010, filed June 11, 1917. 59 Claims. (Cl. 204—64.)



6. A metallurgical furnace comprising a retort having a bottom composed of a layer of granular refractory material normally of low electrical conductivity but which becomes a better electric conductor when heated, a layer of granular or amorphous refractory material of normally higher electrical conductivity than the first-mentioned layer and beneath the same, a metal outer casing, a layer of granular electrical conducting material forming a lining for said casing, an inverted arch of refractory brick interposed between the second-mentioned layer and said lining of the outer casing, and a plurality of metal strips in electrical contact with said casing and extending through the spaces between said brick, through the layer next above said brick and into the first-mentioned layer.

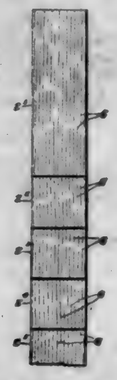
16,055. COTTON-PICKING MACHINE. EUGENE H. SCHOFIELD, deceased, by trustees of The Interstate Cotton Pickers, Toledo, Ohio, assignees. Filed Jan. 26, 1924. Serial No. 688,899. Original No. 1,130,847, dated Mar. 9, 1915, Serial No. 619,255, filed Apr. 6, 1911. 9 Claims. (Cl. 19—75.)

1. In a cotton picking machine, the combination with a separator chamber having an inlet, an air outlet, and a cotton discharge outlet, of means for creating a suction through the separator chamber, a screen comprising parallel wires disposed across the separator chamber impinging the cotton, the cotton sliding on the wires to the lower end of the screen, the ends of the wires terminating adjacent the cotton discharge outlet, and a rotatable bladed member disposed in the cotton discharge outlet, the blades being adapted to contact with the lower end of the screen and to wipe material lodged against the screen from the screen, and to discharge it through the discharge opening.



16,056. BOBBIN CLEANER. EDGAR ALLEN TERRELL, Charlotte, N. C., assignor to The Terrell Machine Company, Charlotte, N. C., a Corporation of North Carolina. Filed Mar. 14, 1925. Serial No. 15,656. Original No. 1,451,239, dated Apr. 10, 1923, Serial No. 431,756, filed Dec. 18, 1920. 14 Claims. (Cl. 28—19.)

1. In a bobbin-stripping machine, a delinting device having a curved surface of flexible teeth, means for driving the same, an endless carrier passing around said



surface and having compartments for carrying the bobbins, a flexible pressure-device engaging a plurality of the bobbins as they pass around said curved surface to press them lightly against the teeth carried thereby, whereby the bobbins are caused to rotate and the waste yarn delinted therefrom, and means for continuously driving the carrier.

16,057. DRAFT RIGGING. IRA O. WRIGHT, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Feb. 7, 1925. Serial No. 7,688. Original No. 1,457,276, dated May 29, 1923, Serial No. 377,477, filed Apr. 29, 1920. 12 Claims. (Cl. 213—70.)

1. In a draft rigging, the combination with center sills, of a coupler, a yoke slidably connected thereto, a cushioning mechanism within the yoke, a block interposed between the coupler and said mechanism and movable in one direction with the said coupler, means for connecting said block to the said sills, said means serving to transmit draft strains thereto, and means carried by the said sills and projecting inwardly therefrom for receiving draft strains when the same exceed the capacity of the first named means.

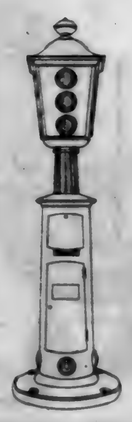
16,058. FABRICATED WOOD SHAFT. HARRY IVORY JORDAN, Auburn, Me., assignor to Lamino Manufacturing Company, a Corporation of Massachusetts. Filed Jan. 25, 1924. Serial No. 688,625. Original No. 1,457,528, dated June 5, 1923, Serial No. 517,547, filed Nov. 25, 1921. 2 Claims. (Cl. 273—80.)

1. A shaft for golf clubs substantially the entire body of which is made up of a plurality of relatively thin layers of wood veneer cemented and compressed together with the grain of the wood in all the layers extending generally longitudinally of the shaft.

DESIGNS

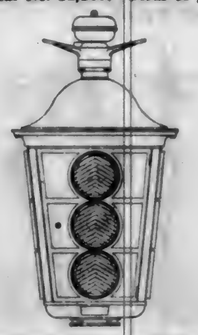
APRIL 28, 1925.

67,115. METAL BORDER STRIP FOR ARTICLES OF HOLLOW SILVERWARE. COLIN DOUGLAS BARRETT, Providence, R. I., assignor to Farber Brothers, a Copartnership consisting of Louis Farber and Harry Farber, New York, N. Y. Filed Dec. 2, 1924. Serial No. 11,558. Term of patent 3½ years.



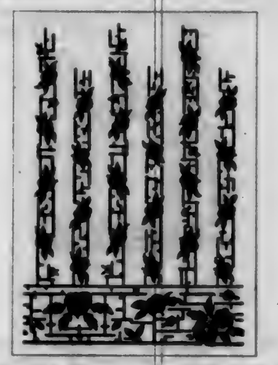
The ornamental design for a metal border strip for articles of hollow silverware, as shown.

67,116. PHONOGRAPH CABINET. ROBERT Y. BARROWS, deceased, late of Rutherford, N. J., by Grace A. Barrows, administratrix, Rutherford, N. J. Filed Dec. 26, 1923. Serial No. 8,152. Term of patent 14 years.



The ornamental design for a phonograph cabinet as shown.

67,117. VEHICLE TRAFFIC SIGNAL HOUSING. REUBEN E. BECHTOLD, Fort Wayne, Ind., assignor to The Signaphore Company, a Corporation of Indiana. Filed Jan. 28, 1925. Serial No. 12,168. Term of patent 14 years.

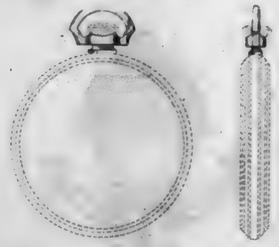


The ornamental design for a vehicle traffic signal housing as shown.

67,118. CASING FOR A SIGNAL LAMP. REUBEN E. BECHTOLD, Fort Wayne, Ind., assignor to The Signaphore Company, a Corporation of Indiana. Filed Jan. 28, 1925. Serial No. 12,169. Term of patent 14 years.

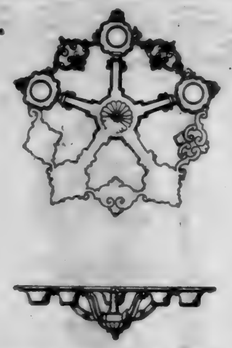
The ornamental design for a casing for a signal lamp as shown.

67,119. COTTON FABRIC. SAMSON F. BLOCH, New York, N. Y., assignor to M. H. Oppenheimer & Co., Inc., New York, N. Y., a Corporation of New York. Filed Jan. 15, 1925. Serial No. 12,058. Term of patent 14 years.



The ornamental design for cotton fabric, as shown.

67,120. DOLL. MINNIE E. CASE, Pratt, Kans. Filed Jan. 23, 1925. Serial No. 12,118. Term of patent 3½ years.



The ornamental design for a doll, as shown.

67,121. WATCHCASE APPENDAGE. ARTHUR P. CONANT, Fort Thomas, Ky., assignor to The Wadsworth Watch Case Company, Dayton, Ky., a Corporation of Kentucky. Filed Nov. 21, 1924. Serial No. 11,435. Term of patent 14 years.

The ornamental design for a watchcase appendage, substantially as shown.

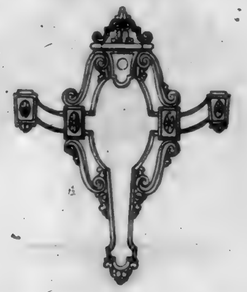
67,122. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,215. Term of patent 7 years.

The ornamental design for a plate for lighting fixtures, as shown.

67,123. PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,216. Term of patent 7 years.

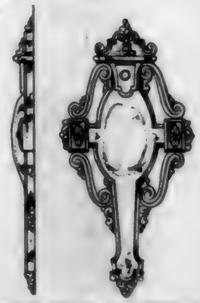
The ornamental design for a plate for lighting fixtures as shown.

67,124. WALL PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,217. Term of patent 7 years.



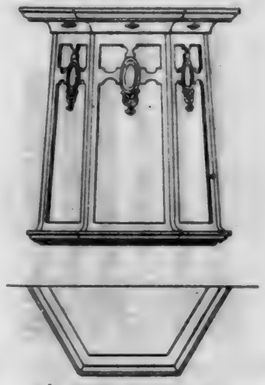
The ornamental design for a wall plate for lighting fixtures, as shown.

67,125. LIGHTING-FIXTURE BRACKET BACK. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,218. Term of patent 7 years.



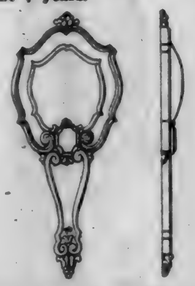
The ornamental design for a lighting fixture bracket back, as shown.

67,126. WALL PLATE FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,219. Term of patent 7 years.



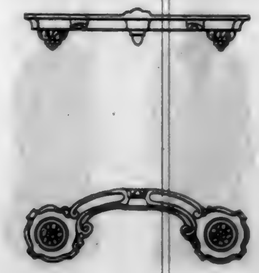
The ornamental design for a wall plate for lighting fixtures, as shown.

67,127. LIGHTING-FIXTURE BRACKET BACK. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,220. Term of patent 7 years.



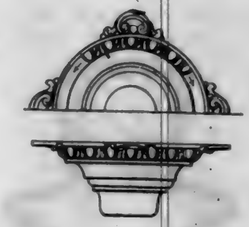
The ornamental design for a lighting fixture bracket back, as shown.

67,128. CEILING LIGHT FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,221. Term of patent 7 years.



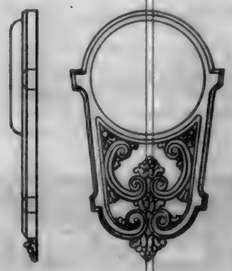
The ornamental design for a ceiling light for lighting fixtures as shown.

67,129. BRACKET BACK FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,223. Term of patent 7 years.



The ornamental design for a bracket back for lighting fixtures as shown.

67,130. ARM FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,224. Term of patent 7 years.

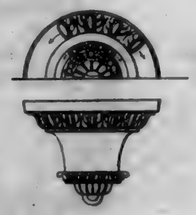


The ornamental design for an arm for lighting fixtures, as shown.

67,131. CEILING LIGHT FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,225. Term of patent 7 years.

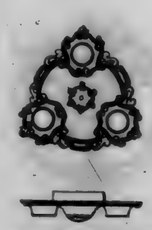
The ornamental design for a ceiling light for lighting fixtures, as shown.

67,132. BRACKET BACK FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,226. Term of patent 7 years.



The ornamental design for a bracket back for lighting fixtures as shown.

67,133. CANOPY FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,227. Term of patent 7 years.

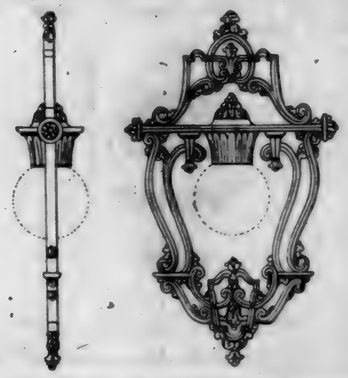


The ornamental design for a canopy for lighting fixtures, as shown.

67,134. CANOPY FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,228. Term of patent 7 years.

The ornamental design for a canopy for lighting fixtures as shown.

67,135. CEILING LIGHT FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,230. Term of patent 7 years.

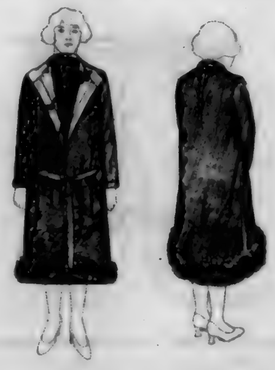


The ornamental design for a ceiling light for light ing fixtures, as shown.

67,136. BRACKET BACK FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,232. Term of patent 7 years.

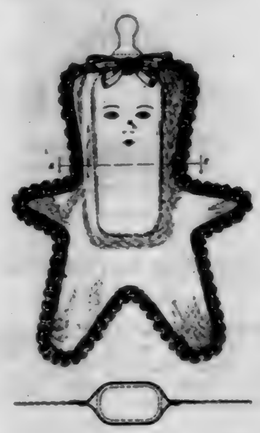
The ornamental design for a bracket back for lighting fixtures, as shown.

67,137. FRAME FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,233. Term of patent 7 years.



The ornamental design for a frame for lighting fixtures, as shown.

67,138. BODY FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,234. Term of patent 7 years.

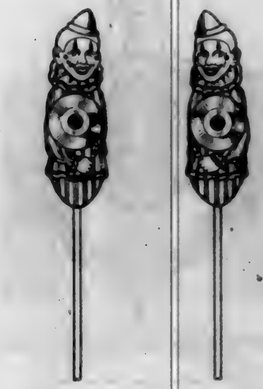


The ornamental design for a body for lighting fixtures, as shown.

67,139. COAT. TAUBE DAVIS, New York, N. Y., assignor to Franklin Simon & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 19, 1925. Serial No. 12,420. Term of patent 3½ years.

The ornamental design for a coat, substantially as shown.

67,140. NURSING-BOTTLE COVER. JEAN G. DUPONT, Chicago, Ill. Filed Jan. 26, 1925. Serial No. 12,142. Term of patent 7 years.



The ornamental design for a nursing bottle cover, as shown.

67,141. BURIAL CASKET. JOSEPH FALCK, Chicago, Ill., assignor to F. H. Hill Company, Chicago, Ill., a Corporation of Illinois. Filed Mar. 1, 1924. Serial No. 8,793. Term of patent 14 years.

The ornamental design for a burial casket, as shown.

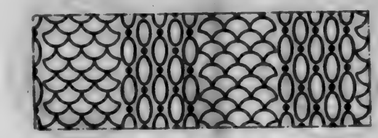
67,142. CANDY. JOHN A. GUSLEY, Minneapolis, Minn. Filed Feb. 27, 1925. Serial No. 12,502. Term of patent 3½ years.

The ornamental design for a candy, as shown.

67,143. BUTTON. WILLIAM W. HOBB, New York, N. Y. Filed Dec. 3, 1924. Serial No. 11,574. Term of patent 3½ years.

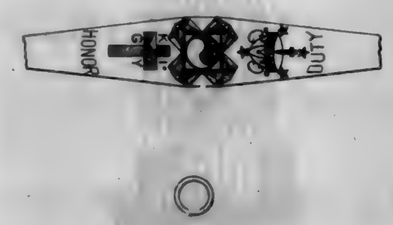
The ornamental design for a button, as shown.

67,144. LAMP GLOBE. JAMES VINCENT HUGHES, New Florence, Pa. Filed Nov. 12, 1924. Serial No. 11,856. Term of patent 7 years.



The ornamental design for a lamp globe, as shown.

67,145. KNITTED FABRIC. CLAUDE C. HYDE, Ottisville, N. Y. Filed May 12, 1922. Serial No. 2,204. Term of patent 3½ years.

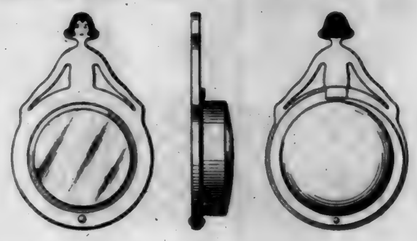


The ornamental design for knitted fabric, as shown.

67,146. PRINTED CLOTH. ALEXANDER KAGAN, New York, N. Y., assignor, by mesne assignments, to Weiner Brothers, Inc., New York, N. Y., a Corporation of New York. Filed Feb. 6, 1925. Serial No. 12,285. Term of patent 3½ years.

The ornamental design for printed cloth, as shown.

67,147. FINGER RING. CLIFTON N. KEITH, Springfield, Ohio. Filed Aug. 8, 1923. Serial No. 6,931. Term of patent 3½ years.

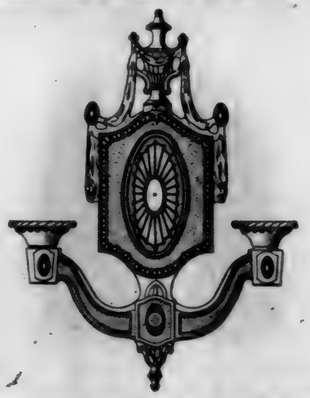


The ornamental design for a finger ring as shown.

67,148. VANITY CASE OR SIMILAR ARTICLE OF MANUFACTURE. WILLIAM G. KENDALL, Newark, N. J., assignor to Henri Rigaud, Paris, France. Filed Nov. 18, 1924. Serial No. 11,402. Term of patent 14 years.

The ornamental design for a vanity case or similar article of manufacture substantially as shown.

67,149. VANITY CASE. WALTER MORRIS LANGSDORF, New York, N. Y., assignor to S. Langsdorf & Co., Inc., New York, N. Y., a Corporation of New York. Filed Feb. 3, 1925. Serial No. 12,249. Term of patent 3½ years.

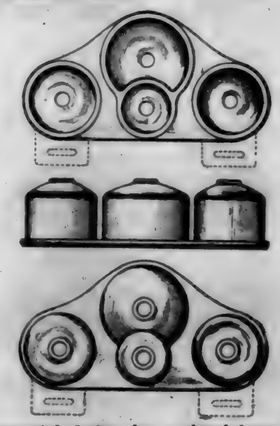


The ornamental design for a vanity case, as shown.

67,150. FLORAL-BOUQUET HOLDER. GEORGE A. LLEWELLYN, New York, N. Y. Filed Jan. 28, 1925. Serial No. 12,166. Term of patent 3½ years.

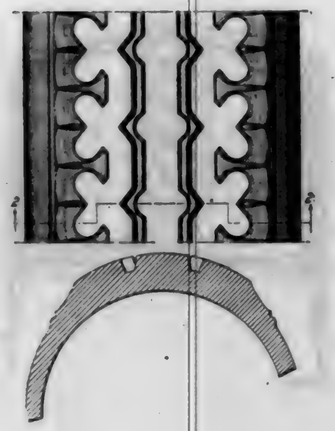
The ornamental design for a floral bouquet holder, as shown.

67,151. ELECTRIC-LIGHTING FIXTURE. JULIUS C. LOWRY, Detroit, Mich. Filed Feb. 12, 1925. Serial No. 12,357. Term of patent 14 years.



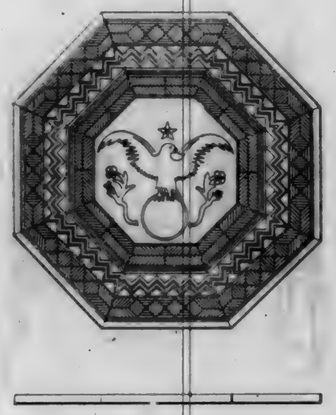
The ornamental design for an electric lighting fixture as shown.

67,152. FINGER RING. JACK MARTIN, New York, N. Y., assignor to The Guarantee Finding Co., Inc., Newark, N. J., a Corporation of New Jersey. Filed Jan. 27, 1925. Serial No. 12,159. Term of patent 3½ years.



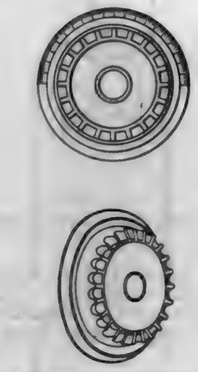
The ornamental design for a finger ring as shown.

67,153. SIGNAL-LAMP CASING. CARL A. MEILICKE, Chicago, Ill. Filed Mar. 20, 1922. Serial No. 1,268. Term of patent 14 years.



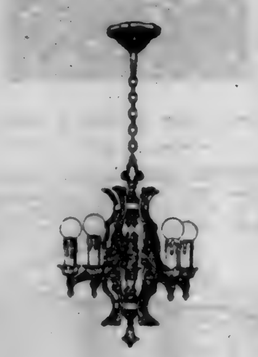
The ornamental design for a signal lamp casing, as shown.

67,154. TIRE TREAD. STEPHEN S. MILLER, Akron, Ohio, assignor to The Mohawk Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 9, 1924. Serial No. 9,829. Term of patent 14 years.



The ornamental design for a tire tread, as shown.

67,155. CHAIR SEAT. ANTONIO NARDEI, Delmont, Pa. Filed Feb. 19, 1925. Serial No. 12,424. Term of patent 7 years.



The ornamental design for a chair seat, as shown.

67,156. CONTROL HANDLE FOR REGULATING APPARATUS. EDWARD B. NOWOSIELSKI, Bloomfield, N. J., assignor to Splitdorf Electrical Company, Newark, N. J. Filed June 5, 1924. Serial No. 9,808. Term of patent 7 years.

The ornamental design for a control handle for regulating apparatus as shown.

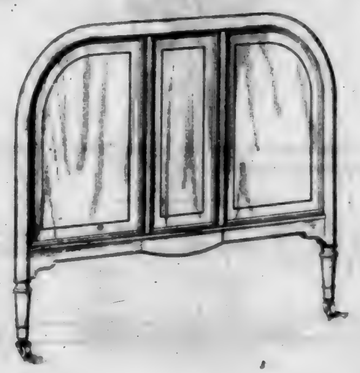
67,157. CHANDELIER OR ARTICLE OF SIMILAR NATURE. ISIDOR ROSENBLATT, New York, N. Y. Filed Feb. 4, 1925. Serial No. 12,263. Term of patent 3½ years.

The ornamental design for a chandelier or article of similar nature, as shown.

67,158. GIRDLE. ERNEST H. ROSS, Iowa City, Iowa. Filed Sept. 27, 1924. Serial No. 10,911. Term of patent 7 years.

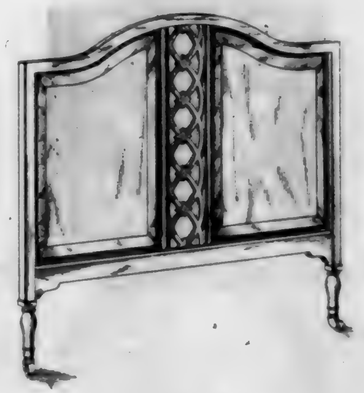
The ornamental design for a girdle, as shown.

67,159. METAL CHAIR. IRVING SALOMON, Chicago, Ill. Filed Jan. 28, 1924. Serial No. 8,468. Term of patent 7 years.



The ornamental design for a metal chair as shown.

67,160. PAPER. THOMAS L. STONE, Newark, N. J., assignor to Hampden Glazed Paper & Card Company, Holyoke, Mass., a Corporation of Massachusetts. Filed Jan. 12, 1925. Serial No. 12,024. Term of patent 14 years.



The ornamental design for paper as shown.

67,161. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1925. Serial No. 12,459. Term of patent 14 years.

The ornamental design for a bedstead end frame as shown.

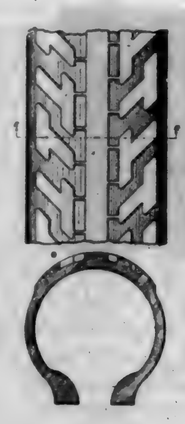
67,162. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1925. Serial No. 12,460. Term of patent 14 years.

The ornamental design for a bedstead end frame as shown.

67,163. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1925. Serial No. 12,461. Term of patent 14 years.

The ornamental design for a bedstead end frame as shown.

67,164. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1925. Serial No. 12,462. Term of patent 14 years.

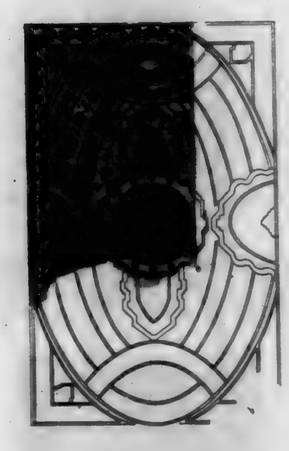


The ornamental design for a bedstead end frame as shown.

67,165. BEDSTEAD END FRAME. CHARLES A. STUART, Kenosha, Wis., assignor to Simmons Company, New York, N. Y., a Corporation of Delaware. Filed Feb. 24, 1925. Serial No. 12,463. Term of patent 14 years.

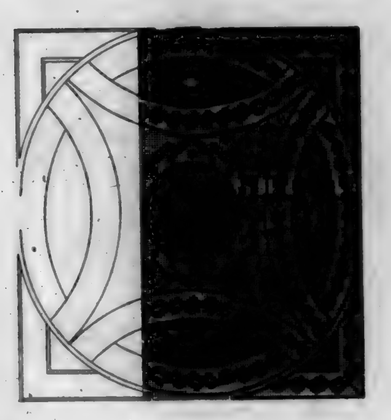
The ornamental design for a bedstead end frame as shown.

67,166. PNEUMATIC-TIRE TREAD. FRANK R. TALBOTT, Cleveland, Ohio, assignor to The Talbott Rubber Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 24, 1921. Serial No. 510,159. Term of patent 3½ years.



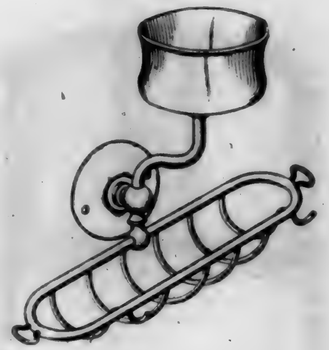
The ornamental design for a pneumatic tire tread, as shown.

67,167. PLATE OR SIMILAR ARTICLE. EDGAR E. TATLER, Trenton, N. J. Filed Sept. 8, 1923. Serial No. 7,162. Term of patent 7 years.



The ornamental design for a plate or similar article, as shown.

67,168. LACE. EDWIN D. TRAGUE, Brooklyn, N. Y., assignor to North American Lace Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 16, 1925. Serial No. 12,390. Term of patent 3½ years.



The ornamental design for lace, substantially as shown.

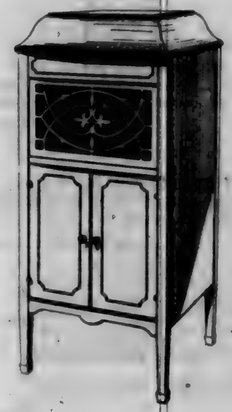
67,169. LACE. EDWIN D. TRAGUE, Brooklyn, N. Y., assignor to North American Lace Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Feb. 20, 1925. Serial No. 12,437. Term of patent 3½ years.

The ornamental design for lace, substantially as shown.

67,170. BATHROOM APPLIANCE. PAUL F. TITCHENER, Binghamton, N. Y. Filed Feb. 2, 1925. Serial No. 12,241. Term of patent 3½ years.

The ornamental design for a bathroom appliance, as shown.

67,171. DOLL. EDWIN L. WHITLOCK and JAMES MADISON, New York, N. Y. Filed Dec. 22, 1923. Serial No. 8,120. Term of patent 3½ years.



The ornamental design for a doll substantially as shown.

67,172. DOLL. EDWIN L. WHITLOCK and JAMES MADISON, New York, N. Y. Filed Dec. 22, 1923. Serial No. 8,121. Term of patent 3½ years.

The ornamental design for a doll substantially as shown.

67,173. PHONOGRAPH CABINET. JOSEPH WOLFF, Brooklyn, N. Y., assignor to Sonora Phonograph Company, Inc., a Corporation of New York. Filed Jan. 5, 1925. Serial No. 11,935. Term of patent 7 years.

The ornamental design for a phonograph cabinet, substantially as shown.

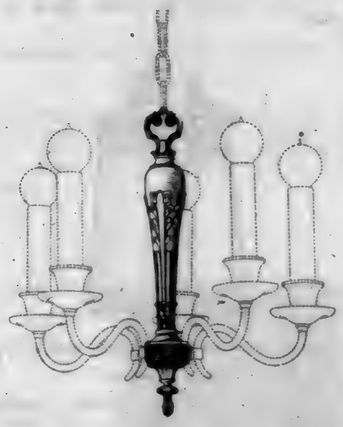
67,174. LIGHTING FIXTURE. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed Feb. 27, 1924. Serial No. 8,751. Term of patent 3½ years.

The ornamental design for a lighting fixture as shown.

67,175. LIGHTING FIXTURE. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed Feb. 27, 1924. Serial No. 8,752. Term of patent 3½ years.

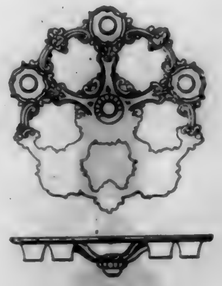
The ornamental design for a lighting fixture as shown.

67,176. LIGHTING-FIXTURE CANOPY. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed Feb. 27, 1924. Serial No. 8,756. Term of patent 3½ years.



The ornamental design for a lighting fixture canopy, as shown.

67,177. LIGHTING-FIXTURE CANOPY. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed Feb. 27, 1924. Serial No. 8,758. Term of patent 3½ years.



The ornamental design for a lighting fixture canopy, as shown.

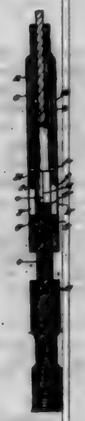
67,178. LIGHTING-FIXTURE SPINDLE. HERMAN H. WOLTER, Meriden, Conn., assignor to The Miller Company, New York, N. Y., a Corporation of Connecticut. Filed Feb. 27, 1924. Serial No. 8,763. Term of patent 3½ years.

The ornamental design for a lighting fixture spindle, as shown.

67,179. BODY FOR LIGHTING FIXTURES. FRANK S. CROWELL, Toledo, Ohio, assignor to The Edward N. Riddle Company, Toledo, Ohio, a Corporation of Ohio. Filed Jan. 31, 1925. Serial No. 12,231. Term of patent 7 years.

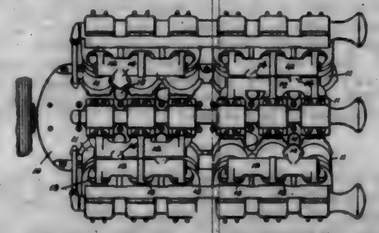
The ornamental design for a body for lighting fixtures as shown.

67,180. CHILD'S DRESS. MILDRED C. SCHMOLER, New York, N. Y., assignor to Franklin Simon & Co., New York, N. Y., a Corporation of New York. Filed Jan. 15, 1925. Serial No. 12,063. Term of patent 3½ years.



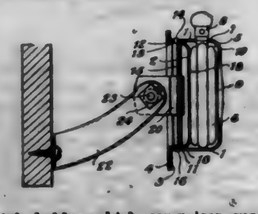
The ornamental design for a child's dress, substantially as shown and described.

PATENTS



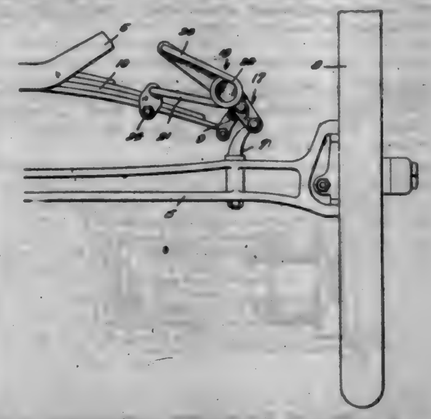
GRANTED APRIL 28, 1925.

1,535,083. DRILLING JAR. PAUL ARBON, Tulsa, Okla. Filed Jan. 2, 1923. Serial No. 610,263. 4 Claims. (Cl. 255—27.)



1. A jar comprising an uncut solid body portion free from joints and having an extension provided at opposite sides with welded joints extending throughout the length of the extension, said extension including two sections integral with the body portion and connected together by said welded joints, each of said sections being provided with an internal longitudinally extending groove and a slot extending through its wall from its outer surface to the groove, the slots having their outer ends open at all times to permit dirt and the like to pass out of the slots, a stem of slightly less diameter than the body arranged in said grooves and having a flattened cross-shaped head, the arms of which are slidably mounted in said slots, the upper ends of said grooves being spaced from the upper ends of the slots a distance equal to the length of the head above the arms to permit the arms to strike the upper ends of the slots simultaneously with the impact of the head against the upper ends of the grooves.

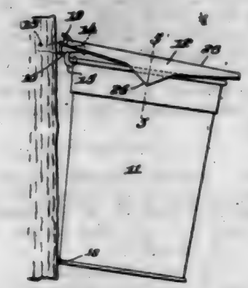
1,535,084. MANIFOLD ARRANGEMENT FOR MULTIPLE-CYLINDER ENGINES. GLENN D. ANGLE, Detroit, Mich. Filed Dec. 30, 1920. Serial No. 434,135. 1 Claim. (Cl. 123—55.)



The combination, in a W-type engine, of a plurality of pipes for the fuel mixture passing through the crank case, and up between the center and outer banks of cylinders, of an intake manifold unit, comprising a body portion provided with a plurality of flanged openings therealong, the flanges of which are in substantially the same plane, said unit further comprising an intake pipe near one end of the unit, the intake pipe entering the manifold so that the axial lines of one of the first mentioned set of openings, and of the intake pipe, are at an acute angle whereby the intake manifold unit will fit in position on any one of the three banks of cylinders, with the intake pipe thereof fitting onto one of the first mentioned fuel mixture pipes between the cylinders.

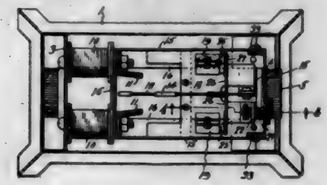
1,535,085. WATCH HOLDER. HENRY BAMBERGER, Newark, N. J., assignor to Newark Watch Case Material Company, Newark, N. J., a Corporation of New Jersey. Filed Feb. 28, 1924. Serial No. 695,616. 7 Claims. (Cl. 224—4.)

2. A watch holder which comprises spaced front and rear sections, a bracket member, and latching means on said member to engage said sections to hold them together and to said member.



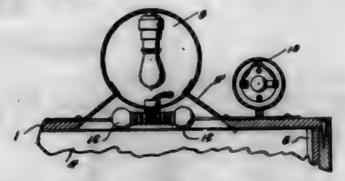
1,535,086. SHOCK ABSORBER. BENJAMIN FRANKLIN BARLOW, Travis, Tex. Filed Dec. 14, 1923. Serial No. 680,692. 2 Claims. (Cl. 267—17.)

1. An automobile shock absorber comprising an attaching bracket adapted to be interposed between one end of a leaf spring and an axle, said bracket comprising spaced parallel arms, a pair of transversely spaced links connected to said arms adjacent the outer



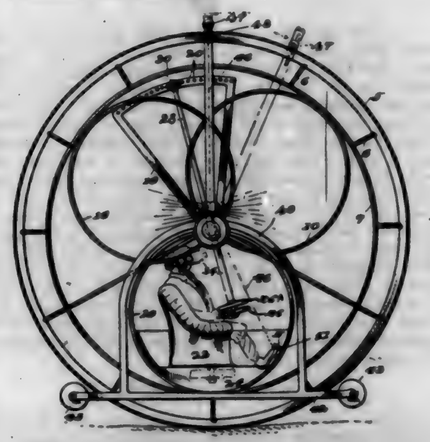
end of the bracket, the lower ends of said links being adapted to be connected with one end of the spring, an auxiliary spring comprising a central coil, and a pair of inwardly extending and diverging arms, the free ends of said arms being connected in one instance to one of the bracket arms and in the other instance to a clamp adapted to be connected with the main spring.

1,535,087. APPARATUS FOR COLLECTING SAP FROM TREES. CARLETON E. BARNETT, Cambridge, Mass. Filed Apr. 7, 1922. Serial No. 550,499. 2 Claims. (Cl. 47—51.)



1. In an apparatus for collecting sap from trees, a spout having means thereon to support a bucket; a bucket adapted to be supported by said means; means provided on said spout to detachably engage and support a cover, said means comprising an upstanding and rearwardly extending tapered horn integrally formed with said spout; a cover for said bucket composed of a blank bent at the median line to form a ridge having sloping flat faces extending laterally therefrom its underface being normally in contact with said bucket at two diametrically opposite points whereby an air space is provided between said cover and said bucket for the passage of air over the mouth of the bucket from all directions, said cover having a hole adapted to engage said tapered horn, and having depending ears to engage the sides of the bucket at times, but normally out of contact therewith whereby the said cover may be raised off said bucket for the purpose of inspecting the contents thereof and lateral displacement of said cover is restrained when it is in position on said bucket.

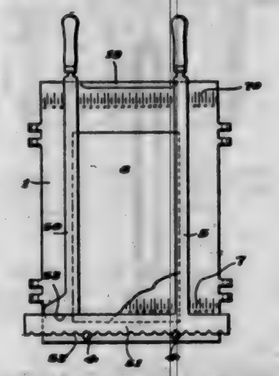
1,535,088. RECTIFIER. JOSEPH R. BARNHART, Cleveland, Ohio, assignor to Walter M. Scott, Cleveland, Ohio. Filed Oct. 6, 1920. Serial No. 415,090. 5 Claims. (Cl. 175—365.)



1. In a device of the character described, the combination with a vibratory reed, of a pair of lateral arms projecting from opposite sides thereof, contact members carried by said arms, a carriage movable longitudinally of said reed, and a pair of brushes carried by said carriage, one in line with each contact member.

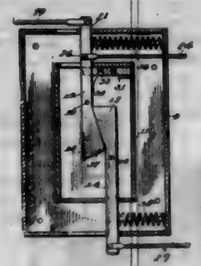
1,535,089. COMBINATION TAIL LIGHT, SIGNAL, AND LICENSE-PLATE HOLDER. EMANUEL M. BARROS, Stamford, N. Y. Filed June 12, 1923. Serial No. 644,931. 1 Claim. (Cl. 40—132.)

A device of the character specified having a signal box, a signal casing made separately from said box and off-set therefrom, said casing having side walls provided with portions integral therewith in diverging relation, said portions being secured to the box, illuminating means intermediate said portions, said illuminating means being outwardly of the interior space of the box, means carrying said illuminating means closing the bottom of the casing and overlapping and supported at its opposite ends on the side walls of the casing, said box having an opening opposite said illuminating means, the inner surfaces of said portions constituting reflectors to assist in illuminating the box, and means supported from the casing carrying said illuminating means.



1,535,090. GRAVITY WHEEL. JULES BAUMANN, Humboldt, Ariz. Filed Aug. 8, 1922. Serial No. 580,429. 7 Claims. (Cl. 208—1.)

1. A vehicle comprising a ground contact rim, an axle on which the ground contact rim turns, a sleeve receiving said axle, an occupant carrying cradle having rigid connection with and suspended from the sleeve, an arch extending upwardly from and rigidly connected to said sleeve, and a manually operable shaft extending through said axle and sleeve and having a gear engaged with said arch whereby to move the same and shift the center of gravity of said cradle.

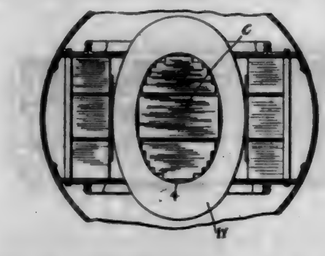


1,535,091. STEREOTYPE MOLD. ELMER E. BEARD, Port Angeles, Wash. Filed Jan. 5, 1923. Serial No. 610,931. 4 Claims. (Cl. 22—5.)

4. In combination with a two-part stereotype mold, one of said parts having vertically-extending rib-forming grooves therein, and having positioning pins at its lower edge projecting therefrom towards the complemental mold part, a side stick defining a side edge of a cut, and having a foot extending at right angles from its lower end to define the bottom edge of the cut, the lower edge of said foot having notches engageable with

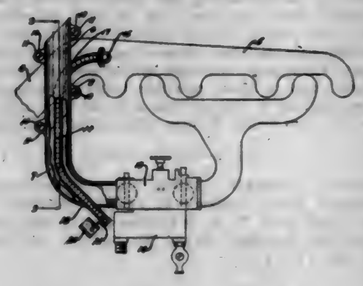
said pins to maintain said side stick parallel with a groove in the mold part and at a predetermined distance therefrom, and means for defining the other side edge of a cut.

1,535,092. BRAKE. ROBERT BENJAMIN BELL, Miami, Fla. Filed Mar. 31, 1924. Serial No. 703,215. 9 Claims. (Cl. 188—2.)



1. A device for coordinating the emergency and service brakes for united action and comprising a pair of levers pivoted intermediate their ends and having their inner adjacent ends in engagement, a link connected to the outer end of one lever and having connections with the service brake, a link connected to the other lever intermediate its ends and having connections with the emergency brake and a pedal connected with the outer end of the second mentioned lever.

1,535,093. PROTECTED BOBBIN AND METHOD OF MAKING THE SAME. RAYMOND C. BENNER, Fremont, Ohio, assignor to National Carbon Company, Inc., a Corporation of New York. Filed Mar. 5, 1921. Serial No. 450,073. 12 Claims. (Cl. 204—38.)

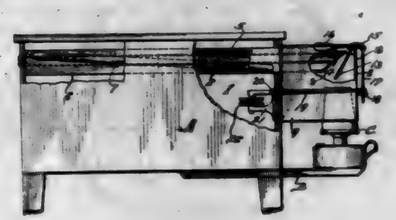


1. In a process of making a protected bobbin, spraying a coating-forming material upon the bobbin surface.

1,535,094. TRANSFORMER. ROBERT V. BINGAY, Pittsburgh, Pa., assignor to Pittsburgh Transformer Company, a Corporation of Pennsylvania. Filed Sept. 29, 1920. Serial No. 413,613. 2 Claims. (Cl. 175—358.)

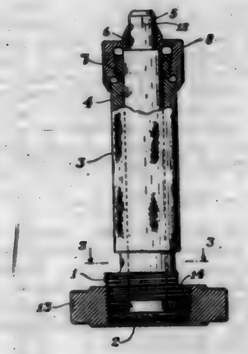
1. In a transformer the combination with a core leg, of a transformer coil surrounding said leg and extending lengthwise thereof and comprising a plurality of successive conductor windings one within the other, insulation comprising strips spacing successive windings apart to provide ventilating ducts between said windings said ducts extending from end to end of the coil, and a layer of hardened varnish forming a binding and insulating film over the conductors and insulation throughout the coil.

1,535,095. AIR AND FUEL HEATER. WALTER J. BLIFFERT, Milwaukee, Wis. Filed Jan. 28, 1924. Serial No. 689,077. 3 Claims. (Cl. 257—241.)



1. An attachment for an internal combustion engine including an exhaust manifold having an aperture therein, and a carburator, comprising a pipe opening into the carburetor and having an enlarged upper end portion, said enlarged portion surrounding a portion of the exhaust manifold, and a tubular member within the pipe and entering the aperture in said exhaust manifold, the lower end portion of said tubular member projecting through the pipe adjacent the carburetor bowl.

1,535,096. HACK SAW BLADE. GEORGE J. BLUM, Chicago, Ill., assignor to The Armstrong-Blum Manufacturing Company, Chicago, Ill., a Corporation of Illinois. Original application filed Dec. 8, 1921, Serial No. 520,838. Divided and this application filed Sept. 4, 1923. Serial No. 660,826. 2 Claims. (Cl. 29—95.)

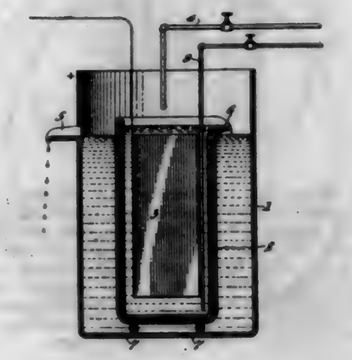


1. A hacksaw blade composed of a thin relatively wide strip of tough steel constituting a back or body, and a thin relatively narrow strip of high speed steel such as tungsten steel forming a toothed cutting edge of high wear-resisting qualities, said strips being arranged in abutting edge relation and welded together so as to be permanently united in an integral blade structure.

1,535,007. INCUBATOR HEATER. LUCIUS A. BROWN, Clay Center, Nebr., assignor to The M. M. Johnson Company, Clay Center, Nebr. Filed June 18, 1924. Serial No. 720,807. 5 Claims. (Cl. 237—15.)

1. In heating apparatus for incubators, in combination, an incubating chamber, a water tank extending across said chamber, water circulating pipes connected with said tank, one end of the tank projecting through a wall of the incubating chamber and extending a considerable distance beyond said wall, a box-like compartment enclosing said projecting end portion of the tank and having air outlet openings, a warm air pipe disposed within the said tank, the tank comprising end walls through which said warm air pipe extends, the end wall of the projecting end portion of the tank being spaced from the outer end of said compartment, a warm air supply means disposed beneath said last mentioned end wall and compartment to supply air to the end of the warm air pipe which leads through said end wall, and a valve movable in said compartment between the end of the air pipe and the outlet openings to open or close either of them substantially as described.

1,535,008. THREAD GAUGE. EARLE BUCKINGHAM, Hartford, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Apr. 23, 1923. Serial No. 634,186. 10 Claims. (Cl. 33—178.)

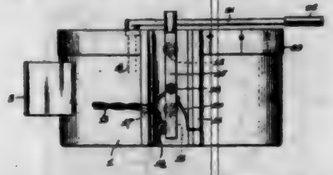


1. A gauge for testing the taper and lead of threaded conical surfaces comprising in combination, a threaded gaging member adapted to contact with a portion of the threaded conical surface to be gaged, a second threaded gaging member adapted to contact with another portion of said threaded surface, means co-operating with the said members to indicate the conical or taper accuracy of the surface, and means movably mounted on one of the members and coperating with the other member for indicating the accuracy of the lead of the thread being gaged.

1,535,099. VALVE-TESTING DEVICE. SAMUEL J. BURNS, Vinita, Okla. Filed July 25, 1922. Serial No. 577,417. 2 Claims. (Cl. 73—51.)

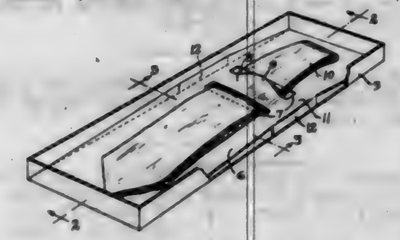
1. In combination, a tube having a pierced closure at one end and open at the other end, a yieldable pierced block at the open end of the tube adapted to be engaged with a tire valve, a piston in the tube, a rod extending from the piston through the pierced closure of the tube and friction means situated adjacent the pierced closure for engaging the rod to normally hold it stationary in an adjusted position.

1,535,100. PROCESS OF PRODUCING CHROMIC-ACID SOLUTIONS. ARTHUR W. BURWELL, Poughkeepsie, N. Y. Filed Jan. 23, 1922. Serial No. 531,281. 6 Claims. (Cl. 204—0.)



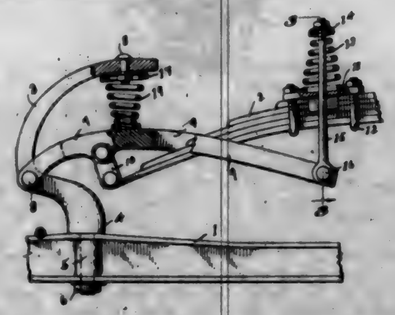
1. Electrolytic process of oxidizing chromic salt solutions comprising causing such solutions to flow successively through the cathode and anode compartments of an electrolytic cell having a porous diaphragm and an anode presenting an active lead surface; and maintaining sufficient excess of chromic salt in the solution to prevent anodic evolution of oxygen.

1,535,101. ELECTRIC TIME SWITCH. HERBERT W. CHRISTIAN, Detroit, Mich. Filed Feb. 17, 1923. Serial No. 619,567. 7 Claims. (Cl. 161—1.)



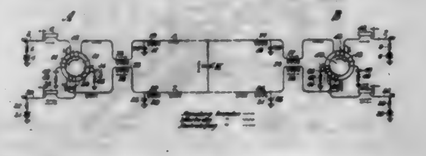
1. The combination of an electric water heating apparatus having a main switch and an auxiliary switch in circuit with a source of electrical energy, a clock mechanism having a winding arbor, and a switch kick-

off member on the winding arbor of said clock mechanism and by which member the clock mechanism may be partially wound, said kick-off member being actuated



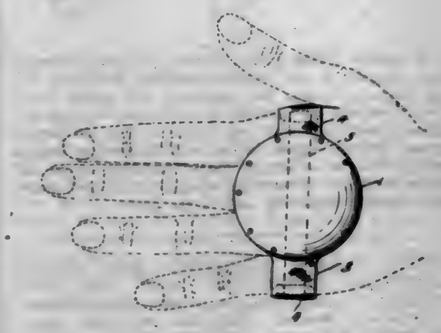
during the operation of the clock mechanism and opening the circuit of the auxiliary switch when the clock mechanism is approximately run down.

1,535,102. NECKTIE BOX. ARNOLD COHN, New York, N. Y. Filed June 11, 1924. Serial No. 719,265. 3 Claims. (Cl. 206—44.)



1. A display box having therein an article holder the ends and midportion of which are adapted to be frictionally held therein, depending means adjacent the midportion of the holder for keeping the center portion of the holder in spaced relation with the bottom of the box, and a necktie retaining bridge formed in said center portion.

1,535,103. SHOCK ABSORBER. WILLIAM P. COLE, Coalinga, Calif. Filed July 20, 1922. Serial No. 576,804. 3 Claims. (Cl. 267—17.)

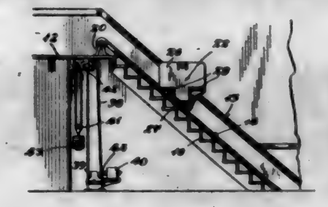


1. In a shock absorber, the combination with an axle of a vehicle, a leaf spring, a hanger carried by the axle and having a portion overhanging the leaf spring, a shock lever having one end pivotally connected to the hanger, compression springs mounted upon the leaf spring, means connecting said compression spring with the other end of the shock lever to absorb downward movement of the vehicle, said leaf spring having connection with the shock lever between its ends, and a second compression spring arranged between the shock lever and the free end of the hanger for absorbing upward movement of the vehicle.

1,535,104. MEANS FOR PREVENTING ELECTRICAL INTERFERENCE. SAMUEL I. CORY, Elmhurst, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 6, 1922. Serial No. 559,010. 5 Claims. (Cl. 178—69.)

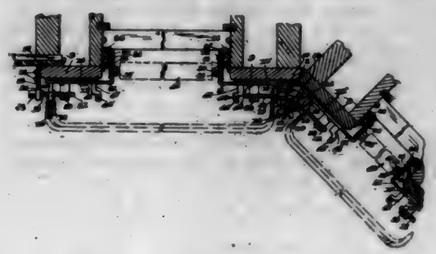
3. In a single-line Morse telegraph system, the combination with a plurality of line circuits, each having terminal apparatus connected therewith, of a transformer having groups of windings connected therewith, one winding of each group being connected in series with a line circuit and the other winding of each group being connected in shunt to ground, the circuits of the said windings being so arranged that the flux resulting from the transmission of a signaling impulse over one of said line circuits will create in the other windings of the other group an electromotive force such as to neutralize interfering cross-fire set up in the other circuit connected with the said latter group of windings.

1,535,105. TRAFFIC SIGNAL. DANIEL E. COTA, Waltham, Mass. Filed Dec. 10, 1921. Serial No. 521,438. 1 Claim. (Cl. 88—1.)



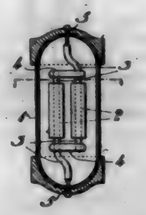
A traffic signal having a base of inelastic material, a reflector thereon, said reflector being curved between opposite edges to fit the hand of a user, said base including tabs integral therewith and returned from opposite edges thereof to provide substantially hook shaped portions adapted to extend partly around the hand and coact therewith to prevent displacing movement of the signal transversely of the hand, and an elastic tape spanning and secured to said tabs.

1,535,106. ELEVATOR FOR STAIRWAYS. CLARENCE C. CRIPPEN, Harrisburg, Pa. Original application filed Oct. 4, 1921, Serial No. 505,328. Divided and this application filed Feb. 25, 1924. Serial No. 695,046. 4 Claims. (Cl. 187—12.)



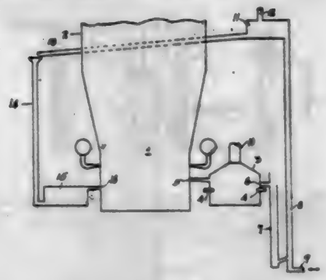
3. A stairway elevator comprising in combination, a channel rail adapted to be secured to extend the length of the stairway, a car movable upon said channel rail,

roller means carried by the car adapted to move in said channel rail for supporting the car, a second rail spaced above the first named rail and roller means carried by



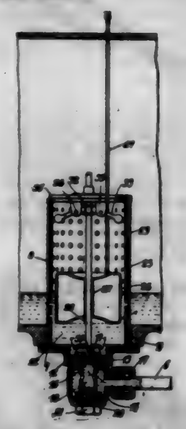
the car adapted to engage the second rail and cooperate with the first named rail for holding the car against tilting.

1,535,107. SHADE AND CURTAIN FIXTURE. ALBERT CZARNIZSKA, Milwaukee, Wis. Filed June 10, 1921. Serial No. 476,401. 8 Claims. (Cl. 156—24.)



1. A window shade fixture including a pair of hinged plates adapted to rest against adjacent angularly disposed surfaces, means for adjusting said plates angularly to conform to surfaces in a plurality of angular relations, hook-shaped devices at the end of the plates, disposed at right angles thereto and adapted to engage about portions of a window frame, clamping means associated with each of said plates, and curtain and shade roller brackets carried by each of the plates.

1,535,108. CARBON ELECTRODE FOR VACUUM LIGHTNING CONDUCTORS. STEN TAGE DAHL, Stockholm, Sweden, assignor to Olof Kullberg-Mayer, Katrineholm, Sweden. Filed Feb. 28, 1923. Serial No. 621,875. 2 Claims. (Cl. 175—30.)

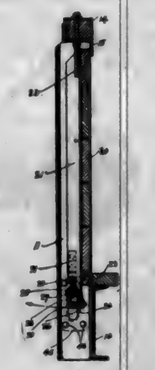


1. A lightning arrester, comprising, in combination, a plurality of carbon electrodes disposed in parallel spaced relation to each other, an insulating bridge adjacent to each end of the electrodes, and a metal conductor passing through each electrode from one end to the other, both ends of the conductor emerging from the electrode and secured to the respective bridges.

1,535,109. MANUFACTURE OF IRON. CALEB DAVIES, Jr., Poland, Ohio. Filed July 3, 1922. Serial No. 572,619. 16 Claims. (Cl. 266—1.)

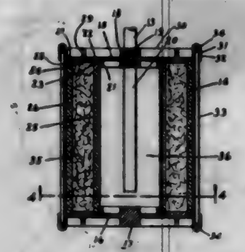
1. In the manufacture of pig iron, the steps which consist in withdrawing a portion of the slag from the blast-furnace hearth, desulphurising such slag, and then returning the same to such hearth.

1,535,110. SELF OILER. FRED DOHRMANN, New York, N. Y. Filed May 21, 1923. Serial No. 640,519. 1 Claim. (Cl. 184—103.)



The combination with a motor crank case, having a threaded opening therein, a removable chamber, perforated throughout its length extending within the casing, a flange formed on the bottom of said chamber to engage the bottom of the motor case, screens surrounding the openings in the chamber, a duct connecting the chamber with a source of supply, a valve in the bottom of said chamber for regulating the flow of a liquid through the duct, a valve stem and float within the casing, a pair of weighted elements depending from the top of the casing, the inner ends of said weighted elements engaging the valve stem to lower the same when said weighted elements are engaged by the float and means to determine the position of said float within the chamber.

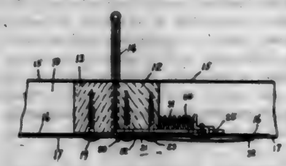
1,535,111. DOOR-LOCKING MECHANISM. GEORGE B. DORSEY, Chicago, Ill., assignor to Enterprise Railway Equipment Company, Chicago, Ill., a Corporation of Illinois. Filed May 31, 1923. Serial No. 642,468. 12 Claims. (Cl. 105—309.)



1. In a railway car, the combination with a supporting framework; of a swinging side door; a shaft adapted to assume a position between the side door and

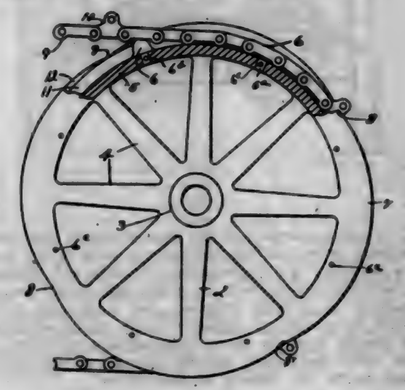
a portion of the supporting framework; a link pivoted to the supporting framework; and a crank arm rigidly secured to the shaft and pivoted to the aforesaid link

the aforesaid shaft being adapted to be moved by rotation thereof about the pivot securing the crank arm to the link.



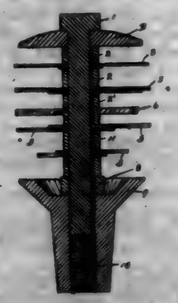
11,535,112. FILTERING APPARATUS. HOMER E. DUKE, Markleville, and GEORGE W. PIERCE, Anderson, Ind. Filed Mar. 17, 1922. Serial No. 544,548. 1 Claim. (Cl. 210—90.)

A pair of similar supporting heads for a filter construction formed from a pair of standard tubular drain tiles and a plurality of exteriorally positioned tile protecting and securing rods, each head including on opposite faces axially projecting bosses, an annular reinforcement and centering ring projecting from one face and concentric with the boss, another and similar ring upon the opposite face and concentric with both boss and first mentioned ring and of a larger diameter than either, a tile seat concentric with the boss and both rings and upon the same face as the first ring, and of a larger diameter than either ring, and radial ribs extending from the boss through the second mentioned ring upon that face of the head and terminating in rod receiving apertured enlargements, the apertures extending through the head for rod reception.



1,535,113. VEHICLE DOORCHECK. FLOYD K. EASTMAN, Kokomo, Ind., assignor to Concealed Door Check Company, Kokomo, Ind., a Corporation. Filed Mar. 23, 1924. Serial No. 702,574. 11 Claims. (Cl. 16—82.)

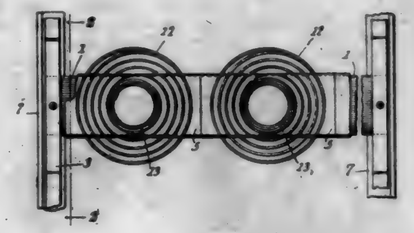
1. The combination with a body frame member, and a door frame member hinged thereto, of a door check comprising a plate secured to one of said members, a relatively thin flat resilient metal strap adapted to maintain itself adjacent the surface of the other member, said strap having one end secured to the other member and slidably connected with said plate, and means on



said strap for engaging said plate and limiting the sliding movement with respect thereto upon the door being opened.

1,535,114. FLANGED SPROCKET WHEEL. LEVI E. EDMUNDS, Philadelphia, Pa. Filed Nov. 8, 1924. Serial No. 748,643. 4 Claims. (Cl. 74—31.)

1. A sprocket wheel including a hub, spokes radiating therefrom, a rim at the outer ends of the spokes, teeth projecting from said rim, and flanges carried by said rim, said flanges decreasing in width from a number of points about the wheel to other points intermediate the first named points whereby transverse recesses are formed, the inner faces of said flanges being straight for a distance approximately equal to the height of the teeth to produce a trough and then beveled outward to form a diverging portion as a guide for a chain.



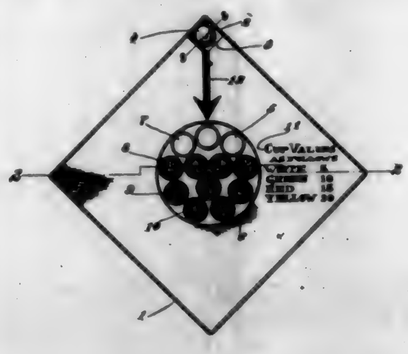
1,535,115. FLUE CLEANER. WILLIAM W. EVANS, Salt Lake City, Utah. Filed June 5, 1922. Serial No. 565,970. 2 Claims. (Cl. 15—104.16.)

1. In a device of the class described the combination of a headed bolt with a flat surface on one side of the shank thereof; a guide collar adjacent the head of the

bolt; breaker blades having a circular opening in each with a flattened portion corresponding to the flattened face of the bolt; and staggered in relation to each other; spacing sleeves carried on said bolt to space other breaker blades likewise staggered in relation to each other and carried on said bolt; a sweeping washer loosely carried medially on said bolt and of smaller diameted than the breaker blades; a sweeping collar of concavo-convex form carried on said bolt; with an internally threaded opening therein to receive the thread of a handle.

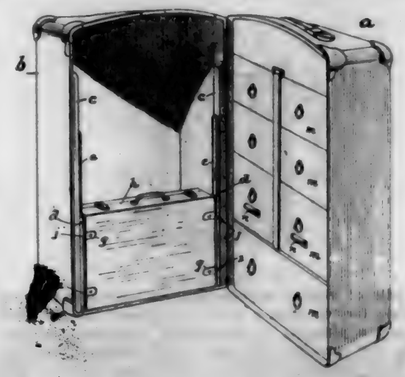
1,535,116. SPRING ASSEMBLY. ELISABETH M. FORE-HAND, Kokomo, Ind. Filed Sept. 17, 1923. Serial No. 663,235. 3 Claims. (Cl. 5—264.)

1. A spring assembly of the class described comprising combined spring holders and spacers, each in the form of a plate having a collar rising therefrom and threaded to receive a spring, slats on which said plates are designed to be slidably mounted, said slats and plates having inter-engaging means to hold them connected, and permit them to move longitudinally relatively to each other, and spiral springs having one end closely coiled to fit the threads of said collar.



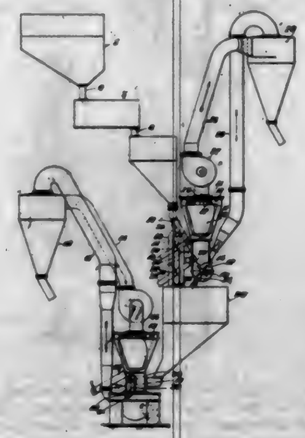
1,535,117. CABLE CONNECTER. ISADORE FULTON and CHARLES A. BOUSTEAD, Cresaps, W. Va. Filed Mar. 27, 1923. Serial No. 628,048. 2 Claims. (Cl. 173—353.)

1. A branch wire connecter for electric conductors comprising a stem, an enlarged outwardly flared head on one end of said stem and provided with a socket to receive the end of a branch wire, said head being split longitudinally, said stem being threaded intermediate its ends, a sleeve movably mounted on the stem having a tapered opening to receive the head on the stem and a threaded portion engaging the threads on the stem, and means to secure the stem to a conductor wire.



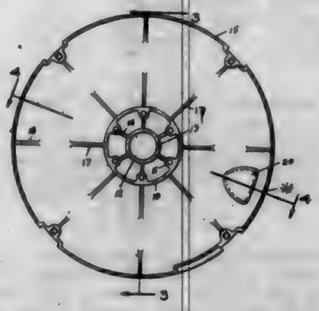
1,535,118. GAME. RUDOLPH M. GRIEBEL, Seattle, Wash. Filed Apr. 3, 1924. Serial No. 703,892. 3 Claims. (Cl. 273—105.)

2. A game consisting of a receptacle and a ball, the receptacle having a home station adapted to confine the ball near one extremity of the receptacle, a group of holes placed closely together near the centre of the receptacle, the spacing of the holes being less than the diameter of the ball, means for separately designating the different holes so that they can be conveniently scored for different amounts in playing the game, the



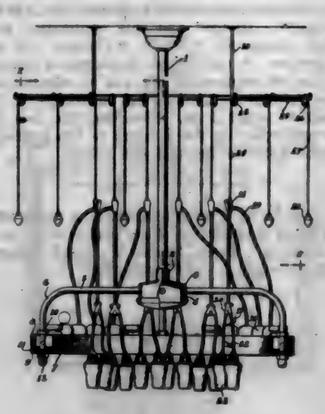
game being played by placing the ball in the home station, so manipulating the receptacle as to toss the ball; and catch it in the holes which are scored as designated.

1,535,119. WARDROBE TRUNK. EUGENE W. HAWLEY, Philadelphia, Pa. Filed July 5, 1923. Serial No. 649,450. 3 Claims. (Cl. 190—13.)



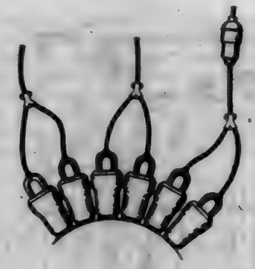
1. In a wardrobe trunk, the combination with one of the compartments, of a shoe box and a pair of pins thereon at each end thereof, the pins of a pair being at different vertical heights, and oppositely facing ways having front and rear walls and opening throughout their length toward each other, said ways being closed at the bottom and open at the top, each way accommodating both pins of a pair, the front wall of each way being longer than the distance between the pins of a pair and the rear wall of each way extendnig a substantial distance above the front wall; thereby allowing the withdrawal of the box by a vertical sliding movement of both pins within, and out of the open upper end of, said ways, and allowing the box to be readily maintained in a vertical position, by the simultaneous engagement of the two pins of a pair with the corresponding rear wall, during the box replacement operation, and whereby the box may also be restrained from a backward swinging movement and allow a forward swinging movement when raised sufficiently high for the upper pins to clear the tops of the front walls of the ways.

1,535,120. METHOD OF SEPARATING HIGH-CONTENT PHOSPHATE FROM LOW-CONTENT PHOSPHATE AND CLAY OR THE LIKE. SAMUEL B. KANOWITZ, Greensburg, Pa., and HYLEMAN A. WEBSTER, Columbia, Tenn.; said Kanowitz assignor of his right to Raymond Brothers Impact Pulverizer Company, Chicago, Ill., a Corporation of Illinois. Filed Oct. 6, 1920. Serial No. 414,956. 13 Claims. (Cl. 83—54.)



1. Method of separating phosphate from clay, which consists in comminuting the phosphate bearing material while in a dry state to reduce the clay to a powder and the phosphate to granular form, and then separating the powdered from the granular material to recover the latter by carrying away the powdered material in a body of air.

1,535,121. VEHICLE WHEEL. PETER LAMBERTUS, Indianapolis, Ind. Filed Dec. 6, 1924. Serial No. 754,836. 3 Claims. (Cl. 307—65.)

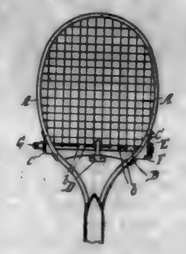


2. A cast metal disk wheel for automobiles or the like, having a hub portion and a rim portion, an intermediate disk-like portion cast integral therewith and extending therebetween, said disk portion being curved in cross section so as to have an inwardly-extending annular bulging portion, and a plurality of radially-extending spoke-like ribs intermediate the hub and bulged portion of the disk and the rim and bulged portion of the disk respectively so as to merge into the latter and form in connection therewith continuous supporting spokes between the hub and rim.

1,535,122. PERMANENT HAIR-WAVING MACHINE. GABRIEL LANTIERI, Jersey City, N. J. Filed Oct. 19, 1922. Serial No. 595,521. 4 Claims. (Cl. 219—24.)

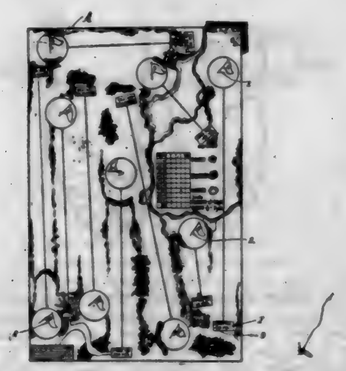
1. In a machine of the class described, in combination, a depending suport having a bracket at its lower end, a plurality of outwardly and downwardly extending arms carried by said bracket, a circular outlet box mounted upon the lower end of said arms, said outlet box being divided into a plurality of independent sections, each of which is provided with a plurality of terminals, a switch, and fuse members, a plurality of electric heaters adapted to lie in nested relation within the circumference of said outlet box, cables extending from said heaters to the terminals carried by said outlet box, and counterbalancing means for said heaters engaging said cables intermediate their ends.

1,535,123. ELECTRIC HEATER FOR PERMANENT-WAVING MACHINES. GABRIEL LANTIERI, Jersey City, N. J. Filed Oct. 19, 1922. Serial No. 595,522. 4 Claims. (Cl. 219—24.)



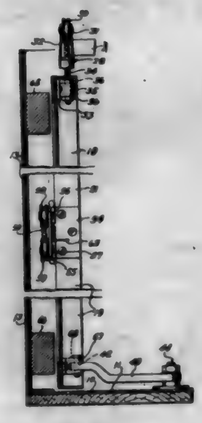
1. A device of the class described, comprising an insulating ring, an inner shell comprising a tubular member having one end positioned about said ring, said inner shell having an outwardly extending flange at its outer end, an outer shell having an inwardly turned portion at its outer end engaging the flange of said inner shell, the opposite end of said outer shell lying in telescoping relation with the corresponding end of the inner shell, means extending through said telescoping portions for fastening said shells together, said shells forming a hollow casing, an electric heating means located within said casing and positioned upon said inner shell, and a handle fastened to the inner end of said casing.

1,535,124. GUN-CLEANING COMPOUND AND METHOD OF PREPARING SAME. ROBERT LAUGHLIN, Buffalo, N. Y., assignor to Commercial Electrolytic Corporation, New York, N. Y., a Corporation of New York. Original application filed Sept. 21, 1918, Serial No. 255,087. Divided and this application filed Feb. 15, 1919. Serial No. 277,232. 4 Claims. (Cl. 148—8.)



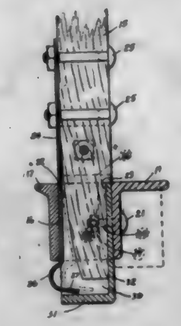
1. A process or method of preparing a material resulting from an ammonium salt and an alkali for removing metal fouling, comprising the provision of the salt and alkali in solid form, dissolving the two together in water and applying the solution to the fouling during the reaction between the salt and alkali.

1,535,125. MEANS FOR TIGHTENING THE STRINGS OF TENNIS RACKETS. JOHN MCDOUGALL, Auckland, New Zealand. Filed Sept. 27, 1921. Serial No. 503,596. 2 Claims. (Cl. 273—73.)



1. In tennis rackets and the like, a spindle mounted to extend transversely across within the frame near its inner end, and through which the inner ends of the longitudinal strings of the racket are threaded, and means whereby such spindle may be rotated in its bearings and may be locked from rotation, substantially as and for the purposes specified.

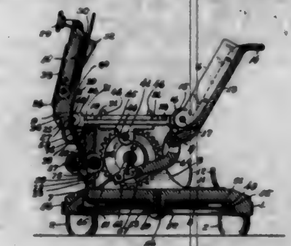
1,535,126. GOLF GAME. HENRY H. MCNAIR and EDWARD KOPPER, St. Paul, Minn. Filed Aug. 10, 1922. Serial No. 580,960. 5 Claims. (Cl. 273—87.)



1. A golf card game comprising a miniature golf course having the fairways thereof drawn to one scale and the greens drawn to another scale, a chance device for indicating a hypothetical stroke and the yardage attained thereby, and measuring means to determine the new position of a ball after said stroke, whether on a fairway or on a green.

1,535,127. SLIDING DOOR AND STRUCTURE CONTAINING THE SAME. JAMES F. MIDDLEDITE, Plainfield, N. J., assignor to The J. G. Wilson Corporation, New York, N. Y., a Corporation of Virginia. Filed July 8, 1924. Serial No. 724,813. 15 Claims. (Cl. 20—19.)

13. In a structure of the class described having a doorway, a door mounted for combined sliding and swinging movement to open and close the doorway, means for suspending the door at its upper margin for sliding movement, a swinging arm for guiding the base of the door and stabilizing devices for limiting angular swaying movement of the door upon said suspending means without interfering with the sliding movement of the door.



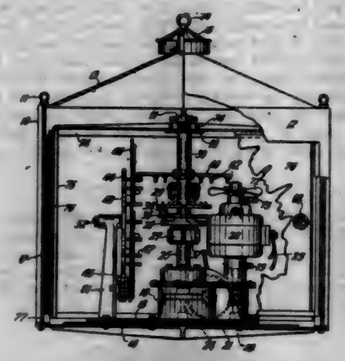
1,535,128. STAKE RETAINER FOR VEHICLES. NUGENT MILNER, Evansville, Ind., assignor to Graham Brothers, Evansville, Ind., a Corporation. Filed Mar. 22, 1924. Serial No. 701,094. 4 Claims. (Cl. 296—43.)

1. A detachable connection for securing a stake to a vehicle body member, including a socket secured to the body member, a stake having one face relieved and receivable by the socket and extending substantially to the bottom thereof when seated, an open faced hood secured to the stake and projecting beyond the stake end and the socket and with the stake relieved face exposed to the socket through the hood open face, said hood projection and stake end forming a recess therebetween having a portion positioned beneath the socket and providing lateral access thereto, and a strap spring rigidly secured to the stake above the socket engaging

portion and having a movable and arcuately curved locking portion normally positioned beneath the socket to engage the lower edge thereof for detachably retaining the stake in the socket and automatically releasing the same to permit forcible removal therefrom.

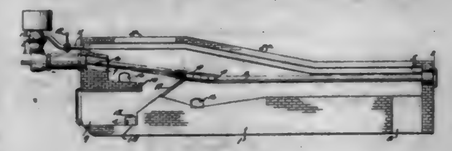
1,535,129. FILM-SPLICING APPARATUS. EMIDIO MONACELLI and AMERICO PAGNANELLI, New York, N. Y. Filed Nov. 18, 1922. Serial No. 601,714. 9 Claims. (Cl. 154—42.)

5. A film-splicing apparatus comprising a platform, clamps to secure pieces of film to be united on the top of the platform, a lever bearing a blade to trim the ends of said pieces, a gear operated by the lever, feed rolls to engage a splicing strip actuated in one direction by the gear, a presser bar, and a guide-way to direct the strip to the lower face of the bar, when said feed rolls are operated.



1,535,130. HIGH-POWER RADIOTELEPHONY. ARTHUR A. OSWALD, East Orange, N. J., assignor to Western Electric Company, Incorporated, New York, N. Y., a Corporation of New York. Filed Mar. 20, 1924. Serial No. 700,557. 9 Claims. (Cl. 250—17.)

1. The method which comprises transmitting a band of frequencies of a total frequency range of the order of 2000 cycles through an antenna having a resonance characteristic materially narrower than 2000 cycles with a substantially uniform effectiveness over the entire frequency range of the band.



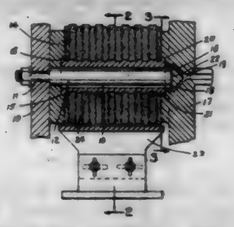
1,535,131. LANTERN-TYPE ADVERTISEMENT AND PICTURE DISPLAYING APPARATUS. HENRY PARKS, Haberfield, near Sydney, New South Wales, Australia, assignor to Joe Millican, Edgecliffe, near Sydney, New South Wales, Australia. Filed July 27, 1923. Serial No. 654,112. 8 Claims. (Cl. 88—27.)

1. A transparency display and projector lantern, comprising a casing with means for mounting or suspending it, a polygonal open bottom lantern housed within said casing and supported on a sleeve rotatable on a central vertical post spindle; an electric motor with speed reducing gear arranged for maintaining said spindle in continuous rotation; a rotatable transparency carrier mounted on a horizontal axis; an optical projector and an electric lamp arranged in operative relation to transparency slide apertures in said carrier; a crown pin wheel on said sleeve co-acting with tappets on said transparency carrier; an automatic pick-up dog clutch adapted for engaging said sleeve to said spindle during a fractional period of each rotation of said spindle; and means for arresting the partial rotary movements

of said lantern and carrier at fixed angular positions and for locating and holding them steady in such positions during the dwells between successive movements, all said parts being mounted on the bottom of the housing casing.

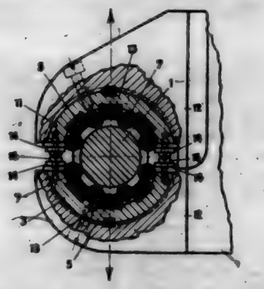
1,535,132. PULVERIZED-FUEL-BURNING APPARATUS. WILLIAM O. RENKIN, Oradell, N. J., assignor to Fuller-Lehigh Company, a Corporation of Pennsylvania. Filed Aug. 4, 1923. Serial No. 655,562. 4 Claims. (Cl. 263—10.)

1. In a furnace designed to operate with pulverized fuel, the combination, with a nozzle extending through one wall of the furnace and means for discharging therethrough into the combustion chamber of the furnace a mixture of pulverized fuel and air, of a nozzle located above said fuel nozzle and adapted to discharge air alone along under, and substantially parallel to the under surface of the roof of said combustion chamber.



1,535,133. TELESCOPIC CURTAIN ROD. DANIEL D. RICHARDS, Storrs, Utah. Filed Dec. 11, 1922. Serial No. 606,112. 1 Claim. (Cl. 156—19.)

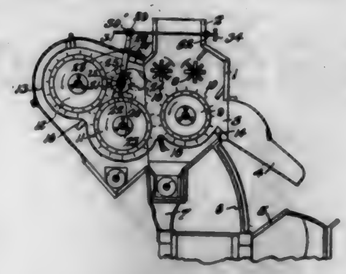
In a curtain fixture, the combination with a pair of plates secured in parallel spaced relation with respect to one another, the rear plate being provided with a pair of vertically aligning and spaced apart slots, said slots terminating in their lower ends in enlarged openings and affording means whereby said rear plate may be



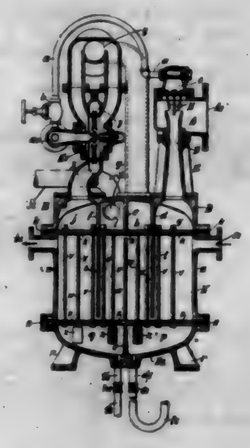
removably attached to a support; of a pair of poles, each of said poles comprising a series of outwardly tapering telescopic tubular sections, means for pivotally supporting the innermost section of each pole between the aforesaid plates adjacent their lower edges, a pair of stop pins mounted transversely of said pair of plates above and inwardly of the pivot points of said pole sections, said pins being adapted to contact with the innermost ends of said inner pole sections in one position to limit the outward movement of said poles and adapted for contact with the outer end portions of said inner pole sections in another position to limit the upward movement of said pole sections, stems secured in the outer ends of the outer sections of said poles, and enlarged and upwardly curved heads formed on said stems.

1,535,134. PROCESS OF UNITING METALLIC AND FIBROUS BODIES. GEORGE O. ROCKWOOD, LOUIS C. MCANLY, and JOHN W. SKELLEY, Indianapolis, Ind., assignors to The Rockwood Manufacturing Company, Indianapolis, Ind., a Corporation. Filed May 15, 1924. Serial No. 713,463. 5 Claims. (Cl. 22—202.)

1. The process of uniting metallic and fibrous bodies consisting of forcing molten metal into the fibrous body under sufficient pressure to penetrate into the pores of said fibrous body and form a bond therewith.



1,535,135. SCREW GEARING. FRIEDRICH GUSTAV BERNHARD RÖDEL, Leipsig, Germany. Filed Sept. 5, 1924. Serial No. 736,126. 4 Claims. (Cl. 74—40.)

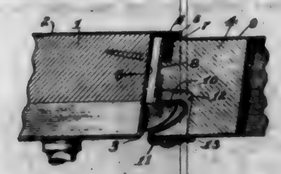


1. In a ball bearing for lead spindles and the like, a threaded spindle, a bearing member surrounding the same, ball bearings associated with the threads of said spindle, retaining members disposed axially of said spindle and retaining said balls, and securing means extending interiorly of said bearing member and over said balls.

1,535,136. ADJUSTABLE AGITATOR FOR COTTON CLEANERS. JOHN ARNOLD STREUN, Sherman, Tex., assignor to Hardwicke-Etter Company, Sherman, Tex. Filed May 2, 1924. Serial No. 710,543. 7 Claims. (Cl. 19—67.)

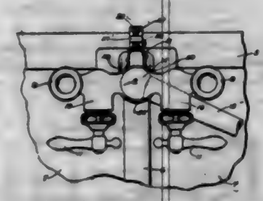
3. In a feeder cleaner for cotton, the combination with a casing, a plurality of picker cylinders journalled in said casing for rotation in the same direction, a screen below said cylinders, and means to feed cotton gradually to said cylinders, of an agitator roller above said cylinders and supported on means adapted to swing relative to said cylinders, whereby the distance of said roller from said cylinders may be varied.

1,535,137. FLUID-COMPRESSING APPARATUS. ROBERT SUCHÝ, Melnik, Czechoslovakia, assignor to C. H. Wheeler Manufacturing Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed May 8, 1920, Serial No. 379,716. Renewed Mar. 21, 1925. 31 Claims. (Cl. 230—13.)



1. The combination with a plurality of ejectors, of an interstage condenser comprising vertical tubes, one of said ejectors discharging through said tubes, connections from said tubes delivering to a second of said ejectors uncondensed fluid, both of said ejectors secured directly upon the top of and discharging downwardly into said condenser.

1,535,138. DOOR-LATCH CONSTRUCTION. HORACE T. THOMAS, Lansing, Mich., assignor to Reo Motor Car Company, Lansing, Mich., a Corporation of Michigan. Filed Sept. 29, 1920. Serial No. 413,466. 10 Claims. (Cl. 292—340.)



1. In combination, an automobile door frame having a covering constituting the external wall of the door

extended in substantially the plane of the outer surface of the door and serving as an overlap and stop-flange, a

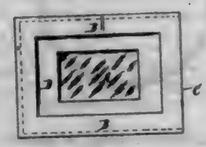
jamb having a bumper of extended vertical dimension engaged by the stop-flange, and bevel latch mechanism to retain said engagement.

1,535,139. LAUNDRY FAUCET. WILLIAM F. VAN EWEYK, Milwaukee, Wis., assignor to Milwaukee Brass Manufacturing Company, Milwaukee, Wis., a Corporation of Wisconsin. Filed Apr. 13, 1923. Serial No. 631,858. 5 Claims. (Cl. 4—193.)

1. A laundry swing faucet, comprising a water faucet body member having a medial downwardly projecting tubular discharge nozzle extension, a supporting member having an annular portion extending around said extension and also having another portion extending downwardly therefrom and provided with a pair of fixed jaws at its lower end for straddling the medial partition of a wash tub, a lever jaw pivoted to the lower portion of the supporting member, and a threaded means for moving the lever jaw to clamp the rear wall of the wash tub between said lever jaw and the fixed jaw.

1,535,140. CONTAINER. VICTOR VIVAUDOU, New York, N. Y. Filed Oct. 16, 1922. Serial No. 594,871. 1 Claim. (Cl. 132—88.)

A container comprising a top member, a bottom member having rigidly attached thereto a threaded member, a compact-supporting member having rigidly attached thereto a threaded member capable of meshment with the threaded member of the bottom member upon rotation of the compact-supporting member with respect to the bottom member and a frangible, solid powder compact fixedly attached to the compact-supporting member.

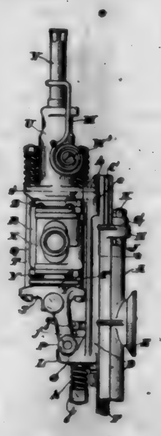


1,535,141. APPARATUS FOR PUMPING WELLS. JAMES D. WADE, Gonzales, Tex. Filed Mar. 1, 1923, Serial No. 622,072. Renewed Mar. 10, 1925. 5 Claims. (Cl. 166—10.)

1. In a well having a casing and liner therein, said casing and liner being of uniform internal diameter, a pump barrel support comprising a mandrel adapted for attachment on the upper end of a pump barrel, and means on said mandrel to seal the space outside said

mandrel and between said casing and liner comprising a packing sleeve slidable on said mandrel and compressed at said mandrel on contacting with said liner.

1,535,142. PHOTOGRAPHIC-PRINTING MASK. PERCY RONALD WATSON and WILLIAM OSBORNE TILSLEY, Te Aroha, New Zealand. Filed May 19, 1921. Serial No. 470,992. 2 Claims. (Cl. 95—79.)

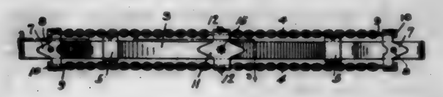


1. A masking device for holding masking sheets in photographic printing comprising a sheet of glass, and non-actinic material supported by the glass and extending loosely inward over one surface of the glass to form a pocket on such surface and having an entrance opening along one edge of the glass through which masking sheets may be slid into said pocket.

1,535,143. MOUNTING FOR ROCK DRILLS. RUSSELL H. WILHELM, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 6, 1924. Serial No. 697,205. 3 Claims. (Cl. 255—51.)

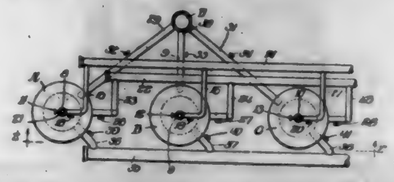
1. A mounting for a fluid actuated percussive machine comprising the combination of a front end portion of the machine, means formed integrally with said front end portion for supporting said portion, a carriage on which said machine is mounted, said carriage being formed with guide-ways adapted to receive said integrally formed means and to permit said front end portion

to slide in the longitudinal plane of the machine but prevent movement in the vertical plane of the machine, means for clamping a rear end portion of the machine



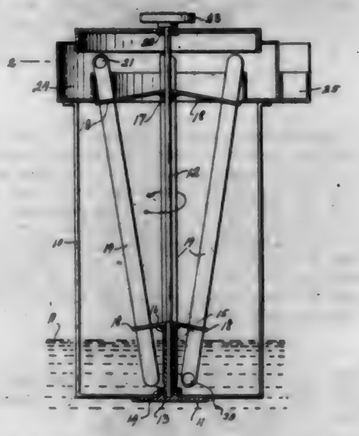
to said carriage adapted to permit limited longitudinal movement of the machine relative to said carriage, and a shell on which said carriage is mounted.

1,535,144. HOOPLE TOY. LEON APTOWICZ, Yonkers, N. Y. Filed Mar. 11, 1924. Serial No. 698,360. 2 Claims. (Cl. 272—85.)



1. A toy comprising a hoop, a plurality of bells secured to the inner periphery of the hoop, tubular guideways extending between said bells, and balls in said guide-ways adapted to strike the bells as the hoop is rolled.

1,535,145. VEHICLE BUMPER. FRANK A. BOND, Pittsburgh, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 9, 1924. Serial No. 691,696. 12 Claims. (Cl. 293—55.)

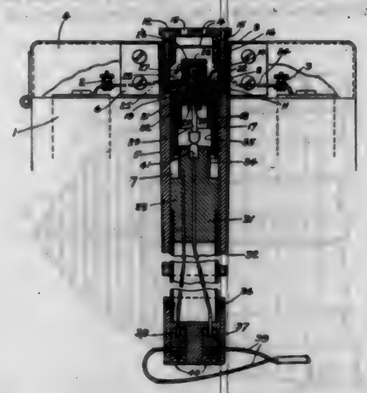


1. A bumper structure comprising supporting brackets, resilient bars supported by said brackets and having their ends extending past said brackets, the outer ends of said bars being bent forwardly, and a flexible tension device connecting the outer ends of said bars.

1,535,146. METHOD OF HEATING GASEOUS FLUIDS. HERMAN A. BRASSERT, Chicago, Ill., and CHARLES W. ANDREWS, Duluth, Minn. Filed Jan. 4, 1923. Serial No. 610,720. 7 Claims. (Cl. 263—19.)

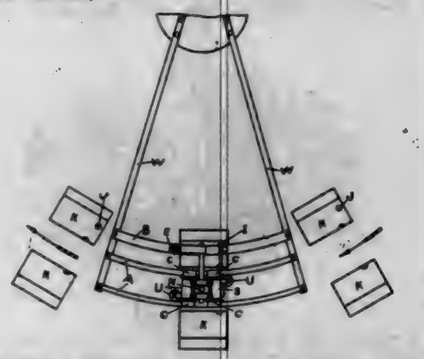
1. The method of heating gases adapted for heating blast air or steam, which method comprises regeneration by means of short heat absorbing and heat discharging periods for each regeneration unit, the periods being of such duration that a relatively even temperature of the heated gases may be maintained throughout the heat discharging period without regulation or mixing of gases.

1,535,147. APPARATUS FOR LIFTING WATER, GRAIN, OR THE LIKE. FAWCETT H. COLPITTS, Denver, Colo., assignor to Hydro Vacuum Elevator Company, Denver, Colo. Filed June 9, 1920. Serial No. 387,714. 3 Claims. (Cl. 103—100.)



1. An elevating machine of the character described comprising an element mounted for rotation about a vertical axis and including a plurality of continuously straight conduits slanting upwardly and outwardly from said axis, each conduit having at its lower end an intake opening having its center in the axial plane of the conduit and facing in the direction of rotation of the element and at its opposite end a discharge opening having its center in the axial plane of the conduit and disposed in the circle of rotation of said end and rearwardly of the same with relation to the direction of rotation.

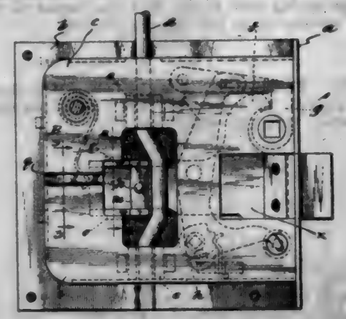
1,535,148. SHOT-FIRING DEVICE. JOSEPH BERTRAM DE HART, Lethbridge, Alberta, Canada. Filed July 30, 1924. Serial No. 729,106. 6 Claims. (Cl. 102—7.)



5. A shot firing device comprising a tubular body having an open ended lower chamber, a pair of electrical contacts carried in the lower chamber and adapted for connection to an ignition battery, a connector rod of substantially similar diameter to the lower chamber adapted for insertion into the lower chamber, a pair of

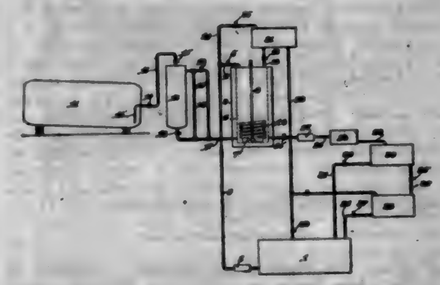
electrical contacts corresponding to those in the lower chamber, means for connecting a pair of shot firing wires to the connector contacts, means for forming connection between one contact in the lower chamber

and the corresponding contact of the rod when the rod is partially thrust into the tubular body, and for forming a yielding connection between the remaining pair of contacts as the rod is thrust to its ultimate position within the hollow body.



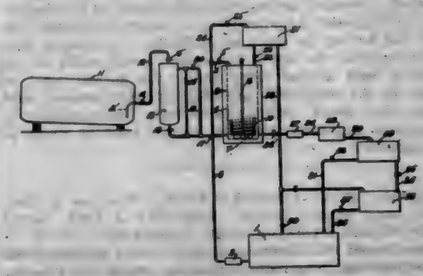
1,535,149. AUTOMATIC APPLICATION OF LAMP-BLACK TO METAL MOLDS. JOSEPH LOUIS DOSTAL, Detroit, Mich., assignor to Earl Holley, Detroit, Mich. Filed Sept. 27, 1922. Serial No. 590,913. 5 Claims. (Cl. 22—88.)

1. In a molding machine an inclined stationary track, a series of molds arranged to be automatically opened when passing beneath said track, a carriage rolling on said track, a burner suspended from said carriage, a peg projecting from each of said molds, an arm extending from said carriage and engaging with said projection whereby the burner is carried forward with the mold, automatically released, returned and again carried forward by the next succeeding molds.



1,535,150. LOCK. FRANK M. EDGAR and THOMAS P. ARCHER, Detroit, Mich., assignors to Ternstedt Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed June 22, 1923. Serial No. 647,128. 6 Claims. (Cl. 292—169.)

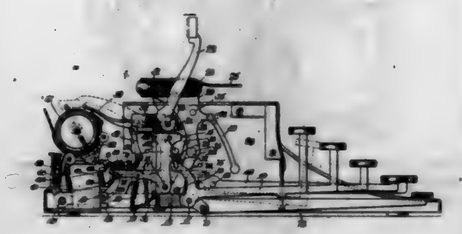
1. In a lock, the combination of a cover plate, a sliding bolt, means adapted to engage the sliding bolt for the purpose of retracting the same, the inner end of the bolt provided with raised bearing surfaces and ears



struck down from the cover plate adapted to engage the bearing surfaces of the bolt for the purpose of guiding the same.

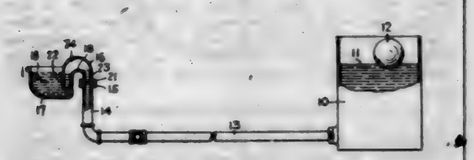
1,535,151. ART OF REDUCING INDIGO DYES AND OTHER SOLUTIONS. FREDERIC AUGUSTUS EUSTIS, Milton, Mass. Filed Nov. 17, 1921. Serial No. 515,809. 12 Claims. (Cl. 8—6.)

8. The art of reducing an indigo dye solution which comprises mixing a part of the dye solution to be reduced with zinc dust, adding sulphur dioxide to the mixture to form zinc hydrosulphite, adding an alkaline agent to the solution to convert the zinc hydrosulphite and other zinc salts into sodium salts, and returning said sodium salts in solution to the rest of the dye solution.



1,535,152. APPARATUS FOR REDUCING DYE SOLUTIONS. FREDERIC A. EUSTIS, Milton, Mass. Original application filed Nov. 17, 1921. Serial No. 515,809. Divided and this application filed June 14, 1922. Serial No. 568,164. 4 Claims. (Cl. 8—18.)

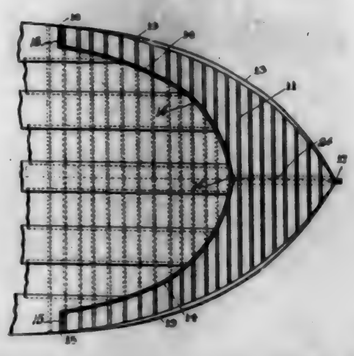
1. Apparatus for reducing solutions comprising a vat, a mixing tank, means to deliver solution from the vat to the mixing tank, a sulphur dioxide supply tank,



means to deliver sulphur dioxide from the supply tank to the mixing tank, a filter, means to deliver solution from the mixing tank to the filter and means to deliver filtered solution from the filter to the vat.

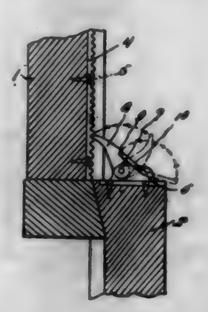
1,535,153. TYPEWRITING MACHINE. MAX GARBELL, Chicago, Ill. Filed Mar. 10, 1924. Serial No. 698,032. 7 Claims. (Cl. 197—26.)

1. In a collapsible typewriter, the combination of a pivoted type bar adapted to be moved from a substantially horizontal position upon one side of the pivot to a vertical position and from said vertical position to a substantially horizontal printing position upon the opposite side of said pivot, a pivoted key lever and a pivoted member providing a connection between the key lever and the type bar, the pivot of the key lever and said member being arranged adjacent each other, the key lever being connected to said member between the ends of said member, said member having an arm extending laterally therefrom and a spring connected to said arm and reacting between said arm and a stationary part of the frame of the machine.



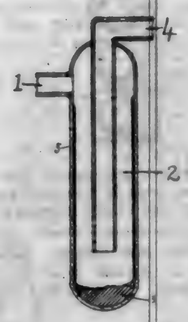
1,535,154. WATER-SUPPLY SYSTEM. GORDON A. HATTON, New Castle, Pa. Filed Jan. 28, 1925. Serial No. 4,265. 4 Claims. (Cl. 119—77.)

1. The combination with a source of water supply, of a receptacle, a conduit leading from said source, an inverted U pipe having one leg connected to the outer end of said conduit and having its other leg extending downwardly into the receptacle, the upper and lower curved walls of the bend in said U-pipe being above the normal level of water in the receptacle, and the mid-point between said upper and lower curved walls being substantially in horizontal alignment with the normal level of water at said source.



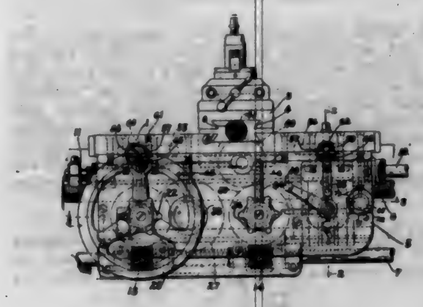
1,535,155. BOAT CONSTRUCTION. WILLIAM I. HAY, Montreal, Quebec, Canada. Filed May 12, 1923. Serial No. 638,528. 1 Claim. (Cl. 114—116.)

In a vessel the combination with a hull including the transverse and longitudinal framing angles, of a series of hold plates riveted to the longitudinal framing angles, curved angle frames extending around the bow of the vessel and attached to the hull by girders at the sides of the hull, forehold plates riveted to the curved angle frames and spaced from the hull, vertical angles reinforcing said forehold plates, bulb angles joining the framing or angles of the hull together to give added trength to the fore-peak, angle brackets arrranged to form a spacing means between the hull plates and the hold, keel



girders, stiffening members provided between the keel girders and the transverse framing angles of the hull, a diaphragm placed between the bow and the hold for reinforcing purposes, said diaphragm being apertured to give passage to the fore-peak compartments at either side thereof.

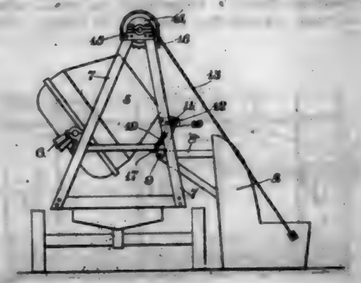
1,535,156. WINDOW-SASH LOCK. ERNEST HIBBS, Fort Wayne, Ind., assignor of one-half to William H. Diederich, Fort Wayne, Ind. Filed June 11, 1924. Serial No. 719,392. 1 Claim. (Cl. 292—210.)



In combination with the upper and lower sliding sashes of a window, means for holding the same in adjusted positions with respect to each other comprising a ratchet bar secured to the upper sash, a bracket secured to the top of the lower sash, a locking dog pivotally supported on the bracket and adapted for engagement with the ratchet bar, a shoulder formed on the back of the locking dog, and means cooperating with the shoulder for holding the locking dog in locked engagement with the ratchet bar, said means comprising a swinging catch formed of a single strand of wire, the central portion thereof being straight, the ends of the wire extending at substantially right angles to the central straight portion and parallel with respect to each other, the terminals of the wire being disposed inwardly in parallel relation with respect to the central straight portion and providing a means for pivotally supporting the catch on the bracket.

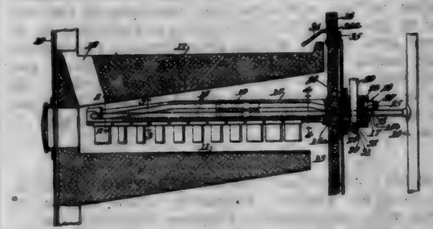
1,535,157. MERCURY-VAPOR TRAP. ARTHUR LLEWELYN HUGHES and FRANKLIN EMBRY POINDEXTER, St. Louis, Mo. Filed Oct. 4, 1924. Serial No. 741,669. 4 Claims. (Cl. 230—13.)

1. A mercury vapor trap containing an alkali metal.



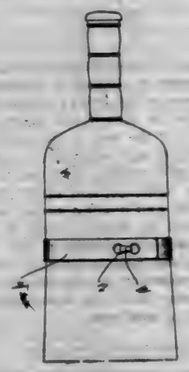
1,535,158. LATHE. WALTER E. INGHAM, Newington, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 2, 1921. Serial No. 498,151. 8 Claims. (Cl. 82—22.)

1. In a lathe, the combination of a tool carriage, a feed shaft, a feed screw, mechanism comprising a clutch for moving the carriage longitudinally upon rotation of the feed shaft, mechanism comprising a nut for engaging the screw to move the carriage longitudinally, interlocking means between the said two mechanisms comprising a rod, and means operatively connecting the rod with one of the said mechanisms whereby the rod is moved in two directions thereby, the operative connection between the two mechanisms and the rod being such that the nut and clutch can not be in the operative engaged position simultaneously.



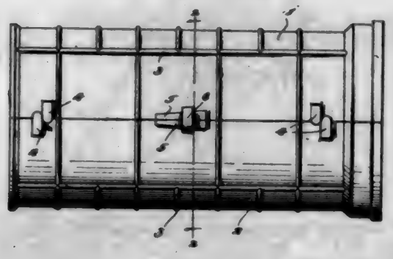
1,535,159. CONCRETE MIXER. GERHARD JABOUR, Columbus, Ohio. Filed Feb. 7, 1924. Serial No. 691,293. 4 Claims. (Cl. 214—130.)

1. The combination with a mixing vessel and a frame for supporting the same, of a loader bucket for the mixing vessel, means for pivoting said bucket with reference to the frame consisting of a pendently hinged link, said link having a hinged connection at its free



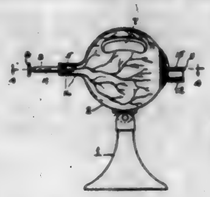
end with the loader bucket, and means for raising the bucket first on the lower axis and then on the other to mixing vessel charging position.

1,535,160. RABBLE FURNACE. ARCHIE NOEL JETTE, Anaconda, Mont. Filed July 16, 1923. Serial No. 651,895. 10 Claims. (Cl. 257—119.)



1. In a roasting furnace, the combination with a central shaft, of a rabble arm comprising a casting extending through the wall of the shaft and a continuous pipe for circulation of a cooling medium extending through the casting and terminating at the inner end of the arm, the casting solidly surrounding the pipe.

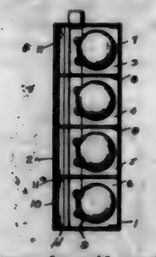
1,535,161. BRIDLE FOR BROOM HEADS. CHARLES H. KEYES, Albany, N. Y. Filed Sept. 4, 1924. Serial No. 735,878. 1 Claim. (Cl. 15—174.)



A broom head bridle comprising a band of galvanized metal, one end thereof being provided with spaced openings, the other free end of the band being reduced, said reduced end being bent back upon itself to provide a tongue, said tongue adapted for interlocking engagement with one of said openings.

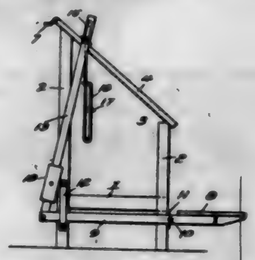
1,535,162. CULVERT PIPE. CHARLES G. KIMM, Crestline, Ohio, assignor to The Burch Flow Works Co., Crestline, Ohio, a Corporation of Ohio. Filed Apr. 10, 1923. Serial No. 631,225. 3 Claims. (Cl. 137—75.)

1. In a culvert, the combination of mating substantially semi-cylindrical sections, longitudinally tapered mating projections upon the exterior surface of said sections, a clamp constructed to engage over said projections whereby to bind the pipe sections together against vertical separation, and interengaging lugs carried by the semi-cylindrical sections and disposed on opposite sides of the mating projections at substantially right angles thereto for preventing independent endwise movement of said semi-cylindrical sections, the free ends of said lugs being curved to assist in guiding the sections when the latter are brought together to form a culvert.



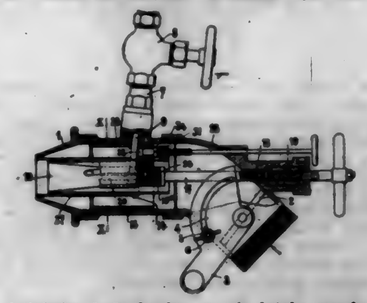
1,535,163. OPTICAL DEMONSTRATING DEVICE. ALCUIN E. KINTNER, Painesville, Ohio, assignor to The W. A. Jones Optical Company, Cleveland, Ohio, a Corporation of Ohio. Filed Feb. 8, 1923. Serial No. 617,714. 2 Claims. (Cl. 35—16.)

1. In an optical demonstrating device, the combination of a hollow member adapted to represent an eyeball and having apertures at the front and in the rear thereof, respectively, a lens in such front aperture adapted to represent the pupil of the eye, a rod longitudinally movably mounted in such rear aperture, a disk on said rod and lying within said member adapted to represent the fundus of the eye, said rod and disk being movable to show optical defects, and holding means mounted on said member and adapted to receive eyeglass lenses to correct the optical defects simulated by thus moving said disk, said holding means being so positioned as to place a lens held thereby in alignment with the apertures in said member and the latter being formed to permit observation of said disk.



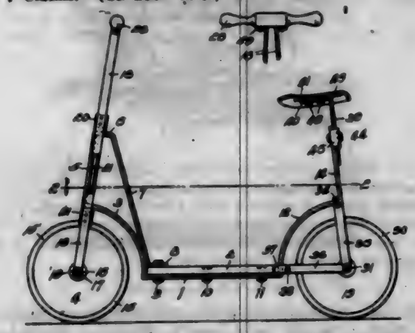
1,535,164. MOTOR-VEHICLE SIGNAL. CHARLES F. KLINGEL, Irvington, N. J. Filed Oct. 3, 1921. Serial No. 504,944. 1 Claim. (Cl. 177—329.)

A display device comprising a casing, a partition dividing said casing into a plurality of compartments, said casing having its front wall in the form of a hinged door, transparent panels carried by said door, a U-shaped element carried by said door at its inner side provided



with securing flanges for said panels, and the bight of the U-shaped element being in line with and adapted to receive the forward edge of the partition.

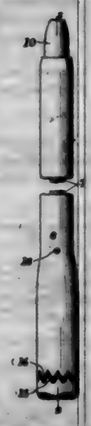
1,535,165. FEED BOX FOR STOCK. JOSEPH V. KOBERRICH and LEO J. HAUSER, Epworth, Iowa. Filed June 4, 1924. Serial No. 717,750. 1 Claim. (Cl. 119—62.)



An animal controlled feed box comprising an open top box, an inclined gravity lowered cover for said box pivotally connected to the latter at one end, a pivotally mounted animal depressed platform, vertically disposed push rods, pivotal connections between said push rods and platform, sliding connections between the upper ends of said push rods and said cover, depending slides connected with said sliding connections, and combined stop and guide eyes through which said slides pass.

1,535,166. FLUID-FUEL BURNER. HENRI LECONTE and LOUIS HIRSCH, Paris, France. Filed June 11, 1923. Serial No. 644,718. 2 Claims. (Cl. 158—76.)

1. A tubular body having an air intake member and also having a frusto-conical nozzle, a sleeve of slightly less diameter than the interior diameter of said body and arranged concentrically and slidably therein and provided with an abutment and also provided with a slot, a tube concentrically arranged in the body and nozzle, a mixing tube in said tube and provided with longitudinal slots, a pulverizing member arranged in said mixing tube and having lateral ribs extending through the slots in said mixing tube and centered in said first mentioned tube, the said pulverizing member having ducts leading to the exterior thereof, a fuel duct to supply fuel to the ducts of the pulverizing member, means to adjust the pulverizing member and the first mentioned tube longitudinally in the body and nozzle of the burner, and means to adjust said mixing tube longitudinally with respect to said first named tube and said pulverizing member.

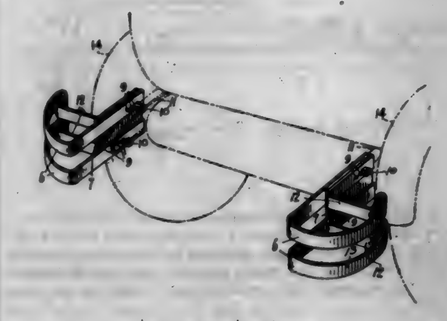


1,535,167. SCOOTER. CHRISTOPHER H. LOVELL, St. Louis, Mo. Filed Oct. 2, 1922. Serial No. 591,827. 7 Claims. (Cl. 280—87.5.)

1. In a vehicle of the class described, a wheel supported frame consisting of a single strap iron member formed to provide a running board supporting section, front and rear wheel guard sections and a front wheel steering mechanism supporting section, and a separate connecting section between the rear wheel and the single member frame.

6. A scooter comprising a main frame formed from a single flat metallic band having curved front and rear ends, an angular connecting frame formed from a single flat metallic band fixed to the rear curved end of the main frame, a wheel carried by the angular connecting frame, a steering mechanism pivotally supported at the forward end of said main frame and a wheel carried by the steering mechanism.

1,535,168. BLOW IRON. GEORGE V. MCCAULEY, Corning, N. Y., assignor to Corning Glass Works, Corning, N. Y., a Corporation of New York. Filed Feb. 28, 1923. Serial No. 621,894. 8 Claims. (Cl. 49—21.)



7. A gathering blow-iron having tensioned means on its gathering end for compressing a portion of the material into which the blow-iron is dipped.

1,535,169. VEHICLE BUMPER. WILLIAM R. MCGOWEN, Chicago, Ill., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 9, 1924. Serial No. 691,665. 7 Claims. (Cl. 293—55.)

1. A bumper comprising a bar, a pair of springs, each having one end bent to semi-circular form, and its other end extending in the general direction of said bar, and means for pivotally connecting said ends to said bar.

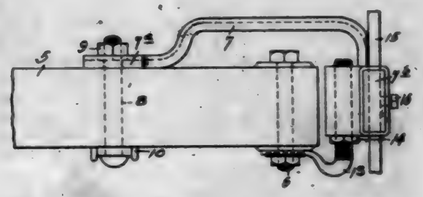
1,535,170. FENDER GUARD. WILLIAM R. MCGOWEN, Chicago, Ill., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 9, 1924. Serial No. 691,666. 5 Claims. (Cl. 293—55.)

1. An impact member for vehicles comprising a one-piece, recurved strap of yielding material, its outer looped end being inturned and disposed substantially parallel to the longitudinal center line of the vehicle, and its inner end portions being adapted to be secured to the frame of the vehicle.

1,535,171. ADJUSTABLE BUMPER FOR VEHICLES. WILLIAM R. MCGOWEN, Chicago, Ill., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 13, 1924. Serial No. 698,980. 4 Claims. (Cl. 293—55.)

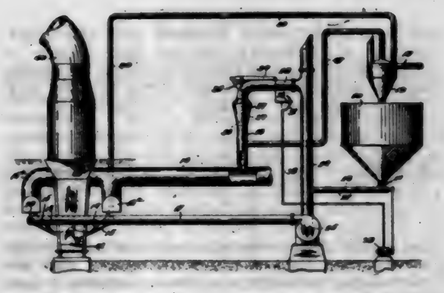
2. A bracket device comprising a member having longitudinally spaced connecting portions, each of said portions extending vertically for a distance sufficient to permit of vertical adjustment of said device, the said portions being adapted for connection to members to which said device is to be secured.

1,535,172. VEHICLE BUMPER. WILLIAM R. MCGOWEN, Chicago, Ill., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 13, 1924. Serial No. 698,981. 7 Claims. (Cl. 293—55.)



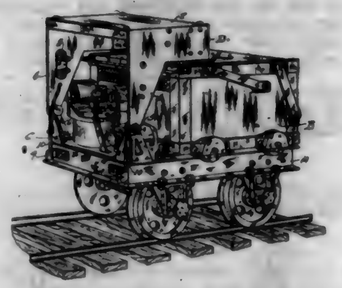
1. The combination with a bumper bar for vehicles, of a strap member having one end thereof secured to said

bar and extending in the same general direction as the bar, the other end of said strap being bent at right



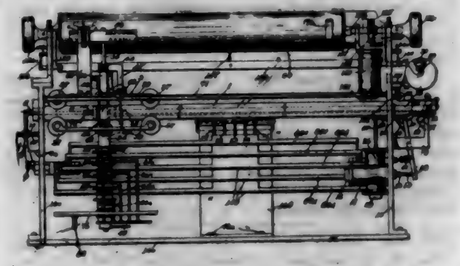
angles to the body portion thereof, and lying in a plane vertically offset with respect to the bar, and serving as a bracket for attachment to a vehicle.

1,535,173. BUMPER BRACKET. WILLIAM R. McGOWEN, McKees Rocks, Pa., assignor to United States Chain & Forging Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Dec. 11, 1924. Serial No. 755,253. 7 Claims. (Cl. 293—55.)



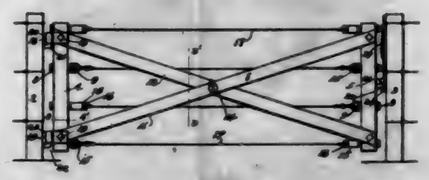
1. Bracket structure comprising laterally spaced members adapted to be disposed at opposite sides of an automobile frame, one of said members having screw threaded engagement with the other member, for lateral adjustment, and means for securing said members to said frame.

1,535,174. ART OF FEEDING POWDERED COAL TO BLAST FURNACES. ALEXANDER GRANT McGREGOR, Warren, Ariz. Filed Sept. 29, 1920. Serial No. 413,595. 7 Claims. (Cl. 266—28.)



1. The herein-described method of delivering powdered fuel to a blast furnace, consisting in introducing the said fuel into the furnace through a fuel pipe or passageway communicating with the main air blast pipe or passageway, and increasing the air pressure in the said fuel pipe or passageway to a sufficient extent to enable the fuel to be forced into the furnace against the air pressure developed therein from the said main air blast pipe.

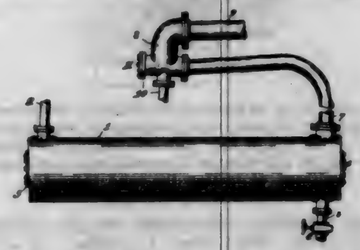
1,535,175. ELECTRIC STORAGE-BATTERY LOCOMOTIVE. RAYMOND MANCHA, St. Louis, Mo., assignor to Mancha Storage Battery Locomotive Company, St. Louis, Mo., a Corporation of Delaware. Filed Jan. 28, 1924. Serial No. 689,038. 12 Claims. (Cl. 105—50.)



1. A storage battery locomotive, comprising a chassis, a battery box on said chassis, and a movable operator's platform which is adapted to be arranged in an operative position wherein it forms an extension on one end of the chassis and in an inoperative position wherein it is positioned above said battery box.

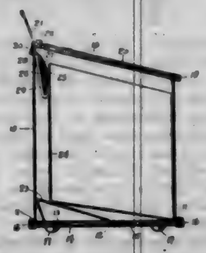
1,535,176. REMOTE-CONTROL TYPEWRITING MECHANISM. IRVING NACHUMSOHN, Winnipeg, Manitoba, Canada. Filed Aug. 12, 1922. Serial No. 581,510. 22 Claims. (Cl. 178—33.)

15. In a device of the character described, means for sustaining the form to be impressed, a rotatably mounted type carrier arranged for transverse movement relative to said form, selectively controlled permutation means movable with said type carrier and electro-responsive members for controlling the operation of said permutation means during transverse progression of said type carrier.



1,535,177. FARM GATE. ELEAZER PARKINSON, Yorkton, Saskatchewan, Canada. Filed Oct. 8, 1923. Serial No. 667,865. 2 Claims. (Cl. 256—73.)

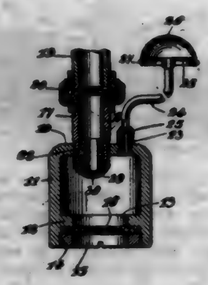
1. A gate comprising a pair of spaced end uprights, a pair of crossed stay bars located at each side of the uprights and having the ends thereof connected to the upper and lower ends of the uprights by fastening bolts,



means connecting the pairs of stay bars at their points of intersection, said means maintaining the stay bars outwardly bowed, spaced adjusting bolts passing through the uprights and provided with adjusting nuts, straps mounted on the latter bolts between the nuts and the uprights and having their ends bent around the nuts and brought together at the inner ends of the latter bolts and tension wires conecting the opposing straps of the opposing uprights.

1,535,178. APPARATUS FOR CONVERTING HYDROCARBON OILS. ROBERT T. POLLOCK, Boston, Mass., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Feb. 16, 1920. Serial No. 358,900. 3 Claims. (Cl. 196—107.)

1. An expansion chamber of the character described, comprising an inclined elongated vapor chamber, an inlet pipe leading thereto near one end for introducing oil at a cracking temperature to said chamber, a residuum drawoff pipe leading from the vapor chamber, a vapor outlet from said chamber said residuum drawoff pipe and vapor outlet leading from said chamber at the opposite end of said chamber to the inlet pipe, the condensible gases and precipitated carbon accumulating in said chamber flowing into the inclined end thereof and being of its greatest depth adjacent the oil inlet, and being removed through said residuum discharge pipe at the opposite end of said chamber.

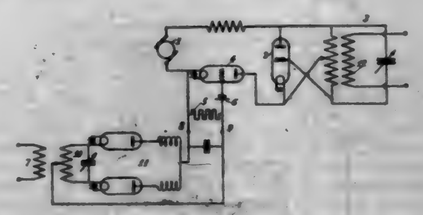


1,535,179. COUNTER DISPLAY CASE. MORRIS POSES, Brooklyn, and MORRIS LUBART, New York, N. Y. Filed June 27, 1924. Serial No. 722,637. 2 Claims. (Cl. 211—25.)

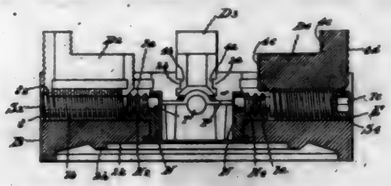
1. A receptacle of the character described, having upright walls whose lower edges flange outward, a bottom comprising layers of sheet metal and an interposed cardboard layer, the edges of said bottom conforming with the edges of the flanges, and channel pieces tightly embracing said flanges and the edges of the bottom to hold the sides and bottom together.

1,535,180. LIQUID-DISPENSING DEVICE. WILLIAM H. ROSE, Jersey City, N. J. Filed Nov. 4, 1924. Serial No. 747,878. 4 Claims. (Cl. 221—94.)

1. In a liquid dispensing device, in combination, a receptacle having an exit opening therein, a resilient member covering the exit opening and having a slit valve therein, the slit remaining normally closed but being capable of opening upon pressure exerted upon a liquid within the receptacle, means for retaining the slit valve over the exit opening, a liquid supply receptacle, a conduit connecting the supply receptacle to the receptacle, a conduit connecting the receptacle with an intermittent pressure exerting device and a device capable of exerting an intermittent pressure upon a liquid within the receptacle.

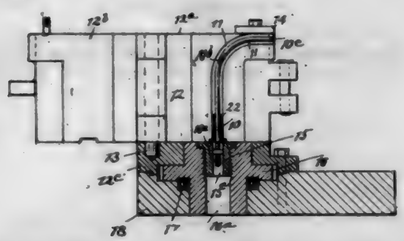


1,535,181. GOLF-BALL TEE OR SUPPORT. BURNSIDE ELLSWORTH SAWYER, Fitchburg, Mass. Filed Sept. 8, 1924. Serial No. 736,511. 3 Claims. (Cl. 273—33.)



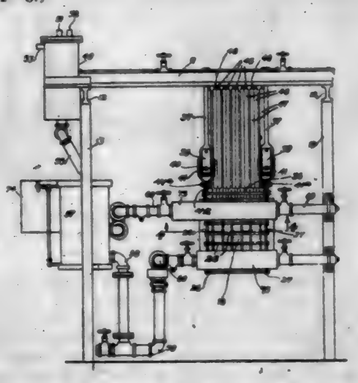
3. A golf tee made of thin resilient material having a hole or depression at apex suitable to support a golf ball and a cut or opening extending through one side wall to the center; the wall of said tee to be at such an angle to the horizontal plane that when the driving club strikes this wall, it will collapse the tee, and slide over it without projecting it with the ball.

1,535,182. ARRANGEMENT FOR AMPLIFYING HIGH-FREQUENCY CURRENTS. WALTER SCHAFFER, Berlin, Germany, assignor to Gesellschaft für Drahtlose Telegraphie m. b. H. Hallesches, Berlin, Germany, a Corporation of Germany. Filed Aug. 18, 1922. Serial No. 582,609. 4 Claims. (Cl. 179—171.)



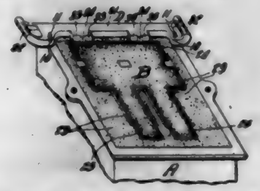
1. An arrangement for amplifying alternating currents comprising alternate amplifiers and frequency transformers, each of said transformers comprising a vacuum tube having a grid, a receiving circuit connected to the grid and a rectifier in the receiving circuit connected directly with the grid for causing direct current potential in proportion to the received energy to be impressed on the grid and for preventing any back effect of the transformer on the preceding amplifiers.

1,535,183. LATHE CHUCK. FRANK C. SMART, Hartford, Conn. Filed Nov. 18, 1919. Serial No. 338,801. 21 Claims. (Cl. 279—112.)



1. In a chuck, in combination, a body-member; a series of thrust bearings; jaw-actuating screws operative in said body-member provided with means for engaging said thrust bearings; work-engaging jaws located in said body-member and actuatable by said screws; and wedging means for exerting axial pressure on said thrust bearings.

1,535,184. PROCESS AND APPARATUS FOR THREADING NUTS. ROY H. SMITH, Kent, Ohio. Filed July 14, 1921. Serial No. 484,571. 9 Claims. (Cl. 10—129.)



4. The method of tapping nuts with a threading tool having an offset portion which comprises causing the blanks to pass from one end of the tool to the other from the offset portion to the threading portion and along the threading portion of the tool to form the threads, and to leave the tool immediately after being threaded.

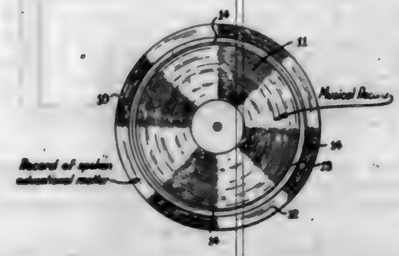
1,535,185. ELECTROLYTIC APPARATUS. CLARENCE G. SPENCER, New York, N. Y., assignor, by mesne assignments, to John P. Scott, Toronto, Canada. Filed Jan. 26, 1920, Serial No. 354,015. Renewed Mar. 10, 1922. Serial No. 542,815. 21 Claims. (Cl. 204—5.)

1. Electrolytic apparatus comprising, in combination, a plurality of dished half-cell sections, each having a marginal abutment flange projecting outwardly beyond the dished portion, assembled in cooperating pairs with a separating diaphragm interposed between the sections of each pair, and means holding the assemblage together in a unitary structure with the flanges of each pair of sections pressed tightly against their separating diaphragm.

1,535,186. CORE FOR CASTING MOLDS. JOHN T. STONEY, Lakewood, Ohio. Filed Dec. 10, 1923. Serial No. 679,604. 6 Claims. Cl. 22—165.)

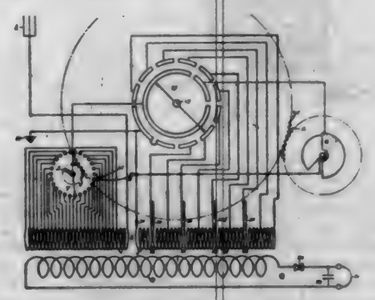
1. A core for a casting mold having an arbor within the boundaries of said core, portions of said arbor extending to the end of said core and provided with apertures to permit of taking hold of said arbor for handling said core without contacting the sand thereof.

1,535,187. DENTAL HANDPIECE. WALTER J. TERRY, Seattle, Wash. Filed Sept. 14, 1923. Serial No. 662,764. 3 Claims. (Cl. 32—15.)



1. A dental handpiece having a non-corrosive spindle, a sheath with its outer surface knurled around the spindle, a bracket for supporting the sheath and spindle, means for holding the spindle and sheath in the bracket, means for holding implements in the lower end of the spindle, a pulley at the upper end of the spindle having the inner edges of its grooves rounded and a knurled surface on one side of the groove, other pulleys mounted in a universal joint at the end of the bracket, and a suitable attachment that may be placed on the lower end of the handpiece in which suitable chucks may be placed for holding implements of different types; said attachment being made in two sections which are held together by a collar having threaded shanks on each end that screw into threaded holes in the sections and said collar forming a bearing for a shaft that may be gripped in the lower end of the handpiece spindle so that it will rotate with it, which shaft has a pinion on its opposite end that meshes with a pinion on the chuck spindle.

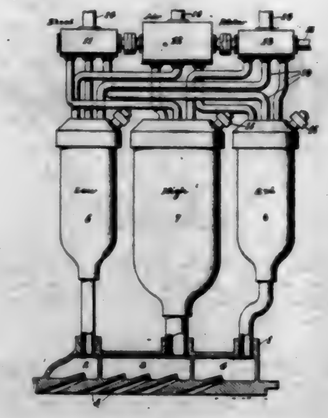
1,535,188. EDUCATIONAL RECORD. MILTON E. THOMPSON, Ridgway, Pa. Filed Oct. 12, 1922. Serial No. 594,020. 1 Claim. (Cl. 274—42).



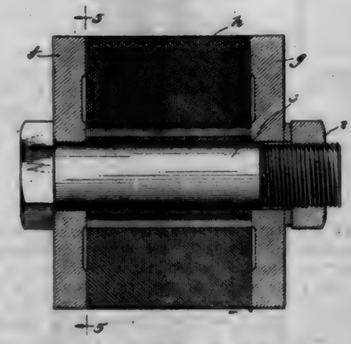
A talking machine record carrying on one surface a plurality of sound records each of which is a complete record in itself, the individual records being associated

with portions of a spiral groove, the portions being radially displaced from each other and separated by an annular band of plane surface free of any sound record,

the width of the band being sufficient to make it plainly visible, and a stylus guiding spiral groove to connect the adjacent individual records, the pitch of the guiding groove being greater than that of the record grooves.



1,535,189. RADIO COMMUNICATION APPARATUS. ROY E. THOMPSON, New York, N. Y., assignor, by mesne assignments, to Wireless Improvement Company, Jersey City, N. J., a Corporation of New York. Filed Mar. 7, 1919. Serial No. 281,113. 18 Claims. (Cl. 250—40.)

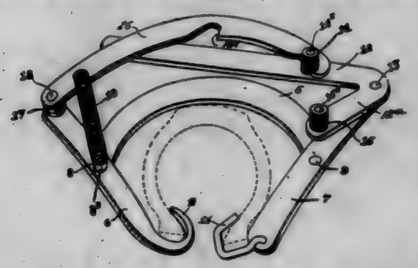


4. A system of the character described comprising an oscillation circuit, an inductance therein, a variable condenser in said circuit, mechanically and electrically interconnected switches respectively tapped to unit sections of a part of said inductance and to multiple section of another part of said inductance, and coordinated to permit of the cycle of operation of the unit switch to be repeated for each stage of operation of the multiple switch, means actuated jointly with said switches to progressively vary the capacity of said condenser effective in said circuit, and means controlled by the operation of certain of said switches to cut said condenser out of said circuit; all whereby the operation of said system progressively varies the wave length of said circuit over a wide range.

1,535,190. TORPEDO. THOMAS E. VAN METER, Newport, R. I., assignor to Government of the United States. Filed Mar. 14, 1922. Serial No. 543,786. 2 Claims. (Cl. 60—46.)

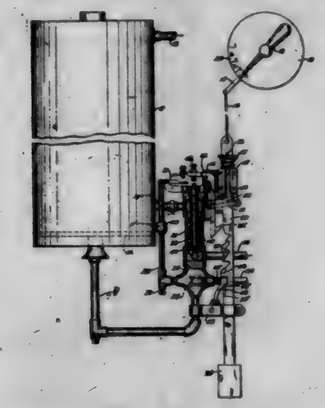
1. In an apparatus of the character described, in combination, a turbine nozzle provided with a plurality of chambers, a combustion flask connected with each of said chambers, a plurality of valves for fuel, air and water respectively, each valve having ports corresponding to the number of combustion flasks, and a means whereby said valves are actuated to conduct fuel, air and water to one or more of said combustion flasks as desired according to the setting of said means.

1,535,191. METHOD OF CONSTRUCTING CLUTCH DISKS. ERNEST E. WEMP, Detroit, Mich. Filed Feb. 15, 1924. Serial No. 693,055. 2 Claims. (Cl. 148—12.)



1. The method of treating clutch disks, which comprises the heating of such disks with a heat approximating from 1450 to 1500 degrees Fahrenheit, the quenching of the disks separately in oil, and then the arranging of the disks in stacks and subjecting them to strains calculated to deform them from their then present condition, then subjecting the same to a heating operation calculated to release such deforming strains, and allowing the disks to set in such deformed relation when the same cools.

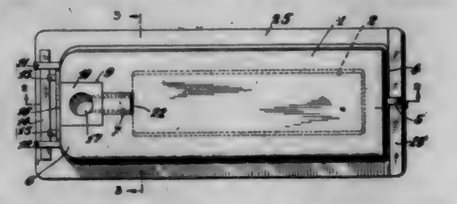
1,535,192. TIRE SPREADER. STEPHEN B. WILBUR, Akron, Ohio. Filed Mar. 17, 1923. Serial No. 625,744. 3 Claims. (Cl. 152—27.)



2. In a device of the class described, an arcuate central member, arms pivotally secured to each end thereof so as to swing in approximately the same plane; means on the lower ends of each arm to engage the inner cir-

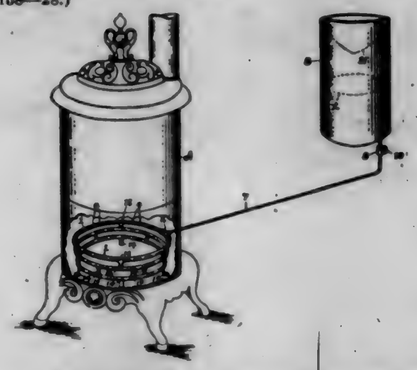
cumferential edge of a tire, a rigid strap hinged to the upper end of one of said arms, a lever fulcrumed on the upper end of the other arm, notches in said strap, said

lever provided with members adapted to be received in said notches whereby the said strap may be engaged by the lever and the lever operated to spread the lower ends of said arms.



1,535,193. AUTOMATIC WATER-HEATER CONTROLLER. ALFRED WILD, Milwaukee, Wis. Filed Jan. 18, 1924. Serial No. 687,116. 8 Claims. (Cl. 126—35.)

1. An automatic water heater controller, comprising a water heater having a gas burner and means for lighting the same, a boiler and a controller to which the water pipes of the heater are connected to provide a back and forth circulation of water from the heater to the boiler and through the controller, a thermostatic means controlled by the temperature of the circulated water for stopping the supply of gas to the burner when the temperature of the water flowing through the controller reaches a predetermined degree, means indicating different temperatures and easily operable from a distant point for selecting the degree of temperature at which the supply of gas to the burner will be stopped, and a pilot light thermostatic means coacting with the first mentioned thermostatic means and the distant point operating means for stopping the supply of gas to the burner when the lighting means is not in operation.

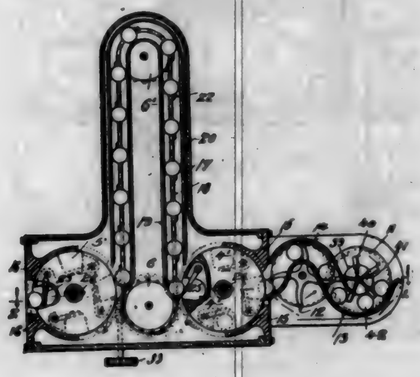


1,535,194. METHOD OF CASTING AND MOLD. EDWARD H. WILLIAMS, Sharon, Pa., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Apr. 21, 1921. Serial No. 463,230. 25 Claims. (Cl. 22—143.)

1. The method of casting steel ingots in horizontal molds which comprises providing a chill for the upper surface of the mold matrix, arranging a gas outlet in the highest part of the matrix, and inclining the upper surface of the mold matrix to the horizontal and toward

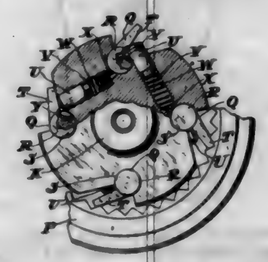
the gas outlet with the lower limit of inclination being substantially one degree from the horizontal, and introducing the molten steel into one end of the matrix.

1,535,195. OIL-BURNING SYSTEM. CLEATUS J. ABRAHAM and MARK A. NORRIS, near Richmond, Ind. Filed Feb. 27, 1925. Serial No. 11,972. 4 Claims. (Cl. 158—28.)



1. An oil burning system comprising a circular fuel pipe having a plurality of exit apertures leading from its interior through its inner periphery, a three-way fitting connecting the ends of the fuel pipe, a supply pipe leading into said fitting and extending from a fuel reservoir, a valve for controlling the flow of fuel from the reservoir into the fuel pipe, a generator ring located below the fuel pipe and parallel therewith but of less diameter than the fuel pipe, means for supporting the generator ring in horizontal position, and means carried by the generator ring for supporting the fuel pipe.

1,535,196. WHEEL RIM. CHARLES S. ASH, Hagerstown, Md. Filed May 13, 1920. Serial No. 381,101. 1 Claim. (Cl. 152—21.)

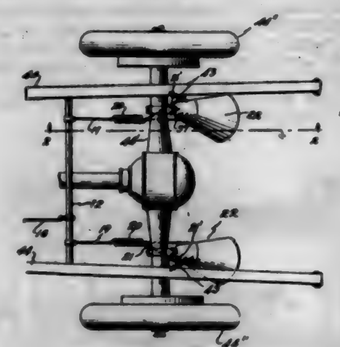


The combination with a wheel rim having on one edge a tire retaining flange and on the other edge a depressed flange adapted to serve as a nipple seat, said depressed flange having an inclined extension converging toward the wheel axis, of a split ring comprising a tire retaining flange adapted to seat on the edge of said rim and a flange adapted to engage with said inclined extension.

1,535,197. CONTINUOUS COOKER. NEILS P. BACH, Millburn, N. J., assignor, by mesne assignments, to Thermokept Corporation, a Corporation of Delaware. Filed Feb. 28, 1921. Serial No. 448,479. 6 Claims. (Cl. 126—272.)

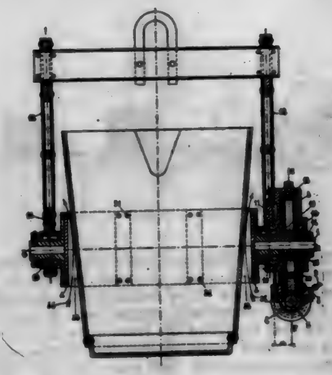
1. In a continuous cooker mechanism, the combination of a cooker chamber, means including a pressure sealed valve for feeding a continuous stream of containers into said chamber, means for advancing said containers through said chamber, and means for continuously removing said containers from said chamber while maintaining a cooking pressure within said chamber.

1,535,198. ROTATION FOR ROCK DRILLS. LEWIS C. BAYLES, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Feb. 18, 1924. Serial No. 693,470. 2 Claims. (Cl. 121—7.)



1. In a rock drill, automatic rotation mechanism comprising a rifle bar having a head, a ratchet ring encircling said head, pawls mounted in said head and cooperating with said ratchet ring to prevent rotation of said rifle bar in one direction, spring pressed plungers for said pawls, said pawls being notched to admit said plungers whereby said pawls are locked against removal from said head.

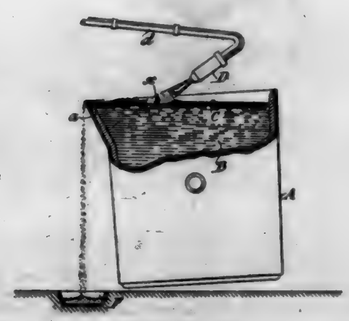
1,535,199. INGOT MOLD AND METHOD OF MAKING SAME. RAY G. COATES, Pasadena, Calif., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Aug. 17, 1922. Serial No. 582,545. 13 Claims. (Cl. 22—140.)



1. A cast metallic ingot mold having the inner portion of its walls in a state of tension in all directions in planes parallel with the surface of the matrix of said mold when said mold is at normal temperature.

1,535,200. NONSKID GRIPPING MEMBER. LOUIS A. COLELLA and SAMUEL ZEFF, Detroit, Mich. Filed Mar. 5, 1924. Serial No. 696,968. 5 Claims. (Cl. 188—5.)

1. An anti-skidding device adapted for use with a vehicle and comprising semi-bell shaped contact members formed from yieldable material; steel reinforcing members mounted in said yieldable material; a rocking cap attached to the upper portion of said yieldable material; means for mounting said cap swingingly on the axle of a vehicle; means for swinging said contact members into engagement with the surface over which the vehicle is being propelled; and means for normally maintaining said contact members free from engagement with said surface.

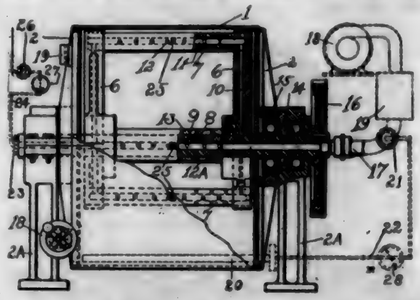


1,535,201. POURING LADLE. ADOLPHE COLLIN, Ougree, and DIEUDONNÉ JEUNEHOMME, Jemeppe, Belgium. Filed Jan. 6, 1922. Serial No. 527,453. 13 Claims. (Cl. 22—82.)

1. In a pouring ladle, the combination of, a supporting arm for the ladle; a ring secured to the ladle; a horizontally extending trunnion secured to said ring; tilting mechanism cooperating with said trunnion; a housing for said mechanism, the mechanism being controlled from the exterior of the housing; roller bearings

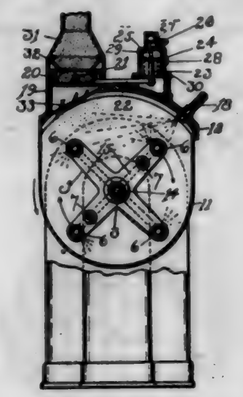
for the trunnion; and race-ways for the roller bearings on either side of said housing, the race-ways being movable vertically on the housing.

1,535,202. METHOD OF REMOVING SLAG AND OF NEUTRALIZING FUMES ARISING IN TREATMENT OF MOLTEN METALS. FREDERICK CONLIN, Westfield, N. J., assignor to John T. Pratt, New York, N. Y., Daniel D. Jackson, Brooklyn, N. Y., and Joseph D. Sears, Bloomfield, N. J., Joint Trustees, constituting a New York Trust Estate. Filed Jan. 5, 1923. Serial No. 610,776. 9 Claims. (Cl. 75—197.)



1. A method of removing slag or residue, comprising blowing off the slag with a substantially neutral or reducing gas jet.

1,535,203. METHOD AND APPARATUS FOR HANDLING FREIGHT. CLEO BRENTON COOK, East Cleveland, Ohio, assignor to The Elwell-Parker Electric Company, Cleveland, Ohio, a Corporation of Ohio. Filed Mar. 12, 1923. Serial No. 624,582. 11 Claims. (Cl. 214—38.)

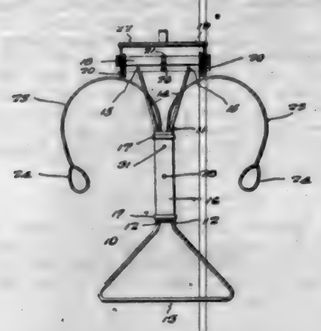


1. The method of handling freight which includes the steps of making up a train of small trailers of convenient size to be drawn by an industrial truck, coupling a tractor thereto, comprising a platform lifting truck, by raising the first trailer of the train upon the elevating platform of the truck while the trailer remains coupled to the train, transporting the train to the railroad freight loading location of the contents of the first trailer, disconnecting the truck from the train while maintaining said first trailer upon the truck platform, transporting said freight while upon the trailer to the trailer unloading position, depositing the trailer with the feight thereon, returning the truck to the train, and repeating the coupling operation by engaging the then first trailer of the train in the manner described in the first step.

1,535,204. APPARATUS FOR MIXING BREAD. WILLIAM A. DARRAH, Chicago, Ill., assignor to The Ekco Engineering Company, Chicago, Ill. Filed Aug. 14, 1920. Serial No. 403,482. 3 Claims. (Cl. 107—31.)

1. A dough mixer comprising a shell, a channeled shaft rotatable therein, a beater system carried on said shaft and channels for introducing both cold air and water into the interior of the dough within said mixer.

1,535,205. METHOD OF MIXING DOUGH AND APPARATUS THEREFOR. WILLIAM A. DARRAH, Chicago, Ill., assignor to The Ekco Engineering Company, Chicago, Ill. Filed Aug. 20, 1921. Serial No. 493,873. 3 Claims. (Cl. 107—31.)



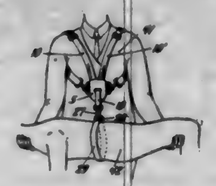
1. The process of making dough which consists in causing finely divided flour to fall with a mist of cold water into a dough mixer, and agitating the resultant product sufficiently to materially increase its temperature in the presence of a stream of cold air.

3. A dough mixer comprising a mixing bowl, a mechanically driven beater system revolvable therein, means for passing air into said dough through said beater system, means for spraying cold water into said dough, and a flour sifting device arranged adjacent to said mixer but operated independently of said mixer.

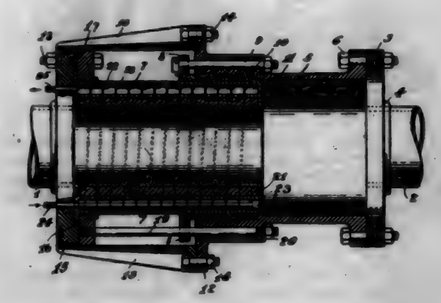
1,535,206. HARMONICA HOLDER. ELIAS DAVIDSON, Grantsburg, Wis. Filed Jan. 26, 1923. Serial No. 615,080. 1 Claim. (Cl. 84—379.)

A device of the character described comprising a wire frame for disposition against a human body and having intermediate parallel portions, a rectangular member arranged between the intermediate parallel portions and provided with longitudinal grooves in its longitudinal edges which receive the parallel portions of the frame,

a plate carried by the upper end of the frame and provided with clamping means for holding a musical instrument, and a pair of vertically adjustable and rotatable arms supported in the rectangular member, the arms being longitudinally bowed and adapted to resiliently engage the shoulders of the person.

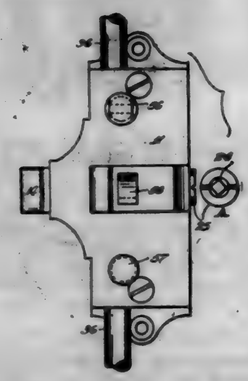


1,535,207. SHOE. JOHN T. DORFF, Dundalk, Md. Filed Aug. 26, 1922. Serial No. 584,453. 5 Claims. (Cl. 36—1.)



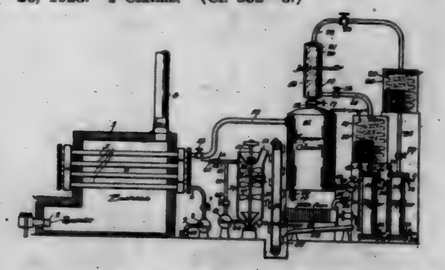
1. A shoe comprising an upper and an outer sole, an auxiliary sole of flexible non-metallic material said soles being formed of materials which are poor conductors of heat, a series of transverse flexible cleats interposed between the outer and auxiliary soles and extending from one edge to the other of said soles, and forming air passages for the free circulation of air between them, and means for attaching the soles and cleats together.

1,535,208. BODY LIFTER. HOMER H. DRENNAN, Connersville, Ind., assignor to Undertakers' Supply Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 7, 1922. Serial No. 527,672. 4 Claims. (Cl. 224—6.)



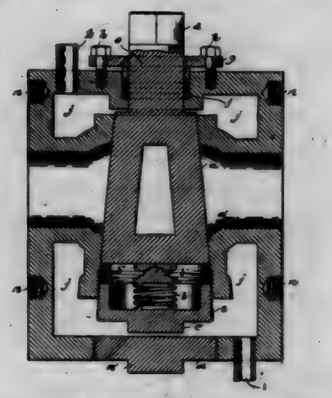
1. The combination of a lifting harness comprising a central supporting member, a pair of adjustable shoulder straps secured thereto and a flexible member depending therefrom, a band of flexible material adapted to be passed around an object, said band having means for detachably securing the ends thereof together whereby the same may be formed into a loop, and means for detachably connecting said band to said flexible member.

1,535,209. EXPANSION JOINT. CARBON P. DUBBS, Wilmette, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 4, 1921. Serial No. 458,371. 4 Claims. (Cl. 285—135.)



1. In an expansion joint the combination with telescopic members, conduits connected to each of said members, a packing interposed between said telescopic members to permit relative movements thereof while maintaining a sealed connection therebetween, one of said members being formed with an elongated annular jacket therein around the exterior of which said packing seats, and means for introducing a cooling liquid to said jacket, said member also having an annular recess located interiorly of the jacket and insulating material disposed within said recess.

1,535,210. EXIT DOOR LOCK. HARRY W. DYER, East Orange, N. J. Filed Sept. 3, 1921. Serial No. 498,315. 11 Claims. (Cl. 70—74.)



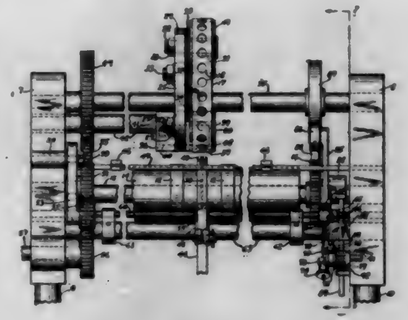
1. In a door lock of the class described, the combination of a locking mechanism having a sliding bolt with a hollow section, a shaft upon which said bolt slides longitudinally, passing through said hollow section and means on said shaft arranged to be positioned by turning said shaft to engage the sides of said hollow section whereby the movement of said sliding bolt is controlled.

1,535,211. PROCESS AND APPARATUS FOR TREATING OIL. GUSTAV EGLOFF and HARRY P. BENNER, Chicago, Ill., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Oct. 23, 1920, Serial No. 419,058. Renewed Oct. 26, 1923. 4 Claims. (Cl. 252—8.)

4. A process of producing purified carbon consisting in cracking petroleum oil, precipitating the carbon thereby produced, withdrawing the carbon containing oil, passing it through a filter, removing the carbon from the filter and subjecting it to the action of solvents.

1,535,212. PLUG COCK. GUSTAV EGLOFF and HARRY P. BENNER, Independence, Kans., assignors to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed Apr. 1, 1921. Serial No. 457,795. 1 Claim. (Cl. 251—112.)

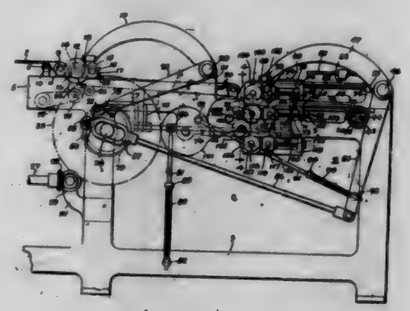
In a plug cock, the combination with a casing having a water jacket therein with water inlets and outlets in communication therewith, a valve cock mounted within the inner wall of said casing and having a turning portion extending through the outer wall thereof, said inner wall having an extension projecting therefrom in the water jacket, a cap adjustably mounted in said extension, a yieldable support for said valve seated on said cap and engaging the valve, and a removable plug in the exterior wall of the casing to permit adjustment of said cap.



1,535,213. PROCESS FOR TREATING ACID-SLUDGE OILS. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed May 16, 1921. Serial No. 470,035. 4 Claims. (Cl. 23—173.)

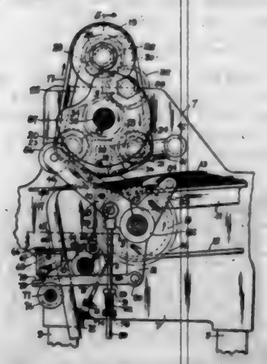
1. A process of removing from acid sludge oils such constituents as sulphuric acid, other acids and oily substances, consisting in distilling an acid sludge oil under a vacuum of at leat '2 inches and in separately collecting such constituents.

1,535,214. PROCESS OF PRODUCING LAMPBLACK. GUSTAV EGLOFF, Chicago, Ill., assignor to Universal Oil Products Company, Chicago, Ill., a Corporation of South Dakota. Filed June 27, 1921. Serial No. 480,838. 3 Claims. (Cl. 134—60.)



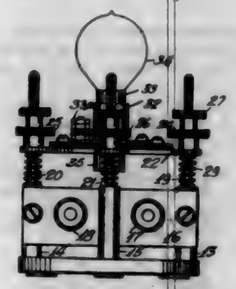
1. The process of manufacturing lamp black, comprising discharging residual oil from a still into a second treating still, and there injecting into said oil, while at a temperature above its flash point, air in sufficient quantities to cause a partial combustion thereof, but limiting the introduction of air so as to permit the reaction to be carried on only to the stage where lamp black is produced.

1,535,215. SHEET FEEDER. HARRY EHLIG, Pearl River, N. Y., assignor to George R. Swart & Company, Inc., New York, N. Y., a Corporation of New York. Filed Nov. 25, 1922. Serial No. 603,163. 14 Claims. (Cl. 271—28.)



1. In a continuous sheet-feeder, a constantly moving suction feed-belt for advancing the successive sheets from the front margin of the bank by applying suction continuously thereto.

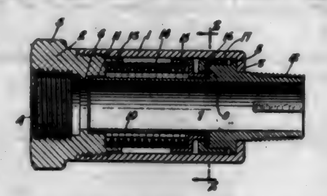
1,535,216. FOLDING AND SLITTING MACHINE. HARRY EHLIG, Pearl River, N. Y., assignor to George R. Swart & Company, Inc., New York, N. Y., a Corporation of New York. Filed Dec. 22, 1923. Serial No. 682,351. 21 Claims. (Cl. 270—80.)



1. In a machine of the class described, separate sheet folding and positioning devices, a cooperating sheet-slitting mechanism, and means for collectively moving said folding and positioning devices from and into operative position with the slitting mechanism.

1,535,217. SHEET FEEDER. HARRY EHLIG, Pearl River, N. Y., assignor to George R. Swart & Company, Inc., New York, N. Y., a Corporation of New York. Original application filed Nov. 25, 1922, Serial No. 603,163. Divided and this application filed Aug. 20, 1924. Serial No. 735,113. 22 Claims. (Cl. 271—62.)

1. In a sheet-feeder, a feed-board, means for advancing a pile or bank of sheets along said feed-board, and means including a part bearing rearwardly against the edges of the sheets and controlled by the forward pressure of the top sheets for inaugurating the operation of said advancing means.

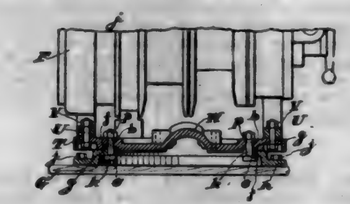


1,535,218. LAMP SUPPORT. EDWARD A. EVERETT, New York, N. Y. Filed Jan. 16, 1924. Serial No. 686,574. 4 Claims. (Cl. 240—44.)

1. In a device of the class described, the combination of a lamp housing with a lens, a supporting base in said housing, three upstanding studs in spaced relation on said base, a coil spring on each stud, a plate on said studs and resting upon said springs, a lamp base with a lamp secured to said plate and adjusting nuts on said studs for adjusting the position of said lamp relative to said lens, said studs being arranged on the base so as to be accessible from a fixed opening in said housing.

1,535,219. PIPE COUPLING. WILLIAM H. FULTON, Irvington, N. J., assignor, by mesne assignments, to Titeflex Metal Hose Co., a Corporation of New Jersey. Filed Aug. 15, 1919. Serial No. 317,642. 12 Claims. (Cl. 285—124.)

1. In a pipe coupling, the combination with a plurality of coupling members of a diaphragmatic means subjected to the fluid pressure within said coupling for preventing leakage between said members, said means

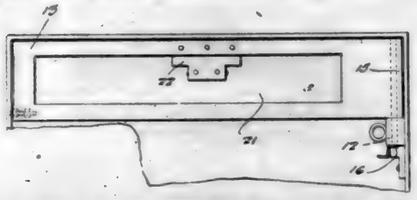


being secured to one of said members and unsecured to but bearing against the other of said members.

1,535,220. HEAT INSULATION. ALFRED HUGH GALLAGHER, Chicago, Ill. Filed Sept. 22, 1924. Serial No. 739,074. 10 Claims. (Cl. 20—4.)

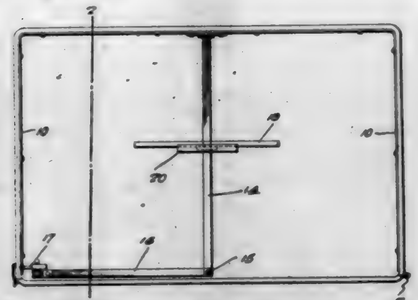
1. A heat insulating structure comprising the combination of a pair of spaced walls, a heat insulating material lying between the walls, and means mounted on the wall for preventing the shifting of the material, this means including a row of spaced projections entering the material, each of which engages the material at a single point.

1,535,221. SWIVEL MOUNTING FOR HOISTS. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed Mar. 12, 1924. Serial No. 698,644. 3 Claims. (Cl. 248—30.)



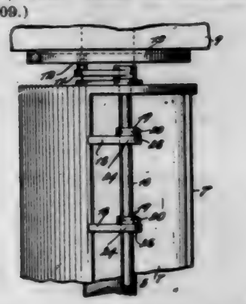
1. In a hoist, the combination of a base plate having an annular guideway, a bed plate, an upwardly extending annular flange on said bed plate cooperating with said guideway and adapted to enable said base plate to be rotated about said upwardly extending flange, and means rotatable with the base plate to prevent unseating of the base plate and for clamping said bed plate and base plate together against rotation.

1,535,222. GARMENT-HANGER-SUPPORTING MECHANISM FOR WARDROBE TRUNKS. WADE H. HARRISON, Petersburg, Va. Filed Jan. 18, 1924. Serial No. 687,053. 2 Claims. (Cl. 211—15.)



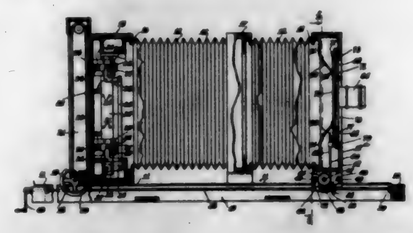
1. A garment hanger, including a plate provided with a channel, a bolt slidably mounted in the channel of the plate and having an angularly disposed extremity which is normally spaced from the end of the plate to limit the sliding movement of the bolt in relation to the plate, a frame pivoted upon the bolt, a bracket mounted upon the frame at a point between the ends thereof and having an inclined wall section and a horizontally disposed

wall section, a bar section pivotally mounted upon the bracket and removable over and engageable on the horizontal and inclined wall sections thereof so that the



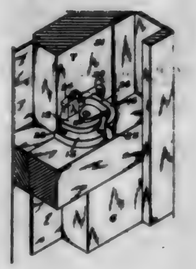
bar section may be supported in either an inclined position or a horizontally disposed position, and a second bar section pivotally connected with the first bar section and arranged horizontally with relation thereto.

1,535,223. GARMENT-HANGER SUPPORT FOR WARDROBE TRUNKS. WADE H. HARRISON, Petersburg, Va. Filed Jan. 18, 1924. Serial No. 687,055. 1 Claim. (Cl. 211—15.)



In combination with a body having a lid hingedly connected thereto, of a garment hanger structure supported in the body adjacent the lid, and a hanger detachably engaged with the hanger structure and carrying at its upper end a strip adapted to engage the under surface of the top wall of the lid when said lid is in a closed position over the body for preventing movement of the hanger on the hanger structure.

1,535,224. SHEET GRIPPERS. CHARLES W. HARROLD, Cleveland, Ohio, assignor to The Harris Automatic Press Company, Cleveland, Ohio, a Corporation of Ohio. Filed Oct. 7, 1921. Serial No. 506,169. 6 Claims. (Cl. 101—409.)

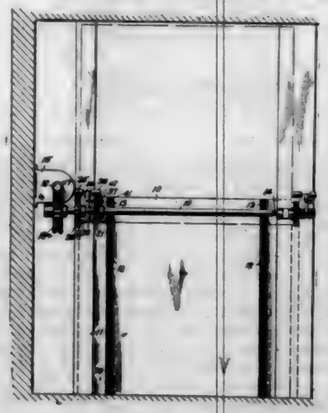


1. In a sheet-gripper mechanism, a sheet support, an oscillatable gripper-bar, a plurality of grippers rotatably mounted on said bar to close on said support, means, carried exteriorly by, and laterally adjustable, on said bar for variably and adjustably limiting the rotative movement of each of said grippers, means for opening and closing said grippers in unison including means for yieldingly compressing said grippers collectively on the said support, and resilient means between each gripper and said first mentioned means for holding the gripper in individual yielding contact with said support while closed, said resilient means normally forcing each gripper to its limit on said gripper-bar.

1,535,225. CAMERA. HOWARD R. HAYS and WILLIAM CORNELISSEN, Philadelphia, Pa., assignors to Howard S. Levy and Lionel F. Levy, both of Philadelphia, Pa. Filed Nov. 28, 1921. Serial No. 518,184. 4 Claims. (Cl. 95—45.)

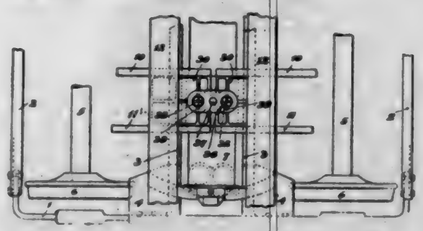
1. In a camera of the character described, the combination with relatively adjustable front and back boxes of a closed frame for supporting said boxes, means disposed in the frame for controlling relative longitudinal adjustment of the boxes, and lens board adjusting means carried by the front box rearwardly of its forward extremity and cooperating with the controlling means to enable the said front box to be adjusted to the full capacity of the frame without meeting with obstruction from the said lens board adjusting means.

1,535,226. WINDOW-SASH FASTENER. THOMAS H. JACKSON, Philadelphia, Pa. Filed May 26, 1921. Serial No. 472,700. 2 Claims. (Cl. 292—242.)



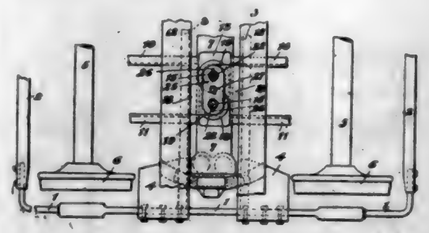
1. A fastener including a base adapted to be mounted on the upper surface of the lower window sash by means of upright screws, said fastener having a front flange with a straight upright surface, a latch with a trunnion movably secured to said base and having a locking tongue, spring means to engage said trunnion and hold said latch in positions, and a keeper mounted on the upright surface of the upper sash and having a slot for the reception of the tongue of said latch, said keeper including an upright surface substantially parallel and in engagement with the upright surface of said base flange to engage the same and stop tilting of said base on the lower sash and preventing withdrawal of the screws in said base.

1,535,227. PROCESS OF DESULPHURIZING IRON, STEEL, FERRO ALLOY, AND COMPOSITIONS OF MATTER FOR USE THEREIN. DANIEL D. JACKSON, Brooklyn, N. Y.; JOSEPH D. SEARS, Bloomfield, and FREDERICK CONLIN, Westfield, N. J., assignors to John T. Pratt, New York, N. Y.; Daniel D. Jackson, Brooklyn, N. Y.; and Joseph D. Sears, Bloomfield, N. J., trustees. Filed July 29, 1922. Serial No. 578,485. 18 Claims. (Cl. 75—49.)



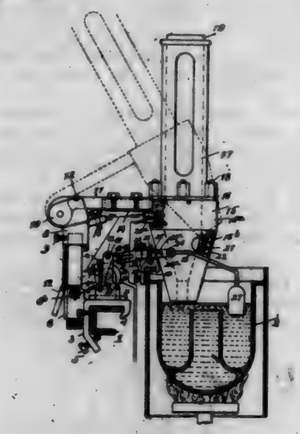
1. A process of desulphurizing comprising treating molten iron, steel, and ferro-alloys with an alkaline desulphurizing reagent having a desiliconizing effect and a silicon-alloy.

1,535,228. DOOR-OPERATING MECHANISM. ALEXANDER E. KRAMER, Brooklyn, N. Y. Filed June 15, 1923. Serial No. 645,631. 11 Claims. (Cl. 268—8.)



1. In mechanism of the character described a rigid door mounted for vertical movement bodily, a vertical rack secured to said door, revoluble means operatively connected to said rack for moving said door vertically, a clutch for causing said revoluble means to rotate to either direction and to stop the rotation of said revoluble means, a magnet for operating said clutch, and means for preventing said door from dropping of its own weight when said revoluble means is freed from said clutch.

1,535,229. CAR TRUCK. ELMER LATSHAW, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Filed Nov. 15, 1923. Serial No. 674,856. 3 Claims. (Cl. 105—4.)

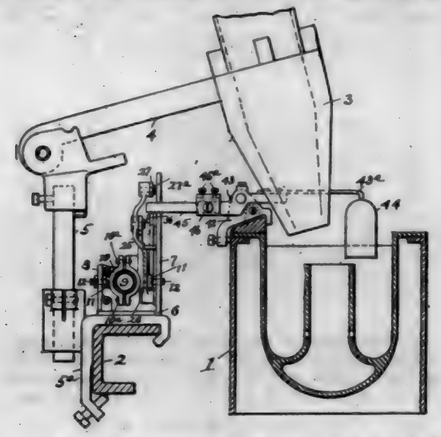


1. A mechanism of the class described comprising a car truck, a pair of car bodies having their ends supported on said truck, a pair of spaced pivot pins for connecting said car bodies with the truck, each of said pins having its lower end terminating in a ball-shaped member, a truck bolster, and a bearing member on said bolster for receiving the ball-shaped portions on the ends of the pivot pins.

1,535,230. CAR TRUCK, ELMER LATSHAW, Philadelphia, Pa., assignor to The J. G. Brill Company, Philadelphia, Pa., a Corporation of Pennsylvania. Original application filed Nov. 15, 1923, Serial No. 674,856. Divided and this application filed Jan. 9, 1925. Serial No. 1,391. 6 Claims. (Cl. 105—4.)

1. A mechanism of the class described comprising a car truck adapted to support the ends of two car bodies, said truck having separate pivotal connections for said bodies on opposite sides of its longitudinal center line.

1,535,231. AUXILIARY MELTING DEVICE. GEORGE E. LEE, Cleveland, Ohio, assignor to The George E. Lee Company, Cleveland, Ohio, a Corporation of Ohio. Filed June 16, 1922. Serial No. 568,695. 6 Claims. (Cl. 22—83.)



1. The combination with a reservoir adapted to contain material in molten form, of a melting cup mounted above the reservoir and adapted to contain material in solid form, an electric resistance element associated with said cup, an oscillating switch controlling the functioning of the resistance element, a pivoted arm, a resilient member connecting the arm with the switch, a pivoted member having operative connection with said arm, and means responsive to the level of the material in the reservoir and having operative connection with the pivoted member.

1,535,232. AUXILIARY MELTING DEVICE. GEORGE E. LEE, Cleveland, Ohio, assignor to The George E. Lee Company, Cleveland, Ohio, a Corporation of Ohio. Filed July 12, 1922. Serial No. 574,570. 16 Claims. (Cl. 22—8.)

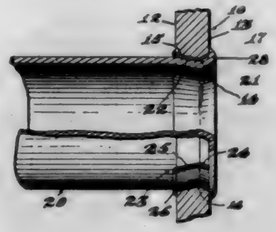
1. The combination with a casting machine having a reservoir for material in melted form, and means controlled by an electric circuit for supplying melted material to said reservoir, of a switch in said circuit, an actuating

member which has a predetermined movement during the operation of the machine, and means responsive to the

level of the melted material in said reservoir for connecting said actuating member with said switch to actuate the same.

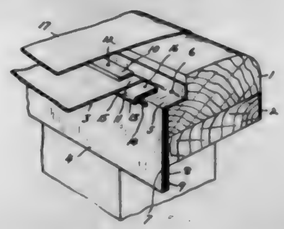
1,535,233. SELF-SEALING, SOLUBLE COFFEE TABLET AND PROCESS OF MAKING SAME. FRANCIS P. MCCOLL, Ridgewood, N. J., and WALTER W. WILSON, Brooklyn, N. Y., assignors, by mesne assignments, to Thermokept Corporation, a Corporation of Delaware. Filed Dec. 22, 1920. Serial No. 432,517. 8 Claims. (Cl. 99—8.)

1. The herein described process of forming a pure coffee unit, which consists in subjecting the whole roasted coffee bean to a crushing stress, and causing said crushed constituents to be formed into units and impregnated in its own oil.



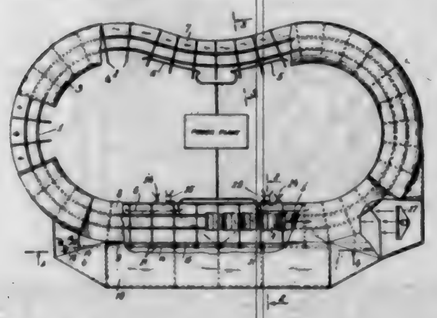
3. A coffee unit consisting of the roasted whole pure coffee bean in crushed condition and compressed form, saturated and sealed with the fluid content of said bean.

1,535,234. CASING-RIPPING DEVICE. WILLIAM B. MCMURTIE and JOHN W. MOORE, Shidler, Okla. Filed June 24, 1924. Serial No. 722,089. 3 Claims. (Cl. 81—103.)



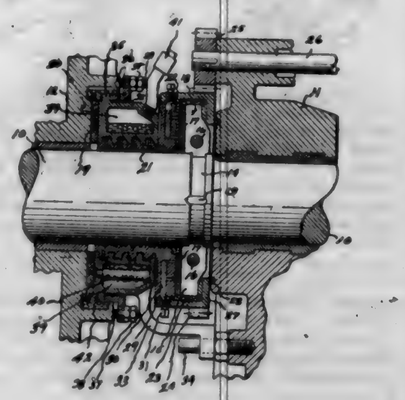
1. In a casing ripping device, a cylindrical body provided with an eccentrically disposed bore extending longitudinally thereof, thereby providing a comparatively thick side and a comparatively thin side, a stem extending from the end of the comparatively thick side, said thick side of the cylinder body being provided with an exterior vertically inclined opening, a knife having a projection slidably located in the opening, and means for moving the knife with relation to the body.

1,535,235. BOILER-FLUE CONSTRUCTION. GEORGE B. MAIER, Los Angeles, Calif. Filed Apr. 3, 1922. Serial No. 549,317. 2 Claims. (Cl. 285—56.)



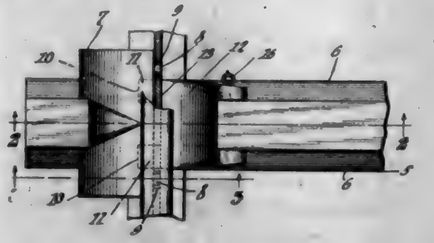
1. In a boiler, end plates, gaskets and tubes, said end plates provided with a series of openings, each opening in said plate having two annular tapering walls, one wall tapering from one side of the plate to near the center of the plate section and the second wall of substantially the same taper as the first mentioned wall extending to near the center of the plate section from the side opposite the first named side; each gasket of tubular section formed to fit the first mentioned tapering wall and the remainder of the gasket formed straight and extending through said openings, each tube provided with a reduced end, said end formed with a taper to fit the taper in the gasket and a straight portion extending through said gasket; said straight portion of the gasket and said straight of the tube extending through said opening in the end plate being expanded and the remaining end of said tube beaded over against the said second wall of said end plate so that the first mentioned tapered sections are in opposition to the second mentioned tapered sections, thus forming a tight joint.

1,535,236. TOP CONSTRUCTION FOR VEHICLE BODIES. HERMAN C. MAISH, Detroit, Mich., assignor to Briggs Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Jan. 2, 1923. Serial No. 610,833. 3 Claims. (Cl. 296—135.)



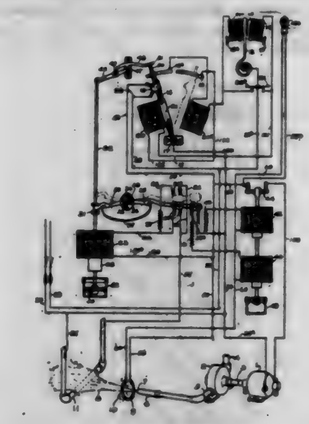
1. In a top of a closed motor vehicle body, the combination with a continuous rigid frame comprising a plate having an upper inner rabbeted corner, of a side lining having a portion engaging and secured to the rabbeted corner of said plate and a depending portion at the inner side of said plate, a top lining having its side edge extending over the rabbeted corner of said plate, and a clamping strip secured to the rabbeted corner of said plate and clamping the side edge of said top lining to said plate.

1,535,237. AMUSEMENT APPARATUS. HYLA FREDERICK MAYNES, North Tonawanda, N. Y., assignor to Maynes Corporation, Dover, Del., a Corporation of Delaware. Filed Feb. 12, 1925. Serial No. 8,694. 16 Claims. (Cl. 104—84.)



2. In an amusement ride, the combination of a passenger-carrying car or train, a translucent curtain between the path of travel of the car or train and a public thoroughfare, and means for projecting a shadowgraph of the car or train upon the translucent curtain visible to the outside public.

1,535,238. THRUST MECHANISM. THOMAS SPENCER MILLER, South Orange, N. J. Filed July 7, 1922. Serial No. 573,499. 7 Claims. (Cl. 192—04.)

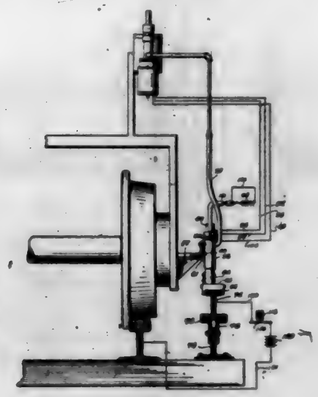


1. In a device of the class described, a shaft, a bearing for the shaft, a clutch member on said shaft and arranged to be moved longitudinally thereof, a thrust-resisting member, a thrust-producing means between the clutch member and the thrust-resisting member, comprising a threaded member on the shaft and unconnected thereto and having a face contacting with a face of said thrust-resisting member, a nut on said threaded member and held against rotation and free to move longitudinally of the shaft, said nut contacting with said clutch member, and means to rotate said threaded member to move said clutch member away from the thrust-resisting member, adjustable means connecting said nut to said clutch member to draw the latter toward the thrust-resisting means when the threaded member is rotated to move the nut toward said thrust-resisting means.

1,535,239. RAIL TIE. THOMAS B. MODLIN, Hurdland, Mo., assignor of one-third to Homer Black and one-third to Lem C. Schenimann, both of Hurdland, Mo. Filed Sept. 23, 1924. Serial No. 739,338. 2 Claims. (Cl. 238—46.)

1. In a device of the character described, a tie having a fastening member formed integral therewith, said fastening member having openings arranged adjacent to the lower edge thereof, a movable clamping section having extensions adapted to fit in the openings, and means for securing the movable clamping section to the tie.

1,535,240. CONTROLLER FOR FUEL IGNITERS. WILLIAM L. MORRIS, Chicago, Ill., assignor to Electric Oil Syndicate, an Association composed of C. P. Jaeger, L. M. Rutledge, William L. Morris, and William K. Booth. Filed Sept. 11, 1922. Serial No. 587,385. 19 Claims. (Cl. 175—115.)



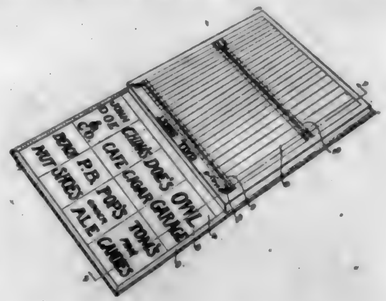
1. The combination with a fuel feeding mechanism, of an electrical igniter, and an electrical resistance variable under different temperatures, the igniter and resistance being so connected that the main current will pass through the igniter if the resistance is cold and through the resistance if the resistance is hot.

1,535,241. TRAIN-CONTROL MECHANISM. WILLIAM B. MURRAY, Danville, Ill., assignor to The Miller Train Control Corporation, Staunton, Va., a Corporation of Virginia. Filed May 16, 1924. Serial No. 713,786. 8 Claims. (Cl. 246—49.)

2. In a train control apparatus, a pressure operated device, a valve casing communicating therewith, a valve arranged in said casing, a magnet controlling said valve, a normally closed circuit to energize said magnet and retain said valve in a closed position, ramps on the

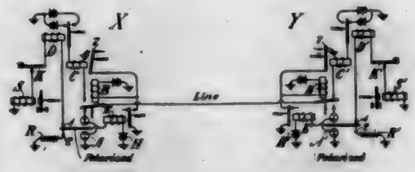
trackway at spaced intervals, mechanical means engaging said ramps and adapted to break said circuit, a second valve communicating with the outlet of said first valve, a normally deenergized magnet controlling

said valve, and electrically operated means controlled by the engagement of said mechanical means and said ramp for energizing said second magnet when the track is clear.



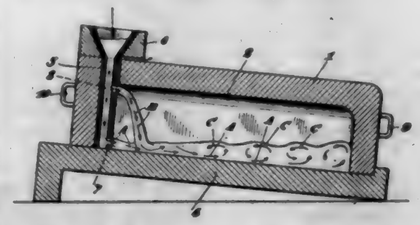
1,535,242. TRACING AND PRINTING DEVICE. SHERMAN LINCOLN PARMENTER, New Rochelle, N. Y. Filed Mar. 29, 1921. Serial No. 456,709. 3 Claims. (Cl. 35—10.)

1. In a device for transferring lines of pencil drawings and sketches, a thin transparent flexible element adapted to receive markings upon its face and means for holding said element relatively immovably upon surfaces to be traced from or transferred to, said holding means comprising an envelope frame having an open end adapted to receive said transparent element therethrough and an open side adapted to expose a surface of said element.



1,535,243. ADVERTISING CALL SHEET. WELDON E. PENTICOFF, Fergus Falls, Minn. Filed June 14, 1924. Serial No. 719,996. 3 Claims. (Cl. 40—125.)

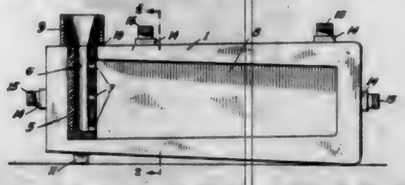
2. An advertising device comprising a backing sheet, a sheet of transparent material marginally united to the said backing sheet and forming, with the backing sheet, a pocket, an advertising medium fitted into the pocket with its display surface visible through the transparent sheet, the medium being so arranged that the advertising matter will be readable from one end of the device, and a call sheet secured upon the backing sheet and read-



able from the other end of the device, the upper marginal portion of the call sheet overlapping the mouth of the pocket whereby to substantially close said mouth.

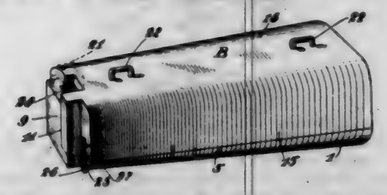
1,535,244. TELEGRAPHY. HARRY S. PERCIVAL, Bloomfield, N. J., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed May 20, 1920. Serial No. 382,972. 8 Claims. (Cl. 178—2.)

1. In a telegraph system, a main line, a station associated therewith, a transmitting branch circuit for said main line at said station, a device for at times associating said main line with said branch circuit, a transmitting device at said station, means governed by said transmitting device for causing said first mentioned device to assume its operative position and means associated with said transmitting branch circuit for retaining said device in its operative position.



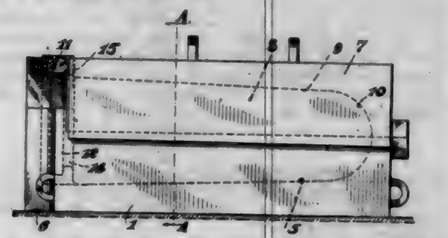
1,535,245. METHOD OF MAKING INGOTS, AND THE INGOT. JOHN E. PERRY, Sharon, Pa., assignor to Valley Mould & Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Nov. 11, 1920. Serial No. 423,304. 41 Claims. (Cl. 22—209.)

1. The method of casting steel ingots which comprises providing a mass of molten steel by filling the matrix of a mold which matrix has the form of the ingot desired and maintaining the steel constituents homogeneously distributed throughout the entire mass thereof; and freezing the molten steel into a solid mass by quickly



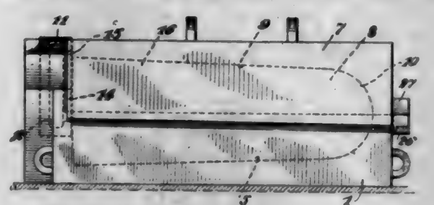
absorbing heat from all sides thereof to arrest the molecular movement of the constituents of the steel before the condition of homogeneity of the mass has substantially changed.

1,535,246. INGOT, MOLD, AND METHOD OF CASTING. JOHN EDMUND PERRY, Sharon, Pa., assignor to Valley Mould & Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Apr. 21, 1921. Serial No. 463,164. 24 Claims. (Cl. 22—216.)



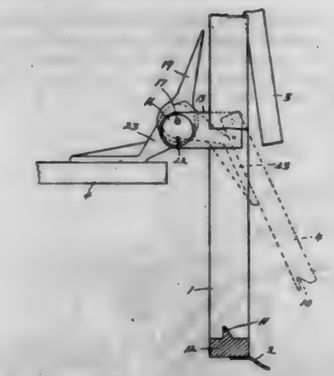
1. The method of casting steel ingots which comprises providing a horizontal pool of molten steel having a wide head and a narrow foot with tapering sides between the head and foot; chilling all surfaces of the pool excepting a small portion at the head end; and withdrawing heat from the foot end of the ingot whereby the heat gradient runs toward the head end of the ingot until after the mass of steel has all been cooled to a temperature lower than crystallization temperature of the mass.

1,535,247. INGOT MOLD AND METHOD OF CASTING. JOHN EDMUND PERRY, Sharon, Pa., assignor to Valley Mould & Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed June 25, 1921. Serial No. 480,304. 37 Claims. (Cl. 22—143.)



1. An ingot mold for casting steel ingots horizontally comprising when assembled a closed chill mold with the longitudinal lines of separation arranged at the corners of the matrix portion of the mold and with the end lines of separation extending diagonally of the mold at one end and transversely of the mold at the other end.

1,535,248. METHOD OF CASTING INGOTS. JOHN EDMUND PERRY, Sharon, Pa., assignor to Valley Mould & Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Feb. 10, 1923. Serial No. 618,206. 30 Claims. (Cl. 22—143.)

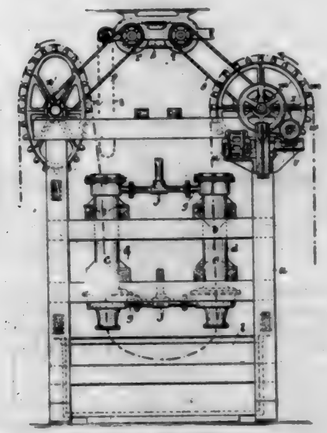


1. The method of casting steel ingots and the like, which comprises pouring the metal to form an elongated quiescent horizontal pool, continuing the pouring to supply fresh molten steel to the surface of the pool, and chilling the pool upon four sides and the foot end to cause the freezing to progress toward the head end.

1,535,249. HORIZONTAL INGOT MOLD. JOHN EDMUND PERRY, Sharon, Pa., assignor to Valley Mould and Iron Corporation, Sharpsville, Pa., a Corporation of New York. Filed Feb. 15, 1923. Serial No. 619,301. 20 Claims. (Cl. 22—143.)

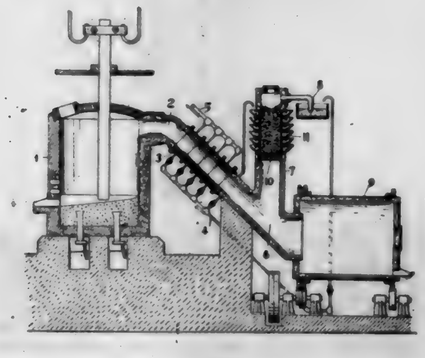
1. A horizontal mold for casting steel ingots comprising a sectional body of chill metal enclosing a matrix of the form of the ingot to be cast, the foot of said matrix being curved, a runner brick at the head of the matrix and forming the major portion of the head wall thereof, said brick being provided with a feeder opening arranged substantially adjacent the horizontal axis of the matrix, and with the heat absorbing capacity of the mold walls decreasing from the foot of the matrix toward the head thereof.

1,535,250. WINDSHIELD. ALBERT T. POTTER, Detroit, Mich., assignor to Ainsworth Manufacturing Company, Detroit, Mich., a Corporation of Michigan. Filed Nov. 20, 1922. Serial No. 602,079. 10 Claims. (Cl. 296—92.)



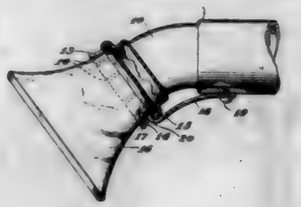
7. The combination with a standard, of a bracket supported upon the standard and having an opening therein, a windshield, a bracket secured to said windshield, a pivot for the windshield rotatably mounted in the last-mentioned bracket, an eccentric non-rotatively secured to the pivot and rotatably mounted in the opening in the first-mentioned bracket, and means for actuating said eccentric to move said windshield.

1,535,251. APPARATUS FOR TREATING FABRICS WITH LIQUIDS. CLIFFORD H. RAMSEY, Glen Rock, and ARTHUR C. MASKERY, Paterson, N. J., assignors to Morrison Machine Company, Paterson, N. J., a Corporation of New Jersey. Filed July 13, 1923. Serial No. 651,368. 7 Claims. (Cl. 8—19.)



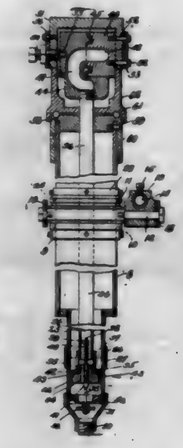
6. In combination, a pair of passaged conductors having their passage-axes upright and being adapted to re-

ceive the upstanding portions of the depending bight of the flexible attenuated material to be advanced longitudinally and each having means to admit to its passage liquid to treat the material while being advanced,



and separate means to advance said material arranged over said conductors and from which said bight hangs, one of said means arranged to deliver the material down to one conductor and the other to draw it up from the other conductor.

1,535,252. METHOD OF CONDENSING ZINC VAPORS. OYSTEIN RAYNER, Christiania, Norway, assignor to Det Norske Aktieselskab for Elektrokemisk Industri, Christiania, Norway, a Business Entity, Christiania, Norway. Filed Feb. 24, 1919. Serial No. 278,977. 5 Claims. (Cl. 75—153.)

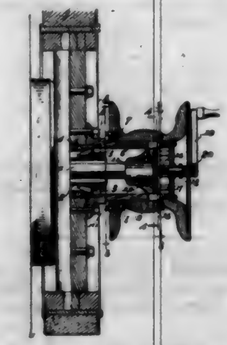


1. The process of recovering metals from hot vapors thereof, which comprises leading the vapors from the furnace in which they are formed directly into a condensation chamber and subjecting the vapors to immediate and intense cooling, liquefying portions of the vapor in the form of drops, and effecting precipitation of metal dust resulting from the condensation by passing the said liquid metal drops therethrough in opposing direction to the flow thereof.

1,535,253. ATTACHMENT DEVICE. HENRY P. ROBERTS, New York, N. Y., assignor, by mesne assignments, to Dictaphone Corporation, New York, N. Y., a Corporation of New York. Filed Dec. 27, 1922. Serial No. 609,300. 9 Claims. (Cl. 181—21.)

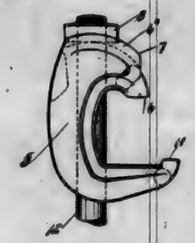
1. In combination, a member having a mouthpiece-receiving portion, a mouthpiece adapted to be engaged in said portion, and spring means separate from the mouthpiece-receiving portion adapted to yieldably retain the mouthpiece therein.

1,535,254. DISPENSING STAND. GEORGE H. RUSSELL, Florence, Ala. Filed Mar. 21, 1924. Serial No. 700,884. 7 Claims. (Cl. 299—80.)



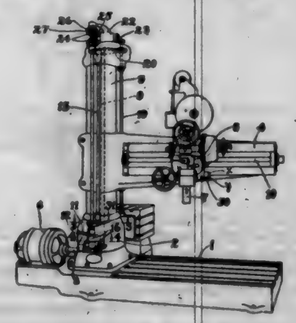
1. In a dispensing device, a base, a housing connected with the base, a sectional head at the upper end of the housing and through which fluid passes, a pipe communicating with the head, said head and pipe adapted to move vertically, a valve member at the lower end of the pipe and adapted to move therewith to control the passage of fluid through the pipe, a plunger carried at the lower end of the pipe, said plunger adapted to control the passage of fluid from the housing, and said plunger and valve adapted to move upon the movement of the head.

1,535,255. AUXILIARY DRIVING ATTACHMENT FOR AUTOMOBILES. CHARLES EDWARD RYAN, Ardmore, Okla. Filed Jan. 9, 1924. Serial No. 685,170. 11 Claims. (Cl. 180—53.)



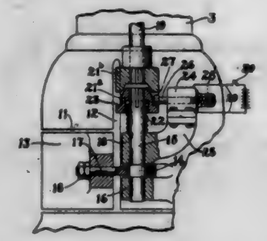
1. In a motor driven vehicle, the combination of a rear axle, a housing embracing the axle, a wheel supported by the housing, a sleeve embracing the axle and

rigidly connected with the wheel, a pulley rotatably mounted on the sleeve, means adapted to connect the



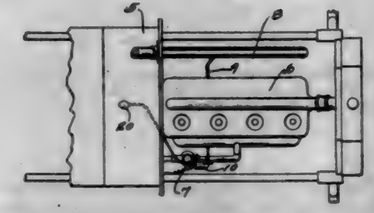
pulley to the rear axle for causing rotation of the pulley on the sleeve, and means for releasing the connecting means between the pulley from the axle.

1,535,256. HOOK. MARCIAN E. SAUNIER, Bay City, Mich. Filed Apr. 23, 1924. Serial No. 708,397. 9 Claims. (Cl. 25—131.5.)



1. A hook adapted to engage the flange of a structural member and having a two point contact therewith, a head on the hook adapted to engage the inside of the flange of the structural member, a vertically disposed opening through the head and a bolt removably mounted therein.

1,535,257. DRILLING MACHINE. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 9, 1921, Serial No. 499,521. Renewed Feb. 23, 1923. 22 Claims. (Cl. 77—28.)

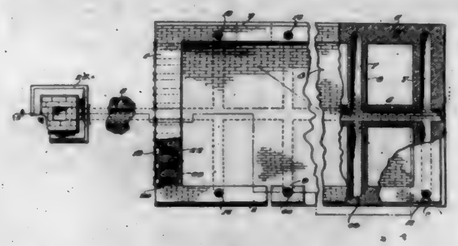


1. In a drilling machine, the combination of a base, a column supported on the base, an arm carried by the column and movable relative to the base about the column axis as a center, drilling mechanism carried by the arm, power means for operating the drilling mechanism, clamping means for securing the arm against the said movement relative to the base, and means adapted to be operated by the power means for effecting the clamping of the arm through the clamping means.

1,535,258. DRILLING MACHINE. WILLARD T. SEARS, Montclair, N. J., assignor to Niles-Bement-Pond Company, New York, N. Y., a Corporation of New Jersey. Filed Sept. 9, 1921, Serial No. 499,522. Renewed Feb. 23, 1923. 12 Claims. (Cl. 77—28.)

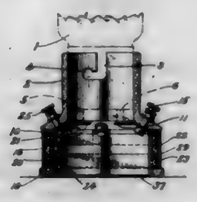
1. In a drilling machine, the combination of a base, a column rotatably supported on the base, drilling mechanism carried by the column, power means for operating the drilling mechanism, clamping means for engaging the column adjacent the base, and means comprising a friction clutch for operatively connecting the clamping means with the power means for effecting the clamping of the column through the clamping means.

1,535,259. FOOT ACCELERATOR. HARLEN M. SELPH, Goose Creek, Tex. Filed July 22, 1924. Serial No. 727,451. 1 Claim. (Cl. 74—30.)



In combination with a carburetor having an extension arm, an accelerator structure having angularly disposed end portions and one of the said end portions is provided with an outstanding flange which is slotted longitudinally and which is disposed in a plane at an acute angle to the longitudinal dimension of that end portion of the plate upon which it is mounted, means pivotally connecting the last mentioned end portion of the plate with the arm and the other end portion of the plate having a hook shaped extension which engages around the intermediate portion of the arm and which is disposed approximately parallel with the longitudinal dimension of the first mentioned end portion of the plate and spaced therefrom.

1,535,260. BRICKKILN. JOHN F. SHERBAHN, McCook, Nebr. Filed Jan. 16, 1924. Serial No. 686,622. 5 Claims. (Cl. 25—132.)



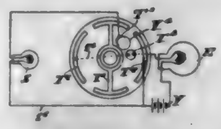
1. The combination of a brick kiln having a fire-box in its front wall in direct communication with the inte-

rior of the kiln, a stack in spaced relation to the front wall of the kiln, a fire-box in said stack, and a return

flue extending longitudinally under the floor of the kiln and establishing communication between the kiln and the base of the stack.

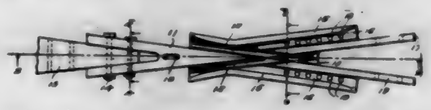
1,535,261. COMBINED TRANSFORMER AND ELECTRON-TUBE SOCKET. JOHN W. SIMMONS, Cleveland, Ohio. Filed Apr. 30, 1923. Serial No. 635,805. 4 Claims. (Cl. 175—356.)

1. In an electron tube apparatus the combination of an electron tube socket having a plurality of terminals, a plurality of grooves formed in said socket and spaced from each other, a primary winding wound in one of said grooves, a secondary winding wound in the other of said grooves, and a short connection between one of said terminals and said primary winding.



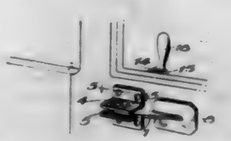
1,535,262. RAILROAD TIE. GEORGE W. SLADE, Baltimore, Md. Filed Jan. 29, 1924. Serial No. 689,329. 1 Claim. (Cl. 238—91.)

A railway tie comprising a plastic body, rail plates embedded in the top thereof, a continuous reinforcing rod having rounded corners and offset portions which pass over the plates and which are secured thereto, the rod being embedded in a concrete body, other reinforcing rods disposed below and outwardly of the first mentioned rod, the last mentioned rods having upset ends terminating in hooks which are connected together and the ends of the tie at the hook portions of the rod having transverse depressions therein.



1,535,263. COMBINATION REAR SIGNAL AND PILOT LIGHT. EDWARD A. SMETZER, Lakewood, Ohio. Filed Jan. 7, 1921. Serial No. 435,660. 4 Claims. (Cl. 177—311.)

2. A single signal for vehicles having a battery, a rear end signal, a front telltale signal, connecting means between the battery, rear end signal, and telltale signal, including cooperating switch means comprising a movable

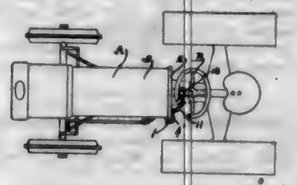


member for successively closing a circuit through said rear end signal and telltale signal in series and thereafter closing a circuit through the rear end signal alone.

1,535,264. RAILWAY SWITCH FROG. JOHN P. STATHAS. Penn, N. Dak. Filed July 15, 1924. Serial No. 726,158. 1 Claim. (Cl. 246—464.)

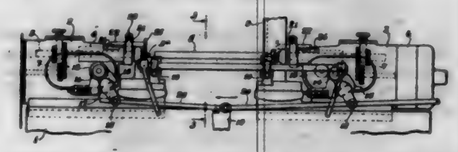
A railway frog structure having a body provided with a wheel-way, a guard flange extending above said way at one side thereof, a filler at the base of said way, said filler being provided with relatively deep vertical channels arranged in the tread surface thereof adapted to contain lubricating means for engagement by the tread of car wheels, and to be spread over the surface of the tread of the wheels and of the frog for lubrication thereof.

1,535,265. AUTOMOBILE SIGNAL. SIDNEY A. STOETZEL, Omaha, Nebr. Filed Dec. 13, 1923. Serial No. 680,536. 2 Claims. (Cl. 116—52.)



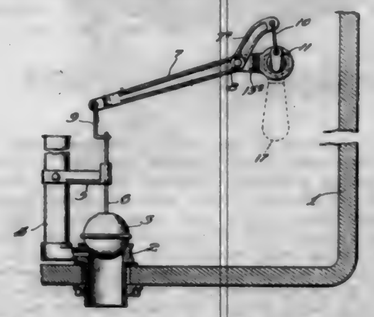
1. A signal comprising brackets situated on the outside and inside of a vehicle respectively, bolts passing through the brackets and vehicle, a ferrule on each bolt serving as a spacer for the inside bracket, nuts on the bolts clamping the inside bracket against said ferrules, a link passing through the vehicle from one bracket to the other, an operating lever mounted on the inside bracket and connected with one end of the link, and a signal arm mounted on the outside and connected to the other end of the link.

1,535,266. STEERING ATTACHMENT FOR TRACTORS. RICHARD T. STRANGE, Jr., Onarga, Ill. Filed Sept. 13, 1923. Serial No. 662,506. 2 Claims. (Cl. 74—33.)



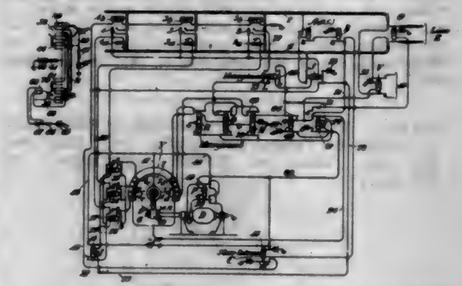
1. In combination with a vehicle including a steering wheel and a dash frame; of a supporting clamp of substantially U-shaped design, one arm being of greater length than the other, said U-shaped clamp being engaged with said dash frame and the arms thereof provided with registering openings, means engaging the dash frame and registering openings to secure the clamp in position, the longer arm of said clamp being provided with an additional opening, a second clamping element comprising a base plate having an angular hook-like projection formed thereon, said base plate being applied to one face of the spider on said steering wheel, an

upper plate applied to the upper face of the spider on said steering wheel, said base and upper plates being provided with registering openings, means engaging the openings of said plates for securing the clamping ele-



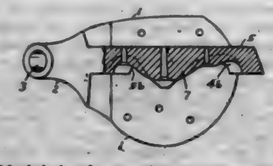
ment to the wheel, and a retractable spring engaged at its one end with the opening in the longer arm of the U-shaped clamp and at its opposite end with the hook-like projection on the clamping element, as and for the purposes described.

1,535,267. SPINDLE-TOP MECHANISM. JOHN J. THACHER, Wethersfield, Conn., assignor to Pratt & Whitney Company, New York, N. Y., a Corporation of New Jersey. Filed June 18, 1923. Serial No. 646,202. 6 Claims. (Cl. 77—18.)



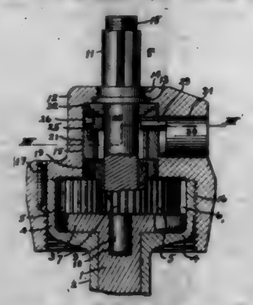
1. In a drilling machine, the combination of a headstock, an axially movable sleeve mounted therein, a drill spindle mounted in the sleeve, and means to limit the forward movement of the sleeve and spindle by engaging either against the work piece or against the headstock.

1,535,268. FLUSHING MECHANISM. OSCAR H. THELEEN, Kenosha, Wis., assignor to Frost Manufacturing Company, Kenosha, Wis., a Corporation of Wisconsin. Filed Apr. 19, 1923. Serial No. 633,103. 5 Claims. (Cl. 4—67.)



1. In a flush tank mechanism, the combination with a solid shaft actuated by a handle, and having a crank, of a pivoted lever, a link between the crank and lever, a valve communicating with the lever adapted to be functioned by the actuation of the handle, said link being disengageable with the lever and crank with the removal of the lever from its pivot, and comprising a stock or body portion having angular connecting portions and substantially parallel extensions, the latter extending in the same direction.

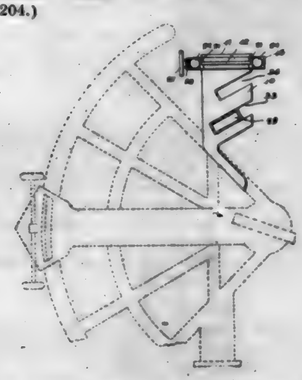
1,535,269. SELECTIVE SIGNALING APPARATUS AND CIRCUITS. JOHN F. TOOMEY, New York, N. Y., assignor to American Telephone and Telegraph Company, a Corporation of New York. Filed Oct. 10, 1919. Serial No. 329,802. 18 Claims. (Cl. 179—43.)



4. In combination, a circuit, a source of current therefor, a device for associating said source with said circuit, a plurality of contacts, a controller for operating said contacts successively after predetermined intervals of time, a motor to drive said controller, and selective means associated with said contacts to cause said source to be removed from said circuit after one of said predetermined intervals of time, and to stop said motor and disengage it from said controller.

1,535,270. GOLF CLUB. RALPH G. TYLER, Bradford, Pa. Filed Nov. 1, 1924. Serial No. 747,216. 6 Claims. (Cl. 273—77.)

3. A golf club head comprising a one-piece frame member comprising the neck, heel and sole, an integrally formed upstanding longitudinal web having its toe and heel portions hollowed out at the rear side of said web, a wooden back block having its frontal portion hollowed out and which block is secured to the sole and at contact with said web, and a face block secured to the front of the said web.

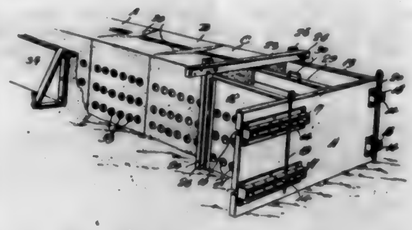


1,535,271. MOTOR-VEHICLE LOCK. LOUIS C. VANDERLIP, Elkhart, Ind. Filed Apr. 28, 1923. Serial No. 635,224. 12 Claims. (Cl. 70—139.)

1. In a steering device for vehicles, the combination with steering gear including a rotary steering post, a housing mounted relatively thereto, driven gears in said housing for steering post actuation, and a fixed cup

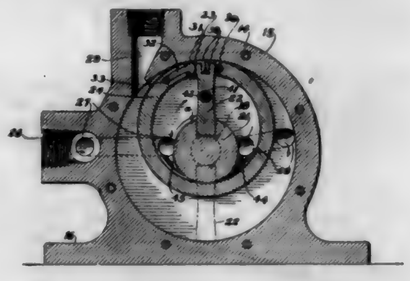
for said housing, of a rotatable wheel shaft fixed against axial movement and provided with a driver pinion which is in constant mesh with said driven gears; clutch means carried by said shaft and comprising an extension of the teeth of said drier pinion; and means for locking said wheel shaft against rotation, said means comprising lock controlled movable clutch means splined to said housing cap, movable axially of said wheel shaft and independently thereof, and adapted to engage said clutch composed of the extension of said driver pinion teeth.

1,535,272. ALTITUDE-DIFFERENCE INSTRUMENT. GUTSBERT B. VROOM, Philadelphia, Pa. Filed Nov. 25, 1921. Serial No. 517,626. 15 Claims. (Cl. 88—204.)



12. In combination with a navigating or surveying sextant adapted to "bring across" an image on the line of collimation thereof, means mounted on said sextant and associated therewith to measure two parts of a right angled astronomical triangle, said means including a mirror rotatably mounted with relation to said sextant and positioned in the line of collimation thereof, said mirror adapted upon rotation to "bring down" the image of a star to a point coincident with the image of a second star "brought across" on the line of collimation of said sextant.

1,535,273. WINDOW STRUCTURE. JOSEPH C. WEGSTEIN, Washburn, Ill. Filed Nov. 26, 1923. Serial No. 676,946. 3 Claims. (Cl. 20—52.1.)



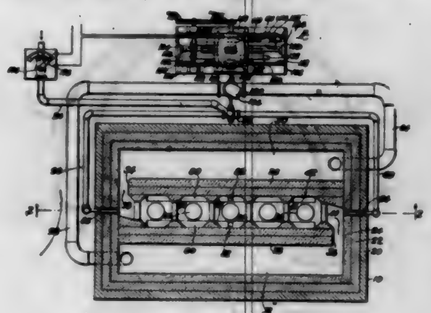
1. In a pocket window structure, in combination, an upper and a lower sash adapted to be telescoped into the pocket of the window, a head piece connected with the top rail of the upper sash and overlying and adapted to be engaged by the lower sash when raised, latch members pivoted to the window casing, means to yieldingly hold said latch members in locking position, complementary means on said head piece arranged to have a locking engagement with said latch members, and means connected to the lower sash arranged to have a slidable relation with said latching members for releasing the same when the lower sash is raised.

1,535,274. PROCESS OF MOLDING AND APPARATUS THEREFOR. JAMES R. WELCH, Roanoke, Va. Filed Apr. 23, 1923. Serial No. 634,012. 12 Claims. (Cl. 22—96.)

1. A molding flask consisting of a side member, and two end members extending in the same direction from said side member and held in substantially parallel relation, with an unobstructed opening between their outer ends adapted to receive backing material.

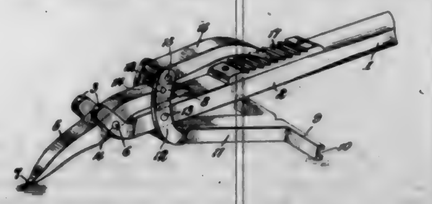
1,535,275. ROTARY PUMP. OLIVER PETER WESTIN, Florence, Wis. Filed Jan. 26, 1924. Serial No. 688,767. 11 Claims. (Cl. 103—144.)

4. A rotary pump comprising a cylinder having inlet and outlet ports, a rotor mounted axially of the cylinder and having a radially extending blade with channels formed in its edges, shoes mounted in said channels, yieldable means urging said shoes outwardly to form a wiping contact with the sides and ends of the cylinder, a cylindrical ring eccentrically mounted within the cylinder and separating the same into two compartments which are in communication with the respective ports, said ring being tangent internally to the rotor and revoluble about its own axis and having a slot through which the blade projects, and a passageway connecting the two compartments.



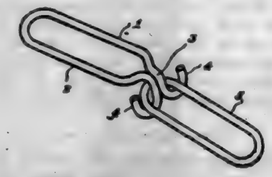
1,535,276. TELEPHONIC ELECTRODE AND METHOD OF CONSTRUCTING SAME. FRANK L. WHITAKER, Olney, Ill. Filed June 11, 1921. Serial No. 476,795. 2 Claims. (Cl. 179—124.)

1. The method of producing an electrode for a variable resistance unit which comprises distributing upon the surface of a conducting base a layer of cementing or bonding material, distributing upon said layer a quantity of conducting granules and subjecting the assemblage to



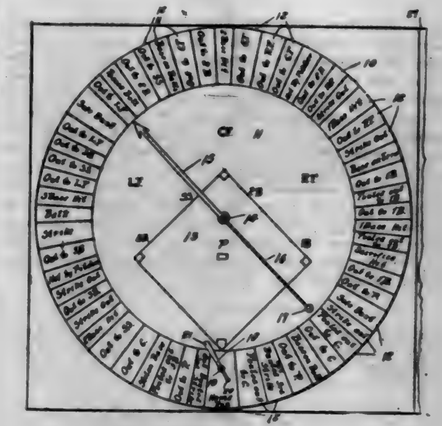
heat and pressure to embed the granules in the cementing or bonding material in electrical contact with the surface of the base.

1,535,277. FURNACE. CARL J. WRIGHT, Toledo, Ohio, assignor to Doherty Research Company, New York, N. Y., a Corporation of Delaware. Filed May 6, 1921. Serial No. 467,250. 8 Claims. (Cl. 263—14.)



1. In a furnace of the class described, an elongated combustion chamber constructed to contain a plurality of crucibles, means for introducing gas into the ends of the chamber, means for pre-heating the air which is used to support combustion in the chamber, means for reversing the flow of air and gas through the combustion chamber, and devices extending inwardly from the walls of the combustion chamber and acting to direct the burning gas into close contact with the crucibles in the chamber.

1,535,278. FLOOR JACK. JOHN YARBROUGH, High Shoals, N. C. Filed Jan. 22, 1925. Serial No. 4,031. 4 Claims. (Cl. 254—15.)

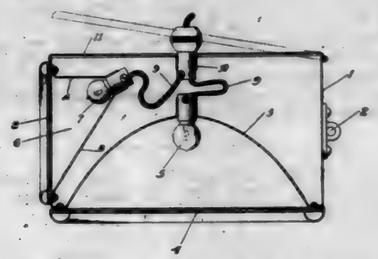


4. A floor jack comprising a presser foot for engagement with a floor board, a shank extending at right angles from the presser foot, said shank terminating at its free end in upturned, spaced arms, a hand lever pivoted adjacent to one end between the lower portions of said arms, said lever terminating at its shorter end in an upturned fork, a spike pivoted intermediate of its ends for limited rocking movement in said fork, the lower, free end of said spike being pointed to engage a joist, the upper end of the spike projecting between the said spaced arms, a pin traversing the latter to limit the rocking movement of the spike, a longitudinal series of transversely arranged rack teeth mounted on the upper face of the hand lever, and a dog pivoted at its lower end between the ends of the spaced arms and adapted to engage at its free end in one of the rack teeth to hold the pointed end of the spike and the presser foot separate, when the spike impinges a joist and the presser foot engages a floor board, and upon pressing downwardly on the handle bar.

1,535,279. HOOK. ALLEN E. YODER, Mount Carmel, Pa. Filed Apr. 14, 1924. Serial No. 706,401. 1 Claim. (Cl. 59—85.)

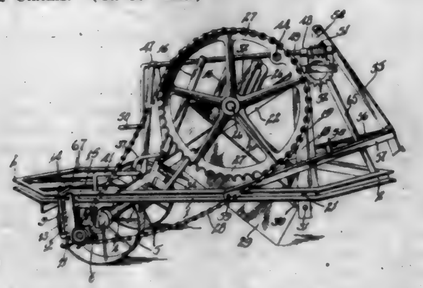
As a new article of manufacture, a hook formed of a single length of material shaped to form a body, said length of material being bent at one end of the body to provide parallel engaging portions and the terminals of the length of material outwardly of said parallel portions being shaped to provide oppositely extending loops opening out in the same direction, said loops extending transversely of the body.

1,535,280. GAME APPARATUS. JOHN J. ZARKER, Wiconisco, Pa. Filed July 18, 1922. Serial No. 575,831. 2 Claims. (Cl. 273—93.)



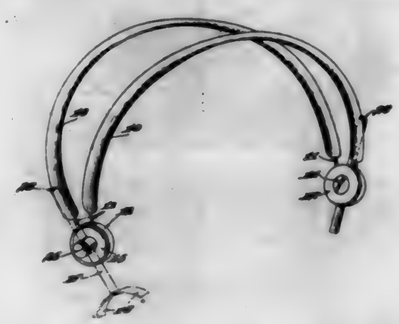
1. A base ball game apparatus having a base or board provided with a field bounded by a continuous circular series of stations designated consecutively to represent different possible plays on the base ball field, an index pivotally mounted at the center of said field and having a pointer arm for traversing and indicating different stations in said series to thereby indicate the play which is supposed to have been made, said index being provided with an operating arm having a terminal knob or ball, said operating arm being transversely resilient whereby to add a degree of uncertainty to the movement of the pointer arm of the index, and a pivotal operating element mounted with its axis beyond the range of movement of the index and provided with a striking arm for invading said path of movement to strike and impart movement to the knob or ball.

1,535,281. WRENCH. JOHN ZILLIOX, Orchard Park, N. Y., assignor of one-half to Frank Zilliox, Buffalo, N. Y. Filed Dec. 21, 1921. Serial No. 523,982. 6 Claims. (Cl. 81—119.)



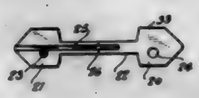
1. A wrench comprising a head provided on its front part with a socket and on the opposite wide sides of its rear part with recesses which extend lengthwise to the rear end of the head, and a detachable handle provided on its front end with two jaws which are separated by a space extending from edge to edge of the handle and which engage frictionally with said recesses of the head.

1,535,282. VEHICLE HEADLIGHT. OTTO E. ZSCHUNKE, Lodi, Calif. Filed Dec. 28, 1923. Serial No. 683,121. 1 Claim. (Cl. 240—46.)



A combination head and side light comprising a primary and a secondary lens at right angles to each other, an independent reflector behind each lens, the axis of the reflector behind the primary lens being substantially concentric with the axis of such lens, the axis of the reflector behind the secondary lens being disposed at an acute angle in a horizontal plane to the axes of both lenses, the horizontal center line of the rear side of the secondary reflector being at right angles to the rearmost edge of the secondary lens, all whereby the light from the primary reflector will be reflected straight ahead while the light from the secondary reflector is reflected at an acute angle to the first light in the same forwardly direction but not back of such secondary lens.

1,535,283. SCRAPER. PHILIP C. ANDERSON, Rapid City, S. Dak. Filed Feb. 15, 1923. Serial No. 619,228. 4 Claims. (Cl. 37—132.)

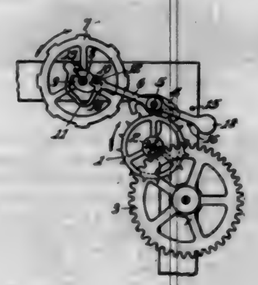


1. A scraper comprising a frame, wheels for supporting said frame, a second frame pivotally secured to said first named frame, said second named frame adapted to be attached to a tractor or the like, and to be supported thereby, a worm carried by said first named frame, a worm gear carried by said first named frame and in mesh with said worm, manually controlled means for rotating said worm, an arm carried by said worm gear, a link connecting said arm with said second named frame whereby a rotation of said worm will raise or lower said first named frame with respect to said second named frame, and a bucket carried by said first named frame and adapted to be moved vertically with respect to the ground when said first named frame is moved with respect to said second named frame.

1,535,284. TELEPHONE HEADSET. RANDALL B. BAKER, Watertown, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a Corporation of Massachusetts. Filed Feb. 23, 1923. Serial No. 620,568. 6 Claims. (Cl. 179—156.)

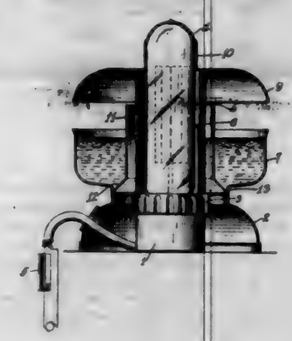
1. A telephone head set having, in combination, a head band provided with an end portion, a receiver carrier provided with a stem, a clamp connection provided with a hole to receive the stem and a recess to receive the end portion of the head band, means for clamping the end portion in the recess of the clamp connection, and resilient means for holding the stem thereto.

1,535,285. PHONOGRAPH NEEDLE. HENRY RAMBERGER, Newark, N. J., assignor of one-half to Alexander Milne, Newark, N. J. Filed Mar. 8, 1924. Serial No. 697,798. 3 Claims. (Cl. 274—37.)



1. A phonograph needle holder formed of a single piece of metal including two head pieces and a connecting shank, one head piece and one-half of the shank provided with a groove and with an opening extending through said shank communicating with said groove, said shank being bent about its center to form a filler sleeve to fit the ordinary stylus socket and to bring the two heads together and means for clamping the two head pieces together to clamp a wire within said groove.

1,535,286. BALANCE ESCAPEMENT. JACOB B. BATES, Cambridge, Ohio, assignor of one-half to W. N. Bradford, Cambridge, Ohio. Filed Apr. 30, 1923. Serial No. 635,441. 5 Claims. (Cl. 58—116.)



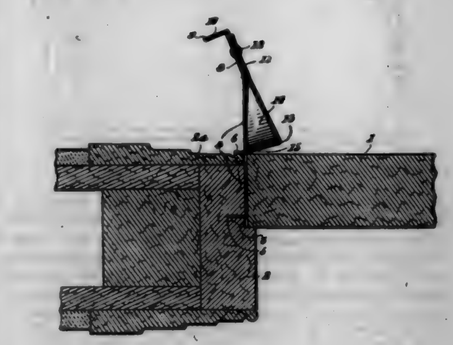
1. A balance escapement comprising an escape wheel, a gear train for actuating said wheel, a pallet operatively associated with said wheel, a balance wheel, a pin in

fixed relation to said balance wheel, and means intermediate said pallet and said pin whereby the balance wheel is actuated to rotate continuously and whereby

said pallet is, in turn, initially actuated by said balance wheel, said means including forks alternately engageable with said pin.

1,535,287. AUTOMATIC HUMIDIFIER. ESTEN B. BEELER, Chicago, Ill. Filed Mar. 26, 1923. Serial No. 627,822. 1 Claim. (Cl. 210—45.)

A humidifier comprising a base, an electric light carried by said base, a water containing reservoir carried by said base, and encircling said light, a centrally disposed sleeve carried by said reservoir and receiving said light, said sleeve keeping the water from contacting with said light, an absorbent sleeve disposed around said first named sleeve and extending above said first named sleeve but terminating short of the top of said light, a cylindrical member enclosing said absorbent sleeve, and a hood carried by said absorbent sleeve and having a cylindrical portion which permits the light to project thereabove, whereby said light when energized changes the water in said absorbent sleeve into water vapor and also attracts the attention of the passerby.

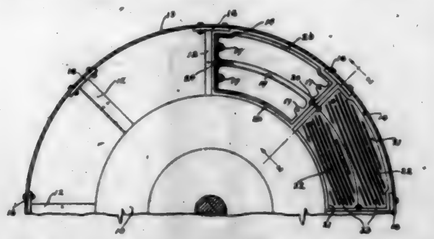


1,535,288. WATER HEATER. WILLIAM E. BEILMAN, Buffalo, N. Y. Filed July 5, 1924. Serial No. 724,490. 2 Claims. (Cl. 236—20.)

1. In a water heater, the combination of a casing, a reservoir mounted in said casing, main and secondary gas burners arranged in the casing below said reservoir, main and secondary valves for controlling the supply of gas to said main and secondary burners, the secondary

burner having an air inlet communicating with the atmosphere exterior of said casing, and thermostatic means for operating said valves.

1,535,289. PORTABLE DOORLOCK. WILLIAM S. CALLERY, Wheatland, Calif. Filed Feb. 28, 1924. Serial No. 695,736. 7 Claims. (Cl. 292—297.)

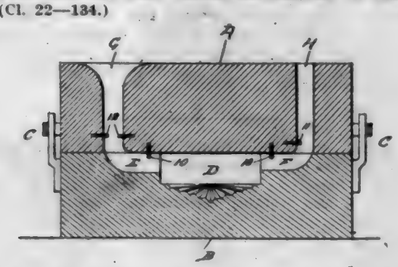


1. In a portable door lock, a plate adapted for mounting on the face of a door jamb, a locking arm swingingly carried by the plate adapted to be moved into engagement with a door, said plate having an angle portion at its point of supporting the locking arm whereby the locking arm is adapted to be laterally displaced from the swinging path of movement of the door when moved to a releasing position, and an apertured extension carried by one end of the plate.

1,535,290. SCREEN PLATE FOR CLAY MACHINES. FRANK C. CARNAHAN, Brazil, Ind. Filed July 24, 1924. Serial No. 728,027. 3 Claims. (Cl. 83—45.)

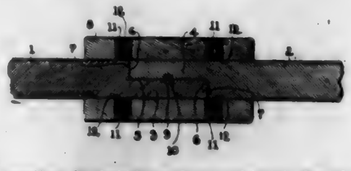
3. In a clay working machine the combination of a dry pan comprising a central portion, a plurality of radiating braces extending outwardly thereof, a plurality of arcuate locking flanges transversely secured to the outer ends of said braces, a rim engaging the outer side of said flanges, means for securing said rim to said flanges, a screen plate frame adapted to be positioned between said rim and said central portion and seating at

opposite ends on said braces, said frame having its opposite outer end portions offset to receive said flanges for locking the frame against circumferential movement,



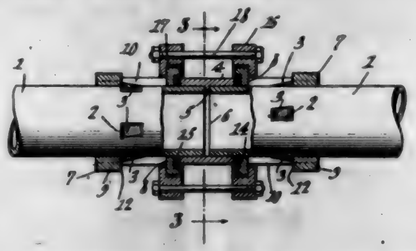
a pair of screen plates adapted to seat in said frame, said plates having openings therethrough for sifting pulverized material, means for holding the plates within the frame, and means for holding the frame to the braces.

1,535,291. PROTECTOR MECHANISM FOR LOOMS. OSBORNE C. CASSELL, Winchester, Va., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed May 21, 1923. Serial No. 640,346. 3 Claims. (Cl. 139—345.)



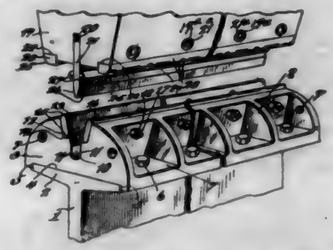
1. In a loom having shipper mechanism, a lay, a protector rod and dagger thereon, and a spring to hold said dagger in knock-off position, the combination of cooperating elements associated with the lay and shipper mechanism, said elements being held in inoperative position so long as the spring is effective to hold the protector dagger in knock-off position, but being released to move to operative position to stop the loom when the spring becomes defective and incapable of holding the dagger in knock-off position.

1,535,292. MOLD WITH MEANS FOR SCORING CASTINGS. MONROE S. CLAWSON, Upper Montclair, N. J. Filed Mar. 14, 1923. Serial No. 625,149. 8 Claims. (Cl. 22—134.)



1. In a mold, scoring means for the casting consisting of metallic projections extending into the runners, filling passages and riser.

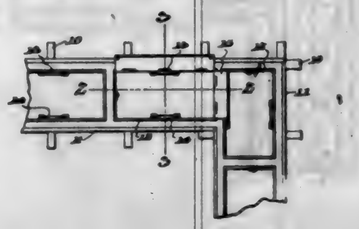
1,535,293. SHAFT COUPLING. COY CLAY COLLINS, Hillsboro, N. C. Filed Sept. 29, 1921. Serial No. 504,043. 2 Claims. (Cl. 287—104.)



1. A coupling for bobbin and other like shafts of equal and uniform diameter comprising two, like, stepped meeting ends of the shafts, a pin traversing the meeting ends in the plane of the adjacent surfaces thereof and engaging both of said meeting ends, a coupling or sleeve surrounding the stepped meeting ends, and movable both longitudinally and rotatably on said ends, and set screws passed through the coupling and engaging the shaft sections and countersunk in the coupling, the coupling or sleeve being imperforate except at the points where the set screws extend therethrough to prevent loss of said pin therethrough.

1,535,294. PIPE COUPLING. THOMAS S. COLLINS, West Union, W. Va. Filed Mar. 20, 1924. Serial No. 700,665. 2 Claims. (Cl. 285—132.)

1. The combination with a pair of pipe sections having lugs, of a sleeve receiving the pipe sections, couplings surrounding the pipe sections and cooperating at their inner ends with the sleeve, the outer ends of the couplings having grooves for the passage of the lugs, the couplings being rotatable to dispose the grooves out of alinement with the lugs, thereby anchoring the couplings on the pipe sections, collars surrounding and engaging the inner ends of the couplings, and tightening devices connecting the collars.



1,535,295. CORRUGATION-FORMING DIES FOR METAL PLATES. WILLIAM M. CONNERY, Philadelphia, Pa. Filed July 16, 1924. Serial No. 726,348. 10 Claims. (Cl. 153—76.)

1. As an article of manufacture, a fixed head provided with a corrugation forming knife, and a removable bolster or head, the latter having a cannel to receive the corrugation when formed by the knife, said cannel having

opposed reversible facing bars with their edges projecting beyond the upper portion of the bolster and over which a plate creeps during the forming of the corrugation, the fixed head having means to straddle the facing bars and acting to depress the opposite sides of the plate the required distance.

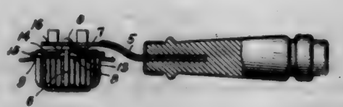
1,535,296. MOLD FOR WALL CONSTRUCTION. PAUL C. CHOLL, Pueblo, Colo. Filed Apr. 18, 1922. Serial No. 554,623. 2 Claims. (Cl. 25—131.)

1. A plurality of spaced molds for wall construction, each comprising a box-like device and including an upper pivoted deflecting element, adjacent elements being movable to position for providing chutes having upwardly and outwardly flared walls for guiding plastic cement into the spaces between the molds.

1,535,297. CORING DEVICE. ORMAN W. DICKERSON, Oklahoma City, Okla. Filed Apr. 22, 1922. Serial No. 556,044. 1 Claim. (Cl. 255—61.)

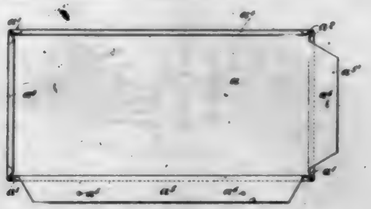
In a coring device for rotary drills, the combination with a drill shoe having a bore and provided in its lower end with a restricted outlet opening and in its side walls with blade receiving openings, of a support shiftable within the bore and having a reduced lower end adapted to engage in said outlet opening, said lower end being adapted for engagement with a coring tool, blind blades carried by the support, a hanger for the support and shiftable within the support, the shifting of said hanger within the support in one direction forcing said blades outwardly for engagement in the blade receiving openings of the shoe, said hanger being provided with a longitudinal bore having an inlet extending through the wall of the hanger at the upper end of the hanger and outlets extending through the wall of the hanger adjacent the lower end thereof and aligning with passages formed in said blades to provide a water course.

1,535,298. ROCKER FOR CHAIRS. JOHN A. DRABINSKY, Camden, N. J. Filed Feb. 0, 1923. Serial No. 618,095. 4 Claims. (Cl. 155—74.)



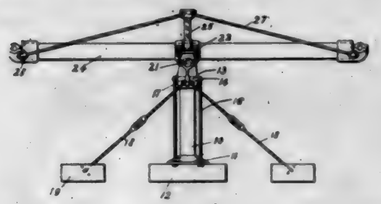
1. A rocker for chairs comprising a curvilinear rocker element, a channel bar secured thereto, slide members adjustably secured on said channel bar, and hinged gripping means mounted on said slide members.

1,535,299. HEADBAND FOR TELEPHONE SETS. VERNON DURBIN, Newton, Mass., assignor to The Holtzer-Cabot Electric Company, Roxbury, Mass., a Corporation of Massachusetts. Filed Mar. 5, 1923. Serial No. 622,780. 1 Claim. (Cl. 179—156.)



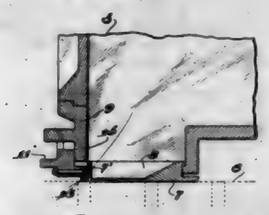
A head band for telephone head sets consisting of a normally curved wire stiffener and a normally straight rubber covering having a central longitudinal hole to receive the stiffener, the covering being unattached otherwise to the stiffener, the tendency of the stiffener to maintain its shape affording head gripping power to the band and the greater resistance of the covering to deformation by bending edgewise than by bending flatwise holding it with one of its flat sides on the inside of the curve imparted by the stiffener.

1,535,300. PIE CRIMPER. JOHN C. FORSTER, Pittsburgh, Pa. Filed Jan. 10, 1925. Serial No. 1,590. 4 Claims. (Cl. 107—49.)



2. A sheet metal pie crimper having in combination a supporting shank, a perforated trimming disc, a crimping wheel having ears extending through the perforations of said disc and secured thereto and means for rotatably mounting said disc and wheel on said shank.

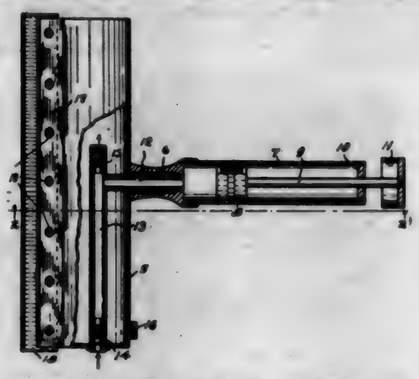
1,535,301. VITREOUS ENAMELED TILE, BRICK, AND THE LIKE. JAMES HENRY EDWARD FRANCIS, Deptford, London, England. Filed Feb. 14, 1924. Serial No. 692,838. 3 Claims. (Cl. 72—18.)



1. A vitreous enameled tile, brick or the like formed from a metal plate having inwardly curved edges, characterized in that said edges throughout their length are each inwardly turned through an angle greater than 90° without joint, as set forth.

1,535,302. DRILLING DEVICE. LOVIAS FAIRY FRASER, Drumright, Okla. Filed Apr. 28, 1924. Serial No. 709,597. 3 Claims. (Cl. 74—5.)

1. In combination, a base, a post rising therefrom, a U-shaped bearing supported by the post, a two part clamp pivoted in said bearings, a tubular beam slidable within the clamp for lateral adjustment with respect to the post, and stay rods terminally connected with the post and ground.

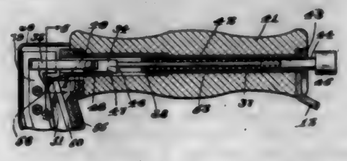


1,535,303. FLOATING STRIKE FOR BRICKMAKING MACHINES. IVAN C. FREY, York, Pa., assignor to Lancaster Iron Works, Inc., a Corporation of Pennsylvania. Filed Nov. 13, 1924. Serial No. 749,746. 8 Claims. (Cl. 25—104.)

1. The combination with a press box from which clay is adapted to be expressed, of a strike-off strip secured to said box at one side thereof for up and down movement with respect thereto, and means for by-passing some of the clay in the box onto the said strip to force it downward.

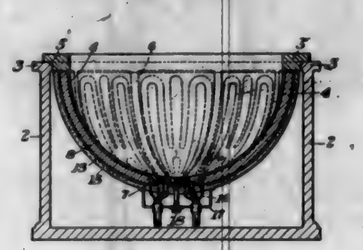
1,535,304. WINDOW-CLEANING DEVICE. OLOF B. GENDIN, Seattle, Wash. Filed May 15, 1924. Serial No. 713,382. 3 Claims. (Cl. 15—126.)

1. A cleaning device of the class described embodying a liquid receptacle, an elongated cleaning pad carried by said liquid receptacle and having one edge subject to contact with liquid within said receptacle, a handle on said receptacle, and manually operated pump



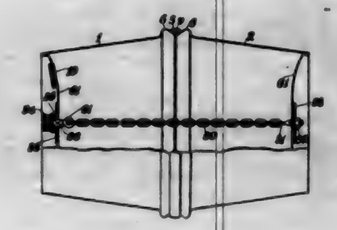
means disposed with said handle for filling said receptacle and for producing a pressure in said receptacle to force said liquid out through said pad.

1,535,305. ATTACHMENT FOR SWIFTS. MARRIETT GREENWAY, Paterson, N. J., assignor of one-third to Charles Ehrentraut and one-third to George Hindle, both of Paterson, N. J. Filed Dec. 22, 1924. Serial No. 757,385. 3 Claims. (Cl. 242—127.)



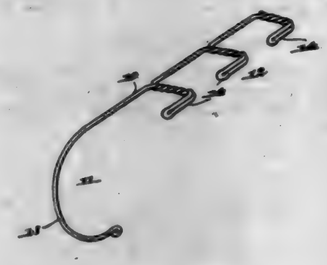
1. A swift including a skein-supporting cross-piece having projecting therefrom substantially radially outwardly spaced separators having precipitate sides and projecting to an extent sufficient to protrude through the skein placed on the swift and adapted to receive between them and positively maintain separated the crossed groups of skein windings.

1,535,306. CONTROLLING MEANS FOR ELECTRICAL DEVICES. JOHN E. HARVEY, Dorchester, Mass. Filed Sept. 13, 1923. Serial No. 662,574. 4 Claims. (Cl. 219—63.)



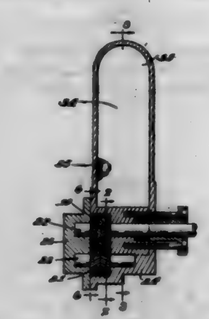
1. In a device of the class described, the combination of a source of power, a switch for connecting the same to the heating element of the device, a thermostat associated with the heating element, a second thermostat associated with said switch and controlled by the first thermostat to operate the switch to disconnect the source of power from the heating element, and manually operable means for controlling said switch independently of the thermostat.

1,535,307. ELECTRIC MELTING POT. ROSCOE C. HAWK, Pittsburgh, Pa. Filed Oct. 17, 1922. Serial No. 595,083. 11 Claims. (Cl. 219—43.)



5. In an electric melting apparatus, a melting pot having its outer surface formed with a series of ribs, and a separate heating unit mounted between each pair of adjacent ribs, substantially as described.

1,535,308. CONTAINING VESSEL. HENRY SELBY HELE-SHAW and ERNEST TRIBE, London, England; Charles Tribe executor or administrator of said Ernest Tribe, deceased, assignors to The Kenward Collapsible (Steel) Barrel Company Limited, London, England. Filed Oct. 14, 1921. Serial No. 507,736. 6 Claims. (Cl. 220—6.)



1. A container comprising two detachable portions each closed at one end and open at the other and held together by connecting devices coaxially with their open ends adjacent, inwardly inclined flanges on the open ends of the containers, and a non-mechanically compressed packing ring of flexible material of hollow cross section having a supporting housing at its external diameter and having its inner circumference formed of two free edges inclined correspondingly to the inturned flanges of the containers, the housing being arranged to hold the hollow packing ring within the space between the inwardly inclined adjacent flanges of the two portions of the container and within their outer diameter, and the inturned edges of the hollow ring held by fluid pressure against the outer faces of the adjacent flanges.

1,535,309. HAIR-HOLDING DEVICE. HENRY HILLEBRAND, Saratoga Springs, N. Y. Filed Nov. 12, 1924. Serial No. 749,520. 4 Claims. (Cl. 132—46.)

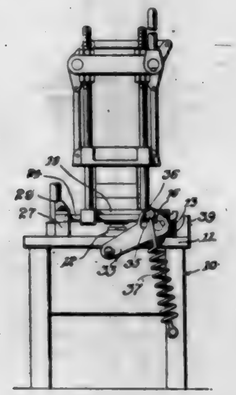
3. A hair holding device comprising a body portion formed with a relatively large hook at one end for engagement with the ear of a wearer, and a plurality of spaced hooks adapted to extend outwardly from the side of the head for holding the hair off the face.

1,535,310. GEAR PUMP. STANLEY H. HOBSON, Rockford, Ill., assignor to Geo. D. Roper Corporation, Rockford, Ill., a Corporation of Illinois. Filed Aug. 8, 1921. Serial No. 490,757. 3 Claims. (Cl. 103—176.)

1. In a pump of the character described, the combination of a casing having inlet and outlet openings, intermeshing herring-bone gears rotatable in the casing between said openings, each gear being formed of two parts, a supporting shaft for each gear, one of which shaft is adapted for driving, the gear parts on the driving shaft being loosely keyed thereto and the gear parts on the other shaft being fixedly connected together.

1,535,311. PROCESS OF PRODUCING SUBSTANTIALLY PURE IRON. ARTHUR P. HOLLOWAY and SAMUEL PEACOCK, Wheeling, W. Va., assignors to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of West Virginia. Filed June 12, 1924. Serial No. 719,582. 10 Claims. (Cl. 75—27.)

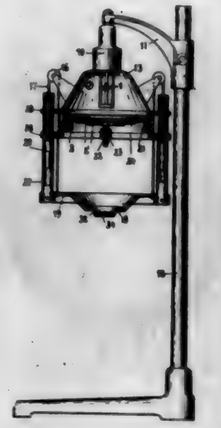
1. The process of producing an iron product exceeding 99 per cent pure iron, which consists in refining said iron with the aid of air in a suitable fuel fed furnace; stopping said refining action when said iron begins to show signs of decarburization; transferring said iron to an electrically heated furnace, raising the tem-



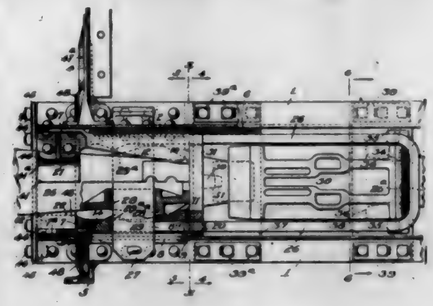
perature in said last named furnace when out of contact with air to a point higher than is practicable in a fuel-fed furnace sufficiently for any carbon present to reduce any iron oxide present; and agitating the molten mass and feeding iron oxide thereto sufficient for the metalloids present to be reduced to less than 0.15 per cent.

1,535,312. WATERPROOF COVERING FOR CAMERAS. RICHARD THOMAS HOSKING, Wilmette, Ill. Filed Sept. 15, 1923. Serial No. 663,005. 1 Claim. (Cl. 150—52.)

The combination with a motion picture camera having a lens and an operating crank, of a flexible waterproof covering for said camera having a yielding opening to permit the projection of said lens therethrough, said camera having an elongated water-tight gland through which said operating crank is projected, and a packing nut at the outer end of said gland by means of which said gland may be projected through a suitable opening formed in said water-tight covering, whereby the union between said covering and said gland is rendered water-tight by tightening said packing nut.



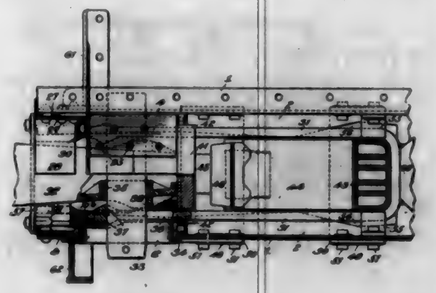
1,535,313. DIE-CASTING MACHINE. CHARLES F. HUMMEL, Ilion, N. Y. Filed Mar. 8, 1924. Serial No. 697,774. 10 Claims. (Cl. 22—91.)



1. In a casting machine, a mold support, means to lock the mold support in its lowered position and means to unlock and raise the support in a single operation.

1,535,314. THERAPEUTIC-LIGHT APPARATUS. VICTOR THODOR JULIN, Djursholms-Danderyd, Sweden. Filed Feb. 26, 1923. Serial No. 621,423. 7 Claims. (Cl. 240—1.)

1. Apparatus for decomposing light and applying selected rays thereof comprising a source of light, a light dispersing annular prism capable of collecting the refracted rays of equal color substantially to the same point, and a disc with a central opening adjustable with regard to said prism in such manner that only the refracted rays of the color to be applied meet the central opening of the disc.



1,535,315. DRAFT RIGGING. BYERS W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed Mar. 20, 1916, Serial No. 85,427. Renewed Mar. 3, 1925. 39 Claims. (Cl. 213—40.)

1. In a draft rigging and in combination with the coupler, a horizontally disposed yoke, and cushioning mechanism therefor, of a follower, means for supporting the same, a projection on said follower, adapted to contact with said supporting means, said projection serving as means for alining the cushioning mechanism and the follower, and means on said follower for supporting the yoke.

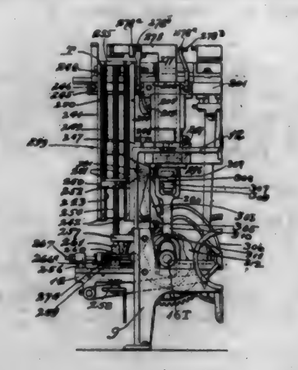
1,535,316. DRAFT RIGGING. BYERS W. KADEL, Baltimore, Md., assignor, by mesne assignments, to The Symington Company, a Corporation of Maryland. Filed May 21, 1918, Serial No. 235,877. Renewed Mar. 3, 1925. 24 Claims. (Cl. 213—40.)

1. In a draft rigging the combination with a yoke, and cushioning mechanism of draft sills, cheek plates attached thereto, said sills and cheek-plates being provided with registering slots, said cheek-plates also being provided adjacent the rear end of the said slot with spaced stop faces, the said yoke arms being adapted to

extend between the spaced stops on the said cheek plates, the portions of the cheek-plates in the rear of the ends of the said slots being hollow in cross section.

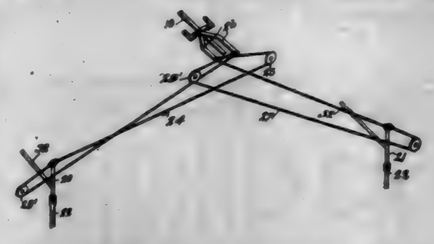
1,535,317. PROCESS OF ANNEALING STEEL SHEETS. IRVIN JOHN KOEHNLINE, Bridgeport, Ohio, and SAMUEL PEACOCK, Wheeling, W. Va. Filed Jan. 6, 1925. Serial No. 882. 2 Claims. (Cl. 148—4.)

1. The process of annealing thin steel sheets at relatively high temperatures while preventing said sheets from sticking together which consists in coating the surfaces of said sheets with separating layers of an alkali earth hydroxide, and subjecting the coated sheets to an annealing temperature above 800° C.



1,535,318. APPARATUS FOR ELECTROPLATING. IRVIN JOHN KOEHNLINE, Bridgeport, and WILLIAM EARL ARMSTRONG, Martins Ferry, Ohio. Filed Aug. 16, 1923. Serial No. 657,757. 5 Claims. (Cl. 204—11.)

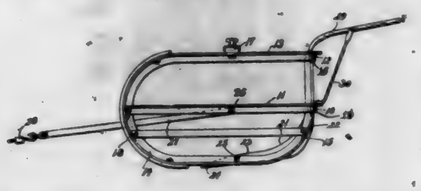
1. In electro-plating apparatus, a tank for containing an electrolyte, a table arranged for rotation within said tank, an upright shaft about which said table rotates, means for driving said shaft, a sleeve splined on said shaft and rigidly attached to said table, anodes removably mounted on said table, means for holding articles to be plated on said table in spaced relation to said anodes, means connected to the positive pole of an electrical circuit supplying current to said sleeve, current conducting means between said sleeve and said anodes, and current conducting means leading from the negative pole of said circuit and arranged to be detachably connected to said articles to be plated.



1,535,319. BINDER-BLANK FEED MECHANISM. ALOYSIUS JOSEPH KUSTERER, Richmond, Va., assignor to Consolidated Paper and Box Manufacturing Company, Richmond, Va., a Corporation of Virginia. Original application filed May 29, 1920, Serial No. 385,361. Divided and this application filed Aug. 10, 1921. Serial No. 491,222. 12 Claims. (Cl. 271—62.)

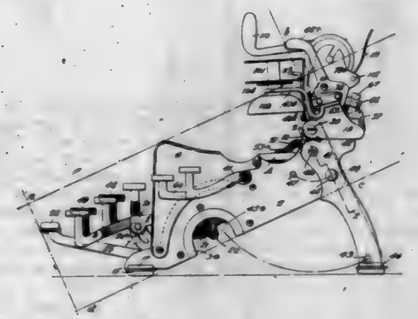
1. In a tray forming mechanism, the combination of a guide for blanks, a magazine adapted to hold a stack of oblong blanks transversely of the guideway, an oscillating arm adapted to transfer blanks from the magazine to the guideway, said arm moving through an angle of ninety degrees whereby to deposit the blanks

lengthwise of the guideway and a rigid abutment at the top of the stack for preventing the stack from raising above a certain height.



1,535,320. GATE. HENRY G. LANE, Colquitt, Ga. Filed July 6, 1920. Serial No. 394,149. 1 Claim. (Cl. 39—57.)

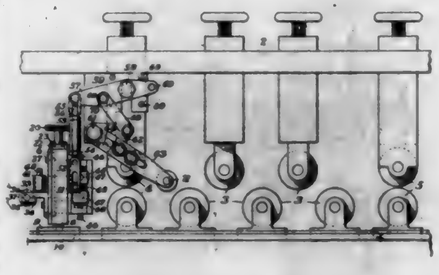
The combination with a gate post and a gate, of a vertically disposed rod secured to said gate at the upper and lower ends thereof, the upper securing point lying in a plane slightly in advance of the lower securing point thereby arranging said rod at a slight inclination with respect to the ground, a fixed socket secured to said post adjacent the lower end thereof, an angular shaped lever pivotally mounted intermediate its ends on the upper surface of said post, a socket provided at one end of said lever, spherical extremities formed on said rod and each extremity adapted to be received in the adjacent socket, a frame supported on the upper end of said post, an arcuate shaped bar terminally secured to said frame and provided at spaced intervals with notches arranged on the outer edge thereof, a pair of pivoted pawls carried by the angular end of said lever and adapted to normally engage the adjacent notch, a pair of pulleys carried by said frame and arranged at opposing points thereon, a fixed member arranged on each side of the gate, a vehicle actuated element pivotally secured to each fixed member, a pulley projecting from each fixed member, a cable one end of which is secured to one vehicle actuated element while the other end is trained over the adjacent pulley thence extending past the nearest pawl and through the other pawl, thence back toward its secured point and trained over one frame pulley and then directed toward the opposite fixed member pulley trained thereover and secured to the opposite vehicle actuated element, a second cable having one end secured to the last mentioned vehicle, actuated element and passed through the first mentioned pawl and thence trained over the opposite frame pulley and



thence directed toward and secured to the first mentioned vehicle actuated element as and for the purpose specified and spring means for retaining the vehicle actuated elements in a vertical position.

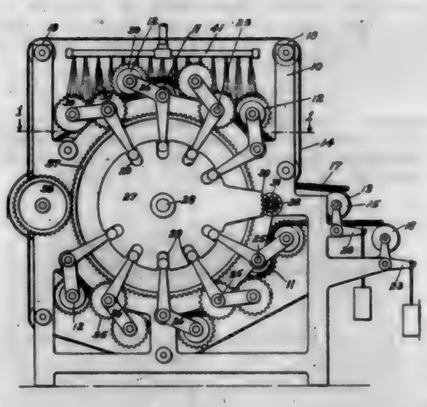
1,535,321. STONE-GATHERING MACHINE. PETER L. LARSEN and JAMES O. ELLIS, Paul, Idaho, assignors of one-ninth to Eddie McDonald and two-ninths to Lester G. Taylor, both of Paul, Idaho. Filed Oct. 31, 1923. Serial No. 672,031. 3 Claims. (Cl. 55—17.)

1. A device of the character described comprising upper and lower frame bars of U-shape, the arms of the upper bar being bent downwardly and rearwardly and secured to define runners, draft links connected with the runners, an evener connected with the draft links, a transverse bar connecting said curved arms, a hand lever connected with the bars for dumping the device, and a plurality of teeth secured to the bight portions of said bars and extending forwardly with their lower surfaces traveling along the ground.



1,535,322. TYPEWRITING MACHINE. EMMIT G. LATTA, Syracuse, N. Y. Filed July 7, 1921. Serial No. 482,974. 34 Claims. (Cl. 197—186.)

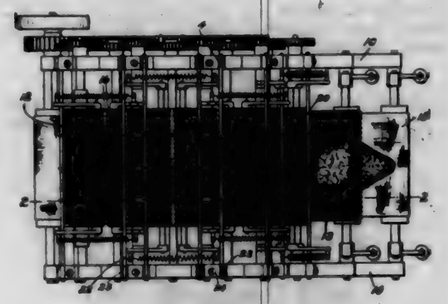
1. In a typewriting machine, the combination of a main frame, a universal bar supported by the main frame, a folding frame mounted on said main frame, a platen and a ribbon vibrator supported on the folding frame and a link connecting the universal bar to the vibrator and having a pivoted connection at each end, and means for shifting one end of the link either up or down from its normal central position.



1,535,323. TWISTER. JACOB T. LEECH, Beaver, Pa., assignor to Union Drawn Steel Company, Beaver Falls, Pa., a Corporation of Pennsylvania. Filed Oct. 21, 1924. Serial No. 744,874. 9 Claims. (Cl. 153—78.)

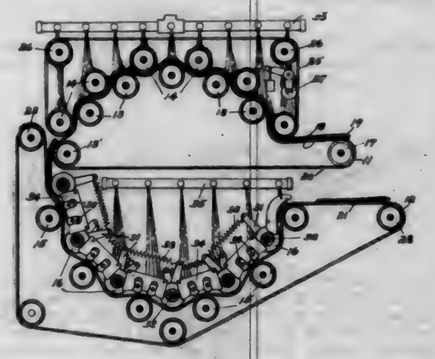
1. The combination with a twister for taking the twist out of work, said twister having means adapted to be set to different positions for imparting the desired reverse twist to the work, of means for drawing the work through the twister and holding the portion of the work engaged thereby against rotation, and means for

automatically setting said first-mentioned means in the desired position after it has been engaged by said second-mentioned means, substantially as described.



1,535,324. MACHINE FOR SHRINKING FELT ARTICLES. WILLIAM A. LORENZ, Hartford, Conn., assignor to United States Hat Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 23, 1923. Serial No. 647,312. 17 Claims. (Cl. 28—6.)

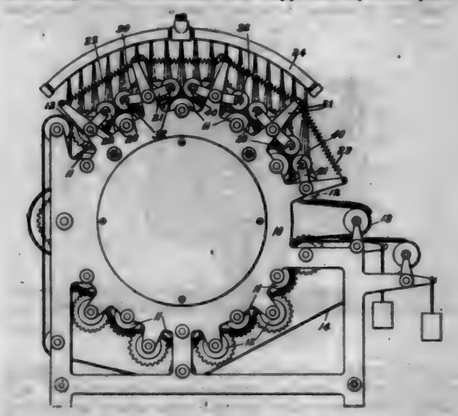
11. In a machine of the character described, a bat carrying belt, staggeredly and generally circularly arranged supporting rolls and deflecting rolls forming a generally circular and wavy path for said belt and the bats carried thereby, a driven shaft journalled centrally of said rolls, a large gear fixed on each end of said shaft, gears on one end of some of said rolls meshing with one of said large gears, and gears on the other end of other of said rolls meshing with the other large gear.



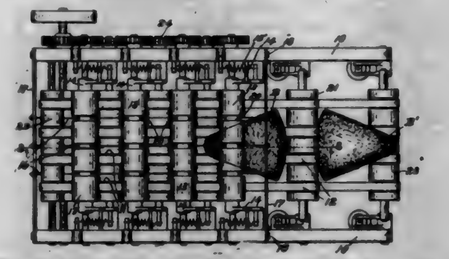
1,535,325. MACHINE FOR SHRINKING FELT ARTICLES. WILLIAM A. LORENZ, Hartford, Conn., assignor to United States Hat Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed June 25, 1923. Serial No. 647,587. 16 Claims. (Cl. 28—6.)

1. In a machine of the character described, a plurality of generally circularly arranged supporting rolls forming a circular track-way, a bat carrying belt supported thereby for travel in a generally circular path, a second belt paired with the first one for a portion of

the circular path of the latter, and cylindrical members having rolling contact with that portion of the operative face of said first belt not paired with said second belt.



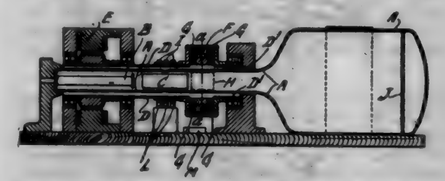
1,535,326. MACHINE FOR SHRINKING FELT ARTICLES. WILLIAM A. LORENZ, Hartford, Conn., assignor to United States Hat Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 16, 1923. Serial No. 651,700. Renewed Oct. 22, 1924. 8 Claims. (Cl. 28—6.)



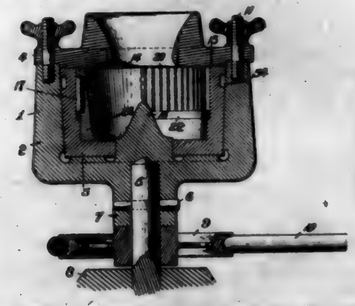
1. In a machine of the character described, a plurality of generally circularly arranged supporting rolls and deflecting rolls therebetween, a belt passing in a generally semi-circular path between the supporting rolls and deflecting rolls at the top of the machine and returning through the center of the machine to the forward end thereof, and a second belt passing between the supporting and deflecting rolls at the bottom of the machine and carrying the bats from the delivery end of said first belt to the forward end of the machine.

1,535,327. MACHINE FOR SHRINKING FELT ARTICLES. HOMER A. GENEST, Hartford, Conn., assignor to United States Hat Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 16, 1923. Serial No. 651,710. 15 Claims. (Cl. 28—6.)

7. In a machine of the character described, supporting rolls, wave rolls in staggered relation thereto, a bat carrying belt passing between said rolls, pressure rollers interposed between said wave rolls and mounted for movement relative to said belt, and stripper plates straddling said wave rolls and supported by said pressure rollers and arranged to prevent the bats from wrapping themselves upon said wave rolls and pressure rollers.

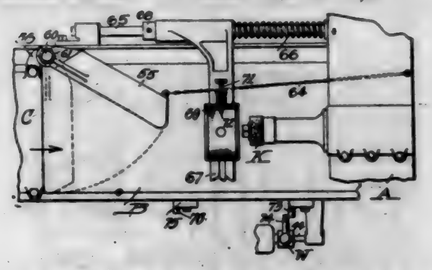


1,535,328. MACHINE FOR SHRINKING FELT ARTICLES. WILLIAM A. LORENZ, Hartford, Conn., assignor to United States Hat Machinery Corporation, New York, N. Y., a Corporation of Virginia. Filed July 16, 1923. Serial No. 651,701. Renewed Sept. 22, 1924. 11 Claims. (Cl. 28—6.)



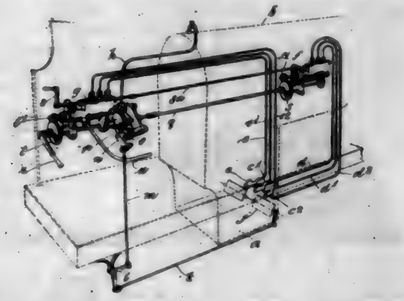
7. In a machine of the character described, supporting rolls, transversely spaced apart endless tapes passing over said rolls, cylindrical members engaging the bat carrying face of said tapes and the bats carried thereby, and stripper rods in fixed position above said tapes and beneath the axes of said cylindrical members, said stripper rods intersecting the peripheries of said members.

1,535,329. MEANS FOR OBTAINING THE POLAR DIAGRAM OF AN ALTERNATING-CURRENT WAVE. JOHN TURNER MACGREGOR-MORRIS and FRANK RAYMOND FABER RAMSAY, London, England. Filed Feb. 5, 1923. Serial No. 617,118. 9 Claims. (Cl. 171—95.)



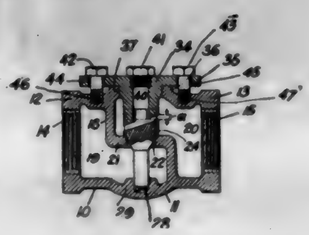
1. The combination with a cathode ray tube having a fluorescent screen of a device adapted to deflect the cathode rays, means for applying an alternating current wave to that device and means for rotating the device in synchronism with the wave.

1,535,330. METHOD OF CENTRIFUGAL CASTING. CHESTER B. MILLS, Brooklyn, N. Y., assignor to The Sperry Gyroscope Company, Brooklyn, N. Y., a Corporation of New York. Filed July 17, 1919. Serial No. 311,489. 14 Claims. (Cl. 22—65.)



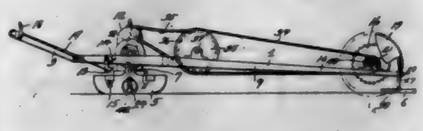
1. A mould, comprising a pot mounted for rotation on a vertical axis, a form adapted to fit into said mould, said form being provided with means for holding inserts, and a cover for said pot having an opening therethrough.

1,535,331. GRINDING MACHINE. MYLES MORGAN, Worcester, Mass., assignor, by mesne assignments, to Greenfield Tap and Die Corporation, Greenfield, Mass., a Corporation of Massachusetts. Filed Feb. 3, 1921. Serial No. 442,258. 3 Claims. (Cl. 51—268.)



1. In a grinding machine, the combination of a reciprocating table, a work-holding head, a cover or guard attached to said head, and a connection thereto so that the cover will be automatically opened when the table moves to retracted position.

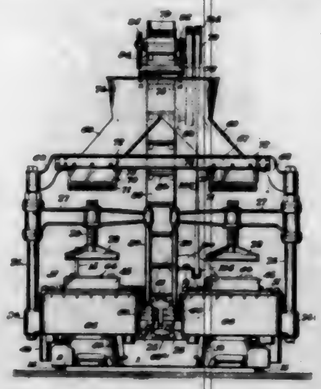
1,535,332. FURNACE ADAPTED FOR BURNING OIL AND OTHER PROJECTABLE FUELS. NORMAN HUSON MORRIS, London, England. Filed Apr. 21, 1924. Serial No. 707,944. 10 Claims. (Cl. 158—28.)



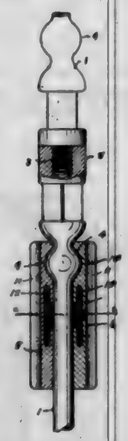
6. In control mechanism for a furnace comprising a plurality of burners, the combination of co-ordinated fuel and steam valves adapted for two different phases of control one phase being that of graduated simultaneous admission of fuel and steam to all of the burners and the other phase being that of graduated admission of fuel and steam to the different burners in sequence, a common control for said valves and an air admission damper device operatively connected with said common control, substantially as set forth.

1,533,333. VALVE. ALBERT W. MORSE, Long Island City, N. Y. Filed Mar. 28, 1923. Serial No. 628,239. 5 Claims. (Cl. 251—127.)

1. In a valve structure of the type in which a valve is fitted into its seat by pressing one upon the other, a casing having a valve seat, a valve and a cap having lugs and a slot, coacting with each other, for the purpose of reassembling the valve into its seat in only the position in which it was fitted, and a plug through the said cap to permit of refitting the valve into its seat in the same position.



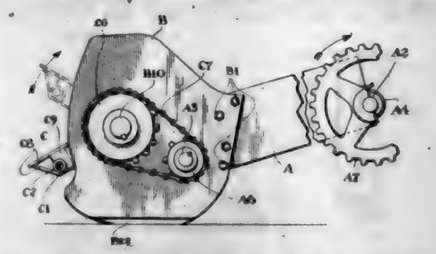
1,535,334. ICE-CUTTING MACHINE. EDWARD ALBERT NEW, Great Barrington, Mass. Filed Mar. 29, 1922. Serial No. 547,799. 1 Claim. (Cl. 262—20.)



The combination with an ice cutting machine comprising a frame, a handle member carried by the frame, supporting runners pivotally connected to the frame adjacent the rear end, an engine supported by said runners, a rotatable sawing element carried by the forward end of the frame and driven by the engine, a lug carried by one of the runners rearwardly of the pivotal point of the frame, a hooked member pivoted to the frame rearwardly of the pivotal point of the frame and cooperating with said lug for holding the frame in tilted position, said hook being controllable from adjacent the handle member.

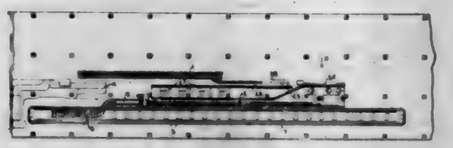
1,535,335. APPARATUS FOR MAKING SAND MOLDS. WILLIAM H. NICHOLLS, Brooklyn, N. Y. Filed Nov. 14, 1922. Serial No. 600,923. 22 Claims. (Cl. 22—9.)

1. A mold making apparatus comprising a wheeled truck, a pneumatically operated mechanism for jolting and then squeezing the mold and means for withdrawing the pattern from the completed mold all mounted on the truck, a sand delivery hopper supported on the truck above the mold making mechanism, a gate to control the discharge of sand to the mold making mechanism, a sand receiving hopper supported by the truck and in front of the mold making mechanism, a sand riddling means in said hopper, a conveyor mounted on the truck and arranged to take the sand from the receiving hopper to the delivery hopper, an electric motor supported by the truck, driving means connecting said motor to the conveyor and to the sand riddle, a flexible hose connection between the pneumatically operated mold making mechanism and a source of air supply, circuit wires connecting the electric motor to a source of electric current, and means for advancing the truck, step by step, toward the sand supply.



1,535,336. ROD PROTECTOR. JEDDY D. NIXON, Houston, Tex. Filed Dec. 5, 1924. Serial No. 754,051. 6 Claims. (Cl. 308—4.)

1. A rod protector formed of lengthwise sections designed to conform to and fit around a rod when in assembled relation, and a tie member within the protector and securing the sections in assembled relation.



1,535,337. LOADING MACHINE. FRED OLDROYD, Cincinnati, Ohio. Filed Aug. 15, 1923. Serial No. 657,599. 35 Claims. (Cl. 198—9.)

1. In a conveyor structure for machines of the nature described, the combination of means on said structure for conducting material rearward lengthwise on said structure, a rotary structure located at the forward end of the conveyor structure and including a blade member slidable transversely to said structure, and means for sliding said blade member forward during the rotations of the rotary structure, whereby during the upward movement of the forward part of the blade member,

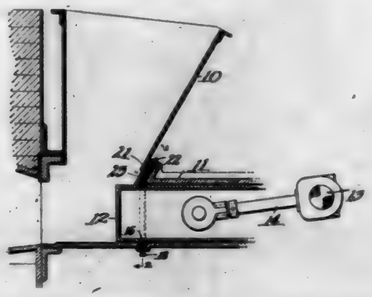
said forward part will project for the taking and upward and rearward carrying of material, substantially as described.

1,535,338. CONVEYER FOR TIRE FACTORIES. MAX H. PADE, Akron, Ohio, assignor to The Firestone Tire and Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed Mar. 17, 1920. Serial No. 366,595. 24 Claims. (Cl. 198—19.)

1. Apparatus for transporting articles to a plurality of stations, one of which comprises a series of heating units, said apparatus comprising, in combination, a horizontally disposed conveyer surrounding the units, a platform above the conveyer comprising one of the stations, an elevator for lifting articles to the platform, and a gravity runway between the conveyer and the elevator.

1,535,339. PROCESS FOR ELECTROLYTICALLY DEPOSITING ELEMENTAL CHROMIUM UPON METALS. SAMUEL PEACOCK, Wheeling, W. Va. Filed May 10, 1924. Serial No. 712,451. 5 Claims. (Cl. 204—19.)

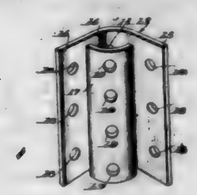
1. The process of coating a metal with chromium which consists in preparing a fused bath of an alkali metal chromium fluoride; adding to said bath a basic sodium silicate; employing the metal to be coated as the cathode in said bath, and plating out the chromium present by passing a current from said bath to said cathode.



1,535,340. RUST-RESISTING MILD STEEL AND PROCESS OF PRODUCING THE SAME. SAMUEL PEACOCK, Wheeling, W. Va., assignor to Wheeling Steel Corporation, Wheeling, W. Va., a Corporation of Delaware. Filed Mar. 14, 1924. Serial No. 699,315. 1 Claim. (Cl. 75—1.)

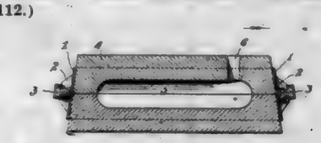
The herein described mild steel of a high corrosion resistance, the same containing not less than 0.1% and not more than 0.3% of each of the metals copper and tin.

1,535,341. PACKING CONSTRUCTION FOR STOKER PLUNGERS. ROBERT SANFORD RILEY, Worcester, Mass., assignor to Sanford Riley Stoker Co., Ltd., Worcester, Mass. Filed Dec. 4, 1918, Serial No. 265,236. Renewed Feb. 13, 1922. Serial No. 536,341. 1 Claim. (Cl. 110—109.)



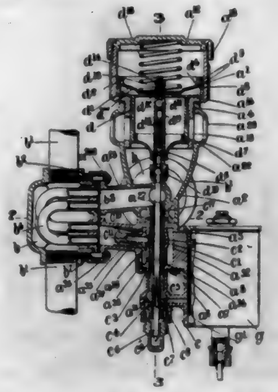
An automatic underfeed stoker having, in combination, a coal hopper, a cylinder opening into the lower portion of said hopper and having an annular recess

adjacent its inner end, a piston loosely slidable in said cylinder, mechanical means to reciprocate said piston, and means to prevent the escape of coal past said piston, said means comprising a split metal ring positioned in



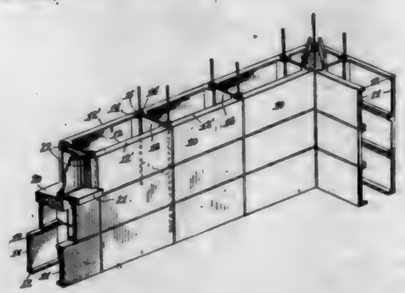
said recess and yieldingly engaging said piston, said ring and recess having associated inclined walls cooperating to force said ring against said piston as the latter moves away from said hopper.

1,535,342. COMBINED CLAMP AND CONNECTION. GEORGE WASHINGTON ROSS, Healdton, Okla. Filed Aug. 2, 1923. Serial No. 655,351. 3 Claims. (Cl. 189—19.)



1. A combined clamp and connection for the leg sections, girts and braces of a tubular steel tower or derrick comprising a clamp member having a curved plate constituting the body portion of the clamp member and adapted to be snugly fitted against the peripheries of adjacent leg sections, the curved plate overlapping the ends of adjacent leg sections, divergent wings integral with the curved plate and affording connecting means for the girts and braces, a cooperating clamping plate adapted to be fitted against the ends of adjacent leg sections in the space between the divergent wings, and fastening means for urging the clamping plate and clamping member into clamping engagement with said leg sections.

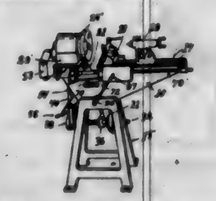
1,535,343. SLIP JACKET AND METHOD OF MAKING IT. EDWARD P. ROTHACKER, Cleveland, Ohio. Filed Jan. 14, 1920. Serial No. 351,447. 18 Claims. (Cl. 22—112.)



1. The method of casting a slip jacket which consists in making a male sand mold section, fashioning the top of a larger female sand mold with gate sprue, and cutting a sprue through said female sand mold to cause it to communicate with said gate sprue, and introducing molten metal to said sprues.

1,535,344. CARBURETOR. FREDERICK HENRY ROYCE, Derby, England, assignor to Rolls Royce Limited, Derby, England. Filed May 14, 1924. Serial No. 713,285. 2 Claims. (Cl. 261—48.)

1. In a carburetor, a body member comprising two cylindrical elements, one within and fitting the other, the outer member having an enlarged part provided with ports, the inner element also being provided with ports, means forming an air passage leading from the space between said elements, and an axially sliding cylindrical member the movement of which closes or uncovers the ports of the said inner element while the ports of the said outer element are always open to the air, the main air supply flowing through the ports of both elements and a subsidiary air supply through the ports of the outer element and said passage.

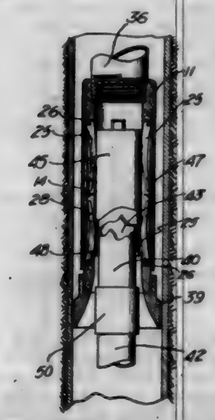


1,535,345. CONCRETE BUILDING CONSTRUCTION. FRANK MCMURRAY SAWYER, Los Angeles, Calif. Filed Aug. 21, 1922. Serial No. 583,111. 7 Claims. (Cl. 72—30.)

1. A concrete building construction formed in part with a series of pre-cast concrete slabs having tile-like edge flanges on opposite sides which extend the full width of the slabs, said edge flanges being concave on their outer sides to form continuous concrete-receiving pockets between adjacent slabs when they are erected edge to edge.

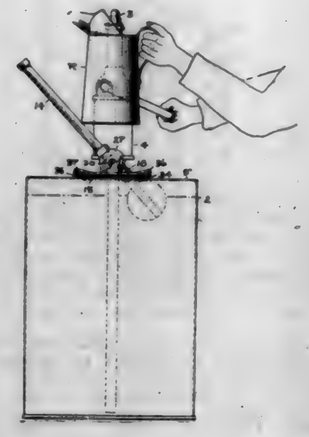
1,535,346. LATHE. WILLIAM L. SCHELLENBACH, Wyoming, Ohio. Filed Apr. 17, 1922. Serial No. 553,612. 12 Claims. (Cl. 82—2.)

1. In a lathe a lathe headstock comprising a headstock frame, a cone pulley shaft journaled to said frame and provided with a cone pulley and a gear, a speed changing shaft journaled to said headstock frame and adjustable endwise relative thereto, said speed changing shaft being provided with a plurality of gears of different diameters one of which meshes with and is driven from the gear on the cone pulley shaft, and a lathe spindle journaled to said headstock frame and provided with a plurality of gears through which said lathe spindle may be driven at relatively different speeds from the gears on said speed changing shaft.



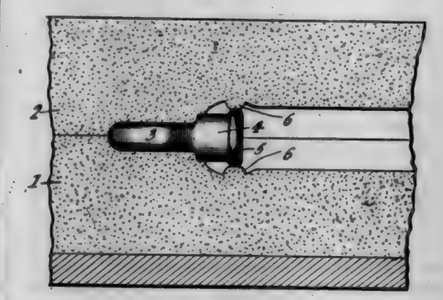
8. In a lathe a lathe bed, legs supporting said lathe bed, a countershaft mounted on one of said legs, a driving pulley loosely mounted upon said countershaft, a yieldingly energized clutch member splined to said shaft and tending to normally clutch said driving pulley to said countershaft, a shoe operable to release said clutch member from said driving pulley and at the same time to abruptly arrest the rotation of said counter shaft, means manually operable from the front of the lathe to actuate said shoe, and means to drive a lathe spindle from said counter shaft.

1,535,347. MOLDER'S CHAPLET. PETER J. SCHMITZ, Rock Island, Ill. Filed Sept. 1, 1923. Serial No. 660,656. 2 Claims. (Cl. 22—184.)



1. A device of the class described, comprising a thin metal plate, having one or more bars struck therefrom into spaced relation therewith, and united with said plate by integral braces converging towards said bars.

1,535,348. CUTTING-OFF TOOL. AUGUST L. SKOGLHORST, Whittier, Calif. Filed Sept. 18, 1922. Serial No. 588,840. 14 Claims. (Cl. 81—189.)

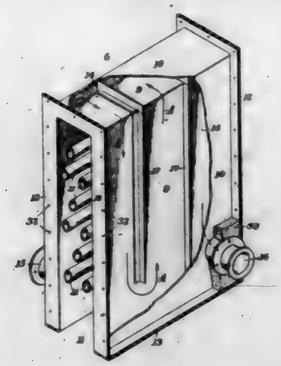


1. In a rotary cutting off tool the combination of: a cutter supporting body; cutter members associated with said body in resiliently projecting positions; and means for lifting said cutter members over projections as said body is moved along the pipe.

1,535,349. OIL-DISPENSING DEVICE. CHARLES SPAETH, Cleveland, Ohio, assignor to The Marvel Equipment Company, Cleveland, Ohio, a Corporation of Ohio. Filed Jan. 13, 1923. Serial No. 612,540. 16 Claims. (Cl. 221—72.)

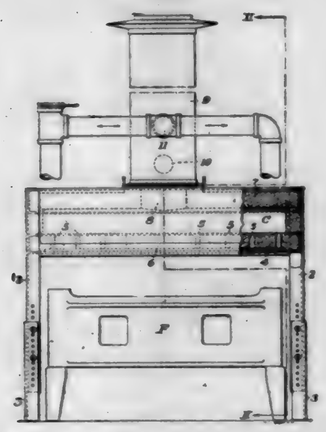
1. An oil dispensing apparatus, comprising a receptacle having a delivery spout, and an oscillatory drain pipe having a horizontal axis intersecting a straight line from the mouth of said spout to the interior of said receptacle.

1,535,350. METHOD OF MAKING SWIVEL LINKS. EUGENE C. STACY, Tiffin, Ohio. Filed July 2, 1924. Serial No. 723,778. 3 Claims. (Cl. 22—203.)



1. The herein described method of producing a swivel link which consists in placing an eye member within a mold, forming sand nodes within the molds so as to extend toward and touch the swivel member, and then pouring molten metal into the mold, said nodes constituting means for providing seepage of gas generated around the eye member during the pouring of the metal.

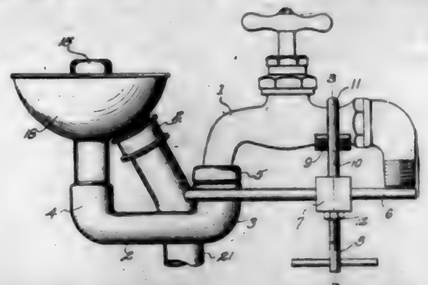
1,535,351. HEAT EXCHANGER. JAMES A. STAIRS, Pittsburgh, Pa., assignor to The Calorizing Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Feb. 7, 1924. Serial No. 691,148. 14 Claims. (Cl. 263—15.)



1. The combination with a furnace, of a plurality of recuperator units arranged in end to end relationship

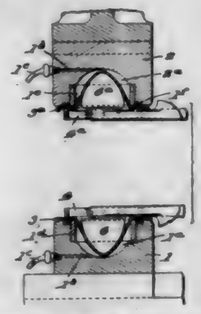
lengthwise of the furnace and adapted to receive waste gases from the furnace, and means connecting said units

in parallel for producing an initial fluid flow individually therethrough, substantially as described.



1,535,352. FURNACE. JAMES A. STAIRS, Pittsburgh, Pa., assignor to The Calorizing Company, Pittsburgh, Pa., a Corporation of Delaware. Filed Mar. 1, 1924. Serial No. 696,387. 7 Claims. (Cl. 263—9.)

1. The combination with an open furnace, of a frame cooperating therewith and supported independently of the furnace, and a roof carried by said frame above the furnace, substantially as described.



1,535,353. ATTACHMENT FOR FAUCETS. MERLE D. STALDER, Lincoln, Nebr. Filed Jan. 29, 1923. Serial No. 615,698. 1 Claim. (Cl. 285—108.)

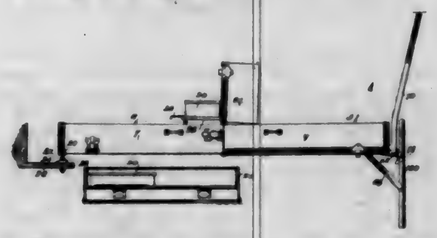
A means for attaching a drinking fount to a faucet, comprising a U-shaped member arranged around the neck portion of the pipe element of the drinking fount in which the non-threaded end of a faucet is received, a block having openings through which the arms of the U-shaped element pass, a yoke arranged over the body of the faucet having threaded arms passing through openings in the block, nuts screwed on said arms in contact with the block, a screw centrally threaded through the block, a cross sectionally U-shaped element

swivelly connected with the screw, contacting with the under face of the faucet body and forced in engagement therewith by the adjustment of the screw.

1,535,354. METHOD OF MAKING HOLLOW RUBBER ARTICLES. CHARLES W. STEBLE and RICHARD T. GRIFFITHS, Akron, Ohio, assignors to The Miller Rubber Company, Akron, Ohio, a Corporation of Ohio. Filed June 19, 1922. Serial No. 569,492. 7 Claims. (Cl. 18—56.)

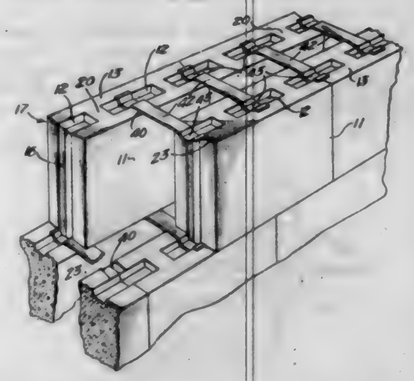
7. The herein described method of forming hollow plastic articles which consists in holding a pair of blanks about the edges of opposed die cavities, forcing said blanks into said cavities to cup the same without contact with the walls of the cavities, simultaneously venting the cavities and preventing the return of escaping air, the cupping being carried beyond the required degree, whereby the inherent elasticity of the material causes a partial retraction, subsequently diecing together such partially retracted blanks with an interposed gasifying medium, and finally vulcanizing the article in a closed mold.

1,535,355. HAIRPIN. SOTOZO TANAKA, Seattle, Wash. Filed Apr. 2, 1924. Serial No. 703,722. 1 Claim. (Cl. 132—50.)



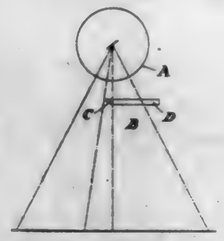
A hair pin formed from a single strand of wire comprising substantially parallel prongs joined at the base of the pin by a coiled spring whereby the prongs are held yieldably together with their ends in straight alinement; said prongs being bent back and forth along their outer portions so as to cross each other at a plurality of points and along their inner portions being extended beyond the spring portion to form handles that may be pressed together to cause the prongs to spread apart.

1,535,356. SEWING-MACHINE ATTACHMENT. ALONSO O. THOMAS, Datil, N. Mex. Filed Apr. 1, 1922. Serial No. 548,614. 5 Claims. (Cl. 112—235.)



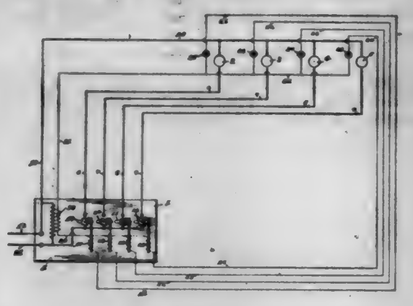
1. In a device of the character described, a skeleton foot comprising a piece of wire bent upon itself to form spaced cloth engaging parts and having its ends inturned to form a pivotal axis for said foot.

1,535,357. TRAVELING KIT. JESSE M. THOMAS, Tampa, Fla. Filed Jan. 9, 1924. Serial No. 685,223. 5 Claims. (Cl. 190—12.)



1. A foldable bed comprising a pair of sections having side rails hingedly connected, bracing links connected at their outer portions to said side rails and having their inner portions pivotally connected, and a U-shaped bracing member having the end portions thereof pivotally connected with the inner end portions of said links.

1,535,358. BUILDING TILE. EDGAR R. THORNTON, Long Beach, Calif., assignor of one-half to Alice A. Thornton, Long Beach, Calif. Filed Nov. 20, 1922. Serial No. 602,003. 4 Claims. (Cl. 72—43.)

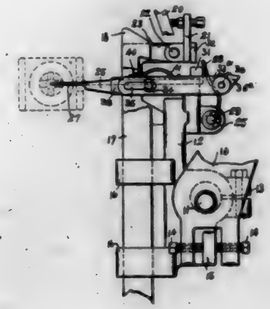


3. In a double wall, the combination of: tile laid up to form two parallel walls, each of said tile having a ridge extending horizontally in said wall and extending into a channel in an adjacent tile; and flat plates, each fitting at one end into said channel under its associated ridge in one wall and at the other end into a channel in the other wall.

1,535,359. X-RAY FILTER OR SCREEN. SINCLAIR TOUSEY, New York, N. Y. Filed Dec. 28, 1920. Serial No. 433,682. 1 Claim. (Cl. 250—34.)

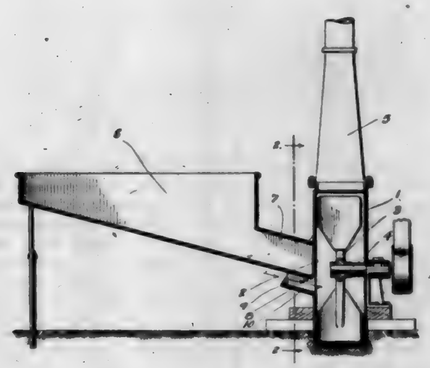
The process of obtaining a substantially uniform radiographic effect from X-rays transmitted through an object whose X-ray opacity is variable, which consists in additionally variable filtering the transmitted rays so that substantially the same obstruction is placed in the path of said rays over the entire field covered by the object.

1,535,360. ELECTRIC HOUSE OR LIGHTING CIRCUIT. HENRY F. VICKERY, Wellington, New Zealand. Filed June 29, 1923. Serial No. 648,615. 3 Claims. (Cl. 171—97.)



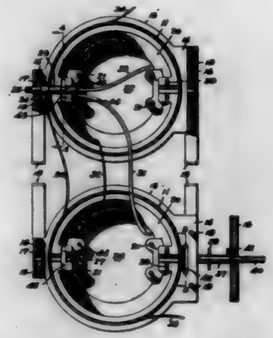
1. An electric wiring circuit comprising a primary circuit of relatively high potential including a common return lead directly connected with a plaurality of electrical elements; a plurality of control switches mounted upon a common switch board relatively remote from the electrical elements; a common supply lead connected through the switches with the electrical elements; electromagnetic operating means mounted upon the switch board in association with each control switch for independently operating the same to connect and disconnect their respective elements form the source of energy; a secondary circuit of relatively low potential connected to the electro-magnetic switch operating elements and having no metallic connection with the primary circuit; and manually operated switches associated with each electrical element and connected through the secondary circuit to the corresponding switch operating means for energising the same to actuate their respective control switches.

1,535,361. COMPOSITION OF MATTER FOR TIRE FILLERS. WILLIAM L. VON EDELKRANTZ, San Francisco, Calif. Filed Aug. 13, 1923. Serial No. 657,188. 2 Claims. (Cl. 134—17.5.)



2. The herein-described composition of matter consisting of gelatine, water, glycerine, dextrin, oxide of zinc, glucose and formaldehyde, proportioned substantially as described to form a light, porous, and resilient tire filler.

1,535,362. WEFT-DETECTING MECHANISM. WALTER H. WAKEFIELD, Worcester, Mass., assignor to Crompton & Knowles Loom Works, Worcester, Mass., a Corporation of Massachusetts. Filed Apr. 5, 1922. Serial No. 549,934. 4 Claims. (Cl. 139—276.)

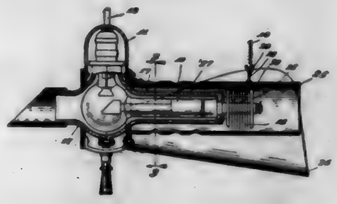


1. In a weft detecting mechanism, a plurality of elongated movable plungers, a single yielding device engaging said plungers and effective to return all of said plungers to normal rearward position, and additional means to resist longitudinal weft-indicating displacement of separate plungers in every position of said yielding device.

1,535,363. FAN BLOWER. HALBERT C. WALLACE, Kansas City, Mo. Filed Feb. 5, 1923. Serial No. 616,951. 1 Claim. (Cl. 302—37.)

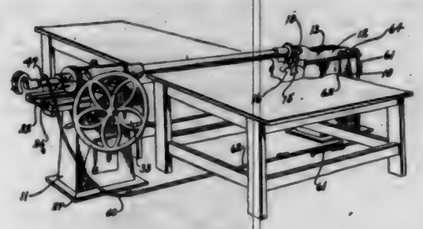
A fan blower comprising a casing having an air impeller therein, the casing having a side opening, in combination with a hopper having a discharge chute emptying into the casing through the opening, the bottom of the chute being spaced from the lower edge of the opening to provide an air space below the chute whereby air may enter the casing in transverse stream lines below the discharge end of the chute to float the material in a solid stream discharged from the hopper before it is driven through the casing and a flange at the lower edge of the opening and extending substantially parallel with the hopper, the flange having side walls for forming a space substantially co-extensive with the portion of the opening which is below the discharge end of the chute.

1,535,364. VARIOMETER. RUSSELL W. CAMFIELD, Berkeley, and ERNEST G. DANIELSON, San Francisco, Calif. Filed Feb. 7, 1923. Serial No. 617,458. 5 Claims. (Cl. 171—242.)



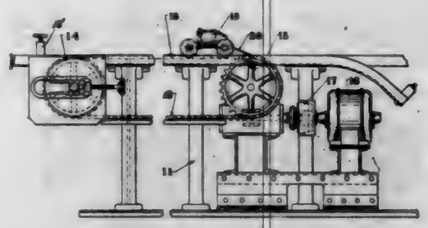
1. In a variable inductor, a stationary coil structure, a rotatable coil structure within the stationary structure, and means for rotatably supporting said rotatable coil and for leading connections thereto, comprising a hollow pivot pin for said rotatable coil, fastened to the stationary coil and projecting radially inwardly into the rotating structure, said pin having an aperture communicating with the interior hollow space, and opening to the space formed between the rotary structure and the stationary structure, and a lead from one terminal of the rotary coil passing through the hollow pin and said aperture.

1,535,365. WELDING ELECTRODE. GILBERT E. DOAN, Cleveland, Ohio, assignor to Rail Welding and Bonding Company, Cleveland, Ohio, a Corporation of Delaware. Filed Nov. 12, 1921. Serial No. 514,603. 4 Claims. (Cl. 219—8.)



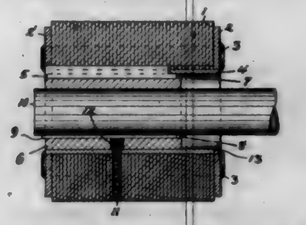
1. An electrode for electric arc welding comprising a substance incapable of being substantially effected by the temperature of an electric arc and characterized by having a boiling point relatively low as compared with the boiling or volatilizing points of carbon.

1,535,366. PROTECTOR FOR X-RAY TUBES. EDWIN L. EDWARDS, Indianapolis, Ind., assignor to Edwards X-Ray Corporation, Indianapolis, Ind., a Corporation of Indiana. Filed Apr. 7, 1921. Serial No. 459,273. 2 Claims. (Cl. 250—34.)



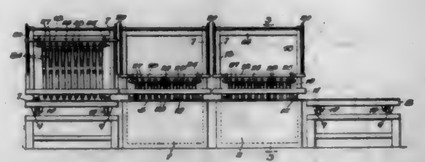
1. A protector for X-ray tubes, comprising an insulating shield which guards the high-voltage end of an X-ray tube, and a grounded conducting shield outside of said insulating shield, both said shields extending beneath and upward on both sides of said high voltage end and being fixed relatively to the X-ray tube, said conducting shield being spaced from said insulating shield in the vicinity of said high-voltage end.

1,535,367. ASSEMBLING DEVICE FOR TUBE-END CLAMPS. THOMAS P. LITTLE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1923. Serial No. 675,650. 5 Claims. (Cl. 18—2.)



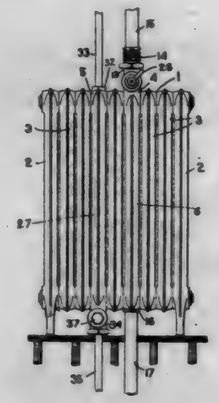
1. A machine for applying sliding clamps to rubber tubes on mandrels, comprising means for supporting a mandrel with the clamps loosely applied thereto, and mechanism for driving the clamps towards each other on the tube with a series of sharp blows.

1,535,368. HOSE OR TUBING STRIPPING APPARATUS. FREDERIC LINTON MACALESTER, Milwaukee, Wis., assignor, by mesne assignments, to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Oct. 27, 1921. Serial No. 510,906. 3 Claims. (Cl. 18—2.)



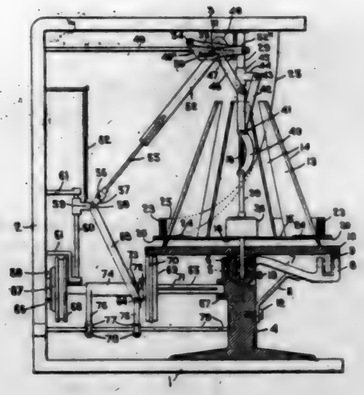
1. Means for stripping an article from a mandrel comprising a conveyor, a carriage movable with said conveyor and an air nozzle on said carriage adapted to loosen the article from the mandrel.

1,535,369. PULLEY. MERRILL F. MAGLEY, Columbia City, Ind., assignor of one-half to Henry W. Soest, Churubusco, Ind. Filed July 26, 1923. Serial No. 653,862. 4 Claims. (Cl. 64—17.)



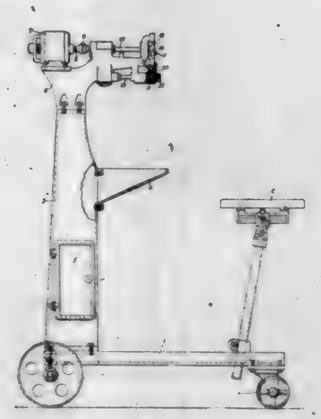
4. In a pulley, a rim; a pair of end discs between which the rim is permanently clamped; an interior sleeve extending through the rim and discs; and a key permanently fixed in the sleeve, one of its edges extending into the rim and its opposite edge, projecting into the bore of the sleeve.

1,535,370. MEANS AND METHOD OF MANUFACTURING METAL ARTICLES. AUGUST D. MEISELBACH, Chicago, Ill. Filed Mar. 5, 1921. Serial No. 449,939. 6 Claims. (Cl. 204—5.)



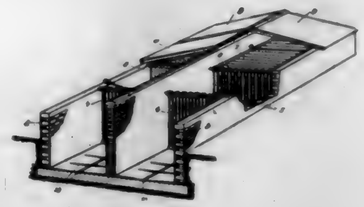
1. The herein described system for use in manufacturing metal articles, which comprises a series of associated vats for containing liquids in which the articles are to be immersed, one of said vats being adapted for applying electricity to said articles, tracks extending longitudinally of the series of vats, separable and independent carriages movable on the tracks and over the vats, the carriages having open bottoms through which the articles can pass up and down, an article support on each carriage movable freely up and down thereon to raise and lower the articles and adapted at its upper limit to hold the articles above the vats, so that the carriage can pass freely from vat to vat and at the lower limit of its movement to lower the articles down into the vats to immerse the articles in the liquid in the vats.

1,535,371. RADIATOR CONSTRUCTION. FRANK A. MERRILL, Malden, Mass. Filed Apr. 7, 1924. Serial No. 704,630. 4 Claims. (Cl. 237—73.)



2. A radiator having a series of assembled communicating vertical heat radiating sections comprising an intake section having a conduit integral therewith and extending longitudinally thereof and provided at its respective ends with coupling means for connecting said conduit into a vertical supply riser for the heating fluid and thereby to form a continuous part of said supply riser, a valve-controlled port leading from said riser to said intake section, and an outlet radiator section having a delivery conduit extending longitudinally thereof and provided at its respective ends with coupling means for connecting said conduit to the return riser for the heating fluid to form a continuous part thereof

1,535,372. STRIP-WINDING MECHANISM AND REEL. MYLES F. MORAN, East Lynn, Mass. Filed July 9, 1921. Serial No. 483,894. 16 Claims. (Cl. 58—18.7.)

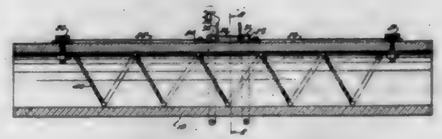


1. A strip winding machine comprising a strip receiving reel having a base and a peripheral strip retaining means, means for producing a flat winding of the strip within said reel from said retaining means toward the center thereof including means for progressively engaging margin only of the edge of the strip as it contacts with the base of said reel and acting to compress and hold the spiral being wound against the next outer spiral without engaging the face of the strip, whereby injury to the surface of the strip is avoided.

1,535,373. SHOE-TRIMMING MACHINE. ERNEST L. PATTEN, New Haven, Conn., assignor to L. Candee & Company, New Haven, Conn., a Corporation of Connecticut. Filed July 6, 1923. Serial No. 649,849. 6 Claims. (Cl. 12—51.)

1. An article trimming machine comprising cooperating reciprocable and rotary cutting elements, means for actuating the same, a feed roll rotatable with said rotary cutting element and spaced therefrom for the passage of said reciprocating element, and a guard covering said last element and spaced from the rotary one for the passage of the material to be trimmed.

1,535,374. PRESERVING SAP-CONTAINING VEGETABLE MATTER SUCH AS GREEN FODDER FOR CATTLE. GEROLD PFISTER, Dresden-Altstadt, Germany, assignor to Siemens-Schuckertwerke Gesellschaft mit beschränkter Haftung, Siemensstadt, near Berlin, Germany, a Corporation of Germany. Filed Nov. 19, 1923. Serial No. 675,604. 8 Claims. (Cl. 99—11.)

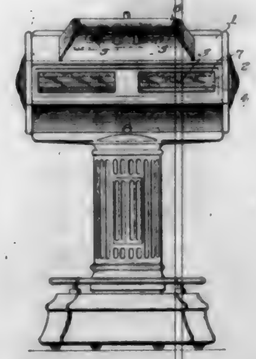


1. The process for preserving sap-containing vegetable matter, which consists in embedding rod-like heating bodies horizontally in the matter and heating said bodies.

1,535,375. CASEIN GLUE. HENRY L. PRESTHOLDT, Minneapolis, Minn. Filed Apr. 17, 1922. Serial No. 554,198. 2 Claims. (Cl. 87—17.)

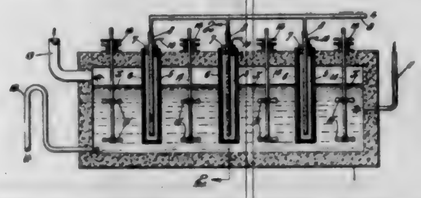
2. An adhesive composition made in accordance with the following formula:

	Parts.
Casein	50 to 75
Sodium formate	1 to 6
Calcium hydroxide	10 to 30
Sodium sulphite	3 to 10
Alum	2 to 6



1,535,376. WATER HEATER. FRED OSCAR RACE, Hillside, N. J. Filed Dec. 31, 1921. Serial No. 526,323. 6 Claims. (Cl. 219—38.)

1. A water heater for an internal combustion engine, comprising tubing of electrically non-conductive material through which the water is circulated, and a water submerged electric heating element disposed within said non-conductive tubing and in contact with the walls thereof.

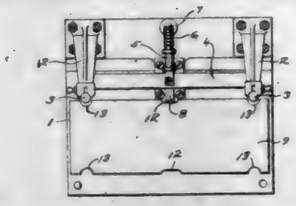


1,535,377. ILLUMINATED INDICATOR FOR SCALES. WALTER W. RADU, Evanston, Ill., assignor to Sanitary Scale Company, Chicago, Ill., a Corporation of Illinois. Filed Apr. 14, 1924. Serial No. 706,279. 4 Claims. (Cl. 88—39.)

1. In an instrument of precision having an indicator presented for reading from an observer's position, and a light source positioned to illuminate said indicator, a lens interposed between said indicator on the one hand and said light source and observer's position on the other hand, and constructed with a translucent but

light-diffusing area over that portion of its surface which lies in light-reflecting relation between the light source and the observer's position.

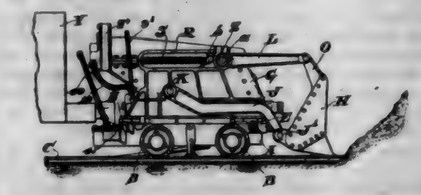
1,535,378. MANUFACTURE OF CHLOROFORM. GEORGE A. RICHTER and WALLACE B. VAN ARSDEL, Berlin, N. H., assignors to Brown Company, Berlin, N. H., a Corporation of Maine. Filed Oct. 14, 1921. Serial No. 507,750. 8 Claims. (Cl. 204—7.)



1. A process of making chloroform by the reduction of carbon tetrachloride with hydrogen, which comprises emulsifying carbon tetrachloride as the disperse phase in a heavy salt solution of substantially the same density as carbon tetrachloride and containing an acid, passing an electric current from an electrode through the solution to decompose the acid and liberate nascent hydrogen in the presence of the dispersed carbon tetrachloride, and recovering chloroform thereby produced.

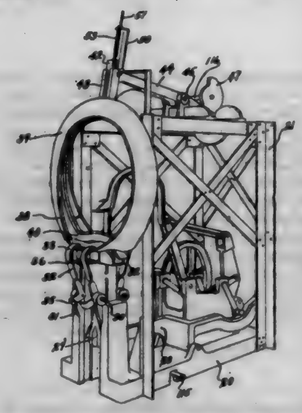
1,535,379. QUENCHING OIL. HUGH RODMAN, Oakmont, and EARL E. BOREN, Penn Township, Allegheny County, Pa., assignors to Rodman Chemical Company, Verona, Pa., a Corporation of Pennsylvania. Filed Nov. 10, 1923. Serial No. 675,500. 17 Claims. (Cl. 148—29.)

1. A quenching oil comprising a low flash-point mineral oil, in combination with a lesser amount of a mineral oil of comparatively high flash-point.



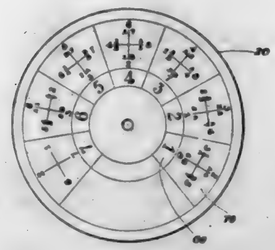
1,535,380. CORE BOX. OLOF SKEPPSTEDT, Moline, Ill. Filed Nov. 13, 1922. Serial No. 600,625. 4 Claims. (Cl. 22—10.)

1. In combination with a core-making machine, provided with vibratory members, and means for setting said members in action upon contact of a core-box therewith, a core-box having a plate provided in its edge with recesses conforming to the shape of said vibratory member, and adapted for engagement there-



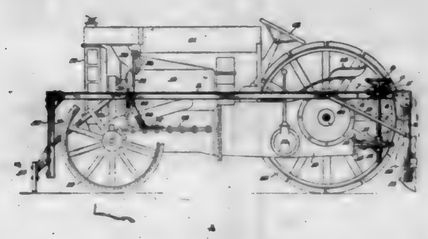
with, to assist in positioning the core-box in the machine, and to hold the core-box from a lateral or tilting movement while the same is being drawn from the cores.

1,535,381. SHOVELING MACHINE. HAROLD I. STAGE, San Francisco, Calif., assignor to Ingersoll-Rand Company, Jersey City, N. Y., a Corporation of New Jersey. Filed Mar. 15, 1924. Serial No. 699,392. 34 Claims. (Cl. 214—132.)



1. A shoveling and loading machine comprising, in combination, a frame, a scoop, means for thrusting the scoop forward in a lineal, substantially horizontal direction, means for withdrawing the scoop in a swinging direction over and to the rear of the frame and means independently controllable for tilting the scoop before withdrawal.

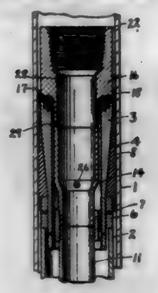
1,535,382. AIR-BAG PULLER. EDWARD C. TAYLOR, Longmeadow, and CHARLES H. DESAUTELS, Springfield, Mass., assignors to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Jan. 15, 1924. Serial No. 686,439. 5 Claims. (Cl. 18—2.)



1. In a machine for pulling bags out of tire casings, tire holding means, a device for opening the tire, and a spade arm provided with mechanism for forcing it between the tire and bag, raising the bag to buckle it inwardly, and then forcing the bag out one side of the tire.

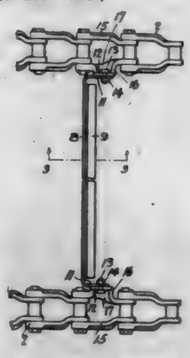
1,535,383. TALLY. MARSHALL TAYLOR, Pittsburgh, Pa. Filed Mar. 15, 1924. Serial No. 699,446. 7 Claims. (Cl. 273—148.)

7. A tally comprising a pair of superposed relatively movable disks operatively connected to form a unit, the lower disk having thereon a plurality of series of associated designating characters, one series indicating consecutively the number of games to be played, another of said series indicating the players and their partners at each of the games, the upper disk being provided with means for simultaneously and selectively exposing to view the associated characters of both said series.



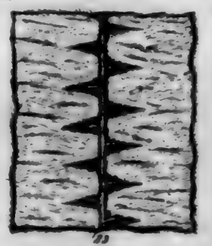
1,535,384. TRACTOR. FREDERICK A. TONEY, Detroit, Mich. Filed Feb. 9, 1923. Serial No. 617,911. 8 Claims. (Cl. 180—14.)

1. An attachment for tractors having a power plant assembly supported by front and rear ground wheels mounted upon axles, said attachment including an open frame of greater lengths than the length of the tractor, means for attaching said frame to the tractor, with upper portions of the tractor power plant projecting upwardly through the open frame and with the side members of the frame extending longitudinally of and between the power plant and the tractor ground wheels, with said frame pivotally supported by the power plant to swing upon an axis extending transversely of the power plant, with said side members of the frame swinging in vertical planes at the sides of the power plant and extending over and beyond said front and rear axles, and means for detachably attaching implements to said frame to be operated thereby.



1,535,385. PACKER FOR PUMPS. JAMES D. WADE, Gonzales, Tex. Filed May 11, 1923, Serial No. 638,255. Renewed Mar. 10, 1925. 6 Claims. (Cl. 166—10.)

1. A packer for pumps comprising a downwardly tapered hollow mandrel, a ring slidable thereon, means to normally secure said ring to said mandrel, a packing sleeve of ductile metal above said ring, a tapered seat at the upper end of said mandrel, a pump barrel, a



nipple at the upper end thereof, and a shoulder of soft metal on said nipple shaped to fit said tapered seat for the purpose described.

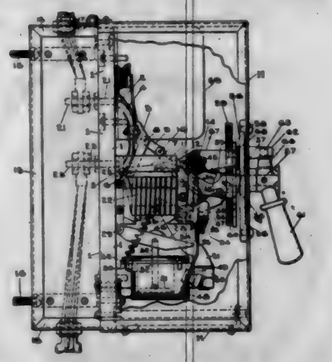
1,535,386. CONVEYER. HENRY B. WALKER and CLARENCE O. BROWN, Lancaster, Ohio, assignors to Fairfield Engineering Company, Marion, Ohio, a Corporation of Ohio. Filed Mar. 17, 1923. Serial No. 625,743. 8 Claims. (Cl. 198—175.)

1. A conveyer comprising two spaced endless members, drag members carried between said endless members, and means for yieldably connecting said drag members to said endless members to permit said drag members to be bent without materially altering the distance between said endless members.

1,535,387. SKIN. PAUL L. WIENER, New York, N. Y. Filed Sept. 2, 1922. Serial No. 585,864. 1 Claim. (Cl. 149—28.)

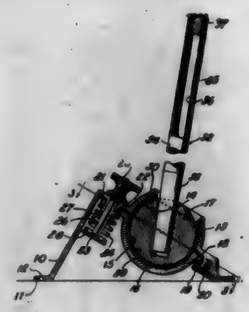
The method of forming plates from skins which includes the steps of removing a portion from each skin at the rump end and intermediate opposite edges thereof to form a slot, joining the walls of said slot and then joining the skins rump end to rump end to form the plate.

1,535,388. TRAP. CORRIE WILCOX, Mart, Tex. Filed Nov. 11, 1924. Serial No. 749,244. 5 Claims. (Cl. 43—74.)



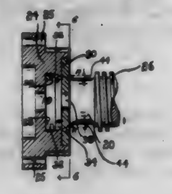
1. A trap comprising, in combination a housing having an opening in its top wall, a rotatable platform for closing said opening, power means for rotating said platform, an arm rotating with the platform, a pivoted lever, said lever being operatively engaged with the arm, means engaging the lever to hold the arm and platform against rotation when the platform is in closed position, a bait trigger, and means operating upon movement of the trigger for releasing the holding means from the lever.

1,535,389. HAT. EDWARD WITTCOFF, St. Louis, Mo., assignor to Superior Hat Co., a Firm composed of Edward Wittcoff, Elias Freedman, and Henry Minkoff, all of St. Louis, Mo. Filed Oct. 20, 1924. Serial No. 744,597. 4 Claims. (Cl. 2—175.)



1. A hat composed primarily of alternate rows of straw braid and strips of waterproofing material, said rows of braid and strips being secured together and overlapping at adjacent edges.

1,535,390. SWITCHING APPARATUS. JAMES H. WYATT, Kirklyn, Pa., assignor to William M. Scott, Tredyffrin Township, Pa. Filed Feb. 17, 1923. Serial No. 619,577. 29 Claims. (Cl. 200—107.)

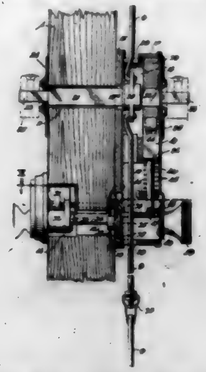


3. Circuit breaker mechanism comprising a movable contact member, an overtravelling toggle for moving said contact member to and restraining it in normal position, an independently movable operating member, a latch forming a detachable connection between said operating member and said toggle, and electro-responsive means for actuating said latch to disengage said operating member from said toggle and for thereafter moving said toggle from overtravelled to undertravelled position.

1,535,391. EXERCISER. JOHN R. ANDERSON, Moline, Ill. Filed July 5, 1923. Serial No. 649,398. 8 Claims. (Cl. 272—79.)

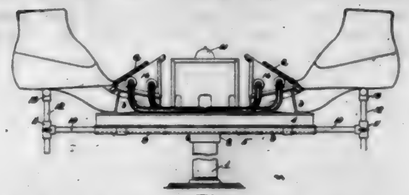
1. An exerciser comprising a base, a member loosely mounted on said base and cooperating therewith to form a socket, means for yieldingly urging said member toward said base, means for adjusting said last named means, a ball in said socket and a handle on said ball, said handle provided with a rotatable grip.

1,535,392. PROTECTING DEVICE FOR MIXING MILLS AND THE LIKE. WILLIAM S. ASHTON, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Dec. 20, 1921. Serial No. 523,642. 2 Claims. (Cl. 18—2.)



1. In a protective device for allowing separation of machine parts when an excessive presure is exerted between them, an apertured removable member, a removable machined cast iron disk adapted to fit over the aperture, an adjusting screw laterally positioned with respect to the aperture and of suitable size and shape to enter the aperture but prevented by the disk under ordinary working conditions from entering the same, the disk being adapted to be sheared between the outside edge of the laterally positioned adjusting screw and the edge of the aperture of the removable member upon excessive strain being brought to bear between the machine parts, whereby the sheared disk may be removed and replaced without disturbing the mounting of the machine parts.

1,535,393. DOORLOCK. ALFRED C. BALLBACH, Detroit, Mich. Filed June 30, 1922. Serial No. 648,739. 6 Claims. (Cl. 70—46.)

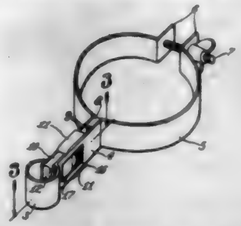


6. In a lock, a bolt actuating shaft, a plunger adapted to lock said shaft, a head on said plunger, co-axial rotatable members at opposite sides of said plunger, said members having outstruck cam portions normally engaging said head and adapted to depress said head to retract

said plunger, means holding said plunger normally extended to lock said shaft, a key operated lock mechanism for controlling one of said rotatable members, and

a knob for controlling the other of said rotatable members, said rotatable members being operable independent of each other.

1,535,394. SHOE HEATER. WILLIAM HARDCASTLE BAYNARD, Boston, and FREDERICK WILLIAM EAGER, Brookline, Mass., assignors to Harry H. Beckwith, Brookline, Mass. Filed Apr. 12, 1921. Serial No. 460,700. 28 Claims. (Cl. 219—19.)

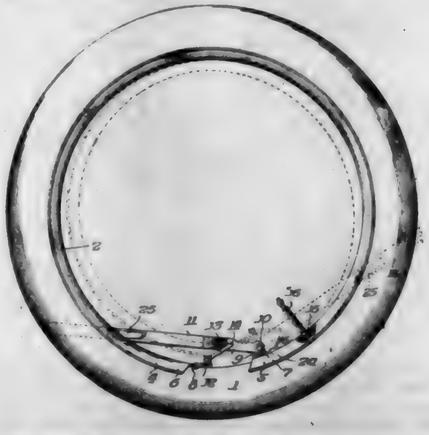


3. A device of the class described comprising a table mounted to turn about a vertical axis, a plurality of shoe supports mounted on said table, and a heater carried adjacent each shoe support.

1,535,395. SCISSORS SHARPENER. ARTHUR L. BREITENSTEIN, Akron, Ohio. Filed Feb. 29, 1924. Serial No. 695,985. 4 Claims. (Cl. 76—82.)

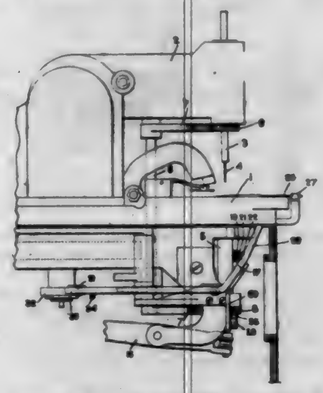
1. As a new article of manufacture, a scissor sharpener comprising a single strip of flat metal, the major portion of which is formed as a U-shaped handle, a piece of abrading material extending across the outer end of the handle, and an extension on one arm of the handle, the outer surface of which is parallel to the inner surface of the opposite arm of the handle.

1,535,396. FLAG HOLDER FOR AUTOMOBILES. CHRISTIAN BUEHLER, Luxemburg, Mo. Filed Sept. 28, 1921. Serial No. 503,927. 4 Claims. (Cl. 248—37.)



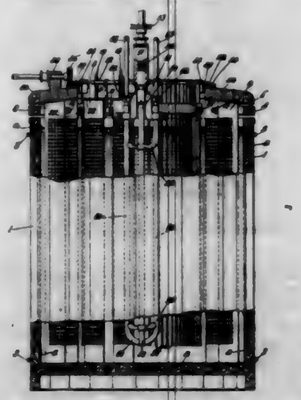
1. A flag holder, comprising, a flat strip formed to provide, at its middle portion a flag socket, at adjacent portions an extension, and at its terminal portions a loop adapted to embrace a radiator spout, a sliding clamp, for clamping a flag staff in said socket, and a screw and a knurled nut operating on said clamp, and means for clamping said loop upon a radiator spout.

1,535,397. TOWING POLE. HARRY C. BUFFINGTON, Springfield, Ill., assignor to Weaver Manufacturing Company, Springfield, Ill., a Corporation of Illinois. Filed Mar. 28, 1924. Serial No. 702,611. 8 Claims. Cl. 280—33.14.)



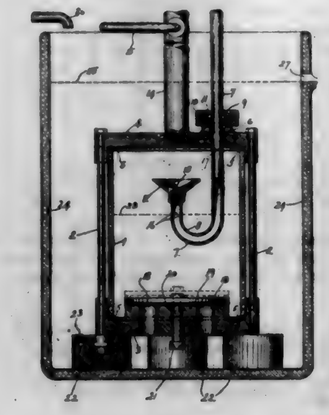
1. The combination of a towing-pole and an end attachment means therefor comprising in combination a pair of companion jaw-members of different lengths hinged together and recessed in register on their inner faces, the greater length portion of said longer member being constructed to engage the element grasped by said members and to prevent turning of the members on said element, and means to force said members toward one another to grasp a portion of a vehicle between them and accommodated at least in part in said recesses.

1,535,398. DEMOUNTABLE RIM. CHARLES B. CARVER, Elk Rapids, Mich. Filed July 28, 1923. Serial No. 654,311. 2 Claims. (Cl. 301—34.)



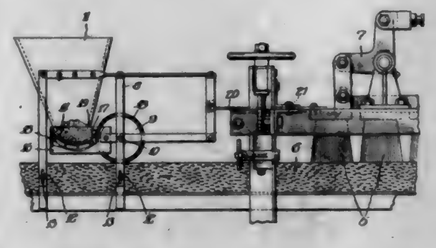
1. In a demountable rim, a flanged major segment, and a flanged minor segment; said segments having their ends including their flanges, constructed to articulate and interlock them against relative displacement; the articulation at two of the meeting ends being constructed to develop an abutment upon which the minor segment can swing into position in the circumference of the rim; said abutment comprising in part a lug on one segment and a corresponding recess on the other segment, in part meeting faces on the two segments in line with the abutting face of the lug, and in part flange abutments in lines removed from said abutment and faces and inclined to a radial plane of the wheel.

1,535,399. BUTTONHOLE-SEWING MACHINE. JOHN W. CONNORS, Dedham, Mass., assignor to The Reece Button Hole Machine Company, Boston, Mass., a Corporation of Maine. Filed Mar. 18, 1924. Serial No. 700,183. 8 Claims. (Cl. 112—255.)



1. In a two-thread sewing machine adapted to sew a short seam and then come to rest, the combination with a rotary turret, of under thread manipulating mechanism mounted thereon, a pull-off device on the turret for pulling off a length of under thread, means on the turret to apply tension to the under thread, and means for simultaneously releasing the tension and actuating the pull off.

1,535,400. METHOD AND APPARATUS FOR FORMING TUBING ELECTROLYTICALLY. RUFUS CROWELL, Winchester, Mass. Filed Jan. 11, 1922. Serial No. 528,496. 19 Claims. (Cl. 204—11.)

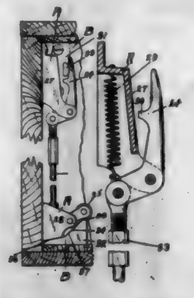


1. The method of making tubes by electro-deposition which comprises moving a cathode mandrel in an electrolyte bodily adjacent to a series of anodes and rotating said mandrel about its axis while subjected to the passage of an electrolyzing current, and then stripping the deposit on the mandrel therefrom.

1,535,401. AIR AND WATER INJECTOR. CHARLES H. DESAUTELS, Springfield, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed June 30, 1922. Serial No. 571,933. 3 Claims. (Cl. 103—231.)

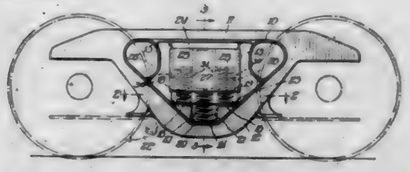
1. A device for inflating objects with air and delivering a measured quantity of water at each inflation, comprising a container adapted to contain water, an inner chamber immersed in the water within the container, a valve in the chamber operable to admit water from the container to the chamber but not to allow it to pass in the other direction, an upwardly opening delivery pipe extending into the chamber, an aperture in the pipe below its opening, means for admitting compressed air to the chamber, a baffle adapted to prevent churning of the water by the air, and a second aperture in the pipe located above the water level and adapted to prevent siphoning of water from the chamber.

1,535,402. FACE-BRICK SANDING MACHINE. IVAN N. DOUGHTY, Danville, Ill., assignor to Western Brick Company, Danville, Ill., a Corporation of Illinois. Filed Mar. 2, 1923. Serial No. 622,366. 6 Claims. (Cl. 25—115.)



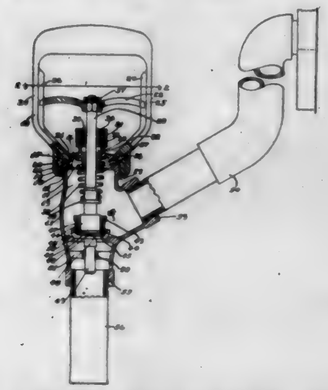
1. Apparatus for sanding brick comprising a pad of fibrous material engaging the brick and a sand reservoir feeding sand to the pad.

1,535,403. WINDOW CLOSER. EDWARD H. ELLISON Jamestown, N. Y. Filed July 25, 1924. Serial No. 728,262. 8 Claims. (Cl. 292—18.)



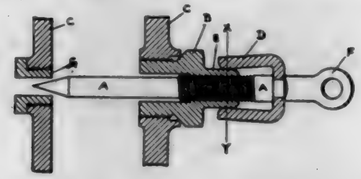
1. A closer for casement windows comprising a movable element, and a fixed element, one of said elements mounted upon the window casing and the other mounted

upon the frame of the window, whereby upon the shutting of the window they are brought into engagement



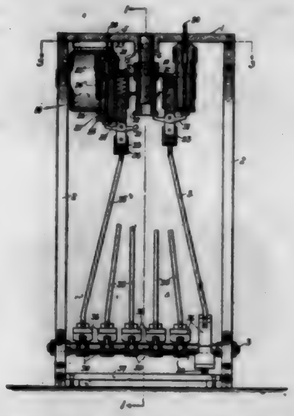
and automatically draw the free corners of the window into the casing, thus eliminating any gap that might result from any uneveness in the window frame.

1,535,404. RAILWAY-CAR TRUCK. FRITZ B. ERNST, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 6, 1923. Serial No. 610,978. 7 Claims. (Cl. 105—197.)



1. In a railway car truck, the combination of a side frame having bolster columns and six spring seats therebetween, two of said spring seats being below the other four spring seats, whereby the spring capacity of the truck may be increased without increasing the length of the side frame.

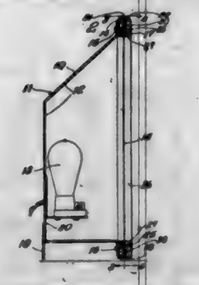
1,535,405. VALVE. HARRY J. ERNST, Cincinnati, Ohio, assignor to The D. T. Williams Valve Company, Cincinnati, Ohio, a Corporation of Ohio. Filed Oct. 8, 1924. Serial No. 742,478. 7 Claims. (Cl. 251—137.)



1. In a device of the class described the combination of a housing having a bore therethrough, a valve seat formed within the housing, coupling connections formed on the housing on opposite sides of the valve seat, a cap forming a closure for one end of the chamber and disposed in substantial alignment with the valve seat, the cap having formed on it an annular flange for annular engagement upon the housing, a handle for mounting upon the housing and provided with an annular recess for the reception of the cap, an annular wall of said annular recess being adapted to retain the annular flange on the cap in engagement upon the housing, a valve stem extending reciprocally through the cap and carrying a valve for engaging the valve seat, and a finger piece positioned adjacent the handle.

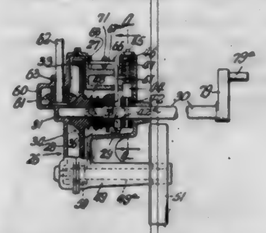
1,535,406. NEEDLE-VALVE RETAINER. GEORGE A. EYNON, Detroit, Mich., assignor to George M. Holley, Detroit, Mich. Filed Jan. 29, 1923. Serial No. 615,494. 1 Claim. (Cl. 251—163.)

A device of the class described, comprising a threaded needle valve, a needle valve support into which said needle valve is threaded, a cylindrical projection from said needle valve support, a plurality of prongs riveted to said needle valve, said prongs being adapted to frictionally engage with the said cylindrical projection from said needle valve support, whereby at any fractional turn thereof said needle valve will be retained in position.



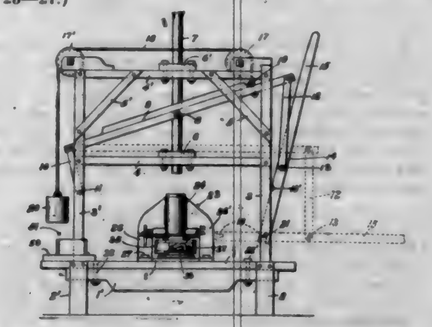
1,535,407. FILING MACHINE. RICHARD H. FREITAG, Akron, Ohio. Filed Jan. 16, 1924. Serial No. 686,532. 13 Claims. (Cl. 29—76.)

1. A machine of the character described comprising a plurality of reciprocating carriers, a tool in each carrier, a common actuating member therefor adapted to be operated continuously but normally disconnected from the tool carrier, and means to place any one of said carriers in operative relation to the actuating member.



1,535,408. DISPLAY DEVICE. CHARLES F. FRICK, Chicago, Ill. Filed Mar. 31, 1923. Serial No. 629,178. 4 Claims. (Cl. 40—158.)

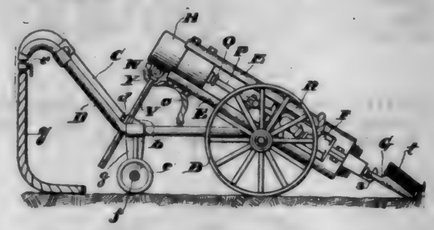
1. In a display device, a display sheet, a frame comprising a plurality of members, one of which is adapted to be brought into position adjacent the other to detachably secure the display sheet in the frame, the members having co-acting surfaces for drawing the sheet taut across the frame as the one member is brought



into position adjacent the other, and one of the members being recessed to receive the edges of the display sheet.

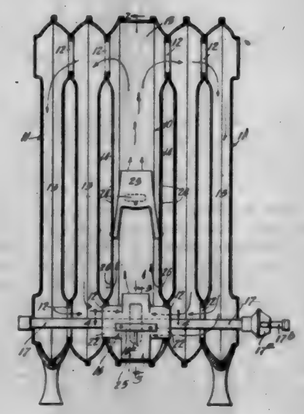
1,535,409. GEARING. WILLIAM H. GEORGE, Fairfield, Iowa, assignor to The Dexter Company, Fairfield, Iowa, a Corporation of Iowa. Filed July 26, 1923. Serial No. 653,868. 8 Claims. (Cl. 74—14.)

1. The combination of an oscillatory operating member, a drive shaft, a driven shaft, means operatively connecting said shafts together and including two clutch members, one loose and the other fixed to said driven shaft, a crank arm on the driven shaft, a pitman connecting said operating member and said crank arm together, and means acting directly on one of the clutch members for retarding the rotation thereof as said operating member approaches the limits of its oscillating movement.



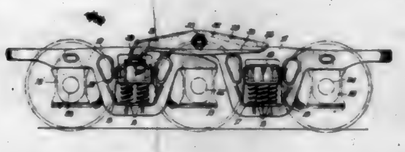
1,535,410. REFRACTORY-SHAPE PRESS AND MOLD THEREFOR. ASHLEY J. GULICH, Clearfield, Pa., assignor to Harbison-Walker Refractories Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 20, 1924. Serial No. 700,614. 9 Claims. (Cl. 25—27.)

1. A molding apparatus comprising a stationary receptacle for containing plastic material and having its opposite ends freely open, a swinging trimmer provided with an aperture therethrough, said trimmer being adapted to be moved to a position whereby to form a closure plate for one end of the receptacle, a removable mold adapted to be disposed in alignment with the receptacle and the aperture in the trimmer, a plunger for forcing material from the receptacle into the mold, and means for actuating the plunger.



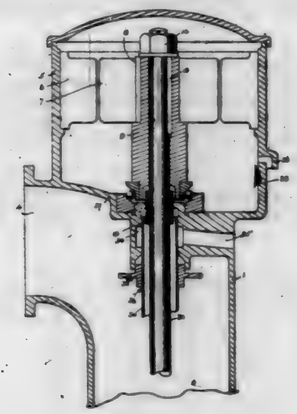
4. A mold for forming nozzles comprising a bottom plate, a top plate, and a hollow body including a plurality of pivotally connected sections, the upper surface of said bottom plate being provided with a depression for snugly receiving the ends of the sections whereby to position the body and hold the sections in abutting relation.

1,535,411. PAVEMENT BREAKER. CHARLES C. HANSEN, Easton, Pa., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 11, 1924. Serial No. 725,875. 8 Claims. (Cl. 262—16.)



1. A pavement breaker comprising a vehicle, a guide on said vehicle, a percussive machine slidably mounted in said guide, pneumatic feed means for thrusting said percussive machine forwardly and a spring for returning said percussive machine to its normal inoperative position.

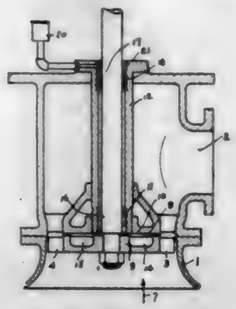
1,535,412. GAS HEATER. AUGUST J. HARTFIELD, Los Angeles, Calif. Filed July 28, 1920. Serial No. 399,537. 4 Claims. (Cl. 126—91.)



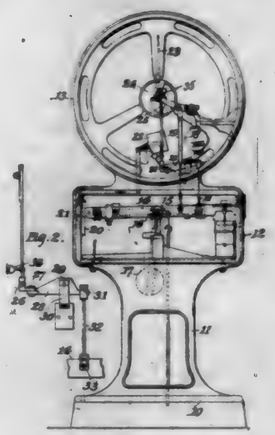
1. A heater of the character described embodying an upright combustion chamber and a side radiator element communicating therewith at its top; characterised by a combined burner and passage member located at said lower end communication and embodying a body having therein a burner chamber, a vertical air passage extending around the burner hamber, and a lateral passage that connects with the lower end of the radiator element and with an exhaust flue.

1,535,413. SIX-WHEEL TRUCK. WILLIAM C. HEDCOCK, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Jan. 31, 1924. Serial No. 689,611. 17 Claims. (Cl. 105—195.)

1. In a six wheel truck, the combination of a side frame including two associated side frame members, bolster members, forming the sole connection between said side frame members, and a load equalising member connected to one of said side frame members and transmitting a load through the bolster member associated with the other side frame member.



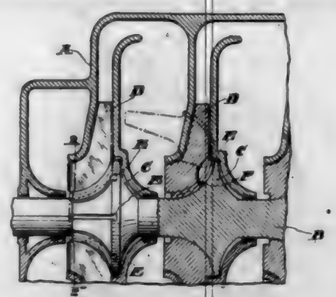
1,535,414. DEEP-WELL PUMP HEAD. ALADAR HOLLANDER, Berkeley, Calif. Filed Mar. 27, 1924. Serial No. 702,239. 1 Claim. (Cl. 103—111.)



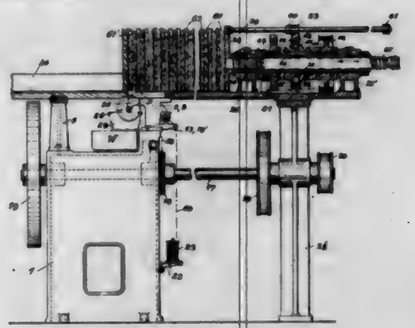
In a head for deep well vertical shaft pumps having an inner tube extending therefrom and enclosing said shaft, a discharge throat, a bearing for said shaft in metallic contact with said throat, gland means around said inner tube and within said throat to prevent leakage into said bearing, a pocket outside the inner tube between the said gland means and the said bearing and a discharge passage from the said pocket to the exterior of the head, said inner tube telescoping with the stationary parts of said head between the pocket and the bearing substantially as and for the purpose set forth.

1,535,415. SCREW PUMP. ALADAR HOLLANDER, Berkeley, Calif. Filed Mar. 27, 1924. Serial No. 702,241. 1 Claim. (Cl. 103—111.)

In a pump, a screw type impeller, a shaft adapted to drive said impeller, a casing having a bearing for said shaft adjacent the discharge side of said impeller, an annular pocket having spiral vanes therein in said impeller open on the discharge side and closed on the suction side of said impeller said casing closing the said open side of said pocket and forming a running joint with the impeller whereby the rotation of the impeller establishes a pressure from the pocket and through the running joint greater than the pressure of discharge of the impeller.



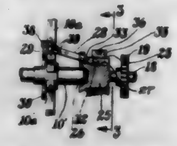
1,535,416. WEIGHING SCALE. JOSEPH HOPKINSON, Dayton, Ohio, assignor to International Scale Company, Dayton, Ohio, a Corporation of Illinois. Filed Oct. 26, 1920. Serial No. 419,636. 3 Claims. (Cl. 265—62.)



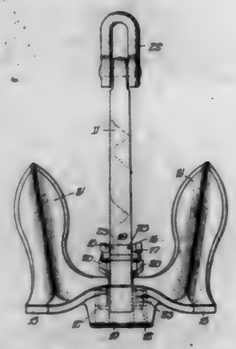
1. In a weighing scale, in combination, a fulcrumed main scale beam, automatic counterbalancing means connected thereto, a pivotal indicator, a pinion therefor, a vertical rack meshing with the pinion, an intermediate lever having a direct connection with said rack and a direct link connection with said main scale beam, said intermediate lever and its connection to the rack and beam being independent of the automatic counterbalance and its connection to said beam.

1,535,417. OPEN IMPELLER. LESLIE R. HUFF, Phillipsburg, N. J., assignor to Ingersoll-Rand Company, Jersey City, N. J., a Corporation of New Jersey. Filed July 5, 1924. Serial No. 724,244. 4 Claims. (Cl. 230—11.)

4. A blower comprising a shaft, a hub on said shaft having opposite circular dovetailed grooves in alignment with each other and extending longitudinally with respect to said shaft, oppositely disposed impeller blades, a dove-tailed base for each of said blades insertable in said grooves and a plate for clamping said blades together whereby said blades are held against removal from said grooves.



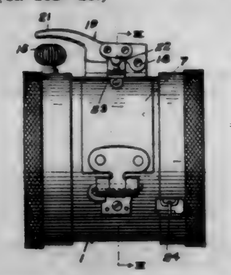
1,535,418. BOOKBINDING MACHINE. GOTTFRIED ISLIKER-BRAUEN, Bruggen, St. Gallen, Switzerland. Filed May 11, 1922. Serial No. 560,074. 7 Claims. (Cl. 11—1.)



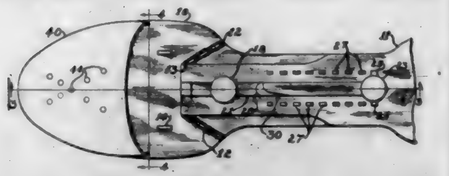
7. In a machine for twisting and gluing together the thread ends depending from the folds of stitched signatures, in combination, a machine frame including a work table presenting slots and a main drive, a twisting instrumentality in each table slot adapted to seize the depending stitch thread ends and twist them together, means in advance of said twisting instrumentalities for properly presenting the depending thread ends to said twisting instrumentalities, means for intertwisting with said stitch thread ends a stiffening thread, a gluing device for gluing the individual twisted thread formations, and a work feed mechanism including a pusher plate, for advancing the work on said table and for returning said pusher plate into the initial position at a predetermined period and for then automatically arresting the machine operation, said twisting instrumentalities and said work feed mechanism all being operated by said main drive.

1,535,419. FASTENING MEANS FOR SEED-PLANTER ATTACHMENTS FOR WHEELED PLOWS. JOZSEF JÁRFÁS, Jr., Bussu, Hungary, assignor of one-half to Rozina Pápay, Winnipeg, Manitoba, Canada. Filed Jan. 9, 1924. Serial No. 685,140. 2 Claims. (Cl. 74—106.)

1. In a device of the class described comprising, a shaft adapted to operate seed distributing devices, and means whereby said shaft may be operatively engaged with the hub element of a running wheel to be rotated by the latter, said means comprising a disk-like head adapted to engage the said hub element, said head having a number of axial slots and a groove in its periphery, a series of inclined arms adapted for pivotal mounting on a wheel, said arms having their free ends engaging in said slots and having pins engaging in said groove, and a nut threaded on said head and adapted to press the free ends of said arms radially inward.

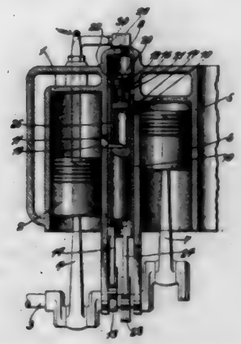


1,535,420. STOCKLESS ANCHOR. AP TREVOR JONES, Chicago, Ill., assignor to American Steel Foundries, Chicago, Ill., a Corporation of New Jersey. Filed Apr. 15, 1922. Serial No. 553,078. 6 Claims. (Cl. 114—208.)



1. A stockless anchor including a head, a shank movably connected thereto, means for locking said head and shank in a given relative position for creating a gripping leverage, causing a quick gripping action of the anchor, and means for giving the locking means a positive unlocking movement for unlocking said head and shank.

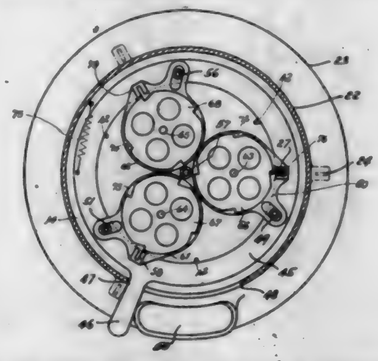
1,535,421. ANEMOMETER. JOHN E. JONES, West Frankfort, Ill., assignor to Mine Safety Appliances Company, Pittsburgh, Pa., a Corporation of Pennsylvania. Filed Mar. 31, 1924. Serial No. 703,138. 6 Claims. (Cl. 161—18.)



1. An anemometer comprising a casing having a compartment for carrying a visible light-weight substance, means for ejecting such substance from the compartment, a stop-watch carried by the casing, and means for simultaneously starting said watch and operating said substance-ejecting means.

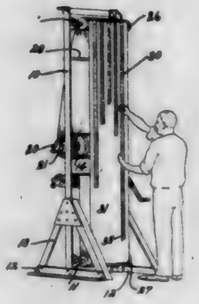
1,535,422. SKATE. WILLIAM G. LARSEN, Steger, Ill. Filed July 26, 1922. Serial No. 577,518. 4 Claims. (Cl. 208—180.)

1. In a skate, a toe plate, a heel plate telescopically mounted on the toe plate, said heel plate having a row of holes, a pivot, a mounting for said pivot, said mounting including a part adapted to project into one of said holes, means for securing said mounting in place with said part projecting into the selected one of said holes, a lever on said pivot, and means integral with one of said plates co-operating with said lever to limit the telescopic motion of said plates.



1,535,423. INTERNAL-COMBUSTION ENGINE. CHARLES LATTA, St. Louis, Mo. Filed May 28, 1923. Serial No. 641,849. 7 Claims. (Cl. 123—69.)

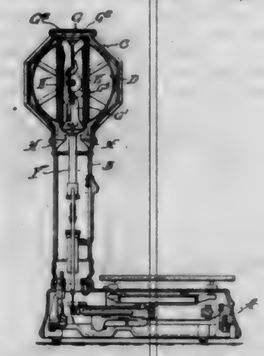
6. In an engine, a working cylinder, a pump cylinder, a valve cylinder between the working and pump cylinders and having ports opening into said cylinders, a sleeve mounted in the valve cylinder having ports adapted to be brought into and out of registration with the ports opening into said cylinders respectively, a valve member mounted for relative sliding movements in said sleeve and having a passage therethrough adapted to be brought into and out of registration with certain of the ports in said sleeve, means for operating said sleeve and said valve member for said purposes, and an air pump device operated by said valve member for forcing air into the working cylinder during exhaust.



1,535,424. SELECTIVE COIN-OPERATIVE DEVICE. JOSEPH S. LAUNDERSVILLE, Oakland, Calif. Filed Apr. 21, 1921. Serial No. 463,414. 1 Claim. (Cl. 194—85.)

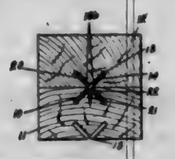
In a coin operative device, a receptacle having a plurality of compartments opening downward adapted to hold different merchandise units, a disc rotatable under each of said openings and having a plurality of passages, one of which passages registers with the corresponding compartment opening, an oscillating member under each disc and a common pivot for the disc and member, a coin slot common to each disc and its member, a bottom element having passages adapted to retain a coin in any of said slots and clearance openings in said element for discharging the coin from any corresponding slot when the member has rotated the

disc to register a disc passage with a corresponding passage in said element whereby a unit of merchandise is discharged and operating means common to all of said members.



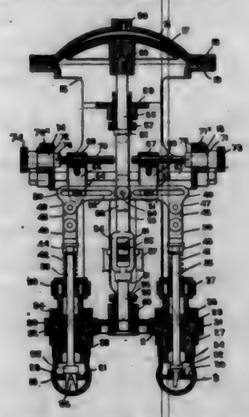
1,535,425. STOCK RACK. THOMAS P. LITTLE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Nov. 19, 1923. Serial No. 675,649. 2 Claims. (Cl. 242—55.)

1. A vertical unwinding device, comprising in combination a frame, supply and liner wind up rolls rotatably fixed at one side of the frame, two rotatable rolls mounted on the frame and located so as to guide the liner in a substantially vertical position at the other side of the frame during a portion of its travel from the supply roll to the wind up roll, means for unwinding the liner from the supply spool and rewinding it on the wind up spool, and means for preventing rotation of the supply roll and the liner wind up roll so as to hold the liner stationary and taut when it is desired to remove the rubber stock from the vertically extending part of the liner.



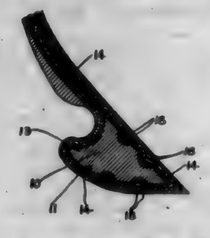
1,535,426. THERMOSTATIC SUPPORT FOR SCALE SPRINGS. GEORGE M. LUDLOW, Evanston, Ill., assignor to Sanitary Scale Company, Chicago, Ill., a Corporation of Illinois. Filed Jan. 2, 1923. Serial No. 610,208. 3 Claims. (Cl. 265—69.)

1. In a spring balanced scale, a base, a pillar upstanding from said base, a chart housing supported upon the upper end of said pillar, a chart having bearings in said housing, said housing constituting a supporting frame for the chart, a standard in vertical alignment with said pillar, mounted upon the pillar independently of the chart-supporting frame, and counterbalancing springs suspended from the upper end of



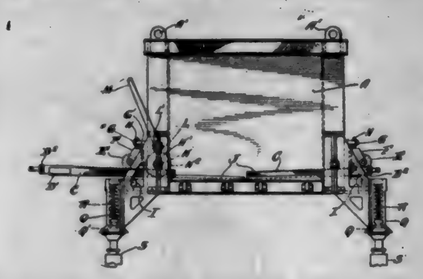
said standard; said standard being of a material having a thermostatic coefficiency which renders the standard substantially corrective of variation in the dimension of the springs resulting from changes in temperature.

1,535,427. SLIDE FOR EXTENSION TABLES. CONRAD LUNDGREN and ERNEST HEDIN, Jamestown, N. Y. Filed May 7, 1923. Serial No. 637,081. 4 Claims. (Cl. 45—115.)



1. A table slide comprising two plates, each plate having a longitudinal slot and a circular opening therethrough at the inner end of the slot, the plates being assembled by means of said slots in the form of a cross, the two openings intersecting to provide a tapering ellipsoidal opening through said slide.

1,535,428. FLUID-MIXING DEVICE. JOHN W. F. MACDONALD, Brighton, Mass. Filed Sept. 28, 1922. Serial No. 590,051. 6 Claims. (Cl. 236—8.)

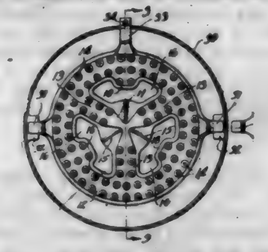


1. A fluid mixing device comprising conduits for the respective fluids to be mixed, a frame connected to said conduits, valves in said conduits, valve actuating levers, brackets slidably mounted on said frame having fulcrums for the respective valve actuating levers, screws mounted in said brackets and frame operable to adjust the positions of the respective fulcrums and thereby vary the effective lengths of the respective levers, means connecting each valve actuating lever to its valve and a reciprocable actuator connected to said valve actuating levers operable simultaneously to actuate said levers and their valves.

1,535,429. METHOD OF MAKING TIRE BEADS. MELVON A. MARQUETTE, Chicopee Falls, Mass., assignor to The Fisk Rubber Company, Chicopee Falls, Mass., a Corporation of Massachusetts. Filed Dec. 23, 1920. Serial No. 432,723. 1 Claim. (Cl. 154—14.)

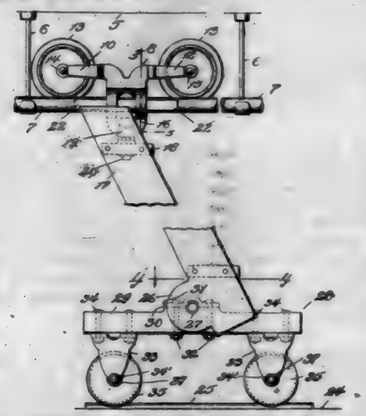
The method of making the bead edges of clincher tire casings, consisting in incorporating between the rubberized fabric plies at the bead edge a filler provided with indentations only at points remote from the heel of the bead adapted to receive extruded rubber, the heel portion of the bead being left smooth, and vulcanising the bead edge under heat and pressure whereby a portion of the rubber is extruded from the fabric, thereby making the heel of the bead harder than the remainder.

1,535,430. BRICK-STACK LIFTER. PAUL A. MEEHAN, Cleveland, Ohio, assignor to American Dressler Tunnel Kilns, Inc., Cleveland, Ohio, a Corporation of New York. Filed Dec. 18, 1920. Serial No. 431,577. 5 Claims. (Cl. 294—63.)



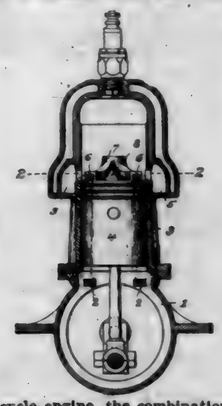
1. A brick lifting device comprising in combination a hollow frame adapted to surround the bricks to be lifted, two sets of parallel rigid brick supporting fingers mounted in said frame at the opposite sides thereof and longitudinally movable toward and away from one another in straight lines into and out of the positions in which they jointly extend across said frame, and mechanism mounted in the frame for giving said fingers said movements.

1,535,431. BURNER. LOUIS R. MENDELSON, Cleveland, Ohio. Filed Apr. 21, 1924. Serial No. 707,916. 7 Claims. (Cl. 158—116.)



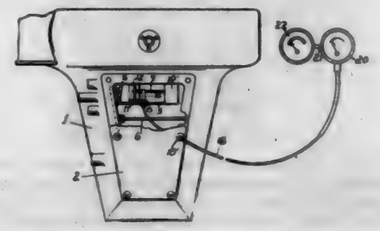
1. A gas burner, comprising a central portion, a marginal portion, and radially extending connecting por-

tions, the upper wall of said central portion being provided with elongated depressions extending downwardly



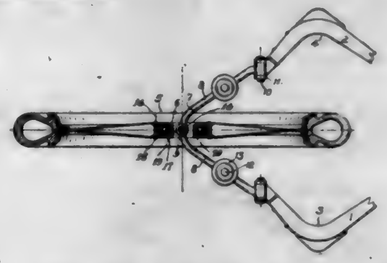
and outwardly from substantially the center of the upper surface of said central portion.

1,535,432. LADDER. GUSTAVE A. MILBRADT, McKnight Road, Mo. Filed June 9, 1924. Serial No. 718,684. 4 Claims. (Cl. 228—53.)



1. In combination with a floor track, a ladder, a carriage slidably supported on casters on said track, said ladder secured to said carriage between its casters in an oscillatory manner.

1,535,433. TWO-CYCLE GAS ENGINE. WALTER A. MORRELL, Chicago, Ill., assignor of one-half to Alfred J. Osborn, Chicago, Ill. Filed Jan. 26, 1924. Serial No. 688,671. 2 Claims. (Cl. 123—73.)

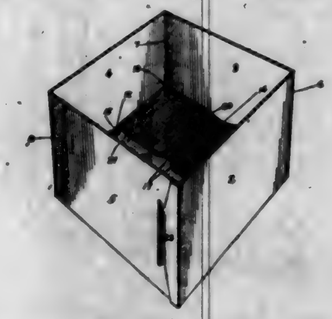


1. In a two-cycle engine, the combination of a cylinder having pluralities of fuel supply and exhaust passages arranged on an approximately common plane around the explosion chamber of the engine, and a piston head moving in said cylinder and having one end formed with a central upright nozzle and with a series of radial and curved passages adapted to register at their outer ends with the aforesaid fuel supply passages and at their inner ends with the aforesaid discharge nozzle, the portions of the piston head intermediate of the walls of said passages constituting valleys adapted to register with the aforesaid plurality of exhaust passages.

1,535,434. LUBRICATOR INDICATOR. CHRISTIE N. NEILSON, Jackson, Mich. Filed Dec. 16, 1921. Serial No. 522,823. 4 Claims. (Cl. 177—311.)

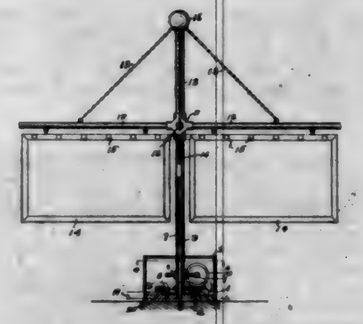
2. In a lubrication indicator for machinery utilizing a splash oiling system, the combination with the casing confining the oil, of an open top reservoir positioned within the same and above the normal oil level and having a drain opening in its bottom, a float within said reservoir, an indicator outside of said casing, and means extending through said casing and controlled by said float for operating said indicator.

1,535,435. MOUNTING FOR VEHICLE WHEELS. CARL A. NERACHER, Syracuse, N. Y., assignor, by mesne assignments, to Ner-A-Car Corporation, a Corporation of New York. Filed Oct. 21, 1919, Serial No. 332,244. Renewed July 14, 1924. 1 Claim. (Cl. 208—114.)



In a motorcycle, the combination of a front wheel, a frame having a pair of substantially horizontal members extending on opposite sides of said front wheel, a yoke the ends of which are pivoted to said frame members at points back of the forward ends thereof, means for mounting the front wheel on the forward portion of said yoke on an axis for steering slightly inclined backwardly from the vertical, guide rods extending upwardly through said yoke from the extreme forward ends of said frame members provided with spring abutments at their upper ends, and coiled springs surrounding said guide rods and extending between said spring abutments and said yoke.

1,535,436. BERRY BOX. EDWARD O. NORDSTROM, Minneapolis, Minn. Filed Oct. 22, 1921. Serial No. 509,576. 6 Claims. (Cl. 229—16.)

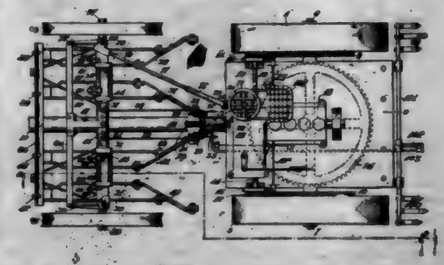


6. A folding berry box composed of flexible material having panels folded to form the side walls of the box, a folding section on the end of each panel and alternate

folding sections having flaps adapted to fold inwardly and upwardly to close the bottom of the box, said flaps having a plurality of tongues formed in their meeting

edges for interlocking one with the other, said tongues resisting horizontal pull or pressure on the flaps tending to separate them.

E,535,437. REVOLUBLE SIGN. FITZHUGH L. OVERTON, Shreveport, La. Filed May 6, 1924. Serial No. 711,510. 1 Claim. (Cl. 40—33.)



A revoluble sign including a base, an inside anchor rod secured to and upstanding from the base, a disc like table mounted to rotate on the base, and having spaced electrical contact points, a tubing supported by said table and surrounding said anchor rod, a motor geared to said tubing and adapted to rotate the same, a bearing inside the upper end of the tubing and working around the upper end of said anchor rod, radiating arms carried by the tubing, panels supported by and depending from said arms, electric lights carried by the panels and connected into an electrical circuit, and a fixed tongue in said circuit with which said points contact successively whereby the circuit is alternately completed and broken as said table rotates.

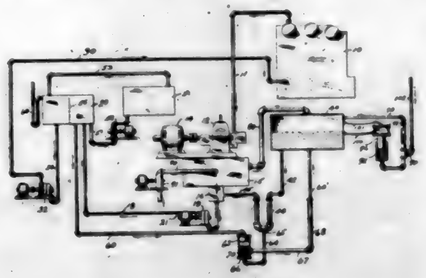
1,535,438. CELLULOSE ESTER OF REDUCED VISCOSITY AND PROCESS OF MAKING SAME. EARLE C. PITMAN, Parlin, N. J., assignor to E. I. du Pont de Nemours & Company, Wilmington, Del., a Corporation of Delaware. Filed Dec. 13, 1922. Serial No. 606,740. 54 Claims. (Cl. 13[illegible]—79.)

1. The process of reducing the viscosity of a cellulose ester which comprises subjecting said ester in the undissolved state to the action of a liquid which is practically a nonsolvent for said ester and which contains an alkaline substance, until the desired reduction of viscosity has occurred.

23. A composition comprising a cellulose nitrate having a viscosity, as determined upon an 8 ox. amyl acetate solution at 28° C., of less than 300 centipoises, said composition being free from decomposition products of the kind formed when cellulose nitrate has undergone a reduction of viscosity.

1,535,439. TRACTOR CULTIVATOR. ANDREAN G. RONNING and ADOLPH RONNING, Minneapolis, Minn. Original application filed Mar. 6, 1916, Serial No. 82,516. Divided and this application filed June 21, 1918. Serial No. 241,133. 38 Claims. (Cl. 97—47.)

1. In a cultivator, the combination of earth working tools, a power operated pushing member located behind said tools, means pushed by said pushing member and operating to pull said tools, means for steering the cultivator, and means operated by said steering means for moving the tools laterally in a direction corresponding with that in which the cultivator is directed.



12. An agricultural implement comprising a front frame adapted to be propelled from the rear, dirigible means and cultivating devices connected with said front frame, a motor driven tractor element back of said cultivating devices and connected with said front frame, means for steering said dirigible means, and means for turning said tractor element laterally with relation to said front frame to aid in steering the implement.
